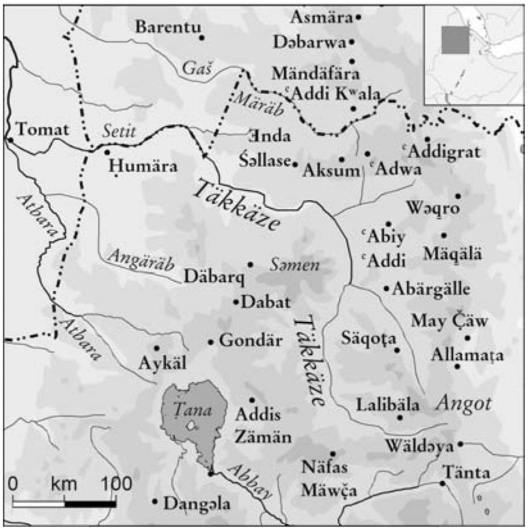
The main head of the T. rises in the central Ethiopian Highlands near Mount Qäč̣č̣ən in ↗ Angot, south of ↗ Lalibäla. From its sources it flows west, north, then it flows west again, forming the westernmost border of Ethiopia and Eritrea for ca. 100 km. It enters the Sudan near ↗ Ḥumära (ca. 500 m A.S.L.) and at Tomat it reaches the Atbara, of which it represents the major tributary. Its main tributaries in Ethiopia are from north to south: on the right bank, Gumalo, "Tocoro", Fərafəra, Wär^{c}i, "Gheoa", "Arek^{w}a", "Sullo", Ṣəlläre, Məri and "Tahali"; on the left bank "Q^{w}älema", Zärema, Atäba, "Bembea", Šäḥa, Bälägaz, Mənna, "Nili" (HuntGeogr 34).

The T. has cut a deep gorge into the volcanic material of the Tertiary (Trap Series), the Mesozoic sediments (Jurassic) and the Precambrian rocks in the lower parts of the valley. The canyon which it has created is the deepest in Africa and one of the deepest in the world. The valley looses its canyon character near the Sudan border. The catchment area of the T. (Ethiopian part) is 67,900 km^2. Run-off depends heavily on



The Täkkäze River near the so-called Chinese dam, western Təgray; air photo 2008, courtesy of Wolbert Smidt

the precipitation scheme of the catchment area. Substantial rainfall begins in March, maximum flow of water is reached in July and August, being ca. 5 m above normal level.

Most parts of the T. valley belong to the ↗*qʷälla* climatic zone (↗Climate; ↗Ecological zones), lying below 1,500 m A.S.L. The bottom of the canyon reaches only 1,000 m A.S.L. east of Səmen mountains. The *bäräḵa* zone begins near the common T. border of Ethiopia and Eritrea. Depending on the altitude, the climate in the canyon ranges from warm to hot and it is relatively dry because of high evaporation and low precipitation in comparison to the mountain areas around. Vegetation represents the climatic and pedological conditions, i.e. riparian formations along the river, largely depending on altitude and edaphic requirements. Generally shrubs and trees are in abundance. Vegetation of most areas on the slopes of the valley is deciduous woodland with a closed but light canopy of 5–12 m high deciduous trees with lower stratum of small deciduous trees and shrubs and scrub. The fauna of the river includes various fish species and crocodiles.

The T. is already attested in Aksumite ↗inscriptions, such as ʿEzana's inscription, where it is spellt "Täkkäzi" (RIÉ no. 189 = DAE IV, no. 11, ll. 8, 15, 29, 40; CRHist 138; HuntGeogr 56ff.). In Gəʿəz the word *täkkäze* means 'river'. Therefore, wherein the Bible the Nile is referred to as "the river", in Gəʿəz this was rendered as "T." or "May T.". The transfer of the name to the river T. is a reflection of its original identification with the Nile, of which T. is the affluent closest to the coast and thus best known to the ancient geographers. In the same meaning T. figures in medieval texts.

The T. canyon and the canyons created by its tributaries have isolated several regions from each other, mainly the Səmen massif and the Lake ↗Ṭana region from the northern and north-eastern plateaus of Eritrea and Təgray. The canyon served as a southern limit to the hegemony of the Aksumite kingdom. Later, during the era of the Solomonic kingdom, it marked the northern limit to its Emperor's dominion and to Amhara expansion (PollEr 29). The areas along the T. are also among the earliest to have adopted Christianity and long remained important centres of Christian life (cp. ↗Lasta, ↗Waldəbba).

In 1534–35, ↗Aḥmad b. Ibrāhīm al-Ġāzī ravaged the areas north of the T. and south of Šire and crossed it in 1536 on his way to Dämbəya. In 1539, the Muslims overran the same areas (HuntGeogr 134). In January 1831, on the southern banks of the T. the Battle of ↗May Ǝslamay took place.

The banks of the T. were also active centres of ↗Resistance to Italian colonialism and amongst the most contested areas during the ↗Italian war 1935–36 (cp. Bartnicki – Mantel-Niećko 1978, vol. 2, 501, 504f.; Greenfield 1965: 208). In 1936 the Italians secured the area and built a road over the old route from Šire to Däbarq and a bridge over the T. (↗Africa Orientale Italiana). The bridge stayed in use until the 2000s when it was replaced.

The earliest accurate descriptions date to the Jesuit period, such as by Pedro ↗Páez and Manoel ↗Barradas (BecRASO II, 270f.; V, 24; IV, 81, 85, 88, 193, 240, 258). Since the late 18th cent., several European travellers have also explored its canyons. In 1770, James ↗Bruce described it and explained the name as originating from *taka* 'terrible' (BruNile^{3}, vol. 4, 347–51). In 1807, Nathaniel ↗Pearce informed on its sources (cp. SalTrav 278) and Combes and Tamisier provided an ample account of the fauna and flora of the river (Combes – Tamisier 1838, vol. 1, 293–309).

The old and important trade route from the ↗Red Sea to the Lake Ṭana region and the south (via ↗Aksum) had to cross the T. Today's modern road from ↗Gondär to Aksum is quite identical with the old route. Parallelly, another route starts from ↗Däbarq through the Səmen mountains leading more directly to Aksum.

In the 19th and early 20th cent., agriculture and settlements seem to have been almost inexistent in the valley below circa 1,500 m A.S.L. for climatic and sanitary reasons. Only some small areas of cultivation and pastures were situated further down. Such areas were used because of good local conditions (i.e., sources for irrigation, soil quality, seasonal grass etc.). There are also semi and fully nomadic people in the lowlands. Because of population pressure it has become common to settle in lower and more unattractive parts of the valley in the 20th cent.

Recently, construction of a large dam at Ozentari, north-east of Amhara state, has been completed. The dam has been developed and built by the state-owned Chinese National Water Resources and Hydropower Engineering Corporation, now known as Sinohydro. It is the largest of its kind in Africa and is expected to produce 300 megawatts of electricity from a reservoir holding 9.3 billion m^3 of water.

Täklä Alfa

T.A. (**ተክለ፡ አልፋ**; fl. first half of the 16th cent.) was a saintly monk from Goǧǧam who rose to prominence as the abbot of the monastery of ↗Dima Giyorgis.

According to his Acts, T.A. was born on 21 *Ṭərr* in Gofč̣ema, Wäsän Amba, and baptized with the name of Ǝndrəyas. His father Aron, originally from Šäwa, and his mother Orni, from Maya, had settled in Goǧǧam in the late 15th cent. According to the usual topos, T.A. fled home a few days before an arranged marriage, thus beginning his spiritual wanderings. He arrived at Däbrä Dima, where he took the monastic habit from abbot Matewos. He then travelled around Goǧǧam, among other things founding a church dedicated to St. George in his native Wäsän Amba.

At the age of 30, T.A. was appointed abbot of Däbrä Dima Giyorgis by *aṣe* ↗Ləbnä Dəngəl at the suggestion of metropolitan ↗Marqos, therefore between 1508 and 1530. He thus headed the monastery during the troublesome period of the wars of ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ). Whilst at the beginning he granted ↗asylum in his monastery to monks fleeing from southern regions, eventually he too had to flee the approaching Muslim army across the Nile (referred to as ↗Giyon throughout the text), settling in Mäqdäla.

Like many other saints who never could perform a real pilgrimage to ↗Jerusalem, T.A. is described as the protagonist of a miraculous heavenly journey to the holy city. He died on 8 *Taḫśaś*, at the age of 75, and was buried in Dima.

The main source on the life of T.A. is his hagiography transmitted in a manuscript kept at Däbrä Dima and copied in two parts for ↗Cerulli by *aläqa* Kənfu in 1922 (VatLib, Cer. Aeth. 184 and 271 [formerly 184a and b], ed., tr. Cerulli 1943). This manuscript contains the ↗*gädl*, divided into seven chapters, one for each day of the week, the miracles (↗*Täᵓammər*; 22 original and one added later) and a ↗*mälkəᵓ* in honour of the saint. The text was most probably written by a contemporary of the saint (possibly a monk from Däbrä Dima) shortly after the latter's death, i.e. in the mid-16th cent. Apart from its historical references, T.A.'s hagiography is interesting for literary allusions to such works as the ↗*Ǝgziᵓabəḥer nägśä* and the ↗*Täᵓammərä Maryam*, indicating their diffusion by the mid-16th cent.: e.g., T.A. reads from the Acts of the Armenian St. Ripsima on the day of her feast, 6 *Taḫśaś*.

T.A. is also mentioned in the Short Chronicles (BassÉt 324, BegCron 8); and is briefly commemorated in the ↗*Sənkəssar* on the day of his feast, 8 *Taḫśaś* (GréSyn IV, 688).

Täklä Giyorgis

T.G. (**ተክለ፡ ጊዮርጊስ**, fl. 1605–29, b. Ǝndärta, d. 1629, Gännätä Iyäsus?) was an Ethiopian nobleman. He first came into contact with *aṣe* ↗Susənyos around May 1605, when he was *šum* of Daḫana, north of Lasta (PerChron 57, 344; HuntGeogr 170). Towards June–July 1614 he was appointed over Səmen (PerChron 116) where he fought a rebellion whose leader claimed to be *aṣe* ↗Yaᶜəqob. In Səmen he fixed his *kätäma* in Zutarya (PerChron 116). In 1619, already as *däǧǧazmač* and *təgre mäkʷännən* and with the help of Təgrayans he led a campaign in the region of Taḫa (PerChron 158, 162f.; close to Kassala?, cf. HuntGeogr 46). The following year, together with *aṣe* Susənyos, he fought the Oromo in Təgray (PerChron 173f.).

Shortly after the arrival of Jerónimo ↗Lobo, T.G. escorted the missionary in search of Christovão da ↗Gama's bones (Lobo 1971: 417ff.). Towards 1628–29, when he was *təgre mäkʷännən* and *baḥər nägaš* he rebelled against Susənyos due to the latter's support of the Jesuit mission (PerChron 227; ↗Jesuits). Among his allies were two *baḥər nägaš*, a certain Yoḥannəs, who was based between Dəbarwa and Massawa, and one Gäbrä Maryam (BecRASO XII, 362f.; VII, 18f.). In parallel, T.G. was also involved in an internal feud in Təgray against other *šum* – i.e. one *baḥər nägaš* ᶜAmdä Mikaᵓel – who disputed his power and eventually became allies with Susənyos against him (PerChron 228). He was however captured by ↗Qəbᶜa Krəstos and sent to ↗Gännätä Iyäsus (PerChron 229f.). There he was tried and sentenced to death (BecRASO VII, 22, 29ff.; XII, 362, 366; also IV, 55).

Reportedly, T.G. had two wives, both Susənyos' daughters: he married first Gälilawit and on her death Wängelawit (PerChron 230; also BecRASO XII, 361). However, the marriage with Wängelawit was celebrated without her consent, as she was living openly with one ↗Zäkrəstos (BecRASO VII, 18). Previously, Wängelawit had been the wife of Wäldä Ḥawaryat, who was Susənyos's faithful servant (PerChron 158; BassEt II, 129). According to Lobo, it was the discovery of this relationship that decided T.G. to launch his rebellion, which he must have been planning for a long time with other powerful nobles of Təgray (Lobo 1971: 425–34).

Dimitri Toubkis

Täklä Giyorgis

Nəguś T.G. (**ተክለ፡ ጊዮርጊስ**, r. 1779–84, 1788–89, 1794–95, 1795–96, 1798–99, 1800, d. 1800) was the son of *aṣe* ↗Yoḥannəs II, and younger brother of *nəguś* ↗Täklä Haymanot II (for the dates, s. CRAxum 60f.). Later generations, who viewed him as the last of the ↗Gondär monarchs to rule with any authority in his own right, knew him by his nickname **ፈጻሚ፡ መንግሥት** *Fäṣṣame Mängəśt* ('Ender/Fulfiller of the Kingdom'). His reign was turbulent, to say the least, and he ruled for six distinct periods, the shortest being the last, March to June 1800. Although increasingly the pawn of the great lords of ↗Bägemdər and ↗Təgray, he was an active figure during the ↗*Zämänä mäsafənt*.

T.G.'s first period on the throne was the most notable. At the beginning of 1779 he was brought from the royal prison of ↗Wähni Amba to replace his brother on the throne. Two years later, accompanied by important members of his brother's court, *ras* Ayadar not least among them, he embarked on the first of a number of major campaigns, this one against *däǧǧazmač* Gädlu of ↗Wälqayt (BlunChr 22–38 [text]). In October 1781, he suppressed opponents of his rule in ↗Mäčča, in western Goǧǧam, where he also collected the tribute of ↗Agäw Mədər and received the submission of *ras* ↗Ḫaylu Yosedeq (ibid. 38–42 [text]). In June 1782, he returned to Goǧǧam campaigning against *däǧǧazmač* ↗Kənfu Addam, who had deposed his brother. He had the captured Kənfu blinded. In August of 1782 he was in ↗Ǝste, where he favored the church of Ǝste Gälawdewos. In November 1782, he was back in Gondär, where the building of his principal foundation, Däbrä Məṭmaq Maryam, was underway. It was staffed with clergy belonging to the "house of *abunä* Täklä Haymanot". By the time of its completion, some years later, it had become one of the major churches of his time (CrumLand 148ff.; for its charter, s. ms. of Täᵓammərä Iyäsus, Illinois/IES, 88.XII.17–18). In that same month he embarked on another major campaign, this one to Bägemdər and ↗Wällo, but also with an eye to Təgray and its rebellious ruler, *däǧǧazmač* Wäldä Gäbrəᵓel. He was the last of the Gondärine rulers directly to intervene in Wällo, where he also received the tribute of ↗Šäwa (BlunChr 48–65 [text]), returning to Gondär at the beginning of May 1783. He made appointments in Goǧǧam and received tribute from as far away as Ḫamasen and ↗Säraye. In February 1784, he suffered the first of his depositions, this one at the hands of an alliance of *däǧǧač* ↗Ali Gʷangul of Yäǧǧu and *ras* Ḫaylu (ibid. 95f. [text]). However, with the falling out of Ali and Ḫaylu, in 1788, he returned to the throne.

One of the lasting acts of his second period of rule was the appointment of Ali as *bitwäddäd* and *däǧǧazmač* of Bägemdər, a major stage in the rise of Ali and his successors to dominance in the central highlands and as kingmakers in Gondär. However, with Ali's death, in 1789, and the succession of his brother, Aligaz, T.G. was again deposed, this time in favor of *aṣe* ↗Həzqəyas, a son of Iyasu I.

Five years later, in January, 1794, T.G. was restored for 15 months, only to be deposed again. Again restored, in February 1798, he granted asylum status to Däbrä Məṭmaq (BlunChr 173 [text]). During this period, he enjoyed a developing relationship with *däǧǧač* (later *ras*) ↗Wäldä Śəllase of Təgray (ibid. 179f. [text]), who brought him rich tribute, in return for which T.G. granted him four years of Təgray revenue (these last years of his rule are also documented in CRReal 783–95, 798, 803f. [text]; and CRNuov 7, 9, 10 [text]). Wäldä Śəllase married T.G.'s daughter Səḥin (CRReal 830 [text]).

Deposed again in 1799, T.G. withdrew to Təgray and the protection of Wäldä Śəllase, then to ↗Waldəbba, whence, in 1800, for the last time he was placed on the throne, reigning from March to June. He was buried at Aksum (CRReal 824 [text]). The abuse which he suffered in his latter years inspired lamentations from his chronicler (BlunChr 178 [text]).

T.G. was very active in the granting of ↗*gʷəlt*, for which the most important source is the marginalia in BritLib (ms. Orient. 777, fols. 16, 283–87). In addition to his own Däbrä Məṭmaq, he favored ↗Däbrä Bərhan Śəllase in Gondär. BritLib Orient 784 (fol. 209), records the granting of *gʷəlt* to *däǧǧač* Wäldä Gäbrəᵓel, in recognition of Wäldä Gäbrəᵓel's having enthroned him. The *Mäṣḥafä* ↗*Aksum* records a number of his *gʷəlt* grants in Təgray (CRAxum 50f., 54, 57 [text]).

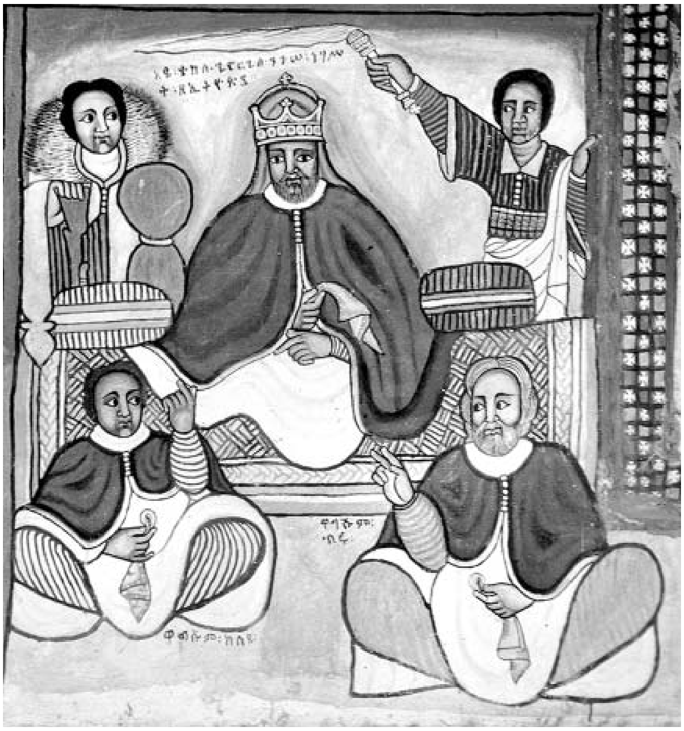
Donald Crummey

Täklä Giyorgis II

Aṣe T.G. (**ተክለ፡ ጊዮርጊስ**, birth name Gobäze, b. 1836, d. ca. October 1873) reigned from 1869 to 1871. Born to *wag šum* ↗Gäbrä Mädḫən, he lived some years at the court of *aṣe* ↗Tewodros II, who appointed him *däǧǧazmač* and governor of ↗Wag in 1862 (BTafY 63 n. 76).

In 1863, Gobäze rebelled, fled into exile, gathered an army with the help of members of his family, particularly his maternal uncle *däǧǧazmač* ↗Mäšäša Säyfu, and took control of Lasta (ZewYohan 21). He pursued his conquest while Tewodros had to face other rebellions and drought was ravaging part of the country. In 1865 he invaded Təgray, overrunning ↗ᶜAdwa. There, counting on the support of a large sector of the population (cf. Fusella 1953:82), he confined to an ↗*amba* the mother and brother of Kaśa Mərča (↗Yoḥannəs IV). However, the two adversaries came to a temporary agreement and Gobäze married Kaśa's sister, ↗Dənqənäš Mərča (Ricci 1947:51, n. 1). In 1867, Kaśa rebelled again against Gobäze and tried to obtain the support of the British and Egyptians (ibid. 52, n. 1).

During this period Gobäze was in close communication with the captives at ↗Mäqdäla and even contemplated an attack on the *amba*, which never took place (RubInd 256). Just before Lord ↗Napier's arrival in 1867 he marched towards ↗Wägära to fight and kill his principal rival, ↗Ṭəso Gobäze (on Gobäze's ambivalent attitude



Aṣe Täklä Giyorgis II (middle) with *wag šum* Käbbädä (left) and in front of him *wag šum* Bərru (right), wall-painting by *abba* Dästa, Däbrä Samuʾel, Adil Badil, Goǧǧam; photo 1993, courtesy of Michael Gervers

towards the Napier expedition cf. ZewYohan 23; RubActa III, nos. 8, 11, 32 and 33).

In 1868 Napier estimated that Gobäze had about 60,000 men under his command (ZewYohan 22). His force allowed him to seize the supreme power shortly after the death of Tewodros, in August 1868. Gobäze was crowned on the plain of Zäbiṭ by *abba* Gäbrä Iyäsus, who in the absence of a metropolitan in Ethiopia had been appointed *əč̣č̣äge* for the occasion (CerDLib III, 162, 171). His claim to the throne might have been ideologically based on his title of *wag šum*. Theoretically as a descendant of the ↗Zagʷe kings (GueCopMen vol. 1, 146, n. 2), the *wag šum* would have had the right to stand in for Solomonic throne in the absence of a Solomonic claimant (Bərhanu Abbäbä, personal communication, Addis Abäba 2005; cp. ↗Lasta).

T.G. surrounded himself of various royal symbols. By his throne name he associated himself with his predecessor ↗Täklä Giyorgis I, the last emperor of the Gondärine period. Since Täklä Giyorgis I was known under the nickname ፍጻሜ፡ መንግሥት (*Fəṣṣame Mängəśt*, 'Ender/Fulfiller of the Kingdom'; RubInd 32f.), Gobäze intended his reign as a renewal and drew on the imperial legacy of ↗Gondär. Thus he is associated with an attempt to give back to the churches of Gondär the position they had enjoyed in the past; he restored their lands and rebuilt those lately ravaged by Tewodros (CrumLand 206; Crummey 1988:23f.; ms. BN Éth. 259, fol. 6v). He also arranged for a special burial and commemoration for *abunä* ↗Sälama. His new name and title were displayed on two seals engraved to announce his coronation (Pankhurst 1973:204; Rubenson 1965:77; Tornay – Sohier 2005:42f.).

T.G. also pursued an active foreign policy in order to assert his authority, as he faced different rebellions and failed to gain from his rivals acknowledgement of his new rank, especially from Mənilək of Šäwa (↗Mənilək II) and Kaśa. He contacted the British and Egyptian governments and with the mediation of a Catholic missionary approached the French government in 1870. In a letter to Napoleon III, he declared he would welcome French merchants and a consul (RubActa III, 62, doc. 49; RubInd 274). T.G. used a marriage policy to pursue his political ambitions. He married his daughter to a relative of *ras* Adal Täsämma (*däǧǧazmač* ↗Täklä Haymanot; Ricci 1947:51 n. 2) and gave to Adal the government of ↗Goǧǧam (GueCopMen 127, n. 6). He also granted his son, Wäräñña, the title of *ras*.

T.G.'s fate was sealed when he went to fight Kaśa to put an end to his threat. The two armies met in Təgray and fought on 21 June 1871. A great number of his troops were injured or captured and T.G. was wounded during a second clash on 11 July, whilst he was leading a cavalry charge. He was taken prisoner, blinded and with members of his family brought to an *amba* where a few years later, perhaps in October 1873, he died, perhaps executed (Marcus 1975:35; cf. BTafY 94–115; for iconography, s. Wion 2000:316–19). A number of sources are available about his reign: diplomatic foreign archives, correspondence and several Ethiopian chronicles. T.G.'s own chronicle, written by *aläqa* ↗Lämläm, has never been published (ms. BN Éth. 259).

Abba T.Ḥ. (**ተክለ፡ ሐዋርያት**; d. 1455) was a Šäwan monk, the abbot of Däbrä Ṣəmmona (Däbrä Gäbärma) in ↗Mugär.

According to his Acts, T.Ḥ. was aggressive in his missionary activity and is said to have flogged a non-Christian priest in public and burnt the houses of others. T.Ḥ. is said to have had a number of encounters with the ↗*ayhud* in Ṣällämt and Səmen. In particular he is credited with converting them and strengthening the faith of some who had only superficially converted. His life took a dramatic turn when he was invited to the court by Queen Žan Källäla to give spiritual counsel to her and her son ↗Bäʾədä Maryam (who should perhaps also be identified with the Emperor's son Gälawdewos). Although he was initially welcomed at court by *aṣe* ↗Zärʾa Yaᶜəqob, he fell into disfavour when he criticized the emperor for allowing the popular custom of games played on ↗*Mäsqäl* in which many were injured and for his generally violent behaviour towards his subjects. T.Ḥ. was accused of plotting the overthrow of the Emperor and was beaten repeatedly and thrown into a ditch. He died in prison and was buried in Yäčär, in ↗Tägulät, the monastery of *abba* Bärsoma. Zärʾa Yaᶜəqob is said to have mourned his death and, shortly before his own death, to have commanded that T.Ḥ.'s body be translated. This was done at the beginning of the reign of Bäʾədä Maryam.

T.H.'s Acts were written shortly after his death in the 15th cent. Not all manuscripts contain the story of his clash with Zärʾa Yaᶜəqob. E.g., it does not appear in the text transmitted by ms. BN d'Abbadie 67 (published by Conti Rossini 1910). However, his "martyrdom" and the translation of his relics are found in ms. EMML no. 6700 (Getatchew Haile in EtRicci). His status as a "martyr" is also attested to in other sources (EMML no. 1521; Kur 1972: 41f.).

Täklä Ḥawaryat Täklä Maryam

Bäǧərond T.Ḥ. (**ተክለ፡ ሐዋርያት፡ ተክለ፡ ማርያም**; b. June 1884, Säyya Däbr, Šäwa, d. April 1977, Hirna) was a prominent statesman and administrator, as well as an important figure in the history of ↗Amharic literature.

T.Ḥ.'s ancestors were Oromo horsemen, who eventually settled in ↗Šäwa and were christianized. T.Ḥ. received basic traditional church ↗education. At the age of nine he moved to ↗Harär with his elder brother who became a secretary to *ras* ↗Mäkʷännən Wäldä Mikaʾel. T.Ḥ. stayed there in the household of the *ras,* where he was brought up as a family member together with the young Täfäri Mäkʷännən (future *aṣe* ↗Ḥaylä Śəllase I) and ↗Ǝmməru Ḥaylä Śəllase. T.Ḥ. once accompanied *ras* Mäkʷännən on the ↗ᶜAdwa campaign.

Later, *ras* Mäkʷännən entrusted T.Ḥ. to Count ↗Leontiev. Having obtained Mənilək's permission, the *ras* sent T.Ḥ. to ↗Russia in 1896/97. There, he was adopted by Colonel Malihanov, and joined St. Petersburg military school and later Michael Artillery School. In 1908 he returned to Ethiopia only to find that neither his knowledge of artillery nor of Russian were in demand.

Emperor ↗Mənilək II is said to have expected him to know how to produce cannons, not how to place them. Therefore, in 1908/09, T.Ḥ. was sent to France to study agriculture.

On his return, T.Ḥ. was appointed the head of Addis Abäba municipality, but was soon dismissed for being too enterprising and independent-minded (Bahru Zewde 2002: 59).

T.Ḥ. was always open to new reforms. First he thought there might be a possibility to implement changes with the help of the young successor to the throne, *ləǧ* ↗Iyasu. He had to realize, however, that Iyasu did not share his passion for reforms. Considering the development of his country to be his primary objective, T.Ḥ. did not hesitate to change political loyalties and so, abandoning his former allegiance, he joined the party of *ras* Täfäri. This brought fruitful results.

In 1917 T.Ḥ. was appointed governor of ↗Ǧiǧiga, part of Täfäris's own fief of Harärge. T.Ḥ. brought this economically backward region to prosperity through development projects such as fort construction, digging wells and stimulating local agriculture. He nevertheless was removed from this position (seemingly as a result of his disagreement with Täfäri, who reinstated some officials dismissed by T.Ḥ. for inefficiency). After a few years of idleness, he was suddenly promoted to the governorship of ↗Čärčär. During his tenure as governor, he introduced fixed taxes and salaries, financed military reorganization and carried out a series of other reforms. Through his innovations, T.Ḥ. managed to increase dramatically revenue from the province. Probably his most important achievement was the foundation of a new town, Asbä Täfäri, said to be one of the best planned towns in Ethiopia (Bahru Zewde 2002: 61). These reforms were not however welcomed by conservative officials. Consequently T. was accused of mismanagement and suffered a six months long imprisonment.

Later, after Täfäri became Emperor, T.Ḥ. was given the task of drafting the first Ethiopian ↗constitution, which was finished in 1931 (s. MahZekr 769–92). That same year, he received promotion and rose to ministerial level with the title of ↗*bäǧərond* as Minister of Finance. Yet his appointment lasted for less than a year; apparently on account of his overzealous attempts to Europeanize the ministry, T.Ḥ. was removed from this position and made Ethiopian representative in London, Paris and Geneva, at the ↗League of Nations.

T.Ḥ. soon (1934) found himself at the centre of diplomatic debate surrounding the growing tensions between Ethiopia and ↗Italy, but could do nothing to help his country's case. When Italian–Ethiopian war began (s. ↗Italian war 1935–36), T.Ḥ. hurried back to Ethiopia, but soon fled to Madagascar. When he finally returned, he retired to Hirna, and occupied himself there with his agricultural interests.

Apart from his political and administrative activities, his name is also closely linked to the emergence of Ethiopian drama (s. ↗Amharic literature) and ↗theatre. He created one of the first drama pieces in Amharic which incorporated his view of progress through enlightenment. Between 1912 and 1916 T.Ḥ. wrote a satirical piece entitled **ፋቡላ፡ የአውሬዎች፡ ኮሜዲያ** (*Fabula yäʾawrewočč komediya*, 'Fable. The Comedy of Animals') which was modelled after the fables of La Fontaine and Krylov, and is said to have been written for *ləǧ* Iyasu, with the aim of teaching him "by examples and precepts" (MolLit 51). In this play T.Ḥ. heaped ridicule on the conceited and arrogant Ethiopian authorities, as only superficially westernized, but in reality deeply provincial. The play was not staged because of opposition from conservative officials, which led to a general abolition of plays at that time, until the ban was reversed by Ḫaylä Śəllase on his succession to the throne in 1930.

Maxim Zabolotskikh

Täklä Haymanot

T.H. (**ተክለ፡ ሃይማኖት**, also Täklo, b. ca. 1532/33, d. 1568) was an Ethiopian nobleman. He was a son of ↗Dägälḥan, governor of Bale and brother-in-law of *aṣe* ↗Ləbnä Dəngəl (cp. KrLebD 6 and n. 19, 54 [tr.]), and as such is mentioned already in the Chronicle of *aṣe* ↗Minas (Esteves Pereira 1888:27 [text]). In the Chronicle of *aṣe* ↗Śärṣ́ä Dəngəl the name of this person, with one exception, appears only in the apocopated form "Täklo" (CRHist 5; cp., however, also Esteves Pereira 1888:34 [text]).

T.H. married Amätä Yoḥannəs who died during the rainy season of 1576 (BassHist 403; CRHist 26, 55). He took part in the wars against *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī; he fought at Waṣəl, the "fifth gate" of Betä Amhara (BassHist 283, n. 1, 403 [tr.]; cp. also CrawItin 49f.; DerDomTh 9–20 and n. 15). There, the Christians were defeated and "4,000 soldiers" were taken prisoners and converted to Islam. T.H. escaped and it is said that he stayed for four months at Qəda, in Zəbul (BassHist 405, 409 [tr.]).

T.H. was one of 'the great men among the people' (**ዓበይተ፡ ሕዝብ**, *ʿabbäytä ḥəzb*) of Minas's reign (CRHist 3, l. 21; cp. KrLebD 53, 61 [text]), after whose death in 1563 he did not immediately acknowledge the new ruler *aṣe* Śärṣ́ä Dəngəl. Later, however, he submitted to him and became one of the leading supporters and advisers of the ruler (CRHist 18f., 26).

Furthermore, T.H. fought against Fasilu and his supporters who wanted to dissuade ↗Ḥamälmal from making peace with Śärṣ́ä Dəngəl (CRHist 22ff.). *Azmač* T.H., as a powerful personage in the Empire, set up a ↗*kätäma* of his own at Gabar Guban (CRHist 37) in order to weather the rainy season in 1566. Several times he provided military support to Śärṣ́ä Dəngəl, for instance after the rains in 1568 against ↗Hadiyya, followed by "his partisans called Ḥawaš, accustomed to battle" (CRHist 46). The Chronicle of Śärṣ́ä Dəngəl makes another allusion to T.H.'s army mentioning "30 troopers and many shield warriors" (CRHist 18).

Dimitri Toubkis

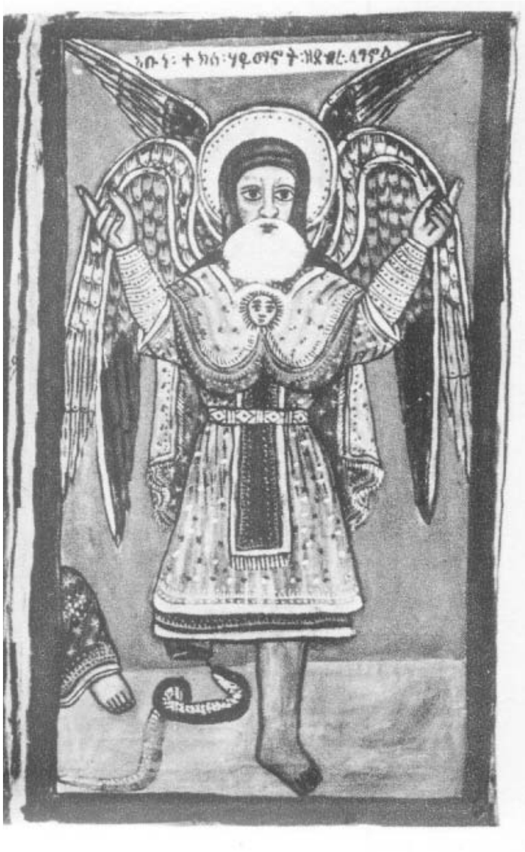
Täklä Haymanot

Abunä T.H. (**ተክለ፡ ሃይማኖት**; d. 1313[?], Däbrä Libanos, Šäwa) is one of most revered ↗saints of the ↗Ethiopian Orthodox (Täwaḥədo) Church. He is credited with evangelizing vast regions of central and southern Ethiopia and founding the famous monastery of ↗Däbrä Libanos in Šäwa. Some traditions also credit him with an important political role during the re-establishment of the ↗Solomonic dynasty by *aṣe* ↗Yəkunno Amlak.

Hagiography

The main source on T.H. is his ↗hagiography, a large corpus of texts containing works of different genres with a complex history, which were written and reworked beginning with the late 14th cent. at the earliest up to the time of the ↗Gondärine kingdom.

1. The main stream of the tradition is represented by the Vita (↗*Gädl*), preserved in at least 22 manuscripts in Europe, more than 20 microfilms in EMML, 3 manuscripts in possession of the Ethiopian community in ↗Jerusalem, 5 in IES; many are still unrecorded. Several recensions are known:
   a) the short *Sənkəssar* recension (with at least two sub-recensions, s. Nosnitsin 2007);
   b) the so-called Waldəbba recension owes its name to its editor Conti Rossini (ed. 1896; English tr. also in Budge 1906), who thought that Täklä Ṣəyon, the scribe (/author) was "a native of Təgray", since he calls himself "son of *abba* ↗Samuʾel of Waldəbba" and mentions his spiritual father *abba* Täklä Iyäsus (cp. CerPal vol. 2, 409, 419, 421 and CerDLib I, 229 n. 1). It is a brief and early (first half of the 15th cent. at the latest; Cerulli's hypothesis on the 16th-cent. dating [CerLett 73] should be dropped) version, archaic in style, witnessed by two manuscripts only (Paris, BN Éth. 136, 15th cent. [ZotBNat 203f.]; Mondon-Vidailhet 37, paper, 19th cent. [ChMonV 24]). Ms. Éth. 136 might have been written outside Ethiopia and may be linked to the Ethiopian community in Jerusalem. The local tradition of Waldəbba refers to old relations with Däbrä Libanos (monks from there coming to ↗Waldəbba as early as 1397 A.M., Bärrihun Käbbädä 1990/91:80; AmhChurchD vol. 4, 37).
   c) the "Ḥayq" recension is represented by a small group of interrelated texts, the archetype of which is still to be reconstructed. It was designated "Ḥayq version" after EMML no. 1834, from ↗Däbrä Ḥayq Əsṭifanos, or "the 1st Däbrä Libanos recension" (DerDomTh 77, after Éth. 697, brought by the ↗Duchesne-Fournet mission, and the text roughly trans-



አቡነ፡ ተክለ፡ ሃይማኖት፡ ዘደብረ፡ ሊባኖስ

Abunä Täklä Haymanot; from Buxton 1970, pl. 87

lated in Duchesne-Fournet 1908: 340–431). This recension is witnessed by mss. Éth. 342 (late 15th cent., s. GrébGriaule II, 18ff.; with full and good text), Ṭānāsee 162 (SixTana III, 202–06), IES 1340 (photos of a few loose leaves, as old as Éth. 342), EMML no. 8742. It might have been written as early as ca. 1425–26, under *aṣe* ↗Yəsḥaq, and was probably linked to ↗Yoḥannəs Käma (Derat 1998: 76f.; DerDomTh 77; cp. also Nosnitsin 2003: 149, n. 40).

d) the so-called Däbrä Libanos recension (= DLr), the most widespread one, became known in Europe thanks to ↗Urreta, ↗Almeida and Pedro ↗Páez (Esteves Pereira 1899; s. Pennec in HirKrSaints), and in full through the edition of Budge (1906, after the beautifully illuminated ms. BritLib Orient. 728) which, despite deficiencies in methodology and the "non-scholarly" aims of the editor, for a long time remained the main source of information on T.H. The DLr can be described as a compilation of the preceding recensions with some additions. At least two sub-types of the text exist. The first was written in the year 7007 "of grace", i.e. 1515 A.D. (the date is missing in Budge 1906, but is apparently found in other mss., s. Conti Rossini 1899: 267, CerLett 73, without precise reference), i.e. during the "golden age" of the monastery. The second is the result of reworking, most probably in the "house of Täklä Haymanot" at ↗Azäzo, in the late 17th cent. This sub-recension, meant to bring the text into conformity with the story of the saint and his "pact" with Yəkunno Amlak as presented in the ↗*Bəʿəlä nägäśt*, included some additional material, e.g., the genealogy of the Ethiopian emperors and the "carnal genealogy" of T.H., as well as a reference to T.H.'s purported role in the re-establishment of the Solomonic dynasty (cp. Nosnitzyn 2000; Nosnitsin 2003: 145, n. 30). The catalogues usually do not distinguish between the sub-types of the DLr. The Ethiopian Church editions mainly follow the second sub-type of DLr.

A unique case for ↗Gəʿəz literature, the DLr was the *Vorlage* for the Arabic version of T.H.'s Vita produced during *aṣe* ↗Gälawdewos's reign, which constituted the basis of T.H.'s fame in the ↗Coptic church (Nosnitzyn 2000).

The manuscript tradition of the DLr is relatively recent, known manuscripts do not date prior to the 17th cent. (the most important witnesses may have perished when Däbrä Libanos was destroyed by ↗Aḥmad b. Ibrāhīm al-Ġāzī in 1532). Additional identifying work is necessary for many manuscripts plainly described as containing the Vita of T.H. (e.g., mss. BN d'Abbadie 40; Mondon-Vidailhet 94; cp. WrBriMus, EMML catalogues).

2. The miracles (↗*Täʾammər*) of T.H. frequently follow upon his Vita and are represented by three sets of 22 miracles each: for his conception on 24 *Mäggabit*, for his birth on 24 *Taḫśaś*, for his death on 24 *Näḥase*, and for the translation of his ↗relics on 12 *Gənbot*. Each of the series is preceded by a homily. The *translatio* set is represented in at least two recensions (cp. Nosnitsin 2003: 145–59). In some manuscripts, the *translatio* miracles end with a colophon referring to the 15th year of *aṣe* Ləbnä Dəngəl's reign (1523/24 A.D.), but the early 16th-cent. ms. 2258 of the Schøyen Collection (Mercier 2000: 64f.) has no date and refers only to *əč̣č̣äge* P̣eṭros. Finally, a few manuscripts contain a

short set of miracles T.H. performed "in the country of Šäbäl" (a district in East Goǧǧam, s., e.g., EMML nos. 2190, 3667; St. Petersburg, Institute of Oriental Studies Orlov 35).

3. Sometimes included in the manuscripts with the Vita, the spiritual genealogy of T.H. is also represented in several recensions (for the "longer" one s. Getatchew Haile 1982–83).
4. There are a number of various ↗hymns in honour of T.H. (ChRep nos. 53, 58, 106, 211, 235, 256, 261).

A deeper philological study and edition of the main recensions of T.H.'s Vita remains a desideratum.

History and veneration

The size of T.H.'s hagiographical corpus makes the reconstruction of his life difficult. The earliest source is the least informative (Nosnitsin 2007); the overviews of T.H.'s life and activities are usually made on the basis of the DLr (cp. SerHist 282f., TadTChurch 160–69; DicEthBio; Tedeschi in EncSan). Only recently has a proper understanding of the complexities in the gradual development of T.H.'s hagiography started to emerge and be applied in historical studies (s. Derat 1998, DerDomTh and DerDom). The mentions of T.H. in other sources mostly depend on his Vita.

Despite the large amount of information, the "core" in T.H.'s legend is concise. T.H. was born in Ṣəlaləš, Šäwa, in the locality Zorare (which is said to be today's ↗Ǝtissa in ↗Sälale). His father Ṣägga Zäʾab was a priest, and his mother Ǝgziʾ Ḫaräya was of noble descent; they were probably among the early Christian migrants to Šäwa (cp. TadTChurch 160–69). When ↗Motälämi of Damot invaded Šäwa, he captured Ǝgziʾ Ḫaräya and wanted to marry her, but the Archangel Michael came to her rescue and brought her back to Ṣägga Zäʾab. Soon afterwards she conceived and on 24 *Taḫśaś* gave birth to a boy who was baptized Fəśśəḥa Ṣəyon.

When the boy grew up, Metropolitan *abunä* ↗Qerəllos consecrated him deacon and later priest (all versions of T.H.'s Vita indicate that Bənyami [corresponding to Benjamin II, 1327–39?] was the Alexandrian patriarch at that time). In a revelation, he received an order from Christ to start missionary activities and was given a new name, T.H. (lit. 'plant of the faith'; in reality, perhaps, his monastic name). T.H. preached in the neighbouring areas; overcoming the resistance of the "warlocks", he baptized several regions and entered Damot, where he was able to convert Motälämi, who became his devoted follower.

Later, T.H. travelled to other sanctuaries, staying for some time in the monastery of *abunä* ↗Bäṣälotä Mikaʾel (where he most possibly received the monastic habit) and visited some well-established monastic communities of northern Ethiopia. T.H. returned to Šäwa, passed through ↗Wägda and, accompanied by some disciples, settled in Gərarya (the place name seldom appearing in the sources, e.g., MarAmdS 53, 203f.), where he established his monastic community (ca. 1284). Initially, the nuns and monks lived in a cave without being separated. Towards the end of his life, T.H. withdrew into seclusion and placed himself standing between iron spikes; after several years, one of his legs "broke" and fell off (the episode frequently represented in traditional ↗painting). He died at the age of 99 on 24 *Näḥase* and was buried in the same cave.

Hagiographic works devoted to T.H. contain a large amount of information still to be deciphered and properly understood. Some episodes must be considered "literary elaborations" of various hagiographic *topoi*, like the spectacular struggles with Motälämi (development of the *topos* of the "indestructible life", probably due to the literary influences from the ↗*Gädlä sämaʿətat*), or multiple pilgrimages to ↗Jerusalem. Many others hint at the historical (yet poorly known) realities of 14th–15th-cent. central and southern Ethiopia, which was exposed to evangelization after *aṣe* ↗ʿAmdä Ṣəyon I's campaigns. The baptism of Motälämi refers to the adoption of Christianity by the early rulers of Damot; Zeb Däḫar (Conti Rossini 1896: 117, 139) appears to be a noble from ↗Wäǧ (Getatchew Haile in PICES 15, 253f.); for the possible meaning of Mälbärädi, the "capital" of Motälämi, s. EAE vol. 3, 1036, etc. The travels of T.H. may also be to more than random places, alluding to the centres of his cult (like ↗Ḥawzen, formerly the seat of ↗*təgre mäkʷännən*). The versions of the Vita contain mention of historical personalities (cp., e.g., ↗Ros Näbiyat), many representing complex historical issues (like T.H.'s relations to ↗Iyäsus Moʾa, ↗Zena Marqos). T.H.'s role in the re-establishment of the Solomonic dynasty, at least as it is recounted in the *Bəʿələ nägäśt*, appears to be a 17th-cent. literary invention (s. Conti Rossini 1922), yet he did indeed live during the last part of the ↗Zagʷe period.

After T.H.'s death, his veneration, along with the popularity of the DLr, spread following the growth of his monastery's importance. Accordingly, the solemn translation of the saint's relics took place several times, being recorded in various writing (Nosnitsin 2003; the most solemn one, "in a golden sarcophagus", was performed by abbot ↗Märḥa Krəstos and *aṣe* ↗Naᶜod; the last one took place in 19th cent., s. Pankhurst 1994). The popular veneration centred on Däbrä Libanos was remarkable already in the 15th–16th cent., and remains strong until today, interpolating with that of other local saints, especially in the central and some southern parts of Ethiopia (cp. Levine in PICES 2, 211, for Mänz; with more complex historical background for ↗Wälamo/ ↗Wälayyta, s. Tsehai Brhane Selassie 1975). T.H. is one of the few saints to whom such religious associations as ↗*maḫbär* are devoted.

T.H. figures in many other Ethiopian hagiographic texts, in particular those of his closest disciples, the fact reflecting the influence of both his monastery/ "house" (to which many other monasteries were affiliated) and/or his Acts, but only in rare cases – historical events (cp., at least, ↗Zena Marqos, ↗Qäwəsṭos, ↗Anorewos, ↗Yoḥannəs Məśraqawi, ↗Tadewos of Däbrä Maryam).

Many ↗*tabot*s are consecrated in the name of T.H. Apart from the annual feasts of T.H. on 24 *Näḥase*, 24 *Taḫśaś* and 12 *Gənbot*, the Ethiopian Orthodox (Täwaḥədo) Church commemorates T.H. on the 24th day of each month. T.H. is the only Ethiopian saint canonized by the Coptic Church, which commemorates him on 24 *Misrā*, 24 *Kīhak* and 12 *Bašans*.

Täklä Haymanot I

Aṣe T.H. I (**ተክለ፡ ሃይማኖት**, known as *ərgum/ rəgum* ['damned'] T.H.; r. 1706–08) was the eldest son and immediate successor of *aṣe* ↗Iyasu I. His mother was Iyasus's concubine ↗Mäläkotawit.

T.H. came to the fore in 1705 as his father's health radically declined. Although he appears to have favoured T.H.'s younger half-brother, Dawit, in June of that year Iyasu appointed T.H. ↗*bitwäddäd* and withdrew himself from affairs of state. Iyasu spent the rest of 1705 at different sites around Lake ↗Ṭana. In March, 1706, he called T.H. to join him. T.H. consulted with the court notables, most prominently *ras* ↗Fares and *däǧǧazmač* ↗Wäldä Giyorgis of Səmen. They warned him that if he went Iyasu might imprison him on ↗Wähni Amba putting Dawit on the throne instead (BegCron 82), and proclaimed T.H. I emperor. In October 1706 the court pressured the deposed Iyasu to join the imprisoned royal princes at Wähni Amba. On his refusal, Iyasu was murdered by Mäläkotawit's brothers Dərmən (Darmän) and P̣awlos (BassÉt 57–60).

The latter years of Iyasu's reign had been beset by doctrinal controversies in which the ↗*Qəbat* party locked horns with the monks of Däbrä Libanos, who advocated a more conservative Alexandrian position (↗*Täwaḥədo*). These same controversies raged during T.H.'s brief reign and were probably responsible for its violent end.

T.H.'s reign was marked by serious unrest with the appearance of at least three different rebels, such as a false ᶜAmdä Ṣəyon, and a number of plots amongst the court nobles (BassÉt 61; DombrChr 81f., 94). At least some of the unrest was due to his refusal to accommodate *Qəbat* doctrine, a major expectation of many of his initial backers. *Qəbat* monks approached him after his accession, appealing to him to end their exile. He refused, announcing that faith was not a matter to be decided by proclamation, unlike affairs like ↗*rəst* and ↗*gʷəlt* (BassÉt 58). T.H. held another council at which, again, *Qəbat* doctrine was condemned, and gave land in Gorgora to Iyasu's great foundation, and a bastion of resistance to *Qəbat*, the Gondär church of ↗Däbrä Bərhan Śəllase, to support *täzkar* services in his father's memory.

T.H. was assassinated in Agäw Mədər in 1708. He was succeeded by his uncle ↗Tewoflos.

Donald Crummey

Täklä Haymanot II

Aṣe T.H. (**ተክለ፡ ሃይማኖት**, throne name Ṭəbäb Sägäd; r. 1769–77) was the elder son of *aṣe* ↗Yoḥannəs II, the brother of ↗Täklä Giyorgis, who succeeded him on the throne, and the father of ↗Sälomon III. T.H.'s mother was *wayzäro* Abalä Maryam (ms. BritLib Orient. 511, fol. 26).

T.H. was put on the throne by *ras* ↗Mikaˀel Səḥul of Təgray on 17 October 1769 (BlunChr 1). He was the third person to occupy the throne in 1769, following ↗Iyoˀas and ↗Yoḥannəs II, both murdered by Mikaˀel Səḥul. These machinations were the outgrowth of the internecine struggles amongst the Ethiopian nobility, struggles entailing alliances, which shifted with bewildering rapidity. In making T.H. emperor, the most immediate conflict was amongst Mikaˀel, the Oromo uncles of Iyoˀas, and the ↗*Qʷäräñña* faction centring on Məntəwwab (↗Bərhan Mogäsa), Iyoˀas's grandmother. In this power struggle other nobles of Bägemdər and Goǧǧam played supporting roles, but soon stepped centre stage.

For over a year and a half, T.H. was little other than a tool of Mikaˀel Səḥul, to whom he showed public deference. Together they campaigned in Goǧǧam, where, at the Battle of Fageta, they defeated Fasil, a representative of one of the two principal noble lineages of the province. At the beginning of March 1770, T.H. and *ras* Mikaˀel were back in Gondär, having received the obeisance of some of the notables of Bägemdər (BlunChr 8). When the clergy of ↗Azäzo came to salute T.H., he sent them first to Mikaˀel, who had put him on the throne. In May T.H. and Mikaˀel returned to Goǧǧam, where, again they fought with Fasil, then returned quickly to Gondär. With a strong alliance forming against them of notables from Bägemdər and Goǧǧam, they now left for ↗ᶜAdwa, the seat of Mikaˀel's power, taking with them the sacred royal icon, the ↗*Kʷərˀatä rəˀəsu* (BlunChr 12; BruNile III, 477ff.). At this point T.H.'s own retinue was reduced to his immediate circle of relatives and intimate supporters. While Mikaˀel and T.H. passed the rains of 1770 in Təgray, the conspirators entered Gondär and proclaimed as emperor a certain Susənyos. Late in December T.H. and Mikaˀel returned to Gondär, where they chased out Susənyos and suppressed dissidence with great severity (BlunChr 18; BruNile IV, 59–82). However, Mikaˀel was soon to be brought down by an alliance between *däǧǧazmač* ↗Wänd Bäwäsan and *däǧǧazmač* ↗Goššu, following a succession of battles at ↗Sarbakusa, to the south-east of Gondär (BlunChr 18f.; BruNile IV, 110–204). At the very end of May 1771, the rebels invested Gondär and imprisoned Mikaˀel, whom they sent back to Təgray in chains.

T.H. survived the overthrow of his protector by another six years. He resisted becoming the tool of Wänd Bäwäsan and in this he was supported by an alliance of Fasil, Wänd Bäwäsan's former ally, Goššu, and ↗Ḫaylu Ǝšäte, who restored T.H. to Gondär (BlunChr 85). At this point the dating of events becomes vague. T.H. managed successfully to repel one attempt by Wänd Bäwäsan to put T.H.'s brother, ↗Täklä Giyorgis, on the throne. However, T.H. eventually managed to alienate Ḫaylu Ǝšäte, now one of his principal supporters. Ḫaylu Ǝšäte joined with *ras* ↗Ḫaylu Yosedeq of Goǧǧam. They marched on Gondär in 1777 and this time T.H. withdrew to the monastery of ↗Waldəbba, "preferring the kingdom of heaven" to his earthly kingdom (BlunChr 88), where he apparently died soon after.

The reign of T.H. is one of critical transition away from the active monarchy of ↗Bäkaffa, ↗Iyasu II and ↗Iyoʾas towards the ↗*Zämänä mäsafənt*. T.H.'s brother and successor, Täklä Giyorgis, was known as **ፍጻሜ፡ መንግሥት** (*Fəṣṣame Mängəśt*, 'Ender/Fulfiller of the Kingdom'), but T.H.'s own reign presaged much that was to occur under his brother.

Our information about T.H. is curiously skewed towards the beginning of his reign. The chronicle (BlunChr), which gives us the most coverage of the reign, is, in many ways, more concerned with *ras* Mikaʾel and then with *däǧǧazmač* Ḫaylu Ǝšäte. James ↗Bruce, who visited Ethiopia in 1770 and 1771, provides us the greatest detail. He met T.H. and provides a vivid, if eurocentric, view: "He was a prince of a most graceful figure, tall for his age, rather thin, and of the whitest shade of Abyssinian colour […] His features, even in Europe, would have been thought fine. He was particularly careful of his hair, which he dressed in a hundred different ways. Though he had been absent but a very few months from his native mountain, his manners and carriage were those of a prince, that from his infancy had sat upon an hereditary throne. He has an excellent understanding, and prudence beyond his years" (BruNile II, 709f.).

T.H. was also active, as had been his predecessors, in the granting of land. Many, if not most, of these grants, involved church lands, some specified as ↗*rim*, some as ↗*gʷəlt*. At least two of his grants were in support of the founding of churches by noblemen (BritLib Orient. 745, fol. 225; Orient. 777, fol. 284). His major foundation was the church of Gondär Däbrä Ṭəbäb. The founding document is testified to by nine different copies, the fullest of which would appear to be in a manuscript copy of the ↗*Nägärä Maryam* (BritLib Orient. 604, fol. 4; CrumLand 145, 297 n. 4).

Donald Crummey

Täklä Haymanot

Ǝč̣č̣äge T.H. (**ተክለ፡ ሃይማኖት**; b. Təgray, d. 24 May 1755) was the head of the community of ↗Däbrä Libanos (of Šäwa) at ↗Azäzo four times, in 1710–11, 1718/19–24, 1728–32/33, and in 1740, under four successive emperors (Rossignol 2004: 125 but s. CerDLib III, 171). At other times he probably lived in a monastery on ↗Daga island of Lake ↗Ṭana (BegCron 100, 119).

T.H. was first appointed *əč̣č̣äge* on 3 April 1710, after a vacancy of a year and six months (Raineri 1992: 229; BegCron 92, 94). He was dismissed for unclear reasons under *aṣe* ↗Tewoflos on 26 August 1711 (BegCron 94). He was reappointed under ↗Dawit III, in ca. 1718/19, but soon dismissed by the monks of his community (BegCron 111; GuiIohan 307 [tr.]). He was again in office from 30 October 1728 (under *aṣe* ↗Bäkaffa) until 1732/33 when he was dismissed by *aṣe* ↗Iyasu II. Finally he was reappointed on April–May 1740 (BegCron 119; GuiIyas 32 [tr.]). It is not known how long he remained in charge that time, but he was no longer in office when he died in 1755. At that time the head of the community of Däbrä Libanos was probably *əč̣č̣äge* Ewosṭatewos (ca. 1736–37, ca. 1754/55–29 May 1756), who may already have been in office or who perhaps succeeded T.H. upon his withdrawal and death (GuiIyas 174 [tr.]).

T.H.'s successive appointments and dismissals seem to have been the result of hostility and discord between the monks of the community of Däbrä Libänos and the various emperors. His good relationship with Bäkaffa (witnessed by a manuscript in which he is styled "brother" of the Emperor, CerDLib III, 151; Ḫəruy Wäldä Śəllase 1926/27: 248) may have been a source of tension between T.H. and the monks.

T.H. participated in the theological controversies between the ↗*Täwaḥədo* and ↗*Qəbat* parties, as his position of *əč̣č̣äge* required, supporting the *Täwaḥədo* party.

T.H. was buried in Azäzo Täklä Haymanot (GuiIyas 174), at that time the most important monastery of the "network" of Däbrä Libanos.

Elsa Rossignol

Täklä Haymanot

Nəguś T.H. (**ተክለ፡ ሃይማኖት**, birth name: Adal Ṭäsämma, horse name: Abba Ṭena; b. ca. 1850, Ǧabi Ṭähnan, Däga Damot, d. January 1901, Däbrä Marqos) was a notable of ↗Damot and ↗Goǧǧam proper who dominated the political arena in his home region in the last quarter of the 19th cent. He apparently did not aspire to the Imperial throne, and, hence, served instead as a vassal to the emperors *aṣe* ↗Täklä Giyorgis II, *aṣe* ↗Yoḥannəs IV and *aṣe* ↗Mənilək II. His descendants also dominated the gubernatorial office of the region for decades after his death.

T.H., originally known as *ləǧ* Adal, was the son of *däǧǧazmač* Täsämma Goššu (G^{w}alu, according to some sources; a native of Damot and a descendant of *ras* ↗Ḫaylu Yosedeq) and *wäyzäro* Məʾəllad Wäldä Səʾul. No mention is made of his siblings, if he had any. Little is known about his early life and education, except that his father died while Adal was young, and that he was brought up by a relative. When, towards the end of *aṣe* ↗Tewodros II's reign, the political stability of the country was shaken, Adal bid for power in his native region by rebelling against his foster parent, *däǧǧazmač* ↗Tädla G^{w}alu, the appointee of Tewodros II. Both Tädla and Tewodros died soon thereafter, but the struggle for power continued with their successors. Adal finally submitted to *aṣe* Täklä Giyorgis who appointed him ↗*ras*, confirmed him as governor of the whole of Goǧǧam and gave him his sister, *wäyzäro* Laqäč, in marriage. Unlike many of his contemporaries who frequently adjusted their private life to the prevailing political circumstances, T.H. sustained this connubial union to the end of his life.

Nəguś Täklä Haymanot of Goǧǧam; from Pankhurst – Gérard 1996: 52

The reign of Täklä Giyorgis was cut short by Kaśa Mərča (later *aṣe* Yoḥannəs IV) who had granted asylum to *ras* ↗Dästa Tädla, the rival of Adal. After the coronation of Yoḥannəs IV in 1872, Dästa was reinstated and Adal rebelled again. He defeated and killed his rival about two years later, and subsequently submitted to *aṣe* Yoḥannəs through the mediation of the clergy. The sovereign appointed him governor of Goǧǧam and ordered him to quell rebellions in ↗Bägemdər and ↗Səmen. *Ras* Adal was successful in his assignment, and Yoḥannəs rewarded him with a gift of ↗firearms, encouraging him to expand his governorate south of the ↗Abbay. Adal sent his military commander, *däǧǧazmač* (later *ras*) ↗Däräso Ṭäbo, and subdued ↗Guduru, Hooroo, ↗Leeqa, western ↗Wälläga and the ↗Gibe kingdoms. In January 1881, Yoḥannəs crowned him *nəguś* T.H. of Goǧǧam and ↗Käfa at Sämära. The addition of Käfa (which was not yet under his control) meant on the one hand an encouragement to continue the conquest, or retrieval, as Yoḥannəs would have liked to conceive it, and on the other hand a confirmation of T.H.'s family claim to have descended from the royal house of Käfa. Mənilək, who had a similar plan of conquest and who now felt encircled by a neighbouring power, was disturbed by T.H.'s success and an open conflict ensued. Mənilək sent his Oromo general, *ras* ↗Gobäna Dač̣i to the Gibe region to confront *ras* Däraso in Limmuu, and the latter withdrew to Goǧǧam without fighting. The conflict culminated at the Battle of ↗Ǝmbabo (1882), in which T.H. was wounded and taken captive by Mənilək. In the peace negotiation that followed, under the auspices of Yohannəs IV, T.H. lost much of his conquest to Mənilək, but he regained most of his captives and weapons. He was reinstated as governor of Goǧǧam and Damot, excluding ↗Agäw Mədər which was temporarily given to *ras* ↗Alula Ǝngəda.

During the peaceful years of his rule, T.H. dedicated his efforts to the development of his governorate. He encouraged and subsidized skilled people, particularly local craftsmen. He was also interested in the development of trade and communications throughout his dominion which he eventually expanded westward to ↗Mätäkkäl and the neighbouring areas. In so far as Goǧǧam was scarcely visited by foreigners, T.H. had less access to Western innovations than Yoḥannəs and Mənilək. However, in 1880–81, he authorized the Italian traveller, Gustavo ↗Bianchi, to construct a bridge for him over the Abbay. Bianchi drew a plan, for which the King secured the release of Antonio ↗Cecchi, who had been detained by the Queen of ↗Geeraa. Later he employed Augusto ↗Salimbeni to build a bridge over the Tämč̣a River, some 45 km north of ↗Däbrä Marqos, and took part in the construction himself in order to encourage his people. He also built many churches, the most famous being that of St. Mark at Däbrä Marqos, after which the capital, Mänqorär, was renamed. His administration in general was efficient and just, qualities which made him popular in Goǧǧam both during his lifetime and afterwards.

His reign, nevertheless, hardly enjoyed peace for long periods of time. In the late 1880s, ↗Mahdist forces from the ↗Sudan encroached into south-western Ethiopia, and Yoḥannəs commanded T.H. to defend Bägemdər. He checked the invasion in 1886–87, but was defeated when a new force came in 1888–89. One of his daughters, Məntəwwab, was taken captive and subsequently died in the Sudan under dubious circumstances. ↗Gondär was burnt down by the invaders. Yoḥannəs blamed T.H. for this and authorized Mənilək to fight the Mahdists. Mənilək simply held a military parade in Bägemdər and returned home via Goǧǧam where he incited T.H. to rebel against Yoḥannəs, as a result of which the sovereign devastated Goǧǧam before he marched onto ↗Mätämma.

After the death of Yoḥannəs at Mätämma in March 1889, T.H. surrendered himself to Mənilək who had declared himself the King of Kings of Ethiopia. T.H. was confirmed in office and remained loyal for the rest of his life. He participated in the conquest of Käfa in 1891 and 1897–98 as well as in the campaign of ↗ᶜAdwa. *Aṣe* Mənilək expressed his appreciation by recrowning him in 1894.

T.H. died of illness and was buried at his capital, Däbrä Marqos. He was survived by his wife, *wäyzäro* Laqäč, three sons – *ras* ↗Bäzzabbəh who had married a granddaughter of Mənilək, ↗Zännäbä Wärq Mikaᵓel, *däǧǧazmač* Bäläw who was frequently in conflict with his father, *däǧǧazmač* Śəyyum who eventually styled himself *ras* ↗Ḫaylu Täklä Haymanot – and a daughter, *wäyzäro* Nəgəśt. The first and the third sons governed Goǧǧam in the first three decades of the 20th cent., but neither of them was nearly as popular as T.H.

Täklä Haymanot

Abba T.H. (**ተክለ፡ ሃይማኖት**, b. ca. 1822, Memsah, near ^{c}Adwa, d. 4 January 1902, Ḥalay) was a Catholic priest. His father was a *qeši* (↗*qäsis*) of the Ethiopian Orthodox Church attached to the church of Maryam Šewito, eight km north-east of ^{c}Adwa. Among the companions of Giustino De ↗Jacobis there were two with the same name: T.H., "The Elder", who was instrumental in obtaining land for De Jacobis at ↗G^{w}al^{c}a, and T.H. "The Younger", who referred to himself as "The Writer", and who is the subject of this entry.

T.H. first met De Jacobis at the Mädḫane ^{c}Aläm church in ^{c}Adwa. He eventually became his associate and followed him to G^{w}al^{c}a. After completing further theological studies he was ordained a Catholic priest of the Ethiopian rite at G^{w}al^{c}a by Guglielmo ↗Massaja in early 1847.

In 1848 T.H. was appointed to go to Gondär with Giovanni ↗Stella and he repeated the journey on 19 May 1851 in the company of Fr. Biancheri with the intention of delivering a letter from Pope Pius IX to *ras* ↗Ali Alula approving the use of the Gə^{c}əz rite by Catholic priests. When writing in January 1853 De Jacobis mentioned that he had just received from T.H. a treatise on the Sacraments from T.H. and also an Ethiopian Gə^{c}əz Ritual.

When *abunä* ↗Sälama and *aṣe* ↗Tewodros II stepped up the persecution of Catholics, T.H. was arrested with others on 15 July 1854 and on 28 July he was put in the *gənd* and deprived of food and water. After almost a year he was released, thanks to foreign intervention, and returned to ↗Ḥalay on 14 August 1855.

T.H. showed his loyalty to De Jacobis's methods and refused the new catechism, hastily introduced by the succeeding bishop Mgr. Pierre-Louis ↗Bel. This earned him suspension from his priestly duties in 1867. Later he was reinstated by Mgr. Touvier and appointed a member of the commission headed by Jean-Baptiste ↗Coulbeaux that published the Catholic Gə^{c}əz Missal (*Mäṣḥafä* ↗*qəddase*) in 1890 at Kärän. Later, T.H retired to Ḥalay where he wrote in Amharic the biography of De Jacobis.

Kevin O'Mahoney

Täklä Haymanot

Abunä T.H. (**ተክለ፡ ሃይማኖት**, given name Mäk^{w}əriya, later Mälaku; b. 18 September 1917, Maḫdärä Maryam, Gondär, d. 4 June 1988, Addis Abäba) was the third Patriarch of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC).

T.H. was born to Wäldä Mika^{ɔ}el Wändəmmu and Zäwditu Kaśa in Gondär. Upon his father's death, Zäwditu returned with the child to Bəč̣äna where T.H. started his traditional church education at Yäräz Mika^{ɔ}el church. He then went to Maḫdärä Maryam and served as a ↗*diyaqon* until deciding to become a ↗hermit.

In 1933/34 he went to Däbrä Mänkərat Täklä Haymanot in Wälaytta (Märša Alläk̲äññ 2004: 63). There he changed his name to Mälaku and started the strict spiritual exercises as a hermit under the close scrutiny of *abba* Dästa. He continued his church education (↗*Mäṣḥaf bet*) under abbot *mämhər* Wäldä Iyäsus, and took the monastic order in the same monastery. He was ordained priest under *abunä* ↗Qerəllos in Addis Abäba. Because of his calligraphic skills he became the monastery's scribe. Most of the manuscripts kept at Däbrä Mänkərat were copied by T.H.

T.H. was active in evangelizing Wälaytta but also supported the local community in getting access to modern infrastructure. His popularity made him one of the five candidates selected to replace the forcibly removed, and later executed, second Patriarch of the EOTC *abunä* ↗Tewoflos.

T.H. was appointed Patriarch on 31 August 1976. His ordination was condemned by the

Abunä Täklä Haymanot during a visit in Aksum; photo courtesy of St. Mary Photo, Aksum

Coptic Church, the All Africa Conference of Churches and the World Council of Churches. Though presumed by many, including the ↗Provisional Military Administrative Council, to be unlearned and easy to manipulate, T.H. turned out to be a true religious leader who resisted the anti–Church politics of the *Därg*. He revised the Parish Council and Sunday School structures in the churches of the country. He also opened six training centres for clergy in different regions of the country to provide the EOTC with young leaders and scholars. He increased the number of dioceses and ordained 28 new bishops. During his period the EOTC opened 36 orphanages. Children who were reared there became traditional scholars who would later hold leading church offices.

In 1986, while laying the foundation for a new church at Däbrä Mänkərat Täklä Haymanot, T.H. fell ill. He was hospitalized in Ṭor Ḫayločč hospital in Addis Abäba he finally died. T.H.'s funeral on 6 June 1988 at the ↗Qəddəst Śəllase Cathedral in Addis Abäba was attended by high level church and state officials. A monument was erected at the Qəddəst Śəllase cemetery.

Mersha Alehegne

Täklä Iyäsus Waqǧəra

Aläqa T.I. (**ተክለ፡ ኢየሱስ፡ ዋቅጅራ**, also known as Täkle; b. 1867/68, Albasa, Kutay, d. 28 February 1936) was a church educated artist, historian and genealogist who flourished under the patronage of *nəguś* ↗Täklä Haymanot of Goǧǧam.

He was born as Nagaroo to Oromo parents, Waaq Ǧera and Galanee. At the age of seven he was captured in a raid conducted by *däǧǧazmač* Yälemtu Goššu, and grew up in his captor's home at Däbrä Ṣəmmuna, eastern Goǧǧam. He was baptized there as T.I. and learnt Amharic. He received a traditional church education at ↗Dima Giyorgis, and became a highly skilled deacon and traditional artist. He went into *nəguś* ↗Täklä Haymanot's service in 1889 and worked with the master painter *aläqa* Ḫaylu on murals, illuminations and engravings in the palace as well as in the churches and monasteries of Goǧǧam, including Dima Giyorgis, ↗Däbrä [Śäḥay Qəddus] Marqos and Ṭamayit Giyorgis. Toward the end of the 1890s, he was made an *aläqa* over ṣəd Maryam.

In 1896/97, after eleven years of research, he completed his first major work, *The Genealogy of* [*the Peoples of*] *Goǧǧam*, a unique and highly interesting document. Täklä Haymanot's death in 1901 deprived him of a generous patron. *Ras* ↗Ḫaylu Täklä Haymanot had him jailed briefly, having used him to forge a seal of one of his father's officials. Ignored and frustrated, and suffering, by then, from a malady which affected his sight, T.I. appeared to have abandoned painting and engraving. He dedicated himself to writing the *Chronicle*, covering the entire period of Ethiopian history, paying greater attention to events in Goǧǧam from the time of *ras* ↗Ḫaylu Yosedeq until 1925.

T.I. was laid to rest in Däbrä Śäḥay Qəddus Marqos, where many of his paintings, illuminated manuscripts and engraved holy vessels form part of the treasures of the church.

T.I. wrote in the style of traditional narrative ↗historiography, focusing on leading actors, with their changing fortunes explained by means of destiny or divine intervention; he employed a language akin to the ↗Historical books of the Bible. His *Genealogy* and *Chronicle,* however, were not commissioned works, and as such are remarkably free from flattery and vain praise of his royal patron, as well as from self-censure.

A fuller account of his life and works will have to wait for a proper assessment of his artistic output along with critical editions of his literary works.

Girma Getahun

Täklä Maryam

T.M. (**ተክለ፡ ማርያም**, regnal name Ḥəzbä Nañ; r. 1430–33) was a younger brother of *aṣe* ↗Yəsḥaq.

After Yəsḥaq's death in 1430, a troublesome period began. He was first succeeded by his son ↗Ǝndrəyas, but the latter only stayed in power for a few months. According to the contemporary Arab historian al-↗Maqrīzī, another son of Yəsḥaq, Sälomon (may be his regnal name) briefly succeeded Ǝndrəyas. Eventually, power was assumed by T.M.

According to some versions of the "short chronicles" (BassÉt I, 12; BegCron 12), T.M. was the third son of *aṣe* ↗Dawit II and reigned for four years. Another version (DombrChr 155) states that T.M. and his son ↗ʿAmdä Iyäsus reigned for five years (this narrative omits T.M.'s other son and probable successor ↗Śərwä Iyäsus). A version from Gondär claims that T.M. and his two sons reigned for five years. The differences between the versions, though not necessarily contradictory, reveal a certain uncertainty in the historical recollection of succeeding generations, and the confusion during and particularly after T.M.'s rule.

T.M. is associated with the church of Däy Giyorgis next to Däbrä Bəsrat in ↗Morät, Šäwa (Chojnacki 1969: 45, 47f.). It was probably a royal foundation of this ruler, a theory which appears to be confirmed by the still visible ruins, comparable to those of other churches of this type such as ↗Mäkanä Śəllase and the old ↗Märṭulä Maryam.

Marie-Laure Derat

Täklä Maryam Sämharay Sällim

Abba T.M. (**ተክለ፡ ማርያም፡ ሰምሃራይ፡ ሰሊም**; b. 23 August 1871, Kärän, d. 30 November 1942, Rome) was an important Eritrean Catholic scholar.

His parents, Sämharay Ṣəllim and Ḥəyar Däbrom, came to Kärän from Šeb Sälläba, near ↗Däbrä Sina, to the east of the city. In 1883 T.M. joined the Catholic Seminary of Kärän, established by Vincentians in 1869. There he was influenced by the prominent defender of the Gəʿəz Catholic rite *abba* Täklä Haymanot Täkläzgi, the linguist *mämhər* ↗Kəflä Giyorgis of Ankobär, and the language teacher Stahl (OMahPh 219). At the same time, T.M. studied printing at the Lazarist ↗printing press, established in Kärän in 1878/79.

On 27 May 1893 T.M. was ordained in Kärän by Jean Crouzet and became parish priest in Ḥalib Mänṭal.

In 1894 the French missionaries were replaced by the Italian ↗Capuchins. T.M. returned to Kärän taking up teaching at the Seminary and resuming editorial work for the former Lazarist printing press, being the only person who knew how to use it. T.M. provided technical and editorial assistance for the publication of numerous books including the first Catholic version of the ↗Psalter, the translation from Italian of the *Le figlie di Maria* (**ናይ፡ ደቂ፡ ማርያም፡ መጽሐፍ**, *Nay däqqi Maryam mäṣḥaf*). During this period he also produced his book of ↗*Säwasəw*.

T.M. was an active missionary who introduced ↗Catholicism in his native area Šeb Sälläba, Robto, and served at the ancient Church of Mägarəh and Bämbi. In 1899, T.M. was the delegate of the Vicariate of Eritrea to the worldwide exposition hosted in Turin, Italy.

In 1910, the Apostolic Prefect Michele Carbonara transferred T.M. to ↗Jerusalem with the position of rector and chaplain for the Catholic Gəᶜəz rite pilgrims to the Holy Land. T.M. established contact with the Ethiopian Orthodox monks of ↗Dayr as-Sulṭān, which helped him deepen his knowledge of the Liturgy in relation to other Oriental Churches. At this time, T.M. took an active stance for the purification of the Gəᶜəz rite from Latin influences, criticizing Coulbeaux for introducing Latin passages in his 1890 Gəᶜəz translation of the Missal (*Mäṣḥafä ↗qəddase*). He compared the current Catholic Gəᶜəz Missal with the texts contained in the Ethiopic and Copto-Arabic manuscripts in Jerusalem and demanded "purification of liturgical texts", deleting Latin insertions and making only very few dogmatic corrections to the Ethiopian text.

T.M. actively assisted the Ethiopian Orthodox community of Jerusalem during the dispute for the ownership of the holy places. He provided the results of his research on the ownership rights to *ṣäḥafe təᶜəzaz* ↗Gäbrä Śəllase when he was on a pilgrimage to Jerusalem in 1921, and to Empress ↗Mänän, when she came accompanied by Gäbrä Śəllase and *blatta* ↗Ḫəruy Wäldä Śəllase in 1922.

In 1927 T.M. was sent to Rome, being replaced in Jerusalem by *abba* Täklä Maryam Kaḥsay. From September 1927 to May 1933 T.M. taught at ↗Santo Stefano dei Mori. During this period he continued to promote the idea of intensifying Catholic efforts in Eritrea (cp. his letter to the ↗Sacra Congregatio pro Ecclesiis Orientalibus of 28 June 1929). However, his presence was inconvenient for the Capuchin friars. As a result of tensions, he left Rome for France on 11 July 1933. Until 1936, when he returned to Rome to teach Gəᶜəz and Amharic at the University of Rome, he served as a chaplain for the Catholic community in Paris. During his stay there, he consulted manuscripts of the ↗Bibliothèque Nationale and wrote his findings in the manuscript **ጦማሬ፡ ፓሪስ** (*Ṭomare Paris*, 'The collection of Paris').

T.M.'s research and teaching paved the way for many students to better understand the liturgical identity of Ethiopians and Eritreans. The late Eparch of Eritrea *abunä* Abrəha Francis was one of his last disciples.

Uqbagaber Woldeghiorghis

Täklä Näbiyat ↗Stephanites ↗Gundä Gunde

Täklä Ṣadəq Mäkʷəriya

T. (**ተክለ፡ ጻድቅ፡ መኵሪያ**, b. 11 September 1913, Asagərt, near Ankobär, d. 23 July 2000, Addis Abäba) was an eminent scholar, prolific Ethiopian historian and a statesman. He received a church ↗education at Rufaʾel Church in Gullallee, Addis Abäba, where his father, *märigeta* Mäkʷəriya Gulte, was a ↗*däbtära*. He then began to work as a private secretary for *bitwäddäd* ↗Wäldä Ṣadəq and at the age of 19 entered into an arranged marriage with *wäyzäro* Kassaye Dästa. In pursuit of a modern education he studied for three years at the Täfäri Mäkʷännən School. During the Italian occupation (1936–41) T. was held in Danane prison camp in Italian Somaliland for over two years.

After the liberation T. joined Ḫaylä Śəllase I's government. Fluent in Italian, at the Ministry of Education, he was assigned to translate Luca ↗Pietromarchi's *Storia di Abissinia* (Rome 1936–38). In 1945, he was promoted to the post of Secretary General of the Ministry of Education. In 1952 he was appointed First Secretary at the Ethiopian Embassy in Paris after which he carried out research at the ↗Bibliothèque Nationale.

In 1945/46 he published the first volume of his opus magnum on Ethiopian history, which was to cover from Aksumite times up to the reign of *aṣe* ↗Tewodros II (TSTarik I–IV).

In the 1960s T. worked as Consul General in Jerusalem and as Ambassador in Yugoslavia and in the same decade published four studies written in French. In the 1970s he returned to Ethiopia as Minister of State of the Antiquities Administration. He was also the chairman of the committee charged with drafting the second volume of the Emperor's autobiography (HSLife [Amh.], vol. 2).

After the Ethiopian ↗Revolution of 1974 T. was appointed Minister of Culture, Sports and Youth, and later chairman of the conference for drafting a new constitution. Still, disappointed with the ↗Provisional Military Administrative Council, he retired from civil service in December 1974 and devoted his time to various initiatives he considered valuable: he contributed to UNESCO's *General History of Africa* and took an active part in the International Conferences of Ethiopian Studies. T. carried out research in the National Archives of France, Britain, Italy and the United States of America. His studies resulted in a trilogy on the reigns of Emperors Tewodros II, ↗Yoḥannəs IV and ↗Mənilək II written in Amharic.

T. presented the history of his nation from an Ethiopian rather than Eurocentric point of view. Renowned for his mastery of Amharic, he wrote in a clear and comprehensible language which made his writings ideally suited for school education and very popular in Ethiopia. He left an unpublished biography.

Ewa Wołk

Täklä Śəllase

Ṣäḥafe təˀəzaz T.Ś. (**ተክለ፡ ሥላሴ**, fl. 1612–38, d. 9 March 1638) was a royal chronicler. Of Oromo origin, he was also known by his Oromo nickname "Ṭino", which referred to a person of small stature (PerChron 160). According to the "short chronicles", at the end of Śärṣ́ä Dəngəl's reign T.Ś. was, together with a certain Abib, the head of a group of priests who were famous for their practice of ↗*qəne*. The other priests were Maᶜəqäbo, Asbe, Zäpäre, Nəway, Näbaro and Sänkoräs (BegChron 40).

It is not known when T.Ś. joined Susənyos's camp. He was already the Emperor's principal secretary when ↗Śəᶜəlä Krəstos converted to Catholicism, which occurred towards 1612 (BecRASO III, 432; also VII, 277; XI, 283; Pennec 2003:222 and note 119). According to Esteves Pereira, however, he took up his duties as *ṣäḥafe təˀəzaz* only in July 1619 (PerChron XVIII).

Of great intelligence, T.Ś. was the Emperor's counsellor and intimate friend (BecRASO III, 374; VII, 393; PerChron 69). He was also befriended by the Jesuit fathers (↗Jesuits) and became one of their principal informants at court (BecRASO II, 15; III, 374, 386, 432; VI, 229, 299, 309). T.Ś. was one of the staunchest supporters of Catholicism and the friend of such pro-Catholic figures as Śəᶜəlä Krəstos, ↗Bukko and ↗Qəbᶜa Krəstos (BecRASO III, 386; VI, 333f.; VII, 393; XI, 468, 474; XIII, 175, 400).

As official royal historiographer, T.Ś. accompanied the Emperor during his journeys and stayed in his *kätama* during the rainy season. He might have been the author of the greatest part of the royal chronicle, from ch. 23 to ch. 79 ca., thus continuing the first part written by ↗Məhərka Dəngəl until he was replaced by a third chronicler (cf. Toubkis 2004: 107–34). In the text, he has his own voice independent from the Emperor and relies on his own testimony (PerChron 160, 174).

T.Ś. gave up his duties towards 1628–29 and retired to Təgray together with Qəbᶜa Krəstos (PerChron XXII). According to Manoel de ↗Almeida, he was dismissed from office at the instigation of the anti-Catholic Ləssanä Krəstos (BecRASO VII, 3). After the Emperor had seized his property, he went into exile in ↗Fogära where he lived with some priests that were in hiding there (BecRASO XIII, 69; on his death, cf. BecRASO VI, 396; VII, 209; XIII, 400; PerChron XXIV).

Täklä Ṣəyon ↗Saints, local

Täklä Ṣəyon Ǝnyäw

Aläqa T.Ṣ. (**ተክለ፡ ጽዮን፡ እንየው**; b. 1820, Ḥarr Amba, Šäwa, d. 1881, Jerusalem) was a famous 19th-cent. ↗*andəmta* scholar.

T.Ṣ. studied under different masters of traditional ↗education including *arat ᶜayna* Goššu of Goğğam (cp. ↗*Mäṣḥaf bet*, ↗Moṭa Giyorgis).

T.Ṣ. was a known advocate of the *Sost lədät* doctrine (↗*Ṣägga*) which led to his persecution under ↗Tewodros II and ↗Yoḥannəs IV, and his excommunication by *abunä* ↗Sälama [III] in Gondär (BTafA 64). T.Ṣ. refused, however, to take an active part in the council of ↗Boru Meda in 1878 and argue with his adversaries when he learnt that Yoḥannəs IV had nicknamed him "Täklä Ləyon" (lit. 'the plant of Leo [i.e. Leo I, the pope of Rome, 440–61]'; Mängəśtu Lämma 1966/67: 154f.); and T.Ṣ., offended, withdrew.

T.Ṣ. took the monastic vow at the monastery of Däbrä Dəmaḥ in Goğğam (↗Dima Giyorgis). According to *aläqa* ↗Lämma Ḫaylu's reminiscences, T.Ṣ. took the monastic order without accepting the ↗*Täwaḥədo* doctrine and dropping *Sost lədät*, only in order to obtain the trust of the community and gain access to the monastery's famous collections (Mängəśtu Lämma 1966/67: 159).

In the late 1860s, *nəguś* ↗Mənilək invited T.Ṣ. to Šäwa and appointed head of the St. George church at ↗Fəqre Gəmb, near Ankobär. There he met Guglielmo ↗Massaja (BTafA 66). This meeting probably made him more open to Catholic doctrine. T.Ṣ.'s pro-Catholic position eventually led him to be rejected of the majority of traditional church scholars. T.Ṣ. eventually fled the country and went to ↗Jerusalem where he died and is buried.

T.Ṣ. is cited as one of the informants of his nephew ↗Aṣmä Giyorgis Gäbrä Mäsiḥ for the latter's *Yägalla tarik* (BTafA 68).

Mersha Alehegne

Täklil: Mäṣḥafä täklil

The M.t. (**መጽሐፈ፡ ተክሊል**, 'Book of Crowning') is the ritual of ↗matrimony of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC). Its title is due to the fact that bride and groom wear crowns during the ↗wedding ceremony.

Manuscripts of M.t. are extremely numerous, cf., e.g.:

CRAbb II, 462, no. 72 (d'Abbadie 213), fols. 1r–20r; HamSixBerl 226, no. 119 (orient. quart. 999), fols. 3r–33v; WrBriMus 93, no. 137 (Orient. 550), fols. 48–56; 94, no. 139 (Orient. 788), fols. 51–62; GrébGriaule I, 172f., Éthiopien 335 (Griaule 31), fols. 33r–61r; EMML I, 31, no. 31, fols. 159r–192v; I, 53, no. 48, fols. 75r–99r; II, 232, no. 502, fols. 3r–23r; II, 261, no. 528, fols. 26r–43v; II, 425, no. 669, fols. 54r–63v; III, 186, no. 864, fols. 76r–89v; etc.

Guidi (GuiSLett 75) dates the composition of the M.t. tentatively to the 17th cent., at least in its present form. Studies on the textual history of the M.t. are missing.

The M.t., as it has been edited by the Patriarchate of the EOTC, consists of three parts, corresponding to the three parts of the rite. The first part, for the Service of Betrothal (**ሕፅዓት**, *ḥəṣ́ᶜat*; the rite is also known as **ሥርዓተ፡ ፍኅረት**, *Śərᶜatä fəḫrät*, lit. 'Rite of Betrothal'), is composed of six "commandments" (**ትእዛዛት**, *təʾəzazat*). In this part, the bride and the bridegroom confirm their voluntary agreement to marry in front of the priest and the public and exchange testament rings (for prayers, s. the entry on Matrimony: Service, part I, 1–16). The second part, the Service of Matrimony (**ከብካብ**, *käbkab*), contains the reading for the rite celebrated on Sunday after the matins (s. ibid., part II, 25–27). The third part is the actual rite of the Holy Matrimony (**ሥርዓተ፡ ምሥጢረ፡ ተክሊል**, *Śərᶜatä məśṭirä täklil*, lit. 'Rite of the Mystery [i.e. 'Sacrament'] of Crowning', s. Matrimony, ibid. 29–39, for the list of prayers).

The M.t. in the edition of the EOTC (1964, 2001/02) also includes the **ጸሎተ፡ መዐስባን** (*ṣälotä mäᶜassəban*, lit. 'prayer for widow[er]s/divorced', also referred to as **ጸሎተ፡ ሰብሳብ፡ ካልእ** …, *Ṣälotä säbsab kaləʾ* 'prayer for the second marriage'), which is the rite for remarriage.

Stefan Weninger

Täklo ↗Täklä Haymanot

Täkʷəlädäre

T. (**ተኰለደሬ**, also Täkulädäre, Tähuladäre) is a highland territory in southern ↗Wällo, to the west of Lake ↗Ḥayq, located between the mountains of Ambassäl and the escarpment of Wärrä Babbo. T. is an area where three rivers have their sources: the Bäšəlo (watershed of the ↗Nile), the ↗Millee and the Borkänna (watershed of the ↗Awaš). Two lakes, Ḥayq and Ardibo, are also found in T. (for location s. map for Tänta). It is situated in the altitudinal zone of ↗*wäyna däga* (ca. 1,800 m A.S.L.). The area is hilly, slopes are soft and soils fertile. Being propitious for cultivation, T. is a very densely populated area. Nowadays T. is a *wäräda* of South Wällo zone of the Amhara *kəlləl* with a population of 117,856 (CSA 2008) inhabitants. Its main town is Ḥayq.

According to local traditions corroborated by ↗Aṣmä Giyorgis, this territory owes its name to a certain Täkle or Täklu, originating from Därha, in Bägemdər (BTafA 383). He is alleged to have been a priest who was sent by *aṣe* ↗Susənyos (presumably in 1622 after a campaign in Angot) to protect Christian communities around Lake Ḥayq. Johann Ludwig ↗Krapf recorded a similar tradition: "T. is said to have derived its name from a priest called Teclo, […] principally feared for his magical reputation, the country was called Tehooladere. Adare is for adara [*addärä*] – he rested, passed his time" (IsKrapf 419). According to traditions, this eponymous person and his successor called Ǧari founded the local ruling family of the Arreločč.

The Arreločč chiefs are remembered in the collective memory for having received several groups of Oromo migrants (such as Wärrä Wayyu, Wärrä Ṭayyä, Wärrä Babbo) granting them land and allying with them. Amongst the last migrants to settle in T. were the ↗Mammädočč, who would later rebel against the Arreločč and become the main local power in Wällo. In the 1830s, the hegemonic ambition of ᶜAli Marəyye, the chief of T., were thwarted by a coalition of neighbouring chiefdoms which supported his rival Amäde "Abba Šawol" who then took over power. The population of T. was decimated by this conflict, and, in the following years, by a cholera epidemic and a famine (IsKrapf 398–401). Then, T. came under the domination of the Mammädočč of ↗Wärrä Himäno and followed the process of integration of Wällo into the Christian Ethiopian kingdom.

Eloi Ficquet

Talbot, David Abner

T. (b. late 1910s, British Guiana, d. 1988, Addis Ababa) was a journalist, writer, editor and a staunch Pan-Africanist, active in the United States and Ethiopia. As a young man he migrated from British Guiana to the United States where he graduated from the University of New York. There he associated with African students, edited a monthly magazine, *The African*, and was involved in social and African American emancipatory struggles. He was a cousin of T.R. Makonnen, the organizer of the 5th Pan-African Congress held in Manchester in 1945 (↗Pan-Africanism).

In 1943 T. met the Ethiopian vice-minister Yəlma Därässa at Howard University, Washington, D.C. The politician was travelling on an official mission, and offered T. a position in Ethiopia, along with other African Americans. His 1944 journey to Ethiopia with six other professionals is related with much humour in the first chapter of his book *The Musical Bride*, which seems to be the story of *käntiba* Gäbru Dästa's (↗Gäbrä Ǝgziʾabəḥer Dästa) daughter, a gifted musician.

A few months after his arrival in Ethiopia, T. took over the editorship of the ↗*Ethiopian Herald*, a weekly English-language newspaper founded in 1943 from William M. Steen, an African American. He remained editor for about 15 years, made it a daily in the late 1950s and recruited well-known journalists such as Yaᶜəqob Wäldä Maryam. For many years as well, T. held Sunday morning radio broadcasts where he discussed international issues such as South Africa or the newly independent African nations. He edited numerous speeches of *aṣe* Ḫaylä Śəllase I translated into English. A prolific writer, he published fiction and various essays.

T. married an Egyptian lady, and he had a five-*gaša* farm in the surroundings of Ambo, where Caribbean migrants occasionally worked for him. T. was indeed close to the growing African American and Caribbean community in Ethiopia. He was President of the Ethiopian World Federation in Ethiopia, a Pan-African organization established in 1937 in New York and he met the delegates of the Back-to-Africa fact-finding missions sent from Jamaica in 1961 and 1964. He was instrumental in the granting of land in ↗Šašämänne to Black settlers.

T. was a public figure in Ethiopia. His character and jokes are vividly narrated by his colleague Yaᶜəqob Wäldä Maryam. Within the Pan-Africanist generation which came to settle in Ethiopia to contribute to its post-war development, the length of T.'s stay was equalled by few others. Despite the Ethiopian revolution, the loss of his property, and years of abject poverty, he remained in Ethiopia until his death. His history is little-known and his biographical data still incomplete. He helped to consolidate relations between Ethiopians and African Americans and demonstrated the relevance of Black skills for African development. They would all benefit from further research.

Giulia Bonacci

Ṭalḥa b. ᶜAbbās

Ṭ. (طلحة بن عباس; r. 1569–71), a ↗Harär ruler, was the son of the *wazīr* ↗ᶜAbbās b. Abūñ b. Ibrāhīm and, thus, a grand-nephew of ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ"). He led the rebellion of the religious party against the renegade ↗ᶜUṯmān b. Badlāy, after *gärad* ↗Ǧibrīl, the first leader of the insurrection, had been killed in a battle near ↗Zaylaᶜ (21 May 1569) against ᶜUṯmān's general *sīm gärad* Bäläw Muḥammad. Ṭ. gathered the partisans of Ǧibrīl and defeated *gärad* Muḥammad Hargāy, who had remained in Harär to protect the town while ᶜUṯmān marched against the rebels in Awsa.

The religious men of Harär agreed to make Ṭ. ruler of Harär on 16 June 1569. The fact that a member of Grañ's family was once again ruler was a cause of great joy, and the enthronement was accompanied by much celebration. On hearing about these events, ᶜUṯmān stopped fighting.

Ṭ. did not meet the expectations of the religious party. Not did he bear the secular title ↗*sulṭān*, instead of the religious title ↗*imām*, but he also neglected the *ǧihād* and undertook no raids against the non-believers. He was deposed on 2 May 1571 and succeeded by ↗Naṣīr b. ᶜUṯmān b. Badlāy.

Ewald Wagner

Ṭalḥa b. Ǧaᶜfar b. Yūsuf

Šayḫ Ṭ. (طلحة بن جعفر; b. ca.1853, d.1936) was a renowned Ethiopian Muslim teacher and author who organized an armed protest against the Christianizing policy of *aṣe* ↗Yoḥannəs IV.

According to one tradition, Ṭ. was born in the village of Arera Fura in ↗Argobba, ↗Ifat, to an illustrious and pious family. His grandfather, Yūsuf Qanqe "Aba Asiya" (d.1835/36), was a famous saint of Däwwäy in south-east ↗Wällo. Another tradition makes Doddota (also in Däwwäy), or Dinsär (in Argobba) the birthplace of Ṭ. (Kemal 2007:10).

Ṭ. acquired his early Islamic education under a number of local scholars. E.g., *šayḫ al-ḥāǧǧ* Bašīr (d. 1964/65 A.D.) of Č̣anno in Ifat taught him Qurᵓānic exegesis at Arräf Lebbe. Later, Ṭ. started teaching at Mäyti on the Reqqe-Qallu frontier (Caulk 1972). An innovative teacher, he chose Amharic as a medium of religious instruction and a vehicle for the propagation of Islam. He also wrote treatises in Amharic, written in Arabic script (*ᶜaǧamī*), the best-known being *Tawḥīd inna fiqh* (i.e. Amh. *Täwḥid ənna fiqh*, original title *Hadīyat aṣ-ṣubyān* ['Gift for the Infants'] or *Tuḥfat al-iḫwān* ['Gift for the Brethren']).

The Council of ↗Boru Meda in 1878 and the massacre of an estimated 20,000 Wällo Muslims at the hands of Yoḥannəs's troops at Bäkke in Qallu in 1880–81 (Muḥammad Tāǧaddīn ms. 231f.; Conti Rossini 1935:468f.) were the events that inspired Ṭ.'s organized rebellion. *Aṣe* Yoḥannəs and the Šäwan *nəguś* ↗Mənilək launched a joint expedition from ↗Tähuläddäre in March 1880; further campaigns in 1881 and 1882 followed. In a raid which lasted from 28 November 1882 to 26 January 1883 they ravaged Arbobba and Qallu as far as Däwwe (ms. Paris, BN Mondon-Vidailhet 74, fol. 78v). Local Muslim sources remember the death of a number of *ᶜulamāᵓ* of Qallu including *šayḫ* Ḥabīb and *šayḫ* Abboyye on 5 December 1882; the latter was the paternal uncle of Ṭ. (Muḥammad Tāǧaddīn ms. 30).

In November 1885 there was another major uprising in which ↗Mästawät and ↗Libän Amäde, two representatives of the ↗Mammädočč dynasty, took part. Yoḥannəs ravaged Gärfa and the frontier districts of ↗Awsa. Ṭ. intercepted and launched a raid against the Emperor's commanders of local regiments (Giannini 1943:236). During one such raid he defeated a column led by a certain *bäǧərond* Näwte at Kilkillo in Däwwäy.

Besides establishing a working alliance with the local dissident Muslim chiefs, Ṭ. also sought financial, material and military support of the ruler of ↗Awsa, *sulṭān* ↗Maḥammad "Illalta" Ḥanfaḍe.

After the arrival of the Italians, whether on the Italians' or his own initiative, Ṭ. began to collaborate closely with them. He was instructed to occupy the territory around Lake Ašänge before Mənilək's army arrived on its way to ↗Ambalage. Ṭ. abandoned the Italians during the initial stages of the battle of 7 December 1895 and boosted the morale of the Ethiopians by spreading the news of the Italian defeat (Baratieri 1899).

In 1896, Ṭ. was reconciled with Mənilək II, following the mediation of a Yäǧǧu *šayḫ* Nurəyye ᶜUmar, in an official ceremony held in the ↗*Gəbbi*. In a letter from Mənilək to Nurəyye of 10 November 1896, the Emperor recognizes the legitimacy of Ṭ.'s revolt (in defence of religion) and confirms his decision to forgive him. Whilst he shows appreciation of the role of elders in resolving disputes, he criticizes Ṭ. for failing to submit to him after the death of Yoḥannəs. Mənilək's own punitive expeditions to eastern Wällo remain unmentioned.

Ləǧ ↗Iyasu appointed Ṭ. as governor of Wäddessa, and Ṭ. readily moved to ↗Čärčär in ↗Harärge, resenting the fact that he had become an object of popular veneration in Ifat. Iyasu is also believed to have sent Ṭ. to Somalia to foment an anti-European revolt in collaboration with *sayyid* ↗Muḥammad ↗ᶜAbdallāh Ḥasan. After the overthrow of Iyasu in 1916, T. was detained for several years but later released and reinstated as governor of Wäddessa. According to one informant, Ṭ. was sentenced to death during the reign of ↗Zäwditu, by the Šäwan nobility but pardoned by *ras* Täfäri Mäkʷännən (↗Ḫaylä Śəllase I).

Ṭ. died shortly before the Italian occupation, and was buried at a place called Goro. He was survived by several sons and daughters, children he had had by several wives at different times (Kemal 2007:11).

Hussein Ahmed

Ṭälla

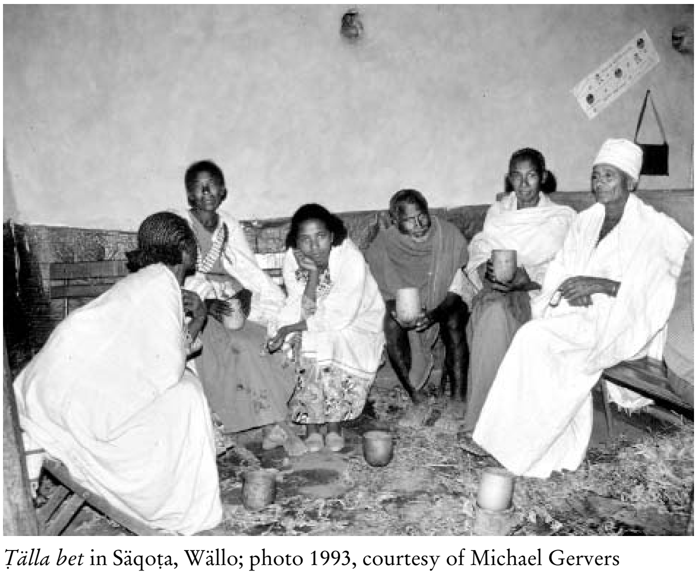
Ṭ. (Amh. **ጠላ**; Tgn. **ስዋ** *səw*[*w*]*a*), a beer with low alcoholic content, is one of the favourite daily ↗drinks in large parts of Ethiopia. In most households women brew this dark-brown beverage in large quantities. Ṭ. is also sold in urban areas by unmarried women. Traditionally, Christian men almost never drank water, therefore it was important for the average farmer to find ways to stretch his Ṭ. by watering it. Traditionally, this beer is drunk out of horn-vessels and calabashes. At the large banquets (↗*Gəbər*) held by rulers for their followers an immense amount of Ṭ. was served to ordinary men out of huge containers, while the nobility enjoyed ↗*ṭäǧǧ*.

Preparation takes place at various intervals. The main ingredient is barley, but also ↗maize and other grains are used (↗Plants, cultivated). In most cases the fermenting agent is ↗*gešo* (*Rhammus prinoides*), a semi-domesticated bush or in some places a small tree situated near the house and growing up to 2.100 m A.S.L. Its shiny dark-green leaves are dried in the sun and mashed thereafter.

Beer jars are fumigated and malt is prepared by fermenting barley in water for three days. When wheat is used in place of barley it has to be roasted beforehand. The mass is dried, ground, baked and stored. When the moment of consumption approaches, water, *gešo* and some fresh malt is added. After three days Ṭ. is ready and is drinkable for three days. To increase the alcoholic content, sorghum can be used and ↗honey, added in the final stage, will make it more tasty (Messing 1957: 61).

Ṭ. and similar drinks exist among many ethnic groups in the Horn of Africa, including Muslim areas. According to Littmann (DAE IV, 6), a similar drink of the ↗Təgre people is called *səlqa* (cp. Littmann – Höfner 1962:168). Very similar to Ṭ. is the *doǧoo* of Käfa made from barley and maize (Bieber 1920: 253). A slightly different kind of beer is prepared in southern Ethiopia. The *farso* or *faršo* of the Oromo is more solid in consistency, contains more alcohol than Ṭ. and is made from ↗sorghum or millet, as in the case with many other ethnic groups in the South. Their beer is also used for libations.

Ṭ. plays a crucial role in the organization of social life among many ethnic groups. In Təgray, e.g., all traditional associations are constitutionally linked with the consumption of Ṭ. Church associations (↗*Maḫbär*) which meet on Sundays celebrate their affiliation to the church and its saint through the consumption of Ṭ., which is considered to be ↗*ṣäbäl* (‘holy water’) after having been blessed by the priests;



Ṭälla bet in Säqoṭa, Wällo; photo 1993, courtesy of Michael Gervers similarly the parochial peasants' associations, the *səwaᶜ sänbät* ('Sunday chalice [association]'; Amh. ↗*Sänbäte*) are linked with the consumption of Ṭ. These associations are responsible for the organization and discussion of important life events and meet every Sunday in private houses (Smidt in Abdulkader Saleh et al. 2008: 246–49).

Ṭ. seems to be one of the most ancient drinks known to the population of the Ethiopian Highlands, since the word *səw[w]a* (today the Tgn. term for the same drink) appears in inscriptions of ↗ᶜEzana (RIÉ nos. 185 I. 11, 185 II. 13, 185 bis I. 13, 185 bis II.C. 1; ῾ύδρϵυμα, *hýdreuma*, and ῾ύδρόμϵλι, *hydrómeli*, respectively in RIÉ nos. 270.17, and 270 bis. 13). In medieval Gəᶜəz sources, the word *məzr* (LesCDic 379; DillmLex 211; KWKDic 582) refers most probably to the same drink as Ṭ. and *səwa.*

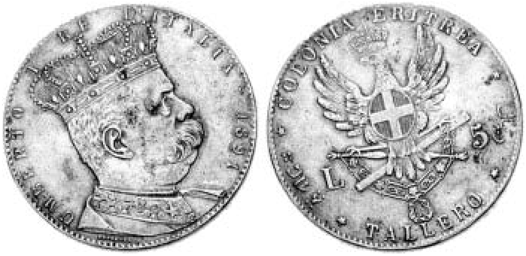
Tallero eritreo

The issue of the T.e. by mints of Rome and Milan in 1890 and in 1896 was the result of an important monetary reform undertaken by the Italians following the conquest of ↗Eritrea. In order to compete with the widely accepted Austrian ↗Maria Theresia thaler, hoarded in quantity because of its high silver content, it was judged necessary to produce an almost identical coin bearing the same pattern, weight and size. From the beginning it was planned not only to be used within Eritrea itself, but to establish it as a ↗currency even in the commerce with neighbouring Ethiopia. The ↗Italo–Ethiopian Treaty of Friendship and Commerce of 1889 (Convention of 1 October 1889) stipulated the use of the T.e. also in Ethiopia.

The T.e. had the nominal worth of five lire (written in Latin), but also had denominations in Arabic and Amharic: one *rīyāl* (written in Arabic) and one ↗*bərr* (written in *fidäl*, for its reception in the Ethiopian commerce; this underlined that it corresponded to one Maria Theresia thaler). The profile of King ↗Umberto I figured on the obverse of the coin; the eagle of Savoy was stamped on the reverse side. The king was shown with a crown, which was known from the crown of Queen Victoria on the British and Indian coins. The T.e. was a little heavier (28,125 gr.) than the Austrian specimen but contained less silver (80 %), which caused its rejection by the population.



The Tallero of 1891, diameter 40 mm; from the collection of Wolbert Smidt

As the Maria Theresia thaler was not minted from 1915 to 1920, due to ↗World War I, a new attempt for the introduction of an Italian thaler was made in 1918 (s. ill. in EAE vol. 1, 829). That new thaler was shaped after an old Venetian Levantine coin and had an effigy symbolizing Italy that resembled the young Maria Theresia, with the legend *Regnum Italicum*. However, this was equally unsuccessful, therefore the mint was abandoned and the unused coins melted.

As a reaction to the introduction of the T.e., ↗Mənilək II in 1894, following the advice of Alfred ↗Ilg, also attempted a monetary reform.

Tälmid

The T. (**ተልሚድ**, from Arab. *tilmīḏ*, 'disciple') is the traditional designation of a theological treatise translated into ↗Gəᶜəz from Arabic and ascribed to "George, *disciple* of Antony the Syrian". It is also sometimes referred to as *Rädᵓa Ǝnṭonəs* (**ረድአ፡ እንጦንስ**, 'the disciple of Antony').

The translation was probably carried out towards the end of the 15th cent., as recently accepted, from a work by the 14th-cent. Arab historian Ǧirǧis al-Makīn b. al-^{c}Amīd (GrafLit II, 450–53; the latter should not be confused with another author by the same name who had lived earlier; cp. ↗ Giyorgis Wäldä ^{c}Amid) entitled *The Profitable Compiler. Abridgement of the Explication of the Truth of the Faith* (s. Colin 1985).

This voluminous work presents an exposition of Monophysite doctrine (cp. ↗ Monophisitism) in opposition to its main rivals: those who negate the divinity of Christ on the one hand, and those who negate His humanity on the other hand. In keeping with the common Oriental Christian practice, the text abounds in scriptural quotations.

The main particularity of the Ethiopic text is the literariness of the translation. In order to remain faithful to the Christological subtleties of the *Vorlage*, the translator coined new Gə^{c}əz terms and tried to approximate the syntactic structures to those of the Arabic text. As a result, the Gə^{c}əz language of T. is partially nearly unintelligible.

BN d'Abbadie 131]. **Lit.**: GrafLit II, 284, 450–53; Gérard Colin, "La profession de foi christologique du *Talmid*", in: Christian Robin (ed.), *Mélanges linguistiques offerts à Maxime Rodinson par ses élèves, ses collègues et ses amis*, Paris 1985, 161–63.

Gérard Colin

Ṭälsäm

Ṭ. (Gə^{c}əz, Amh. **ጠልሰም**) is a traditional term mainly used for a special kind of images and drawings which appear in ↗ magic scrolls or amuletts, or in manuscripts containing texts of the ↗ magic literature. The term Ṭ. is derived from Arab. *ṭilasm* (from Gr. *télesma*, 'powerful object'; cp. Ruska – Carra de Vaux in: *EI*^{2}). Ṭ. can be understood in the sense of 'talismanic image' (cp. "magic image", DillmLex 1215; TMHDic 1258; DTWDic 558) as protection against ↗ demons causing diseases and misfortune or as healing medicine when diseases have already occured (Burtea 2002a: 95, 2002b: 16; Chernetsov 2006: 54; Mercier 1979: 24).

Magic images

Magic images are considered to possess an inherent power which protects against malign influences (usually described as "evil eye", more precisely "shadow eye"; ↗ *Buda*). In general it seems that such images on magic scrolls are not in direct connection with the content of the accompanying text, but contribute to its impact by their own power, and they are therefore neither simple illustrations, nor "religious art", but a therapeutic and/or protective instrument. The effect of a magic scroll is produced by the combination of the power of magic texts (sometimes with ↗ *asmat*) and paintings or Ṭ. (cp., e.g., Burtea 2001: 96; Mercier 1976: 232).

The local tradition divides paintings on magic scrolls into two categories: Ṭ. and *śə^{c}əl* (lit. picture, image). Ṭ. images depict an "invisible" sphere, different from *śə^{c}əl*, narrative pictures, which usually show saints or angels, which are considered to belong to the visible world (Mercier 1979: 24). The *śə^{c}əl* depicts what "can be seen" and tells a story of a person, such as St. ↗ George of Lydda fighting the dragon or illustrates a narrative, like ↗ Susənyos killing Wərzəlya. On the other hand, Ṭ. depict symbols from the world of magic such as magical squares (with different designs, like *lofḥam mähaflon nəmlos Sälomon* which are the secret names of ↗ Solomon; s. magic square in EAE vol. 3, 778a, or with geometrical patterns, s. ill. 1, left), other figures or "seals" (such as the 'Seal of Solomon' which is depicted as an eight–pointed star, s. ill. 1, right; cp. Mercier 1997: 49) or the 'Net of Solomon' (↗ *Märbäbtä Sälomon*).

One peculiar element in Ṭ.-pictures is represented by drawings sometimes (misleadingly) called "spectacle scripts/Brillenbuchstaben", or even "secret script". Despite being referred to as "script" and looking like letters of an "alphabet", they do not represent a writing system. These signs are composed of curious combinations of curves, lines and arches with small loops (hence the term "charactères à lunettes"). In manuscripts they rarely stand alone but mostly accompany other illustrations (s. ill. 1, top right; s. also ill. EAE vol. 3, 637). Similar characteres can be found in other magic traditions, esp. Hebrew, Arabic and Coptic but also in Greek and Latin and even texts in Egyptian hieroglyphs. The tradition of these characteres in Ethiopian Ṭ. seems to be adopted from the Coptic and Arabic magic tradition (cp. Strelcyn 1955: XXXIII–XXXIX). In a few cases, Ṭ.-pictures can be combined with a written text: cp. the prayer *Mäsḥetä Sälomon* ('Mirror of Salomon') presented by Euringer (1937). Here the text is written in a helix around a stylized ‘Net of Solomon’ and surrounded by “caractères à lunettes” and other drawings (Euringer 1937). One more discernable element of Ṭ.-pictures is the stylized representation of the ↗cross, believed to possess strong magic defensive power.

In the Islamic magic tradition of Ethiopia amulets are called (Arab.) *ḥiǧāb*, *ḥirz*, or *ṭilsam*. They consist of Qurʾānic verses, or the beautiful names of God, illustrated by geometrical figures and drawings.

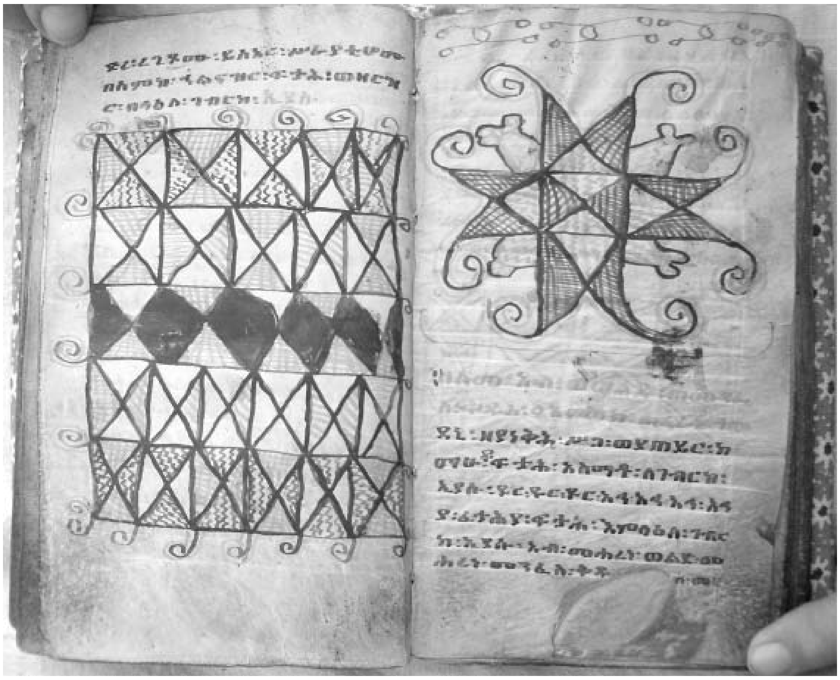

Fig. 1: Ṭ.-drawings (including “spectacle script” and ‘Seal of Solomon’), from a ms. containing a collection of magic prayers, 19th cent., fols. 20v–21r, monastery of Ṣäʿada Ǝmba, Šire, Təgray; photo 2005/2006, courtesy of Ewa Balicka-Witakowska

Kətab

The term Ṭ. can, however, also be used in a more general sense for amulets, which are usually known as **ክታብ** (Gəʿəz, Amh. and Tgn., *kətab*), worn around the neck (↗Jewellery: Necklaces; Burtea 2002b: 18; Vecchiato 1993: 172; Young 1976: 152f). Amulets are mainly leather scrolls with script and images, leather containers which contain herbal (or other) remedies and even specific kind of jewellery, almost any other kind of amulet can be called Ṭ., even if this term is less wide-spread and less general than the term *kətab*. Women wear special Ṭ., i.e. silver boxes or other silver elements of specific form, perceived both as jewellery and as amulets. It is especially the decorative shape, which recalls Ṭ. as “talismanic images” which links such objects to magic images. Amulets are a very ancient tradition in the region; as early as during the reign of ↗ʿEzana a ↗Noba priest is mentioned who carried a golden amulet (BudHist 256; RIÉ no. 189 = DAE no. 11, l. 27).

Kətab are usually worn as necklaces, especially by children all over the Ethiopian highlands; in some cases they are also worn on one side of the breast under the arm. The production of *kətab* traditionally belongs to the religious sphere in the Ethiopian and Eritrean highlands, but is also carried out by “culturally other” lowland populations. In Təgray, for example, amulets are produced by local *märigeta*, some of whom have acquired a good name due to the “confirmed” success of their amulets, so that they attract customers also from outside their village. The amulets are usually made of leather and may contain roots, or dust from a holy place (such as ↗Däbrä Damo) which serves as ↗*ṣäbäl*, and in some cases also a religious text on paper. They are believed to protect mainly against diseases.

A special form of *kətab* is called *mästäfaqər*, also produced by *märigeta*, used to attract the love of another. It is believed, however, that they expire after a certain period, e.g., after one year; if not renewed, one might lose the love of the beloved person. Special amulets can even protect against being killed (e.g., as a case from the Gondär region shows, where such an amulet was used by someone who had killed a person, trying to protect himself against vengeance). In north-western Ethiopia, those amulets which are produced by “↗Tukrir” and by lowland populations such as ↗Gumuz or, further north, ↗Ṣällim Bet, are especially appreciated. These include love amulets, but also amulets against diseases.

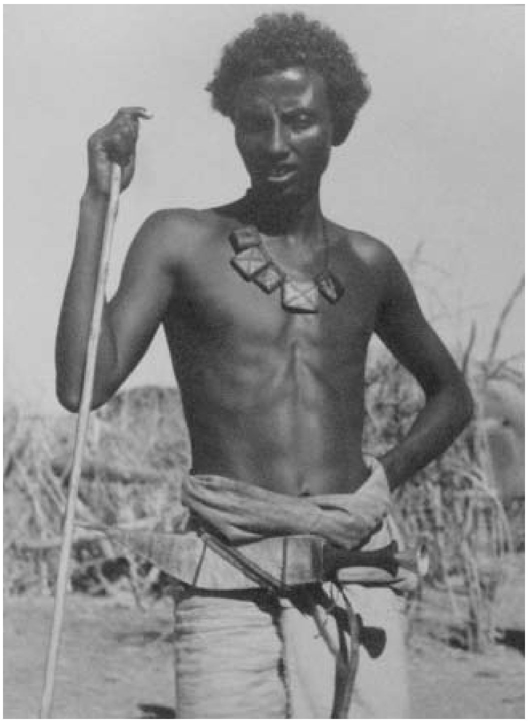

Fig. 2: An ^{c}Afar man wearing talismans; photo 1939 by Georg Schulze, "Mappe 'Africa Orientale Italiana' "; courtesy of Villa Grisebach, Berlin

Among the Somali, as amongst many other Muslim peoples, it is reported that magic calculations are written on a paper in a diagram consisting of several squares (e.g., numbers adding up to 15 in each row of squares in a "magic square"), in addition to a *sūra* (e.g., the *sūra Yaasiin*, the heart of the ↗Qurʾān); the paper is folded, put into a cover of leather (*ḥersi*), which the patient has to wear around the neck (Helander 1989: 91; ↗Numbers and numerals).

Among the ↗Boorana, amulets are produced by ritual experts (diviners, usually called *raaga*). These are protective charms, and are given to a person after the ritual slaughtering of cattle, after which the meat is given to ↗hyenas. They consist of a small leather container which contains ingredients which are kept secret.

Tämben

Early history of Tämben to 17th century

T. (**ተምቤን**, present official spelling, but also **ተንቤን**, 'Tänben', certainly the etymological, and previously current form, as attested in chronicles, documentary texts, and scholarly studies, cp. Praetorius 1874, Littmann 1902) is a historical province in the region of Central ↗Təgray.

Whilst T. is presently a Təgrəñña speaking area, ↗Agäw elements due to earlier settlers are apparent in several T. place names (e.g., Bartarwa, also known as Däbrä Wär^{c}, from the name of the river, cp. Conti Rossini 1943: 340). According to traditions widespread in northern Ethiopia, T.'s inhabitants would descend from the Jewish tribe of Levi (cp. Conti Rossini 1901: 166ff.). As to positive evidence, there is a substantial lack of ancient (pre-Aksumite and Aksumite) archaeological and epigraphical findings. T., however, played a significant role since the age of Christianization at least, as suggested by the lore about Frumentius (↗Sälama Käśate Bərhan) being buried at the remote monastery ↗Ǝnda Abba Sälama

View on the mountains of upper Tämben from the Tämben incense hills; photo 2005, courtesy of Wolbert Smidt

(in Anba Sälama, cp. CRStor 258) and better proved by a twofold evidence:

1) the *gädl* of *abba* ↗Yoḥanni of Däbrä ᶜAśa in T., not far from Däbrä Bartarwa, includes late Aksumite traditions referring to expeditions against "Noba and Saba" (s. ↗Soba Noba in EAE vol. 5) by the *śəyyum* of T., and making Yoḥanni the latter's natural son (cp. Basset 1884: 443; Virgili 1983: 309ff.; Fiaccadori 1992: 18, n. 52); other ancient and recent, only partially known, hagiographic traditions, confirm the importance of the monastic movement in the area: saints Danəᵓel of T. (known as 'the Apostle of T.'), Hadära, ↗Krəstos Bezanä, Mäsqäl Bezanä, P̣awlos of T., ↗Tadewos of Däbrä Bartarwa (cp. de Santis 1942; Conti Rossini 1943), Tadewos of Täᵓamina (↗Däbrä Täᵓamina), ↗Zä-Libanos of Yəlmatan, all are either native or active in T. (cp. KinBibl; for additional elements cp. Virgili 1983: 311; T. is also mentioned in one of the recensions of the *Gädlä ↗Libanos*, dating to about the end of the 15th cent., cp. Bausi 2003, § 146);

2) the textual evidence is substanciated by the existence of several, still little explored ↗rock-hewn churches, the most famous of them entitled to *abba* Yoḥanni (cp. Sauter 1963: 257f.; Fiaccadori 1992: xviiif., n. 13; Lepage – Mercier 2005: 164ff.).

Since the early 14th cent., literary sources document the activity of the *śəyyum* of T. In a miracle of the saint ↗ᶜAbiyä Ǝgziᵓ (cp. Conti Rossini 1938: 419ff.) the *śəyyumä* T. is introduced as active and loyal to the king on the occasion of the insurgence of ↗Yaᶜəbikä Ǝgziᵓ (cp. TadTChurch 73). The *Mäṣḥafä ↗Aksum* testifies to donations in T. from the times of *aṣe* ↗Säyfä Arᶜad (CRAxum 24 [tr.], no. 8, for ↗Mädḫaninä Ǝgziᵓ) to those of ↗Yəsḥaq (ibid. 26, no. 12, for ↗Samuᵓel of Däbrä ᶜAbbay), ↗Ləbnä Dəngəl (ibid. 34, no. 26 [cp. also 85, no. 4], for Tänsəᵓa Krəstos), and ↗Täklä Giyorgis (ibid. 61, no. 68). The title of *śəyyumä* T. also frequently occurs in documentary sources (ibid. 34, 36, 47, 85, nos. [I], 26, 29, 44, [III], 4; PerChron 186, 209 [tr.]; additional evidence in HuntGeogr 306, s.v. T.). In ca. 1609, people from T. and ↗Säḥart joined the rebellion against ↗Susənyos led by a *wäräñña* (the slave Mälkä Ṣedeq?, cp. PerChron 100 [tr.]). In the age of ↗Ludolf, T. was a governatorate of Təgray (LudHist I, iii, § 28).

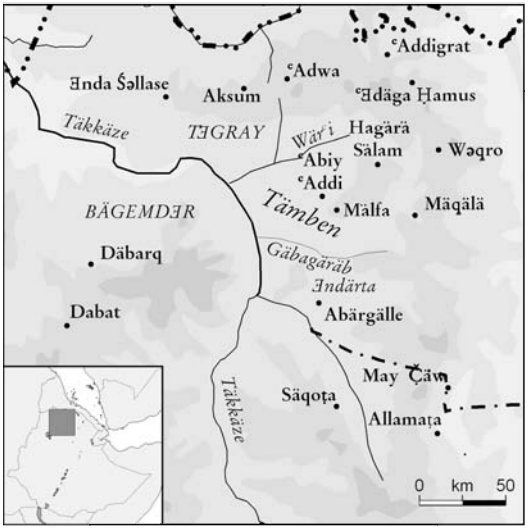
Alessandro Bausi

Tämben from the 18th to 20th century

T. corresponds to the today's provinces Dəggʷəᶜa T. *wäräda* ('Highland T.') and Qʷälla T. *wäräda* ('Lowland T.'). It borders in the north on the ↗ᶜAdwa historical province (Central Təgray, properly Naᶜder Adet and Wärᶜi Läḵä *wäräda*) and in the south on the ↗Abärgälle *wäräda*; the borders are marked by the Wärᶜi and Gäba (Gäbba) rivers resp., both tributaries to ↗Täkkäze. To the east, T. borders on the historical province of ↗Ǝndärta (region of Təgray).

A number of powerful Təgrayan nobles and warriors originated from T. Research into local traditions shows that T. was characterized by a pronounced social stratification – different from other more egalitarian Təgrayan regions – with a strong nobility possessing extensive lands with dependant peasants and other personnel. The lowland population partially consisted of serfs of diverse origins. The leaders of T. intermarried with the most important Təgrayan dynasties; *šum* T. Wäldä Kidan Wäldä Mikaᵓel, for example, married into the family of *ras* ↗Mikaᵓel Səḥul, and his son *šum* T. ↗Mərč̣a Wäldä Kidan into that of the *šum ᶜagamä*. The latter's son, *aṣe* ↗Yoḥannəs IV, was able to ascend the Ethiopian throne also thanks to his genealogical connections. *Ras* ↗ Alula Ǝngəda was of humble T. origin; he donated his *gəbbi* at Mänawe, situated on the escarpment between the T. highlands and the T. lowlands, to the church. It is today a monastery, with a collection of manuscripts (formerly including a *Gädlä Alula*, now lost, with Alula's history).



In 1902, ↗Mənilək II appointed ↗Abrəha Arᵓaya governor over T. He was, however, replaced in 1905 by ↗Śəyyum Mängäša, which sparked an attempt of rebellion by Abrəha. In the 20th cent. a considerably large number of warriors originated from T. It was also a centre of ↗resistance against the 1935 Italian invasion. The "first battle of T.", which halted the Italian advance, was followed by the "second battle of T.", after which T. was occupied (↗Italian war 1935–36). Resistance, however, continued being particularly active in T.

Economically, T. is dominated by agriculture and dispersed settlements with only very few urban centres. During the dry season, many peasants work as *mäqaray* (workers collecting ↗incense from the mountains of Qʷälla T. *wäräda*, which are densely covered with incense trees of the species *Boswellia papyrifera*, in Tgn. *mäqar*). Incense is an ancient local crop not cultivated in ᶜAdwa and Ǝndärta. In addition, locals seasonally also pan for ↗gold from the gold-bearing rivers of T., especially the Wärᶜi. Industrial mining has not yet started despite the rich mineral deposits in the T. mountains.

The historical capital of T. was ↗Mälfa in the T. highlands, which was in the mid-20th cent. replaced by nearby ↗Hagärä Sälam (now capital of Dəggʷəᶜa T. *wäräda*). Only in the 1930s did ↗ᶜAbiy ᶜAddi in the T. lowlands become an important urban centre and T.'s capital in the second half of the 20th cent. (now the capital of Qʷälla T. *wäräda*).

T. is considered in Təgray as a centre of Ethiopian Christianity of a similar importance to ↗Aksum. The ancient monastery of ↗Ǝnda Abba Sälama is the site of annual pilgrimages through the T. mountains, and in the past served as a prison for rebellious nobles.

According to modern tradition (contradicted, however, by some sources), only in the 20th cent. were Muslims able to settle in hitherto exclusively Christian T. Seemingly, this started with Italian occupation in the 1930s, when ↗ᶜAbiy ᶜAddi became a regional centre for commerce. Consequently ᶜAbiy ᶜAddi also has a mosque today.

T. is considered the origin of a number of migrant groups in Ethiopia and Eritrea. After the *Tämbenay ras* Alula was appointed governor of ↗Märäb Məllaš (Eritrean highlands), many of his retainers from T. followed him and settled in his capital Asmära, where they received lands. Many urban inhabitants of Ḥamasen are today descendants of these migrants. In addition, when

↗Wälqayt was successively pacified in the course of the 19th and 20th cent., it attracted settlers from T. A much more ancient migration from T., into southern Ethiopia, seems to be the one to the ↗Wälaytta kingdom, according to Wälaytta oral tradition. Its ruling clan, the Təgəra, are of alleged T. origin.

T. is still today a rather remote region. It was only electrified starting in 2006, and only one asphalted road connects Hagärä Säläm with ↗Mäq̱älä, with ᶜAbiy ᶜAddi in the lowlands, and further with ᶜAdwa. One more road, non-asphalted, links ᶜAbiy ᶜAddi with ↗Säqoṭa in Lasta. It was because of the relative inaccessibility of the highlands that T. served as the centre for the rebel government of the ↗Tigrayan People's Liberation Front (TPLF) from 1989 to 1991, with their rock-hewn headquarters at ᶜAddi Gäzaᵓti, from where they planned and directed the decisive attack against the *Därg* regime.

Wolbert Smidt

Tamisier, Maurice

T. (b. 23 December 1810; Sommail, Aude) was a French traveller and member of the ↗Saint Simonians. He went to Egypt shortly after the French Revolution of 1830. In May 1834, he participated in the Egyptian military expedition to Arabia and in January 1835 he travelled to Ethiopia with Edmond ↗Combes. The two reached Massawa in 1835 aiming for a two-year stay in the country. They were well received by the different local leaders they met, *däğğazmač* ↗Wəbe Ḫaylä Maryam, *ras* ↗Ali Alula and *nəguś* ↗Śahlä Śəllase. Almost without any support, they also travelled across Təgray, Səmen, Amhara, Šäwa, Goğğam and Bägemdər. In 1837, on the way back to Europe, they received the help of a French army medical officer attached to the armies of the Khedive at Jeddah.

As a result of their wanderings, Combes and T. published a five-volume account, which included precious natural, ethnographic, religious and historical data. For his work T. received the Légion d'Honneur in 1838 and the silver-medal of the Société de Géographie de Paris. After his carreer as an explorer he turned to private business.

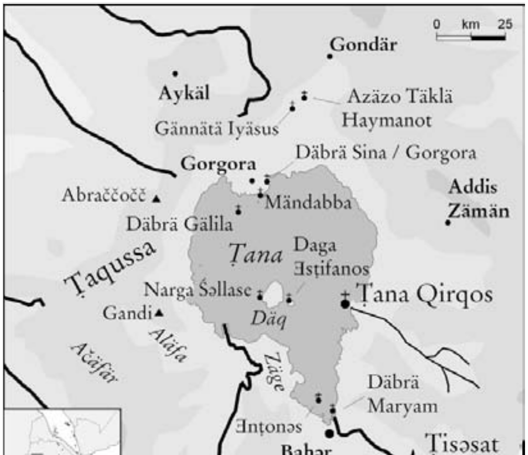
Lukian Prijac

Ṭana

Lake Ṭ. (**ጣና**, old also Ṣana, 1,830 ASL) is the largest lake in Ethiopia (50 % of national freshwater). The Blue ↗Nile (↗Abbay) flows through it. It is situated in the Amhara *kəlləl*, in the Səmen Gondär, Däbub Gondär and Məᶜərab Goğğam zones).

The Lake Ṭ. graben was gradually formed between the horsts of the ↗Səmen mountains, the Guna mountains and the ↗Čoqqe mountain shield. The lake was then formed through the volcanic blocking of the Blue Nile in early Pleistocene times about two million years ago. This 3,000 km^2 lava flow locked the 1.5 million year old depression, allowing it to collect and store abundant Quaternary precipitation. The lava dam blocks the southern part of the present lake watershed at the Alata cataract where the Blue Nile crosses it, plunging over the ↗Ṭisəsat falls.

Ṭ.'s surface area covers between 2,156 km^2 and 3,600 km^2 and its maximum length and width



The Blue Nile flowing out of Lake Ṭana; photo 1995, courtesy of Galen Frysinger

are 72 km and 68 km respectively. It has a volume of 29,175 km^3. The lake is fed by about 60 rivers. With a few exceptions (Gəlgəl Abbay, Dirma, Arno, Mägäč̣, Rəb, Gumära), most of them remain dry for most of the year. The Abbay River, which is the only outlet of the lake basin (15,320 km^2), reaches an average discharge of 3,5 billion m^3 a year.

At ↗Baḥər Dar the annual rainfall is 1,500 mm. In high water periods (July to October) the amount of water discharged by the Abbay River is almost 35 times higher (350 m^3/sec) than during low water periods (10 m^3/sec, February to May). Ṭ.'s mean depth is 9 m and its maximum depth, to the north west of the island of ↗Däq, is 14 m. Being only a shallow reservoir, the lake thus has a weak regulatory effect.

Every year during the rainy season the water flows out of the south-east of the lake until it reaches its equilibrium. In 1996 a dam was built, just south of the lake on the Čara Čara rapids, to stabilise its discharge at around 110 m^3/sec. In times of heavy rains the banks of the lake in the west (Dämbəya and Qʷənzəla) are submerged, and to the east the ↗Fogära plain (18,500 ha) is flooded.

Vessels such as the ↗*tankʷa* sail on this vast water area that is surrounded by such tree species as ↗sycamores (*wärka*, *wanza*), podocarpus (*zägba*), ↗acacias (*grar*), ↗juniper (*ṭəd*), olive trees (*wäyra*) and *doqma*. The coves on its banks, formed of basalt blocks, are colonized by endemic papyrus (*Cyperus papyrus*) that can grow to 6 m high. Well lighted and oxygenated, the shallow waters of the Ṭ. are rich in plancton and valuable resources. Among the species fished are tilapias (*qäräso*), catfish (*ambazza*), perch (*beyešo*) and endemic carp (*näč̣č̣asa*).

The Ṭ. also hosts exceptional ↗bird species such as African bird of paradise, great white pelican, white breasted hamerkop, pied kingfisher, African sacred ibis, Egyptian goose, lappet-faced vulture, Goliath heron and village weaver. The lake also hosts some menaced (trumpeter hornbill, African fish-eagle, pallid harrier) and migrant species (pink flamingo, European bee-eater). In 2004, more than 217 species were identified.

Lake Ṭ. is also the highest place on earth where ↗hippopotamus is found, nowadays endangered due to the introduction of ↗firearms and the increase of human activity around the lake. ↗Malaria epidemics occurred on its marshy shores until the 1950s (Simoons 1960).

The lake has been given different names throughout its history. One of the earliest names may have been ↗Qʷara, as the eponymous region west of the lake. In Ethiopian texts from the 15th and 16th cents. it is called Azaf and the Portuguese called it "Dembià", i.e. Dämbəya (Conti Rossini 1910).

The peninsulas, islands and islets of Lake Ṭ. (between 34 and 41) used to shelter many monasteries and royal residences (now often in ruins) dating from the 13th to the 18th cents. The oldest church is that of ↗Ṭana Qirqos, which began to flourish under ↗ʿAmdä Ṣəyon I. In the 15th and 16th cents. the area saw an important development of monastic centres (Di Salvo 2000: 18–22, 42–55).

A large number of churches and monasteries are located along the peninsula of ↗Zäge (Däbrä Śəllase, Wərra Kidanä Məḥrät, Mähal Zäge Giyorgis, Bäträ Maryam, Awza Maryam, Yəganda Täklä Haymanot, Fəre Maryam) and on the islands to the north of Baḥər Dar (↗Kəbran Gäbrəʾel, ↗Ǝnṭonəs Iyäsus, ↗Däbrä Maryam). The island of Däq, to the centre of the lake, includes the important sanctuaries of ↗Narga Śəllase, Arsima Maryam and ↗Daga Ǝsṭifanos. To the north, on the ↗Gorgora peninsula, lie the ruins of *aṣe* ↗Susənyos' palace and the ↗Jesuit mission. On the banks the churches of ↗Däbrä Sina Maryam, Bərgida Maryam, ↗Mändabba Mädḫane ᶜAläm and Gälila Abunä Zäkaryas are found.

With the settlement of *aṣe* ↗Minas, and especially ↗Śärṣä Dəngəl, at ↗Gubaᵓe, Lake Ṭ. became the centre of the Christian Solomonic Kingdom. The area has been inhabited by the ↗Wäyṭo, the ↗Betä Ǝsraᵓel and the ↗Kəmant (cp. ↗Agäw). It has also been the cultural core of the Amhara, who constituted the majority of the population and who, little by little, have assimilated the minorities.

The largest town around the lake is Baḥər Dar (183,489 inhabitants). About 2.47 million people live in the nine *wäräda* that border the lake, providing a density of 150 inhabitants/km^2. After 2002, the growth rate of the Amhara region has been 3 % annually. The population is largely rural and after Baḥər Dar the largest nuclei are Dälgi (9,573 inhabitants), Qʷənzəla (6,369 inhabitants), Gorgora (5,247 inhabitants) and Korota. Every year, large groups of Christians go to take a bath in the holy springs found near the churches, especially those at Säkala, at the sources of the Gəlgəl Abbay, and at Ṭana Qirqos.

After the rainy season, when waters retreat from the banks, farmers grow grains (↗maize, barley, ↗*ṭef*), fruits (papaya, mango, avocado), ↗*bärbäre*, ↗coffee and recently irrigated rice at Fogära. The cultivated land area is estimated to be 234,948 ha of which only 4 % is irrigated.

Fluvial erosion has led to land degradation and accelerated sediment deposits on parts of the shoreline. Up to the present, the two hydroelectric plants of Ṭisəsat I (11 MgW) and Ṭisəsat II (74 Mgw), which use 2/3 of the waters of the Abbay, have not significantly affected the level of the lake. The Ṭ.-Bäläs, which had been launched with Italian help and abandoned after the fall of Mängəśtu Ḫaylä Maryam, was reinitiated in 2006 and has been recently completed. It diverts a significant share of the water from the lake, transferring it by a feeding tunnel through a hydrolectric plant on the ↗Bäläs River, in order to irrigate land to the west. This operation could threaten other irrigation projects as well as current water utilization, such as water supply, navigation and tourist visits to the lake's monasteries.

Since the early Jesuit descriptions from the 17th cent. (e.g. BecRASO II, 277–82), Lake Ṭ. has been visited and described by several people, e.g., James ↗Bruce, Antoine d'↗Abbadie, Anton ↗Stecker, Hormuzd ↗Rassam and Robert Ernest ↗Cheesman. It was also the object of a major scientific expedition led by Vinigi Lorenzo ↗Grottanelli.

Maxime Lachal – Alain Gascon

Ṭana Qirqos

Ṭ.Q. (**ጣና፡ ቂርቆስ**, also **ጣና፡ ጭርቆስ** Ṭana Č̣ərqos, **ጻና፡ ቂርቆስ**, Ṣana Qirqos) is probably the most prominent island monastic site of Lake ↗Ṭana.

The homonymous island (ca. 1.5 km x 0.4 km), situated close to the eastern shore of the lake (for location s. map for Ṭana), boasts the status of the oldest Christian establishment in the area, as illustrated by a number of legends. According to tradition, the ↗Ark of the Covenant was brought to the island by ↗Mənilək I and kept there for nearly 600 years before it found its final resting place in ↗Aksum Ṣəyon; the island was the shelter for the Holy Family escaping from Herod's persecution; the first abbot was Zadoq, the son of a high priest from ↗Jerusalem; the kings ↗Abrəha and Aṣbəḥa transformed the former holy place into a church dedicated to St. ↗Qirqos; a ↗*tabot* of the Archangel Michael from Egypt is kept on the island; and, finally, *abunä* ↗Sälama Käśate Bərhan is said to be buried here.

Beside these legendary traditions referring to the Christian connections of the place which probably existed already before the end of the ↗Zagʷe era, its history becomes more concrete during the 13th and the beginning of the 14th cent., when the island was the base for christianization during the reign of ↗Amdä Ṣəyon I. The Acts of ↗Yafqərännä Ǝgziᵓ is a reliable source for the development of the Christian community in the lake region and particularly for the island. This saint joined the monastic community in his early life with the permission of the principal ruler of ↗Goǧǧam. One may conclude that the Ṭ.Q. community was already in existence. The monastery was then a major centre for missionary activities, also in the ↗Betä Ǝsraᵓel area. With the successful campaign of Amdä Ṣəyon against the provincial rulers of the Ṭana region, Ṭ.Q. became the Emperor's favourite place.

There are reports of restoration of the church building patronized in the first half of the 15th cent. by the rulers ↗Yəsḥaq and ↗Zärᵓa Yaᶜəqob.

Tradition says that during the period of the threat of ↗Aḥmad b. Ibrāhīm al-Ġāzī in the 16th cent., the monastic community was rescued by the intervention of St. Qirqos. This story appears in the collections of his miracles (↗*Täᵓammər*).

The establishment of the royal capital at ↗Gondär in the 16th cent. strengthened the relations between court and clergy in the region. Ṭ.Q. achieved the status of a royal church during the early Gondärine period by receiving land grants in 1597 from ↗Śärṣä Dəngəl. A second wave of attention was manifested by donations from *aṣe* ↗Fasilädäs (CrumLand 58, 77).

The church building was restored early in his reign by ↗Susənyos, during whose time the church was named Iyäsus Mädḫənä Kʷəllu ('Jesus Saviour of all'). In later decades, the monastic community of Ṭ.Q. was a strong bulwark against Catholic endeavours. The Acts of ↗Wälättä Peṭros refer to a verdict against the presence of female persons on the island.

A last restoration was carried out by ↗Iyoᵓas in the 18th cent.

Bosc-Tiessé (2008: 391) provides a list of the abbots of Ṭ.Q. from the time of ᶜAmdä Ṣəyon until the reign of Täklä Giyorgis (second half of the 18th cent.).

The mss. of the monastery are listed in a note in ms. Paris, BN d'Abbadie 68 (CRAbb 209; s. also HamTana I, 49; Bosc-Tiessé 2008: 402–09). Presently, there are about one hundred manuscripts, among which is a richly illustrated (90 miniatures) copy of the ↗*Täᵓammərä Iyäsus*.

The church also possesses two liturgical fans (↗*Märawəḥ*), a bowl carrying a Sabaean ↗inscription, and two Sabaean altars (↗*Tabot*), as well as the legendary relics: a basin of King ↗Solomon, a stone with Jesus's footprints, a necklace of St. Mary, and a prayer stick of St. ↗Yared.

Veronika Six

Tänaññä Wärq Ḫaylä Śəllase

Wäyzäro T.W. (ተናኘ፡ ወርቅ፡ ኃይለ፡ ሥላሴ; b. 30 January 1913, Harär, d. 6 April 2003, Addis Abäba) was the first child of *aṣe* ↗Ḫaylä Śəllase I and his wife, *ətege* ↗Mänän Asfaw.

In 1924, T.W. was married to *ras* ↗Dästa Damṭäw, a governor of Sidamo. They had six children, two sons and four daughters. Their son *ləǧ* Amməha died at the age of 16. *Ləǧ* Ǝskəndər became a commander of the Imperial Navy. In 1974, he was imprisoned and then killed by the *Därg*. Their elder daughter Ayda was married to *ləᶜul däǧǧazmač* (later *ləᶜul ras*) Mängäša Səyyum, great-grandson of *aṣe* ↗Yoḥannəs IV and governor of Təgray. The second daughter, Ḫirut, was never married, the third, Säblä Wängel, was married to *ləǧ* Kaśa Wäldä Maryam, President of Ḫaylä Śəllase I University (later ↗Addis Ababa University) and later Minister of Agriculture, and the fourth, Sofiya, married in 1960 Captain Däräǧǧä Ḫaylä Maryam, son of the patriot ↗Ḫaylä Maryam Mammo, junior Ethiopian officer at the Imperial Military Academy at Harär who lost his life in the ↗coup d'état 1960 (s. EAE vol. 2, 1081–82) fighting on the side of loyalist forces.

During the Italian occupation, T.W. followed her father into exile in England. Her husband was murdered by the Italians, and T.W. began a relationship with Abbäbä Rätta, and bore him a daughter, Ṣägga Maryam. After the Liberation, the family returned to Ethiopia, and in 1964 Abbäbä became Minister of Health; however, his humble origins made the marriage between him and T.W. impossible. Ṣägga Maryam was later imprisoned with her mother in 1974 and died soon after.

In 1944 T.W. married the governor of Bägemdər and Səmen *ras* Andargaččäw Mässay. The couple resided in Gondär. From 1952 to 1959, whilst *ras* Andargaččäw was the first Representative in Eritrea after its union with Ethiopia (↗Ethiopian–Eritrean Federation), they resided in Asmära. T.W. had one daughter from her second husband, Məntəwwab, who died in childhood.

T.W., with her conservative views, was believed to have more influence upon her father than her brothers. Ḫaylä Śəllase used to discuss state matters with her, mostly social problems, but she also had some impact on the choice of appointments in his administration. She was involved in many social activities; she founded schools and health institutions. From 1941 she headed the Ethiopian Women Charitable Works Association.

T.W.'s father bestowed the Ethiopian Order of the Collar of Solomon and the Cordon of the Order of the Queen of Sheba on her (↗Orders and decorations). In 1959 she also received the Greek Grand Cross of the Order of Beneficience, and the Grand Cross of the Order of St. Olav from the King of Norway in 1956.

In the last days of the Empire, T.W. joined those who unsuccessfully tried to persuade Ḫaylä Śəllase into taking an active role in fighting the mutiny. She was imprisoned during the ↗Revolution and released together with her four daughters in 1989. She left for the United States, from where she returned to Ethiopia in 1999. She was buried in the Qəddəst Śəllase Cathedral next to her parents and her husband.

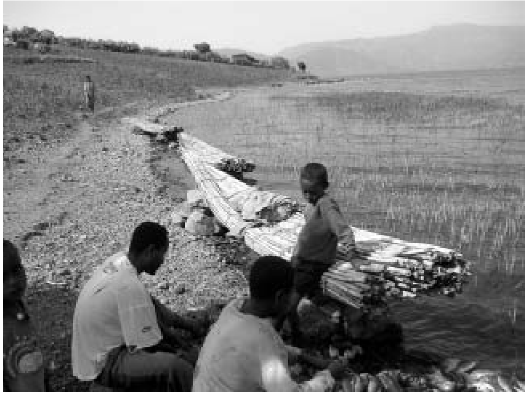
Tankʷa

Although native watercraft are rare inside Ethiopia and Eritrea, the ↗Wäyṭo of Lake ↗Ṭana shores are expert in building and navigating T. (ታንኳ), a boat of papyrus reeds. The reed, called *T. Papyrus*, has a triangular cross-section, and grows along the marshy lakeshore, especially to the south, in thick stands up to three metres tall. The Wäyṭo are the sole builders and boatmen of the T. Early European travellers reported T. Undoubtedly such craft were used on the lake much earlier.

A skilled craftsman builds a small (15-foot) T. in about ten hours. Firstly, the boat builder harvests papyrus reeds (*dängäl*), up to about half their maximum thickness, and allows them to dry. Next, he makes cord from long strips of the bark of the wild ↗sycamore fig tree (*wärka*) by soaking them until they are soft and then biting them into strips about a foot long. He plaits a series of these strips and rolls them by hand against his leg into a continuous cord. Finally, he soaks the cord and dries it to make a tough end-product. He inspects the reeds and trims them with a knife-like sickle and soaks them for pliability.

A keel is constructed with a thin, boat-length ↗eucalyptus pole, an inch or two in diameter, at its centre, around which several reeds are bound with wet cord. The cords making up a T. are in the form of chain-like links. Gradually, side walls about 6-inches thick form the shell of the T.; they are built up and tied, with the butts of the reeds toward the stern. Reeds are thinned and shaped to form the blunt stern and the bow tapering upward to a point. Finally, the shell is filled with bound reed bundles which form the deck. The



Tankʷa of fishermen at the shores of Lake Ḥayq, Wällo; photo 2004, courtesy of Wolbert Smidt

shell is *ənnat* ('the mother'), holding the deck bundles, *ləǧ* ('the child'), above the water. Each reed bundle is *bet*, and a T. is classified according to how many bundles form the widest part of it. Thus an 8-*betočč* is a standard 2-person T.; a T. can range from 6- to 20-*betočč*.

The Wäyṭo use T. for fishing, formerly for ↗hunting hippopotami, travelling to weddings and ↗*täzkar* feasts, visiting, and taking the grinding stones they produce as well as merchants and their wares to lakeside marketplaces.

Only rarely do the Wäyṭo use their lightweight T. on nearby rivers and, then, only in the brief period between the torrents of the big rains and the ponding in the dry season. Balancing the T., a Wäyṭo sits and punts and steers with a reed pole about 10 feet long; paddles are unknown.

Tänśe Mammo

T.M. (**ተንሤ፡ ማሞ**, d. 1733) was a nobleman who in late 1732 led a revolt against ↗Iyasu II and the ↗Qʷara faction at court. He came from the *Gäbärma*, a division of the ↗Agäw who lived in or close to ↗Damot. He was one of *aṣe* ↗Bäkaffa's favoured officials, serving briefly as *bitwäddäd* in 1722 and then as *däǧǧazmač* and governor of Damot. In late 1731 Iyasu appointed him *ᶜazzaž* of ↗Yəbaba. Like several of Bäkaffa's high-ranking officers, he was angered by the maneuvering at court upon Bäkaffa's death in which ↗Bərhan Mogäsa (Məntəwwab), Bäkaffa's wife and Iyasu's mother, and her Qʷaran relatives hastily and secretly crowned Iyasu, seizing control of throne and state.

The rebellion led by T.M. lasted from 19 December 1732 to 2 January 1733 and involved an eight-day siege of the royal compound. T.M. and several other prominent nobles marched into ↗Gondär and proclaimed a new ruler, Həzqəyas, whom they had brought from the royal prison, ↗Wähni Amba. Fighting raged daily around the palace grounds and throughout the city. The rebels tried repeatedly to break into the royal enclosure and at one point succeeded, but the Qʷaran forces beat them back. Several buildings inside the royal compound were set afire, as were nearby houses, a royal banquet hall, and the church of Qəddus Rufaᵓel. The rebels accused the court of harboring two "Franks" (i.e. Catholics), falsely as it turned out, and used the accusation to persuade the *əčč̣äge* ↗Täklä Haymanot and *abunä* ↗Krəstodolu to excommunicate Iyasu, Məntəwwab and all of their defenders.

Despite valiant efforts to defend the royal enclosure, the Qʷarans struggled in the face of T.M.'s relentless attacks, dwindling provisions, and the wavering loyalty of their soldiers. In desperation, Iyasu and Məntəwwab sent a plea for help to *däǧǧazmač* Wäräñña, governor of Damot. Wäräñña, together with *azzaž* Giyorgis, newly appointed over Yəbaba in place of T.M., led an army of Oromo cavalry to Gondär. Confronted with this armed force, T.M. and the rebels fled to Wägärä, where they were immediately defeated. T.M. and two other leaders were captured and hanged, the *əčč̣äge* and *abun* were persuaded to recant their decree of excommunication, and Həzqəyas was remanded to Wähni.

T.M.'s rebellion was the most serious opposition the Qʷarans faced in their ascent to power. The rebellion would almost certainly have succeeded if the Qʷarans had not received help from their Oromo allies. T.M.'s siege of the royal compound in 1732 was also the only time when the Gondär castle compound was used to fend off a determined attack, albeit one that very nearly succeeded.

Tänta

T. (**ተንታ**; 11° 19' N, 39° 15' E, 2,972 m A.S.L.) is a town and a *wäräda* in the Däbub (South) Wällo administrative zone. The town is said to have been founded in the last quarter of the 18th cent. by ↗Mäḥammäd ^{c}Ali "Abba Ǧəbo", the founder of the ↗Mammädočč dynasty. The main town of the *wäräda* of T. is Ağəbar. In 1994, the town of T. had 2,320 inhabitants and the *wäradä* 137,412 inhabitants (CSA 1996). In the 2005 census, the town had 4,022 inhabitants and the *wäräda* 187,604 (CSA 2005).

T. is probably named after the Egyptian city of Tantah, in the Nile delta, 100 km north of Cairo and renowned in the Islamic world for being the birthplace of Aḥmad al-Badawī, the founder of the Aḥmadīya Sūfī brotherhood (↗Islamic brotherhoods). The use of this place-name in Wällo, at the time of the expansion of ↗Islam in this region, may be an indication of the influence of Sūfī brotherhoods, including the Aḥmadīya, which was not the most influential in the region.

T. is located on a strategic site, on the northern end of the plateau of ↗Wärrä Himäno, on a narrow strip of flat land. It is watching over the *amba* of ↗Mäqdäla, in the west, and the valleys of the Bäšəlo River and its tributaries. During the 19th cent. T. was the stronghold of the Mammädočč dynasty. It was described by ↗Krapf who spent a night there in 1842. It was the main town in the highlands of Wällo until the foundation of ↗Wärrä Illu by Mənilək in the 1870s and the foundation of ↗Däse by *ras* (later *nəguś*) ↗Mikaʾel Ali in 1890s. The shift of the centre of Wällo to Däse seems to have brought about the decline of T. It kept some importance as the main town of the *awrağğa* of Wärrä Himäno.

The famous church of T. Mikaʾel is found 4 km north of the town, on a small chalky hill, named Däbrä Bərhan, over a cliff in front of Mäqdäla, which used to be the camp of *ras* Mikaʾel Ali. The church was built from 1903 to 1910 by order of *ras* Mikaʾel, who chose the same saint's name as the church of Golbo Mikaʾel in Ambassäl where he was baptized in 1878. Local traditions say it was commissioned by *ras* Mikaʾel to an Italian named Bukovic. Its architecture is remarkable. It is made of stone blocks assembled together by a fine masonry work and has three tiers majestically surmounting each other, including two bell towers. It has three *tabotat*, one dedicated to St. Michael, one to Täklä Haymanot and one to the Trinity. In the courtyard there is the mausoleum of *nəguś* Mikaʾel and his family. T. is also the birthplace of *ləğ* ↗Iyasu.

Ṭäqäye

Ṭ. (**ጠቀዬ**; d. 1859) was one of two "ambassadors" sent in October 1858, by *däğğazmač* "Agäw" ↗Nəguśe Wäldä Mikaʾel, ruler of northern Ethiopia, to Rome and France, to establish an alliance with the French and to obtain arms.

Nəguśe and his brother ↗Täsämma Wäldä Mikaʾel claimed the legacy of their powerful uncle *däğğazmač* ↗Wəbe Ḫaylä Maryam of Səmen in opposition to the newly–crowned *aṣe* ↗Tewodros II. In anticipation of meeting the full force of Tewodros's army and at the instigation of the Roman Catholic Lazarist missionary, Giustino de ↗Jacobis, Nəguśe turned to France (RubInd 194f.; CrumMis 104ff.).

In a formal letter addressed to Napoleon III in 1858, Nəguśe introduced Ṭ. as his cousin (RubActa II, no. 37). Ṭ.'s role in the embassy was, apparently, subordinate to that of his companion, an Ethiopian Catholic priest, *abba* ↗Ǝmnätu. The two Ethiopians were accompanied by the French traveller, Lepère de Lapereuse, who was to act as their interpreter, and who, on the embassy's arrival in Rome, ceded place to the Lazarist missionary, Giuseppe ↗Sapeto, an ardent promoter of a French–Təgray connection.

In February 1859 the embassy was in Rome, where they were granted a papal audience. In April in Paris they were received by Napoleon III (RubActa II, doc. 46). On their return to Ethiopia they again passed through Rome, where they were given a papal letter addressed to Nəguśe.

With funds provided by Nəguśe, Ṭ. and Ǝmnätu had purchased some arms in Europe, which were confiscated at Suez on their return, sometime before August. In September, Ǝmnätu was back in Ethiopia, but alone, Ṭ. having died on the way. As Nəguśe subsequently informed Napoleon III, "I thank you for the fine ceremony you held for Ṭ., my cousin, whose death by shipwreck at sea, while returning from France, makes me sad at heart" (RubActa II, no. 49).

Donald Crummey

Ṭaqussa

Ṭ. (**ጣቁሳ**, in European sources Dagusa) is a district located to the west of Lake Ṭana, stretching along a mountain range (Mount Abraččočč in the north, Mount Gandi in the south, 2,412 m A.S.L.; Guida 369) that separates it from the ↗Bäläs basin (for location s. map for Ṭana). It is separated from the neighbouring district of Aläfa by the river Känna in the east (Girma Getahun 1991: 469), and from ↗Ačäfär by the river Qinna in the south (Guida 369).

Ṭ. is historically relevant as the site of repeated battles between *däǧǧazmač* Kaśa Ḫaylu (later *aṣe* ↗Tewodros II) and the forces of *ras* ↗Ali II and *däǧǧazmač* ↗Wəbe Ḫaylä Maryam.

When Kaśa invaded ↗Dämbəya in October 1846, *ətege* Mänän, Ali's mother, sent troops to stop him. Her troops were, however, defeated twice, first at Čäqo and then at Säqäla Wärka, in Ṭ. Kaśa was able to capture ca. 100 rifles as booty which boosted his position for renewed engagements in the 1850s (RubTew 37).

Subsequently, *ras* Ali asked for military help from *däǧǧazmač* Wəbe. In March 1853, their combined forces invaded Dämbəya. Kaśa was forced to retreat to Ṭ. where he scored a spectacular victory in April. He killed Ali's ally, the *balabbat* of ↗Yäǧǧu *ras* Bərru Aligaz, and one of Ali's leading officers Bäläw Abbe (BTafA 891, 895).

The Battle of Ṭ. marked the defeat of the two principal *rases* of the period and played a significant role in Kaśa's rise to power, second only to that of ↗Ayšal. Ṭ. might also have remained a stronghold for Kaśa's relatives such as Gärad, the nephew of the Emperor, who rebelled and began to control Ṭ. and its surrounding areas in 1860 (BTafA 919).

In the 1930s, the area was populated by the ↗Wäyṭo, inhabiting scattered hamlets, such as Goga (probably now the town of Däbr; Guida 369; Simoons 1960: 22, 49ff.). Today, activities such as hunting, fishing and ↗*tankʷa* transportation, all carried out by the Wäyṭo, have declined; the inhabitants speak Amharic.

In the modern administrative division, Ṭ. together with Aläfa form the Aläfa *wäräda* of North Gondär zone, Amhara *kəlləl*. Ṭ. stretches ca. 40 km from north to south and ca. 20–30 km from west to east. Aläfa covers an area of over 6,000 km^2 and has ca. 300,000 inhabitants (CSA 2006). Its main town is Dälgi, with ca. 10,000 inhabitants. Other important towns are Gomänge (ca. 3,000 inh.), Šäwra (ca. 5,000 inh.) and Dängel Bär (2,500 inh.). Urban dwellers account for ca. 7 % of the total population of the *wäräda*.

Tsega Endalew Etefa – Alain Gascon

Ṭarma Bärr

Ṭ.B. (**ጣርማ፡ በር**, 9° 51' N, 39° 44' E) is a mountain above the town of ↗Däbrä Sina in northern ↗Šäwa (for location s. map for Tägulät). Three tunnels on the main modern road pass under the mountain, while the historical route presumably went a few kilometres further north, through easier terrain. The name often appears in historical sources, because the place is a natural point of reference. Ṭ.B. is part of the mountain ridge that separates the eastern slopes and lowlands (↗Yəfat) from the western highlands and valleys (↗Mänz and ↗Tägulät). Broadly speaking it is also a dividing point between the northern ↗Amhara heartlands and the area conquered and resettled during the rule of ↗Amməḫa Iyäsus, and thus brought under tighter administrative control.

Ṭ.B. is also a natural crossroads. The eastern escarpment of the mountain ridge is part of the Rift Valley formation, and is generally very steep. Below Ṭ.B., however, the landscape slopes somewhat more gently towards the lowlands. Furthermore, the principal route towards Mänz passed through Ṭ.B. in order to avoid crossing the many deep river valleys further to the west. Today there is a small village at the road junction between the main road and the roads towards Mänz and ↗Sälla Dəngay.

Svein Ege

Ṭarūᶜa

Ṭ. is an important ↗Sāho subgroup settling in an territory between the River Ḥaddas and ᶜAla, between the highlands (↗*Käbäsa*) and the coastal regions of Eritrea (for location s. ↗Idda). They are especially known for their conflicts with a neighbouring ↗Təgrəñña group, the ↗Ṣänᶜadäglä in the Sägänäyti sub-district of ↗Akkälä Guzay.

The Ṭ. are bilingual in Sāho and ↗Təgre, and are divided into two main sub-groups, the Musa ᶜAre (Tgr. Bet Mosa) and Sara ᶜAre (Tgr. Bet Sarah). The Bet Mosa are mixed and affiliated with Təgre-speaking groups in the ↗Samhar region. In addition, there are small Sāho clans who are affiliated to the Ṭ., like the Šek Laḥlaḥa ᶜAre, Kabuta and Bet Aqayl or Bet Uqayl (MuhTarih 230).

The Ṭ. trace their descent to a distant ancestor of the ↗Qurayš, especially to the clan of Banū ᶜUmayya. This is linked with similar legends of origin of the Sāho-speaking group of ↗Ḥazo and those of the Təgre-speaking ↗Mänsaᶜ and ↗Marya. The ancestor of all these four groups, Zayd, had originated from ↗Yemen, crossed the Red Sea and settled on the ↗Buri Peninsula. They claim that the founding father of the Ṭ. was known as ᶜUmar Ṭ. (PollEr 170). The myths of the Ṭ. are rather based on religious, linguistic and cultural criteria, like those of the majority of the Sāho who trace their ancestors back to ↗Arabia and the Middle East.

The Ṭ. are agro-pastoralists and move between the highlands and the lowlands, i.e. between March and October to the highlands of Ḥamasen (mountains of Bizän, Damas, Sarat) and to Akkälä Guzay (area of ↗Däqqämḥare and Sägänäyti, especially Aligäde) in search of pasture and water, while between November and February they migrate to coastal areas such as ↗Gindaᶜ, Əmbatkalla, Gaḥtälay and Saḥati (PollEr 170f.). During the rainy season, they practice rain-fed agriculture. There are also some clans who are sedentary agriculturalists and harvest twice a year during the *baḥri*-rains in the Sämenawi Qäyyəḥ Baḥri, the Northern Red Sea *zoba* (Trevaskis 1977: 3f.; NadEr 128f.; Lewis 1969: 175).

The centres of the Ṭ. today are Gindaᶜ, Gaḥtälay and Agambussa, because most of the their clans were displaced from the highlands by Təgrəñña groups. During the Italian colonial period the Ṣänᶜadäglä formed permanent settlements in the highlands of Akkälä Guzay, excluding the Ṭ. from pasture and agricultural land. This caused a long blood feud and conflict between the two groups. This conflict with the Ṣänᶜadäglä (and not between the ↗Asaorta and Ṣänᶜadäglä, as erroneously noted by Favali – Pateman 2003: 147) started while the Ṭ. were administered by the Asaorta chief Nasir *bey*, and was linked with the fact that the Ṣänᶜadäglä leader collaborated with the colonial administration (ibid.). Due to this, disputes over pasture and agricultural land between the Ṭ. and Ṣänᶜadäglä were particularly intense during the Italian colonial period. However, the Eritrean government succeeded in mediating the conflicts (Favali – Pateman 2003: 162; Abdulkader Saleh et al. 2008).

Täsämma Asbärom

Ras T.A. (**ተሰማ፡ አስበሮም**, also Täsämma Asmärom ᶜUntura; b. 26 May 1870, Maᶜräba, Akkälä Guzay, d. 1964) was a prominent figure in the formation of political parties in post-colonial Eritrea. Born to a noble family, at the end of the 19th cent., he was able to expand his family's power, despite his constantly changing allinaces. When *däggiyat* ↗Bahta Ḥagos rebelled against the Italian occupants in December 1894, T.A. fought on the Italian side against his rival Bahta. However, in the Battle of ↗ᶜAdwa in 1896 he served on the side of the Ethiopian troops.

In 1898 T.A. was appointed *däggiyat* over the district of Haddägti in ↗Akkälä Guzay by the Italians, and became locally famous for his jurisdiction and mediation of land rights. T.A. and his brother, Bärhe Asmärom ᶜUntura, became the most prominent rulers in Akkälä Guzay. During the time of the ↗British Military Administration T.A. was raised to the rank of ↗*ras* by the British governor Brigadier Stephen ↗Longrigg on 17 February 1941.

On 5 May 1941, after a series of political demonstrations and violent confrontations with the British adminisitration, the ↗*Maḥbär Fəqri Hagär* (MFH) was founded. T.A. was among its founding members, together with ↗Wäldä Ab Wäldä Maryam, T.A.'s eldest son, *däǧǧazmač* ↗Abräha Täsämma and others. The MFH, however, was weakly led, its leaders following different aims. T.A. was the spokesman of a group that favoured the Union of Eritrea and ↗Təgray under some kind of British administration. Different parties developed out of the MFH in 1947, such as the ↗Unionist Party, led by T.A.'s adversary ↗Tädla Bayru, and the ↗Liberal Progessive Party (LLP) with T.A. as its president.

Täsämma Asbärom (middle) with *däǧǧazmač* Abrəha (right) and an unidentified person (left); from ZRErtra 89

In order to achieve their goal of an independent Eritrea the ↗Independence Bloc was formed in 1949, T.A. served again as president. His career reached its climax with his election as representative for ↗Ṣänᶜadäglä disctrict to the first Eritrean Assembly in 1952. He served in this position until his retirement in 1956.

Täsämma Darge ↗Darge Śahlä Śəllase

Täsämma Ǝšäte

Näggadras T.Ǝ. (**ተሰማ ፡ እሽቴ**; b. 27 July 1876, Minǧar, Šäwa, d. 13 October 1964, Addis Abäba) was an Ethiopian politician and pioneer project planner. In addition, he was a writer, poet and the first Ethiopian – and probably the first African – musician to record his songs in Europe and have his grammophone records published.

As a child T.Ǝ. got a basic education and learned to read and write Amharic. From his father Ǝšäte Gobe who was an ↗*azmari* at *ras* ↗Mäkʷännən's court in ↗Harär, he also learned to play Ethiopian musical instruments. After the death of his father, T. was transferred to the palace of *aṣe* ↗Mənilək II in Addis Abäba, where he grew up.

In 1908 the life of T.Ǝ. suddenly changed. At this time, a German advisor to Mənilək, Arnold ↗Holtz, presented a car to the Emperor. But Mənilək had no driver, and when Holtz returned to his country, he proposed to take three Ethiopians with him for a professional training. T.Ǝ. was among the three selected together with Astaṭqe and Wäldä Ṣadəq.

T.Ǝ. stayed in ↗Germany for two years. He was supposed to study auto mechanics and obtain driving skills. T. also used this opportunity to sign a contract with a music recording company (Beka, later Odeon), thus becoming the first Ethiopian to record his songs on discs. His 17 discs were the first in sub-Saharan Africa and among the oldest on the entire continent.

On his return T.Ǝ. was appointed the head of the imperial vehicle fleet and chief driving instructor. Around the same time T.Ǝ. became a friend and confident of the new ruler *ləğ* ↗Iyasu (cp. Teclehaimanot G. Selassie 1986:165), who also introduced him to Ḫaṣīb ↗Ydlibi. T.Ǝ. married an aunt of *ləğ* Iyasu, *wäyzäro* Ṣ́äḥayä Wärq Darge, daugther of *ras* ↗Darge Śahlä Śəllase, by whom he had two children. He was soon appointed first Director of the Hot Springs in Addis Abäba, and then representative of the Post Office and Telegraph with the title of Minister. After divorcing from his first wife, he married Mulatwa Gäbrä Śəllase on 22 December 1915, with whom he had seven children, among them ↗Yədnäqaččäw Täsämma. T.Ǝ. had another child from a relationship in Boorana (in addition, according to his last will, he also had one son with the former wife of *bitwäddäd* ↗Ḫaylä Giyorgis and occasional concubine of *ləğ* Iyasu, Təsämme Andarge, and a daughter from another woman).

After the ↗coup d'état 1916 (s. EAE vol. 2, 1081) and deposition of Iyasu, T.Ǝ. was placed under house arrest in the town of ↗Ǧimma, and his property confiscated. In Ǧimma he ran a small brick manufacturing plant to make his living; he returned later to Addis Abäba, where, for a short time, he managed the construction of the hotel in Bišoftuu (↗Däbrä Zäyt) in preparation for ↗Ḫaylä Śəllase's coronation in 1930. Just before the beginning of the ↗Italian war of 1935-36 T.Ǝ. was appointed governor of ↗Wälamo and received the title *näggadras* (but was unarmed, in spite of the Italian advance) by Ḫaylä Śəllase. During the Italian occupation T.Ǝ. lived in Addis Abäba, and his real-estate property was restituted, including the Italian-owned Lombardia Restaurant and Bar, for which he received a rent. His songs were republished by Odeon and his living conditions became better. However, after the Liberation of Ethiopia his position became as difficult as it had been before. He had to stay under house arrest for five years in Amäya Wäliso, and was then briefly appointed director of the Šašämänne wood and tomato processing plant.

Studio photo of Täsämma Ǝšäte; photo 1906, collection of Tadele Y. Tessema

Despite the numerous restrictions, he initiated diverse development projects; at his suggestion, e.g., the Sodäre hot spring became a centre of recreation, and the ↗Qoqa hydro-electric dam was built. He also tried a number of businesses, which were often stopped or hindered by the government; he started the first city transport company in Addis Abäba with imported taxis; he established sugar cane, fruit and vegetable farms in Bišoftuu, Wänği and Awara Mälka.

Throughout his life T.Ǝ. dedicated himself to writing poetry. It dealt with political topics, touching occasionally on delicate aspects, which led to further arrests and harassment. His poetry is also characterized with freedom on religious issues, despite its being composed using the old church technique of wax and gold (↗*Sämənna wärq*).

Täsämma Habtä Mikaʾel

T.H.M. (**ተሰማ፡ ሃብተ፡ ሚካኤል**; b. 4 June 1890, Sälale, Šäwa, d. 7 October 1970, Addis Abäba) was an outstanding Ethiopian lexicographer and author of the dictionary known as **ከሣቴ፡ ብርሃን፡ ተሰማ። የዐማርኛ፡ መዝገበ፡ ቃላት** (*Käśate bərhan täsämma. Yäʿamarəñña mäzgäbä qalat*, 'Täsämma, the Light Revealer [or also: The Light Revealer was Heard]. An Amharic Dictionary'; THMDic).

At an early age, under the influence of his western–trained father, T.H.M. studied both French and English. As a youth, he followed the traditional Ethiopian ↗education system, and attended ↗*mäṣḥaf bet* in Goǧǧam.

From 1919 to 1929, T.H.M. worked for the Ethiopian government and was particularly involved in the preservation and copying of manuscripts. He later worked as a teacher in Harär until 1943 when he moved to Addis Abäba. There he taught grammar (↗*Säwasəw*) until 1962, at the Teacher Training College. During the Italian invasion of Ethiopia, he also worked as head of the propaganda office in the Ethiopian government.

His dictionary is a monolingual grammar and lexicon. He wrote it in 1958/59, while in Harär. It is divided into three major sections:

1) introductory notes on the history of the Amharic language;
2) a morpho–syntactical discussion;
3) an extensive alphabetical lexicon.

This thematic division is a well recognized pattern amongst Ethiopic lexicographers including ↗Dästa Täklä Wäld and ↗Kidanä Wäld Kəfle (cp. DTWDic, KWKDic). The lexicon contains more than 38,000 entries over 308 pages.

The dictionary is strictly alphabetical, based on the Ethiopic syllabary (*hahu*, unlike DTWDic, which follows the *abugida* order; s. ↗*abugida and hahu*). The lexemes are categorized according to their roots: first by the first letter, then the second letter, and finally the third (unlike *aläqa* Tayyä's *Säwasəw*, which emulates the methodology of Classical Arabic grammarians: last radical first, then the first radical and finally the second). The entries, based on the pattern of verbal roots, are followed by the various derivatives of the root. Dialectical differences are offered, including those from Gondär, Goǧǧam, Šäwa and Bägemdər.

Borrowings from different languages are supplied (Hebrew, Arabic, Harari, Somali, Oromiffaa, Təgrəñña, Gəʿəz, Greek, Latin, French and English). Personal ↗names of Ethiopian rulers and names of Ethiopian cities, mountains and rivers are also included. The dictionary is illustrated by 278 drawings.

Meley Mulugetta

Täsämma Nadäw

Ras T.N. (**ተሰማ፡ ናደው**, horse name "Abba Qämmaw"; b. ca. 1845, d. 10 April 1911 [2 *Miyazya* 1903 A.M.]) was an army general, political leader and confidant of *aṣe* ↗Mənilək II and was appointed by him as regent and guardian of the young *ləǧ* ↗Iyasu, the designated heir to the throne in 1909.

T.N. was the son of *wäyzäro* Qonǧit Däbnäh, who belonged to the powerful Šäwan ↗Addisge provicial rulers. His father was *däǧǧazmač* Nadäw Aššabər who had been the tutor and guardian of Mənilək, a courtier and confidant of *nəguś* ↗Ḫaylä Mäläkot with whom he had gone to the court of *aṣe* Tewodros II in 1855. T.N. made his name as a military leader, playing an important role in the conquest of western Ethiopia as well as in several campaigns to quell rebellions. In the years of confusion following Mənilək's first stroke in 1908, T.N., who was a serious and careful personality, committed to Mənilək's vision of a unified and centralized Ethiopia. After initial hesitation, he was responsible for sidelining *ətege* ↗Ṭaytu when she tried to take Mənilək's place and shift the balance of power at the court to the "Gondärine" party.

As a close confidant T.N. rose to power in the 1880s as one of Mənilək's chief military leaders and political loyalists. Since 1887 he had ruled the conquered regions of ↗Guumaa and eastern ↗Illubabor. He married Bäläčaččäw Abbaa Ǧoobir, the young baptized daughter of Guummaa's last king, in a political marriage. His seat became the town of ↗Gore, where he had his power base and his chief source of revenue. In these years, T.N., together with *ras* ↗Wäldä Giyorgis Abboyye, secured a monopoly on coffee exports from ↗Käfa and other southern regions, redirecting the flow to Addis Abäba instead of the north (Gondär); this led to a fall in prices (Garretson 2000: 14, 121, 189), but helped to consolidate Mənilək's power. T.N. also had an ↗ivory trade monopoly in Illubabor.

Shortly before the Battle of ↗ᶜAdwa, T.N. was sent by Mənilək to neutralize the ᶜAfar *sulṭān* ↗Maḥámmad "Illálta" Ḥanfaḏé who had been urged by the Italians to open a front in the East. In February 1896, T.N. successfully completed this campaign (cf. Bairu Tafla 2000: 463; cp. ↗Millee). At ᶜAdwa T.N. led one of the victorious armies against the Italians. In 1897–98 T.N. joined *ras* ↗Wäldä Giyorgis Abboyye in a campaign to conquer the remaining parts of what is now western Ethiopia, securing the lands of the ↗"Gimira", ↗Añwaa, ↗Mağaŋir, and other groups in the south-western periphery, while Wäldä Giyorgis went to ↗Maǧi and the Sudanese borderlands. T.N.'s army then counted ca. 30,000 soldiers with firearms (GueCopMen 504). *Ras* T.N. himself did not proceed to the Sudan to meet up with the French forces and then heading to ↗Fashoda on the White Nile, but an advance company under *fitawrari* Ḫayle, with a number of Europeans (de ↗Bonchamps), did and reached the mouth of the "Sobat" (cf. GueCopMen 472; Prouty 1986: 205). The meeting did not take place, as the French commanding officer Major Jean-Baptiste Marchand did not turn up on time and Ethiopian troops, affected by illness, had to return.

After having secured the whole of Illubabor, T.N. returned to Addis Abäba, where he arrived on 15 September 1898. In 1900 he deposed Abbaa Foǧi, king of the Guumaa kingdom and local ruler, and reinforced imperial control over western Ethiopia. In this year, T.N. was also made a *ras*. While keeping his governorate of Gore, T.N. became more active in court politics and was often in Addis Abäba as a representative of the "Šäwan" party, rivaling those of Gondär, Təgray, Wällo and Goǧǧam. In 1909, as Mənilək's advisor, he reinforced Addis Abäba militarily, with defense batteries placed at strategic points. In the same year, trouble started between the troops of T. and those of *fitawrari* ↗Habtä Giyorgis (supporter of *ləǧ* Iyasu's party), who offered T.N.'s men a larger salary, resulting in defections. Finally the Emperor had to intervene (Garretson 2000: 92).

Ras Täsämma Nadäw on a postcard; from the André Evalet collection

In August 1909, *aṣe* Mənilək II proclaimed T.N. *ras bitwäddäd* and "plenipotentiary" of the government with the foreign legations (Amh.: *balämulu səlṭan əndärase*), a new title. His appointment as regent and tutor of *ləǧ* ↗Iyasu followed on 30 October. T.N. took Iyasu to his home to be tutored. A year later, T.N. married Iyasu to the daughter of *ras* ↗Ḫaylu Täklä Haymanot of

Goǧǧam for political reasons. T.N.'s new position as regent evoked intense rivalries, e.g., from the Empress and from regional lords, such as *ras* ↗Mikaᵓel, Iyasu's father, whose influence T.N. tried to limit. In these crucial years of transition, however, T.N. acted in a hesitant manner (Prouty 1986: 321, 323). Finally, after having been deeply insulted by Ṭaytu (ibid. 327), he took action to cut the political maneuvering of the Empress, calling a large council of chiefs and nobles on 21 March 1910 to force her out. Those present supported his plan to give her the choice of either retiring to a monastery or devoting herself to caring for her ailing husband and refrain from politics. Ṭaytu took the latter option and was since then no longer a political factor. This was one of the measures that T.N. took to stabilize the situation following Mənilək's incapacitation in 1908.

T.N.'s tutoring of Iyasu bore little fruit and allegedly exhausted him (GebMolIyas 314, cf. Zäwde Rätta n.d., 122, 214). In 1911, T.N. died suddenly. Rumor had it that he was poisoned (Bartnicki – Mantel-Niećko 1978: 428). One source suggests this might have been the work of his wife (GebMolIyas 558; local informant), who resented him and subsequently tried to ingratiate herself with Iyasu (Prouty 1986: 338). T.N. was buried in Däbrä Libanos.

After T.N.'s death, several more unstable years followed, with Iyasu finally assuming government in 1913 with the support of his father *ras* Mikaᵓel. In Ethiopian politics, T.N. had shown a commitment to Mənilək's national causes, not to provincial-regional ones. While a man of the old guard, he had a broad vision, was conscious of Ethiopia's international needs, interested in European politics and technical innovation, and kept good contact with Western diplomats in Addis Abäba. He died before he could complete his political role to usher in an orderly transition to post-Mənilək rule.

Jon G. Abbink

Täsämma Wäldä Mikaᵓel

Däǧǧazmač T.W.M. (**ተሰማ፡ ወልደ፡ ሚካኤል**; d. January 1861, ᶜAdwa) was the brother of the better-known *nəguś* ↗Nəguśe Wäldä Mikaᵓel. Both brothers carried the nickname "Agäw", their father having been an ↗Agäw nobleman of ↗Səmen.

They were nephews through their mother of *däǧǧazmač* ↗Wəbe Ḫaylä Maryam, ruler of ↗Wägära, Səmen and much of northern Ethiopia from the late 1830s until 1855 (RubTew 67). Of the two brothers, Nəguśe receives much the fuller treatment in the sources, T.W.M. emerging only occasionally and briefly from his brother's shadow. Wəbe was defeated by *däǧǧazmač* Kaśa in the Battle of ↗Däräsge in February 1855, immediately following which Kaśa claimed the Solomonic throne and had himself crowned as *aṣe* ↗Tewodros II. Nəguśe and T.W.M. emerged as the principal contenders for the political legacy of Wəbe, contesting the establishment of Tewodros's newly-appointed governors.

During a long campaign by Tewodros in ↗Šäwa and ↗Goǧǧam, which continued into 1856, T.W.M. and Nəguśe marched on ↗Gondär and occupied the town (RubTew 67f., citing British Foreign Office reports by Walter ↗Plowden). However, on the Emperor's return the brother rebels retreated to Səmen and ↗Təgray. For the next three years they entrenched themselves in Təgray, defeating most of Tewodros's appointees (ZanLitTheod 46f.). At some point, Nəguśe appointed T.W.M. as governor of Səmen and Wägära. During the rains of 1857, T.W.M. again captured Gondär, where his rule proved very unpopular (CRNuov 411ff.). His ambition to plunder ↗Dämbəya was averted by the intervention of a number of notables and a strong letter from Wəbe (RubActa II, no. 38). In 1858 the approach of Tewodros towards Wägära again encouraged T.W.M. to withdraw (ZanLitTheod 33).

However, in 1859, when news reached the Emperor that T.W.M. and Nəguśe were trying to establish diplomatic relations with ↗France, he marched on Təgray, and in January 1860, T.W.M. and Nəguśe fled to the ↗Märäb valley (RubTew 78f.). T.W.M. next appeared in Wägära, and, in March 1860, in alliance with an ally, ↗Garäd Kənfu, just outside Gondär he attacked and killed Plowden, the British consul and favourite of the Emperor. Immediately following the rains in 1860 Tewodros marched against Garäd and T.W.M., forced them into a battle in ↗Wäldəbba, where he defeated them and killed Garäd. T.W.M. escaped and joined his brother north of the ↗Täkkäze, whither the Emperor followed them, bringing them, in turn, to battle in ↗Tämben in January 1861. The two brothers were captured and executed in ᶜAdwa. They had their hands and feet amputated; T.W.M. died the same day, and his brother three days later.

Donald Crummey

Täsänäy

T. (**ተሰነይ**) is one of the major towns and commercial centres in the province of Gaš-Barka in the western lowlands of Eritrea (for location s. map for Taka). According to ↗Təgre and ↗Ḥədaräb folk etymology the name means 'land without water' (Paulos Zaid 1997:3). A possible ↗Beğa etymology would be *te-sisa-nʾəy* 'where goats [*nʾəy*] graze'.

In fact, the town is rich in subsurface flowing water and its location close to the seasonal river ↗Gaš provides sufficient water during the rainy seasons from March to April and from July to November. T. lies 500 m A.S.L. at the end of a scenic mountain range amidst a fertile plain with pittoresque granite monolithic rocks, along green river banks seamed by gallery forest and doum palms – the habitat of the transhumant Beğa- and Təgre-speaking pastoralists (↗Beni ᶜAmər). Almost all Eritrean ethnic groups can be found living in the town, but mostly by Ḥədaräb, Təgre, ↗Kunama, ↗Nara, ↗Təgrəñña and Bilen (↗Bilin); Muslim ↗Hausa pilgrims from Nigeria (↗Tukrīr) on their way to or from ↗Mecca remained here and work as potters (↗pottery and potters) and ↗blacksmiths. Beni ᶜAmər caravans pass the town and stop over on their way to ↗Kassala (ca. 45 km) in ↗Sudan.

The actual founding of the town with permanent brick residences dates back to approximately 1915 (Paulos Zaid 1997:3). In 1901 the Italian colonial power started to build a diversion dam and a reservoir to feed a nearby irrigation scheme for agriculture and at the ↗cotton plantation in ᶜAligədər as did the British in Kassala (NadEr 15, 27; League of Nations 1925:192). After the conclusion of an agreement between the Italian and British Governments respecting the regulation of the utilisation of the waters of the river Gaš in 1925, an Italian colonial Residenza was built in 1928, accompanied by the parastatal Italian agricultural company Società Imprese Africane, a cotton gin, a hospital, hotels, garages, workshops serving the colonial agricultural projects in the region (KilHDic 396; 66ff.; League of Nations 1925:190–99).

The population grew from 1,800 in 1938 to 12,000 in 1962 (KilHDic 396) and at the end of the 1990s, with the influx of returning Eritrean refugees from the Sudan, to about 25,000. The master plan of the town for 1972 comprised 162 ha, whereas in 1997 it comprised 382 ha for urban housing and various social facilities (Paulos Zaid 1997:3).

In 1961 the Eritrean war of independence began in an area close to T. and thus the town experienced numerous raids in the 1960s, both Ethiopian offensives and ↗Eritrean Liberation Front (ELF)/↗Eritrean People's Liberation Front's counter offensives. It became the Ethiopian military headquarters for the region – with a garrison of at times 3,000 soldiers – until the ELF liberated it on 26 March 1988 when the Ethiopian troops finally withdrew after losing the Battle of ↗Afᶜabet (KilHDic 396). After that the town was largely in ruins, but reconstruction started soon with the help of international organizations bringing back the necessary infrastructure such as roads, a power plant, schools, mosques, churches, banks, agricultural schemes, urban housing and shops, so that T. – until the border conflict between 1998 and 2001 in which the town was destroyed again – became an important centre of trade.

Kerstin Volker-Saad

Täsfa Gäbrä Śəllase

Qäññazmač T.G.Ś. (**ተስፋ፡ ገብረ፡ ሥላሴ**; b. 1902/03, Akrəmət Mikaʾel, Šäwa, d. 3 June 2000, Addis Abäba) was a prominent Ethiopian publisher. Most of his publications are still used in the elementary stage of traditional church ↗ education. T.'s father was already famous for preparing and writing ↗ manuscripts. When T.G.Ś. served as ↗ *diyaqon* at Akrəmət Mikaᵓel church, he as well used to prepare parchments and inks and copied various prayer books for the parish and different members of the congregation.

T.G.Ś. came to Addis Abäba in 1916 where he sold on the streets the ↗ *fidäl gäbäta* which he had copied out on parchment. His "self motivated literacy campaign" became more effective and easy when he published the *fidäl gäbäta* at the Märḥa Ṭəbäb printing press under the motto "*ᶜəwqät yəsfa dənqʷrənna yəṭfa yəh näw yäᵓityop̣ya täsfa*" ('let knowledge flourish and ignorance be eradicated; this is the hope of Ethiopia'). When the newspaper ↗ *Bərhanənna Sälam*, one of the earliest Amharic newspapers, was launched in 1925, T.G.Ś. became the agent for the distribution of pamphlets and the newspaper in Addis Abäba and other cities. T.G.Ś.'s dedication to promoting literacy was admired by different institutions, especially the Church, which offered him a work place in the compound of the Patriarchate. Seizing the advantage of having his own place, T.G.Ś. bought a manually operated printing press and started publishing. Material for his campaign included the ↗ *Wəddase Maryam* and other small books of prayers.

Prior to and during the Italian invasion, T.G.Ś. was active in mobilizing people against the invaders by publishing anti-Italian propaganda. As a result he was briefly imprisoned during the Italian occupation. After the country regained its independence, he was among the patriots who received an imperial award and the title *qäññazmač*.

After the Liberation, T.G.Ś. resumed his work in the publication industry and later opened his own publishing house, Täsfa Gäbrä Śəllase Matämiya Bet, which he ran until his death. He died a natural death and buried at the Ǝnṭoṭṭo Däbrä Ḫayl Raguᵓel wäDäbrä Elyas church. He was survived by 13 children, some of whom continued the operation of the printing press.

Src.: recollections read at the burial of *qäññazmač* Täsfa Gäbrä Śəllase, 6 *Gənbot* 1993 A.M. [3 June 2000 A.D.]; **ስምዐ፡ ጽድቅ** (*Səmᶜa Ṣədəq*, 'The Righteous Truth'), 15–30 *Miyaziya* 1994 A.M. [2001 A.D.]).

Mersha Alehegne

Täsfa Śəllase Wäldä Gärima

T. (**ተስፋ፡ ሥላሴ፡ ወልደ፡ ገሪማ**; b. 10 April 1870, Edalgädä, ᶜAgamä, d. 18 April 1948, Addis Abäba) was a Catholic priest and intellectual. Born to a noble family, he was the eighth of 13 children of *blatta* Wäldä Gärima. In spite of opposition from his father, a staunch Orthodox supporter, T. chose to study at the school of ᶜAlitena run by the ↗ Lazarists. Then he moved to Ak̠rur where he encountered Jean-Baptiste ↗ Coulbeaux and converted to Catholicism. In 1883 he moved to Kärän to enter the Catholic seminary. He was ordained priest in Massawa by bishop Louis-Callixte Lasserre, the Vicar Apostolic of Aden, on 10 May 1897. After his ordination T. became first parish priest of Mäsärrəḥa, and then of ᶜAlitena, where he worked for ten years as pastor and school teacher.

In February 1910, together with a catechist, T. began a journey to the south, disguised as a merchant. His aim was to visit and to minister to the Catholics in ↗ Ankobär who had been left without priests for 40 years. After roughly a year, he went to the Kəmant area where he exercised his ministry. In 1912, he joined the Lazarist Order.

T.'s skills in relating with the government and local authorities were an important factor in the establishment of Catholic missions in ↗ Gondär, Mändida and ↗ Däse. During the Italian invasion, he was regarded with suspicion by the Italian colonial administration because he was on friendly terms with *aṣe* ↗ Ḫaylä Śəllase I. He was therefore detained in 1937, falsely accused and sentenced to death, but soon released. In the same year T. went into exile to Alexandria and returned home in 1941. During his subsequent stay in Addis Abäba he helped to acquire land for the Lazarist Mission.

T. is remembered as a vibrant intellectual and as a capable teacher. He knew Latin and French and, reportedly, had a good command of Gəᶜəz. Some of the manuscripts he owned have been profitably used in the elaboration of scholarly texts (e.g. Ayelè Teklehaymanot 1974; cf. also EMML nos. 2333, 2339).

In 1921–22, while in Ankobär, T. translated from French into Amharic St. Alfonso Maria de Liguori's devotional book *Apparecchio alla morte* (1758) and prepared for publication the Təgrəñña version of the same text translated by Angelo da Ronciglione (Roma 1905), which could only be published in 1939 with the help of Goitᵓom P̣eṭros (d. 1983). A major scientific contribution of T. is his correction of the Amharic–French Dictionary by his Lazarist confrère Joseph ↗ Baeteman (cf. BaetDic vii). He also translated

Gäbrä Śəllase's Chronicle of Mənilək II from Amharic into French (= GueCopMen).

Täsfa Yoḥannəs Bärhe Asmärom

Däǧǧazmač T. (**ተስፋ፡ ዮሐንስ፡ በርሄ፡ አስመሮም**, Tgn. **ተስፋሓንስ፡ በርሀ፡ አስመሮም**, Täsfaḥannəs Bärhä Asmärom, b. ca. 1923, Maᶜräba; d. 23 November 2006, London) was a leading Eritrean politician.

T. was the son of *däǧǧazmač* Bärhe Asmärom ᶜUntura the brother of *ras* ↗Täsämma Asbärom (also known as Täsämma Asmärom). He was one of the few privileged Eritreans who attended the Italian elementary school in Sägänäyti.

Around 1947 he was appointed as an Acting Divisional Officer (an administrativ position given to the local elite) of the ↗ᶜAddi K̠ʷala District by the ↗British Military Administration (BMA) in Eritrea. T. was one of the very few Eritreans to obtain such a position under the BMA.

In the late 1940s and 1950s T. started to become involved in various political activities. He became an active member of the ↗Independence Bloc from the late 1940s to the 1950s. After the ↗Ethiopian–Eritrean Federation in 1952, he continued to engage himself in politics. In 1953, he was appointed Director of Social Affairs under the Eritrean government. T. is believed to have played a decisive role in putting an end to the upheaval (of May 1953) started by secondary school students in ↗Asmära (ᶜAlämsägäd Täsfay 2005: 423f.). In 1955, he was appointed Head of Finance of the Eritrean government. In the early 1960s, he was chosen as the deputy of ↗ᶜAśratä Kaśa, the then ↗*əndärase* in Eritrea. In 1975, T. was imprisoned by the *Därg* (↗Provisional Military Administrative Council). After his release in the 1980s he went to London where he lived until his death.

Mussie Tesfagiorgis

Täsfay Ḥanṭal

Šum ᶜagamä T.Ḥ. (**ተስፋይ፡ ሐንጣል**) was a 19th-cent. governor of ↗ᶜAgamä.

In the late 19th cent. ↗Təgray was marked by conflicts of succession and conflicting claims to regional hegemony. *Ras* ↗Mängäša, son of *aṣe* ↗Yoḥannəs IV, faced greater resistance particularly in subduing ᶜAgamä. Thus, he appointed one of his staunch supporters, T.Ḥ. from Ḥənṭalo (↗Anṭalo), Ǝndärta, to pacify the rivals.

In 1890, Mängäša and *ras* ↗Səbḥat Arägawi of ᶜAgamä temporarily reconciled and allied as a "Təgrayan block" against the rising power of *aṣe* ↗Mənilək II from the south. This was, however, a short lived peace. In 1893, Mängäša doubted Səbḥat's loyalty and arrested him together with his sons and many of his leading officials. Soon afterwards, Mängäša, accompanied by his dignitaries *ras* ↗Alula Ǝngəda, *däǧǧazmač* ↗Ḥagos Täfäri, *däǧǧazmač* Ambayä and T.Ḥ., occupied ᶜAgamä and proclaimed himself heir to his father's throne.

Following his victory over the rival house of *däǧǧazmač* ↗Säbagadis Wäldu, Mängäša appointed T.Ḥ. over ᶜAgamä with the title of *šum ᶜagamä*. In June 1894, Mängäša officially submitted to Mənilək and was confirmed as governor of Təgray. However, the arrest of Səbḥat apparently aggravated the political instability in ᶜAgamä. In addition, the appointment of T.Ḥ. was viewed as unlawful appropriation of the chieftaincy of ᶜAgamä by Ǝndärta. *Däǧǧazmač* ↗Ḥagos Täfäri incited a serious rebellion, but T.Ḥ. suppressed the protest at heavy cost.

T.Ḥ.'s brief rule over ᶜAgamä came to an end with the Italian occupation of Təgray in 1895 and their release of Səbḥat from prison. *Šum ᶜagamä* Səbḥat took over ᶜAgamä's chieftaincy immediately after the Italian defeat at the Battle of ↗ᶜAdwa in 1896.

Tsegay Berhe

Tato

T. (in Käfa: *taatoo*) is the common term used for the paramount ruler or king (*Kafinoo taatoo*) of the ↗Käfa kingdom, but in a derived form the word was also used for Käfa provincial lords and chiefs. The term T. was also used by the four regional vice-kings of the kingdom, by leaders of incorporated subject peoples like ↗Nayi and Še (↗Benç̌), and by some other social groups. The ↗Manǧo hunter caste group, e.g., had their *manǧi taatoo*. The term T. seems to refer to the “possessor of life force/incumbent of power” on various levels, from the top (king/emperor) to the level of clans and territorial groups. The specific term for the “divine king” (↗Kingship, divine) in Käfa seems to have been *kafi atioo* or *atioǧo*, used since ca. 1700, during the reign of *taatoo* Galli Gafočči, a conqueror king whose achievements reinforced royal authority and charisma.

The Käfa T. was always a male and since ca. 1690 came from the paternal Bušašo dynasty of the Minǧo clan, replacing the royal Matto clan (↗Käfa dynasties). The T., addressed as *adii* (‘Sire, Majesty’), was the supreme political authority, judge and religious officiator in Käfa. He had to be of sound mind and good health and should not have any physical blemishes. Numerous oral traditions on the Käfa T. are presented in Lange’s work (1982: 180–324), mentioning the legends of origin, the sacrum (i.e. the quality of sacredness inherent in the kingship, cp. Haberland 1965: 149), the kings’ ascension to power, and their deeds. The main royal insignia were the crown (*taatoo ukoo*; ↗Jewellery; ↗*kallačča*) with gold, ostrich feathers and ornaments of a phallic-like shape, a golden ring, golden bracelet, a two-blad ritual spear, a silver-and-gold staff, a short sword with gold decoration, and a drum. The sacred crown (now in the Museum of the ↗Institute of Ethiopian Studies in Addis Abäba) may have been one of a pair, one of which was of solid gold and the most valuable but never worn in public. It was probably of Hinnaryo (s. ↗Ǝnnarya) origin and lost in the 1897 conquest of Käfa (Lange 1982: 272).

Käfa was one of the few kingdoms in pre-Mənilək southern Ethiopia that developed a marked form of centralized, divine kingship, in which the T. was made the living embodiment or symbol of unity and strength of the polity. He had both earthly and supernatural power (for a similar but less supernaturally imbued structure, s. ↗Wälaytta). Taboos precluded his being seen in public by his subjects when speaking, eating, or giving judgment, and his gaze was to be avoided. As his supernatural status and emblematic function for the kingdom grew over time, however, the T., as divine king, became less directly involved in actual rule and political activity. His advisory council (*mikirečo*) and his top religious officials (notably the *gumbaččinoo*) or advisers were probably as powerful as the T. himself, and they acted in his name. The T. did not use seals and no written orders given by him are known, as writing was not developed in the pre-conquest Käfa kingdom. The T. designed a successor before his death, a choice usually but not always taken over by the *mikirečo*. Tradition has it that upon the imminent death of a T. his patrilineal-agnatic kinsmen (all possible successors) had to be imprisoned until the choice of a successor was confirmed by the *mikirečo*. The title of T. was also in use in other ↗Gonga kingdoms such as Šeka and Boša.

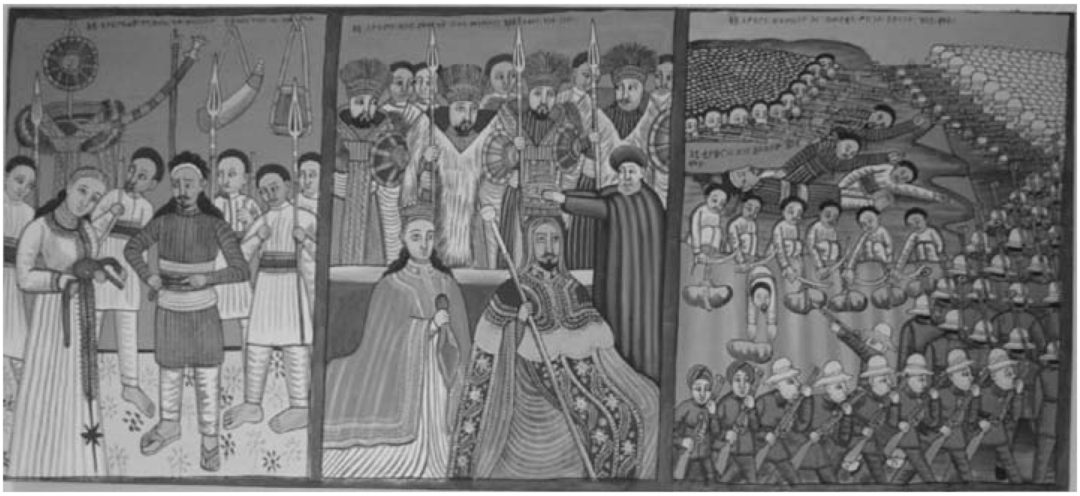
Jon G. Abbink

Täwabäčč

T. (**ተዋበች**, d. 19 August 1858) was the daughter of *ras* ↗Ali Alula who became the first wife of *aṣe* ↗Tewodros II.

T. married the then *däǧǧazmač* Kaśa sometime in the mid-1840s. This was a political marriage, designed to curb the latter’s ambition, as his rise increasingly threatened the rule of Ali Alula’s mother *wäyzäro* ↗Mänän over Dämbəya and the western Ethiopian borderlands. The union nonetheless seems to have been marked by a strong emotional bond. T. seems to have had little difficulty in transferring her allegiance from her grandmother to her husband. At the time of the marriage, Kaśa was appointed ruler of ↗Qʷara, a post which he held in subordination to Mänän (RubTew 36f.; ZanLitTheod 11f.;



3 panels on Tewodros: (1) *abba* Taṭäq and Täwabäčč; (2) *qʷərban* marriage with Täwabäčč; (3) Tewodros's death; painting by Wändəmmu Wände, ca. 1968, oil on canvas, ca. 100 cm x 35 cm; photo 2006, courtesy of the author

MonVidTheod 2f.; FusTeo 3). However, he soon rebelled. About this time he received the nickname, "Abba Taṭäq" ('Gird up your loins'). Some sources attribute this command to T., who, thus, urged him on in his rebellion (MonVidTheod 2; FusTeo 3), which led to the defeat first of Mänän and then of Ali. Eventually, it led to Kaśa's overthrow of Ali's dynasty, the Wärräsek, and to his claiming to rule all Ethiopia.

For much of the rest of the marriage T. remains a shadowy figure. She and Tewodros had no children. However, by taking Holy Communion together, they entered into a religious marriage, at ↗Amba Č̣ara, near Gondär, in September 1854. The act was an important symbol of Kaśa's declaration of himself as a Christian ruler, destined to revive the Solomonic kingdom, and he seems to have taken its moral/behavioural implications very seriously (Crummey 1988: 18; CRNuov 409). He is said to have remained faithful to T. during her life, and, in an interpretation of canon law commonly applied to the clergy, for some time was reluctant to re–marry following her death (RubTew 56, 76). She was buried at ↗Amba Gəšän in Wärrä Himäno in Wällo (ZanLitTew 11f., 36; MonVidTheod 21f.).

T.'s death is often said to have contributed to a personal turning point in Tewodros's life, following which his rule became increasingly brutal and oppressive.

Täwaḥədo

T. (**ተዋሕዶ**, from *wäḥadä*, 'be united', and *täwaḥadä*, 'be one, united with each other' [DillmLex 893f.], corresponding to Gr. ἕνωσις 'oneness, union, unity', Lampe 1961: 487) is a key term in the theology (esp. ↗Christology) of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC). The term is used to state the union of the divinity with humanity after the Incarnation, whereby Christ, from two natures, became one ὑπόστασις and one φῦσις (↗Monophysitism). It is a formulation inherited from ↗Cyril of Alexandria (against ↗Nestorius's "Christ in two natures" after the Incarnation). The Council of ↗Chalcedon (451) wished to follow in part Nestorius, at the cost of alienating the extreme Cyrilline party of the mid-5th cent. (McGuckin 1994: 135f.).

In his explanations, Cyril had recourse to analogies, comparing, e.g., the hypostatic union to the ↗Ark of the Covenant where wood and gold were intimately united (PG 68: 596.661; PG 75: 1381); to the lily and its fragrance (PG 76: 61D ff.); to the live coal of Isaiah's vision (PG 75: 1377D); to iron and fire (PG 75: 1357 CD); to the union of "body and soul" (PG 75: 1292AB; 1376C–1377C; Qerəllos III: 52.1, cp. Weischer 1977: 106).

Christian Ethiopia has adopted much of the Cyrillian imagery, in particular the "iron and fire" and the "body and soul" analogies (ms. Raineri 170: fol. 260vab; HA 489, n. 9) to describe the unity of the human and divine in Christ. The defeat of Antiochene Christology at the Council of ↗Ephesus, the victory of Cyril, the affirmation of Alexandrian Christology, the dramatic language of the twelve anathemas pronounced by Cyril against Nestorius (Tanner 1990: 59ff.), the animosity first towards Nestorius, and later against the Roman Pope Leo I, the translation of the Cyrillian *Corpus* into Gəᶜəz (↗*Qerəllos*) during the ↗Aksumite period and its wide circulation has left an indelible mark in the EOTC. The attitude of the EOTC towards Nestorius, Pope Leo and the Council of Chalcedon is exemplified by the language of the *Mäṣḥafä* ↗*məśṭir* (YaqMist I, 72–104, 368–414; II, 1–30 [text]) and by religious literature in general.

Both ↗*Karra* and ↗*Ṣägga* recognize the continuation of the divinity and humanity after the union and they qualify it with the term **ተዐቅቦ** (*täᶜaqqəbo*, 'preservation'). The anti-*Qəbat*, anti-*Ṣägga* catechetical text **በተዋሕዶ፡ ከበረ** (*Bätäwaḥədo käbbärä*, 'He was honoured by the union'; ms. Raineri 170, fols. 251vb–252ra), reads: "the hypostasis of the Word and the hypostasis of the Son were different, but when they were united they became one in preservation" (cp. also 255va; cf. also Yaqob Beyene 1981: 14f.).

The issue remains a controversial one. When *abunä* ↗Filəppos wrote that speaking of "two natures existing united" after the union was not alien to the EOTC (1964/65: 55.61), the book was banned, its author deposed from his post at ↗Dayr as-Sulṭān and put under house arrest in 1966. *Abunä* Gäbrəᵓel (1976: 26) wrote that "one nature does not mean one nature but a unified nature". He did not dare to use the expression "in two natures", yet his overture brought about his downfall. He was deposed as Archbishop of Eritrea on 22 May 1984, excommunicated on 25 July 1984 and reduced to the status of a layman. He was re-habilitated a few years later. The Amharic version of the book by the Catholic friar, Ayyälä Täklä Haymanot (Ital. 1956, Amh. 1959) outraged the EOTC. Even *aṣe* ↗Ḫaylä Śəllase I, who financed the book, aired his concerns to the author and to the translator, when he saw "natures" in the title. The scholars of the EOTC reacted indignantly and vilified Ayyälä, who by his own admission was baptized in the Orthodox Church but was converted to ↗Catholicism at the age of eleven. Five books and several articles were written in response and in protest (e.g., Ayyalew Tamməru 1960/61). Ayyälä's language was perceived as offensive, the contents betraying the author's inadequate knowledge of the topic. He was depicted as a traitor to his Church, a disciple of Pope Leo and of the ↗Jesuits, a dangerous man who reopened old wounds which had the potential to divide the EOTC along ethnic and regional lines (Tesfazghi Uqbit 1973: 14–17). On 6 March 1960 the book was withdrawn from the market and banned. *Abunä* ↗Tewoflos, on the day of his enthronment (9 May 1971) as second Patriarch of the EOTC declared: "The two natures of Godhead and manhood became so united in Jesus Christ, the incarnate Son, that they with their respective properties, continue dynamically in him" (Tesfazghi Uqbit 1973: 185). In its latest official text, the EOTC states: "Without separation of His Divinity from His humanity and His humanity from His Divinity, He became one person, one nature without confusion, without separation and without division" (EOTC 1996: 27f.). The EOTC underlines that its creed is *miaphysis* and rejects the "nickname" *monophysite* (Aymro Wondmagegnehu – Motovu 1970: 99).

Though T. is commonly associated with the creed of the ↗Däbrä Libanos based school, the appellation has been contested by other groups involved in the Christological disputes which started in the early 17th cent. According to ↗Kidanä Wäld Kəfle (KWKDic 384), "as the epithet Orthodox pertains to the Council of Nicaea, T. is the name of the Council of Ephesus [...] Ethiopian faith and doctrine from the time of Abrəha and Aṣbəḥa until the reign of Susənyos was only this [i.e., Orthodox T.]. During the period of Susənyos and Fasil, two parties known as *Karra* and *Qəbat* arose and people such as *azzaž* Zädəngəl and Zäᵓiyäsus snatched away the name T., and claimed that they were Orthodox T., and smeared with the title *Ṣägga* the true T.". At present, T. alongside *Ortodoks* is the name of the autochephalous Ethio–Eritrean Churches.

T. is a recent title: it does not appear in the *Amäknəyo Zäḥawaryat* nor in documents such as the *Confessio Claudii* (1555). The faith is traditionally qualified by the adjective *rətəᶜt* ('straight, orthodox', Cornill 1876: 420; *Haymanotä abäw* 1974/75: 46, n. 2).

In the last 50 years there have been several dialogues between the Orthodox *mia-physite* and *dyo-physite* Churches (EOTC 1996: 143ff.), as well as with the Roman Catholic Church. Pro-Oriente, founded by Cardinal König of Vienna in 1964, has since been active in improving the relations between the Roman Catholic Church and the Eastern Orthodox and the Oriental Orthodox Churches. The Pontifical Council for the Promotion of Christian Unity has been organizing annual meetings of a mixed commission of experts from the Oriental Orthodox Churches and the Roman Catholic Church. One of the most significant events in the dialogue between pre-Chalcedonian and Chalcedonian Churches is the Common Declaration issued in the Vatican, on 10 May 1973, by Pope Paul VI (1897–1978) and by the Patriarch of Alexandria Shenouda III which reads: “We confess that Christ is perfect God with respect to His Divinity, perfect man with respect to His humanity. In Him His divinity is united with His humanity in a real, perfect union without mingling, without commixtion, without confusion, without alteration, without division, without separation […]” (*Acta Apostolicae Sedis* 1973: 299ff.). T. is predicated also to the “(Eucharistic) Body and Blood which Christ took from the Lady of us all, the twofold virgin Holy Mary and made it one with his Divinity, without confusion, nor mingling, neither change, nor separation” (Marcos Daoud 1959: 82, n. 101). “Made it one with his Divinity” was introduced in the Eucharistic prayer before the Communion by Gabriel ibn Turayk (70th Alexandrian Patriarch, 1131–45). The clause of the Homologia “without confusion, nor mingling, neither change, nor separation” too was added by the same Patriarch under pressure from the monks of the monastery of Anba Maqarios (Burmester 1935: 9; CE vol. 4, 1128).

Tedros Abraha

Täwäldä Mädḫən

Abba T.M. (**ተወልደ፡ መድኅን**, fl. 15th cent.) was a disciple of ↗Ewosṭatewos of the third generation who lived at the time of *aṣe* ↗Zärʾa Yaʿəqob.

His Acts are known from one manuscript which also transmits the hagiography of his spiritual son and successor as abbot, ↗Fiqṭor. The elegantly written 15th-cent. codex is kept in the monastery of ↗Däbrä Maryam (Säraye). The hagiographer does not offer any biographical data on T.M. prior to his monastic life. The colophon of the ↗Octateuch of Däbrä Maryam says that T.M. was elected abbot of the monastery of Däbrä Maryam in 1391/92 (Lusini 1996: 90). He is also mentioned in the annotation by Yoḥannəs of Däbrä Maryam which appears at the end of the first fascicles of the ↗*Gädlä sämaʿətat* (BauEr I, 50–57). There is no church dedicated to T.M., nor any date in the liturgical calendar that celebrates his memory.

The Acts of T.M. focus on his struggles to maintain the Ewosṭatean practice of observing the Saturday ↗Sabbath alongside Sunday, and with equal dignity. T.M.’s hagiographer provides accounts of persecutions, torture and reports on 207 monks who died as a consequence of the hostility of *aṣe* ↗Dawit II towards the ↗Ewosṭateans, instigated by the official church. He also records a journey of the metropolitan ↗Bärtälomewos to Säraye to demand that the

Ewosṭateans abandon their practice of observing the Sabbath. T.M. refused to comply, fled and took refuge in ↗Ḥamasen. Eleven months later, Dawit summoned T.M. to a council which he held at Ayda. There the monk and his companions were tortured and imprisoned because of their refusal to break the Sabbath. Later, in a change of heart, Dawit issued a decree which lifted the ban of celebrating the Sabbath.

According to his Acts, T.M. died at the age of 130. The hagiographer praises him for the austerity of his life, his lifelong commitment to the study and teaching of the Scripture, unflinching loyalty to the Ewosṭatean way of life, and endurance during the time of persecution and arrest.

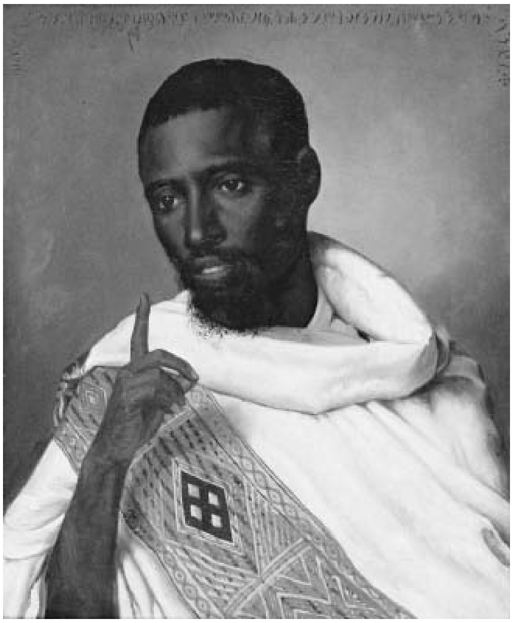
Tedros Abraha

Täwäldä Mädḫən

Däbtära T.M. (**ተወልደ፡ መድኅን**, b. ca. 1810/15, Aqäwärq, Wälqayt, d. 1854, Dayr al-Muḥarraq, Egypt), descendant of a family of clerics, was an Ethiopian traditional scholar and the main informant for Antoine d'↗Abbadie's ↗Amharic dictionary.

Starting from his childhood, T.M. received a traditional church ↗education at the famous church schools of ↗Gondär. There, he befriended Antoine d'Abbadie, who studied Amharic and Gəᶜəz. Finally, he became a teacher (*mämhər*) at Mädḫane ᶜAläm in Gondär, specializing in the ↗*Fətḥä nägäśt* (according to the caption on his portrait). When d'Abbadie returned to France in 1848, he offered T.M. to accompany him on a pilgrimage to ↗Jerusalem.

When they arrived in Cairo, d'Abbadie purchased ↗Isenberg's Amharic dictionary and studied it together with T.M. T.M. commented on it in great detail, identifying the context and status of each word, e.g., as "standard" Amharic (i.e., the variety spoken in Gondär) or as dialectal variations from ↗Goǧǧam or ↗Šäwa – or even as ↗Təgrəñña or Gəᶜəz, and thus to be eliminated from the word-list. This led to d'Abbadie's decision to produce a complete dictionary. During their stay in Cairo, d'Abbadie and T.M. laid the basis for this dictionary, finalized by d'Abbadie after his return to France. The dictionary, with about 14,000 to 15,000 entries, mainly relies on T.M.'s expertise, as other sources used (e.g., compilations by ↗Schimper and others) were not based on interviews with scholarly-educated Ethiopians, as d'Abbadie deplored. It retains a certain value still today, because it documents the language of Gondär as spoken at that time.



Oil portrait of Täwäldä Mädḫən; from the collection of the château d'Antoine d'Abbadie, Hendaye, © Académie des Sciences

After d'Abbadie had left, T.M. stayed in Jerusalem, where he compiled the first half of his *Yäfətḥä nägäśt tərgwame*, containing a commentary on the *Fətḥ mänfäsawi* ('spiritual judgements'; AbbCat 222f., no. 231). For this traditional legal commentary T.M. received 50 Maria Theresa thalers through the French Consulate from d'Abbadie, and a monthly support of 20 piastres.

In October 1849 T.M. returned to Ethiopia, together with an Ethiopian delegation, which had tried to solve a quarrel over ↗Dayr as-Sulṭān with the Armenians. T.M., however, returned again in ca. 1852. The second half of the manuscript was never produced, because T.M. retired to an Egyptian monastery to lead a life of seclusion. For this reason d'Abbadie was never able to realize his plan to publish this work. T.M. left his copy of the *Fətḥä nägäśt*, corrected by himself, to d'Abbadie.

Around that time T.M. also placed his nephew ↗Bərru Peṭros into schools in Jerusalem and later Malta (RubActa I: 177, 238, 244, 246, 255, II: 30). A portrait of T.M. was made during his stay in Egypt.

Täwäldä Mädḫən Gäbrä Mädḫən

Qäsis (Tgn. *qäšši*) T.M. (**ተወልደ፡ መድኅን፡ ገብረ፡ መድኅን**; b. 1860, Ṣäʿazzäga, d. 1930, Asmära) was a pastor, educator and translator. He came from four generations of priests, both his father, Gäbrä Mädḫən Täsfay, and uncle, Ḫaylä Ab Täsfay, were renowned Orthodox priests from Ṣäʿazzäga (Holmer 1986: 115). However, both they and T.M. had contacts with and were influenced by the ↗Evangeliska Fosterlands Stiftelsen (EFS; ArEvang 182, 340 note).

In 1872, T.M. was ordained deacon of the Ethiopian Orthodox (Täwaḥədo) Church by *abunä* ↗Atnatewos and two years later entered a school in ↗Gäläb (s. EAE, vol. 5) run by the EFS. There, he worked together with ↗Dawit Amanuʾel to translate the N.T. into ↗Təgre. Before it was completed he was sent to the theological seminary in Johannelund, ↗Sweden, for further studies of the Bible and language studies from 1883–87. T.M. showed a certain gift for languages and mastered Təgre, Təgrəñña, Gəʿəz, Amarəñña, Arabic, Hebrew, Greek, Italian and Swedish.

When T.M. returned to Eritrea he was first sent to the EFS station in ↗Ḥərgigo were he was stationed with the family of Karl Gustav ↗Rodén (s. EAE, vol. 5). From the Mission's superiors T.M. demanded the same payment as ↗Onesimos Näsib, as they were both educated abroad. When T.M. married Amätä Śəra Ṣəyon in 1888 he was finally awarded the same sum (ArEvang 299f.).

Täwäldä Mädḫən Gäbrä Mädḫən; from Holmer 1986: 113

In 1889 T.M. and his wife moved back to Gäläb where he, in collaboration with Täwäldä Mädḫən Gäbru, prepared a 'Təgre Spelling and Reading Book' that was published the same year by the mission's press at ↗Ǝmkullu (Holmer 1986: 130f.). This publication was the first book printed in Eritrea in the Təgre language. The entire N.T. in Təgre was published in 1902; a revised version published in 1934 adopted spelling rules which T.M. had advocated all along.

T.M. was ordained in ↗Asmära by Adolf Kolmodin on 1 January 1909, thus being the first Evangelical Ethiopian to be ordained on the African continent (ArEvang 350f.; Kolmodin 1909: 209). The same year he worked with Dawit Amanuʾel and Karl ↗Winqvist on the translation of the N.T. into ↗Təgrəñña, which was published in 1909, later working on the O.T. as well.

Through his years abroad T.M. had adopted many European manners, which also influenced his daily life, especially with his wife; their two sons for example were sent to Beirut for their education (Holmer 1986: 131, 138). In addition to his educational and translation work, he also served the churches as a pastor and teacher, becoming a widely known and respected missionary in Eritrea as he extensively travelled the country.

Taxation ↗Tributes and Taxation

Ṭaytu Bəṭul

Ǝtege Ṭ.B. (**ጣይቱ፡ ብጡል**, baptismal name Wälätta Mikaʾel, coronation name Bərhan Zäʾityopya; b. ca. 1853, Gondär or Maḫdärä Maryam, d. 11 February 1918, Ǝnṭoṭṭo) was the wife of *aṣe* ↗Mənilək II, and an influential politician at his court.

Ṭ.B.'s birth date is not clear; sources provide dates ranging from 17 August 1840 (Taddäsä Zäwälde 1986/87:2; cp. also the date on the tomb which seems to be 1932 A.M., Prouty Rosenfeld 1986:27) to 1856 (GueCopMen 191 n. 6 and 207 n. 2); 1853 has been suggested as the most plausible one. She was a daughter of *balabbat* of ↗Yäǧǧu, ↗Bəṭul Ḫaylä Maryam, and his wife, Yäwəbdar from Goǧǧam (d. 1905). She was thus a granddaughter of *däǧǧazmač* ↗Ḫaylä Maryam Gäbre of Səmen and Ḫirut Gugsa from Oromo-Yäǧǧu family. T.B. was baptized in the Däbrä Tabor Iyäsus church. After her father's death, Ṭ.B. lived with her mother and brothers in Däbrä Mäwi monastry, Goǧǧam.

In ca. 1866, she was briefly married to Wäldä Gäbrəʾel, a soldier of *aṣe* Tewodros II. Her husband was imprisoned by the Emperor and Ṭ.B. was forced to cook for Tewodros's soldiers. She then married *däǧǧazmač* Täklä Giyorgis and later *ǧantärar* Wälde from Yäǧǧu. When *aṣe* ↗Yoḥannəs IV ascended the throne, Wälde was imprisoned and Ṭ.B. returned to her mother in Goǧǧam. It was then, ca. 1876/77, during Mənilək's visit to their house, that their decision to get engaged was taken. In 1878/79 Ṭ.B. paid a return visit to Mənilək's residency in Däbrä Bərhan. However, after a short visit to her brother, Alula Bəṭul, in Šäwa, in 1882 Ṭ.B. got married to *qäññazmač* Zəkarǧaččäw (d. 1887), a brother of Mənilək's first wife, ↗Bafäna. The fourth husband did not treat Ṭ.B. well, and she left him to live with her brother ↗Wäle Bəṭul, in Yäǧǧu. She finally married Mənilək on 23 April 1883, in the church ceremony (↗Matrimony) that took place in ↗Ankobär in Mädḫane ʿAläm church (GueCopMen 191f.; 2 May in Taddäsä Zäwälde 1986/87:3).

Aṣe Mənilək II was thus the fifth husband of Ṭ.B. Their marriage served political purposes of both parties. Mənilək appreciated Ṭ.B.'s background and family relations, while Ṭ.B. appreciated Mənilək's position at that time as a ruler of Šäwa. It has been also assumed that the marriage was instigated by *aṣe* Yoḥannəs IV (GueCopMen 207 n. 6). Moreover, their common political aims as well as skills made them a strong couple and turned Ṭ.B. into one of the leading Mənilək's advisors.

Soon after the wedding the couple chose ↗Ǝnṭoṭṭo as their residence, where Ṭ.B. founded the church ↗Ǝnṭoṭṭo Maryam (GueCopMen 209 and nn. 4-9, 212f.; Prouty Rosenfeld 1986:49). The ↗coronation of Ṭ.B. as ↗*ətege* took place on 3 October 1889, two days after Mənilək's coronation as Emperor (GueCopMen 274–78). From that day, Ṭ.B frequently accompanied her husband on military expeditions or remained in charge of state affairs during his campaigns (s., e.g., GueCopMen 289ff.).

In 1894 Mənilək granted Ṭ.B. lands in ↗Ṣällämt (Prouty Rosenfeld 1986:113) and, in 1896/87, the area of ↗Finfinnee (PankHist II, 204). She also governed Karra Lägoma (in the vicinity of Sägäle in ↗Tägulät) as a *gəbzənna* for Mädḫane ʿAläm church in Ankobär, and Dərre for Ǝnṭoṭṭo Maryam (Haile Gabriel Dagne 1972:67ff.). Among Ṭ.B.'s *gʷəlt* lands were Gärän, Bulga, Magda, and Gäč (GSMen 127). She also held lands in Wällo and Wəčale (Prouty Rosenfeld 1986:61).

Ṭ.B. did not have children with Mənilək and was probably barren. She developed a close relationship with her husband's daughter, ↗Zäwditu. They met in August 1884 in Boru Meda, when Ṭ.B. accompanied Mənilək during his visit to *aṣe* Yoḥannəs IV, at whose court Zäwditu, who was then married to the latter's son, ↗Arʾaya Śəllase Yoḥannəs, lived. After Arʾaya Śəllase's death and Zäwditu's return to her father's court, Ṭ.B. efficiently played the role of step-mother and strongly influenced the future empress. She also chose Zäwditu's next husband: *ras* ↗Gugsa Wäle, a son of her brother Wäle. The marriage was part of a plan to consolidate family ties with a view to take control over leading political families in Ethiopia.

Ṭ.B. was recognized in Ethiopia as an outstanding beauty and a clever and educated woman. She could read Gəᶜəz, compose poetry, play ↗*bägäna* and was interested in, and well informed about, the political situation in the outside world. She is believed to be the author of the idea of building the capital of Ethiopia in its contemporary location and giving it its name, i.e. ↗Addis Abäba. She also built the first Ethiopian ↗hotel, the Ǝtege Ṭaytu Hotel.

Ṭ.B. was active both in domestic and foreign policy. She mistrusted Europeans, especially Catholics. She took a strong position in the Wəçale Treaty affair (↗Italo–Ethiopian Treaty of Friendship and Commerce) and opted for war with Italy.

During the Italian aggression against Ethiopia in 1896, Ṭ.B. lead a muled group of noble women who participated in the war helping the soldiers in different ways (as carriers of imperial clothes and ↗*täǧǧ* jugs, nurses etc.). She herself assisted in surgery performed on casualties who survived the battle. Ṭ.B.'s army which took part in the Battle of ↗ᶜAdwa numbered about 3,000 soldiers.

Aṣe Mənilək's health started to deteriorate in ca. 1906. In 1908 the Emperor had another stroke which left him paralysed. Ṭ.B. and Zäwditu were the only persons who nursed the Emperor and the only ones who had free entrance to his rooms. Thus in 1909, Ṭ.B. began to asssume the power of regent in the name of Mənilək and briefly also in her own name in 1910. She thus tried to fulfill the prophecy saying that a queen would reign over the country after Mənilək. Among the most efficient tools Ṭ.B. used to consoldiate power were arranging marriages between members of her family and influencial lords, and ↗*šum šir*s, bringing about a re-shuffle of land and offices.

In the coup d'état of 1910, Ṭ.B. lost her power to Šäwan lords led by *ras* ↗Täsämma Nadäw and *fitawrari* ↗Habtä Giyorgis, who protected the position of the Heir to the Throne, Mənilək's grandson, *ləǧ* ↗Iyasu. They confined Ṭ.B. to the palace and ordered her to take care of her husband and not mingle in politics. After Mənilək's death in 1913, Ṭ.B. spent her last years in the Ǝnṭoṭṭo Maryam church. She stayed there also after the ↗coup d'état 1916 (s. EAE vol. 2, 1081), when Zäwditu was crowned *nəgəśtä nägäśtat*. In 1917 Ṭ.B. asked the Šäwan lords for permission to leave for Gondär to spend the rest of her life there, but her wish was refused. She died in Ǝnṭoṭṭo, having refused treatment by European doctors.

Tayyä Gäbrä Maryam

Aläqa T. (ታየ፡ ገብረ፡ ማርያም; b. 30 March 1860, Kämkäm Qäroda, Yəfag, Bägemdər, d. 21 August 1924, Addis Abäba) was a Protestant-educated traditional Ethiopian scholar.

After his mother's death in 1878, T. went to Təgray in search of his uncle, but the latter had left for India, and T. eventually (in 1880) landed in ↗Ǝmkullu. There he got in touch with the Swedish Evangelical Mission (↗Evangeliska Fosterlands Stiftelsen). By 1886 he became a member of the Bethel congregation in Ǝmkullu and was employed by the Mission in translation and teaching work. A major research result of that period was his translation and edition of a traditional book of grammar (↗*Säwasəw*; 1896/97).

Following the mediation of *ras* ↗Mängäša Atikam, who learnt to appreciate T. during the latter's missionary activities in Bägemdər (after 1898), T. was introduced to *aṣe* ↗Mənilək II, and presented the Emperor with a copy of his *Säwasəw*. It was probably thanks to this personal contact that, when the German mission headed by ↗Rosen requested that an Ethiopian scholar be sent to teach Gəᶜəz and Amharic at the Oriental Institute of the University of Berlin, it was T. whom the Emperor suggested.

T. left Ethiopia on 23 May 1905 and arrived in Berlin on 14 June. For three years he stayed there as a visiting scholar, acting as a resource person and co-worker to Eugen ↗Mittwoch. During this period, T. provided an invaluable contribution to ↗Ethiopian studies. The texts T. had collected and brought with him (s. the list in Alemé Eshеté 1971–72: 26ff.) were the basis for a number of scholarly publications by Mittwoch (e.g., 1906, 1907, 1910, 1911) and other scholars (e.g., Gori 1999).

Aläqa Tayyä Gäbrä Maryam; from Ullendorff 1972: pl. 1

After T.'s return from Germany in 1908 mounting opposition and his enemies (headed by *däǧǧazmač* ↗Mäšäša Wärqe, and supported by the then governor of Bägemdər *ras* ↗Wäldä Giyorgis Abboyye) – who abhorred his evangelical religious views and were jealous of the recognition he had received – used Mənilək's failing health as an occasion to strike back at T. In 1910–11 he remained in chains for a whole year in Addis Abäba, regaining freedom only after the fall of ↗Ṭaytu Bəṭul. His years under Iyasu, Zäwditu and ras Täfäri were relatively peaceful, and he is even reported to have been employed as a political adviser by the latter (s. Alemé Eshеté 1971–72: 21 n. 1). He authored most of his works, including his famous *History of the People of Ethiopia* (1922, in fact, an extract of a larger historical opus) and the so far unpublished *Mäzgäbä qalat* during those years. The latter, rather than a dictionary as the title may suggest, is in effect a veritable *Summa Theologica*, a handwritten manuscript of about 450 pages, written in Amharic with abundant quotations in Gəᶜəz.

When T.'s wife Ṣäḥaytu died, T. got married to Ṭərunäs, daughter of John Parkyns and widow of Ǝngədašät Schimper, the son of Wilhelm ↗Schimper. T. died six months after the marriage, leaving no children of his own. He was buried at the Catholic/Protestant cemetry of Gullallee, after the Orthodox clergy's refusal to admit his body to ↗Qəddəst Śəllase.

The theological position of T. can be described as that of a Low Church, Evangelical Lutheran Christian. But he was thoroughly imbued with the spiritual and literal heritage of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC). The art of ↗*qəne* which he used in his theological and devotional writings in Amharic as an Evangelical Christian was a direct inheritance from the EOTC. Many of the documents which T. examined in the libraries of Europe and brought back to Ethiopia were documents taken out of Ethiopia, and the sources from which he took his proof texts even when he questioned current teachings and interpretations within the EOTC were sources that the church itself used. At the same time, T. had the objectivity to also look into Ethiopian ↗Islam, having translated into Amharic and studied a number of Arabic texts (s. Mittwoch 1915: 444f.; Gori 1999).

Tazena

T. (TZN; in later Gəᶜəz sources **ታዜና**, ‘T.’, Täzena and Tazen; in South Arabian script TZN, in Gr. ΘEZENA) seems to be the direct predecessor of his son ↗Kaleb on the throne of ↗Aksum. However, in the authentic documents of the epoch, *viz.* in RIÉ no. 191/8 and in the Greek legend on the reverse of Kaleb’s gold coins, his name occurs only in Kaleb’s patronymic (*wld TZN*; YΙΟΣ ΘEZENA).

As an independent ruler he is attested in common versions of the lists of the Aksumite kings and in hagiographic tradition. According to these sources, T. was the 7th (or 6th) king after ↗Abrəha and Aṣbəḥa. Nothing is said about a plausible kinship between him and the king Alᶜamida (Alᶜameda, s. ↗Ǝllä ᶜAmida [II]) son of Sälᶜadoba, whom he succeeded.

Hagiographic traditions maintain that in the 6th year of T.’s reign the ↗Nine Saints left the court after 9 (or 12) years of sojourn in a royal domestics’ house (*betä qäṭṭin*) and began to spread the Christian faith throughout Ethiopia.

Serguei A. Frantsouzoff

Täzkar

T. (**ተዝካር**, Gəᶜəz for ‘remembrance, memory, commemoration’), also called *arba* (**አርባ**, lit. ‘forty’), or *qʷərban* (**ቍርባን**, lit. ‘communion’), is a major commemorative feast for a dead person (sometimes the term is used to refer also to religious ↗feasts devoted, e.g., to St. ↗Mary and esp. ↗saints [cp. ↗*zəkr*]). According to the canon of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC), a deceased person should be daily commemorated in the church until the 40th day of his/her demise (*Mäṣḥafä gənzät* 1986/87: 6f.); this day is believed to be the time when the soul will undergo a series of judgments in front of God. It is believed that the prayers performed by the living can help to ease the sufferings of the souls of the dead.

On three days special prayers are to be performed; the days are called **ሠለስት** (*śäläst*, lit. ‘three’), **ሰባት** (*säbat*, lit. ‘seven’), and **ዓሥራ፡ ሁለት** (*ᶜaśra hulätt*, lit. ‘twelve’), being the third, the seventh and twelfth after the demise, respectively. The symbolism of the ↗numbers is explained by the tradition. The resurrection of Jesus Christ took place on the third day, being a core Biblical event upon which much of Christian doctrine and ritual depends. By commemorating the deceased on the third day after his demise (*śäläst*), it is believed that the buried body will rise to life at the time of the Last Judgment (Paulos Tzadua 1968: 123). On the seventh day (*säbat*), the soul is believed to reach the Seventh Heaven, to be judged before the throne of God. There is also a special commemorative prayer on the twelfth day (all the prayers are collected in the *Mäṣḥafä ↗gənzät*).

The fourth and the major memorial event is the T. which is held on the 40th day after the demise of a person (called therefore also *yäʾarba qän täzkar*, lit. 'the T. of the 40th day', or simply *arba*). According to the teaching of the Church, at the time of the death of each individual God will decide where his/her soul has to spend time until the second coming of Christ (cp. *↗Dagəm məṣʾatu läkrəstos*). This judgment is believed to occur on the 40th day after death, and on this day the soul should be commemorated by the T. Any Christian older than twelve years who has died is supposed to get this service.

The type of prayer depends on the status of the deceased (priest, deacon, ordinary faithful, etc.). A T. should always be celebrated in the parish where the deceased is buried. Apart from its religious reason, the T. is a big event in which all the relatives come to participate, including those who do not live in the immediate surroundings (and therefore had been unable to attend the ↗funeral). Crying and lamentations (cp. *↗Ǝngʷərgʷərro*) are usual on this day. The commemoration begins with the Mass and *Ṣälotä ↗fətḥat* which are followed by a banquet served in the *däǧǧä sälam* (lit. 'the treshold of peace'), a small building which is built on the left side of the western entrance of a church.

The banquet is meant to thank and remunerate the priests and the community who prayed for the deceased. The food is prepared by the family and neighbours of the deceased. The clergy of the parish and neighbouring churches and selected dignitaries of the area are invited; the needy people are also supposed to come.

After the T., the next memorial service should be on the 80th day (*sämanya*), after six months (*mänfäq*, lit. 'half'), after one year (*mut ᶜamät*). Thereafter, the *mut ᶜamät* is celebrated as long as there are people who can arrange it.

Being basically the liturgical commemorative service for an individual, T. appears to be an old social and religious institution of the EOTC (with probable pre-Christian roots, since the term is found in a few pre-Christian inscriptions, like RIÉ no. 183). A regular T. – commemoration service – for any person, churchman or layman, could be secured through a conditional land donation to a church or a monastery, which is witnessed in the earliest extant documents from the time of the ↗Solomonic dynasty (cp., e.g., Kropp 1998) and is extensively attested for the later period (cp. CrumLand 37).

Apart from its religious objective, the T. is one of the most lavish events in the life of the Orthodox Christians which could become a heavy burden for the family of the deceased (cp. PankSoc 196ff.). In the 20th cent., in line with his modernizing policy and with the support of the church officials of the Patriarchate, Emperor ↗Ḫaylä Śəllase I denounced the tradition arguing that the extravagance in such ceremonies (esp. excessive consumption of alcoholic ↗drinks) does not comply with the religious canons and have a disastrous effect on the economy of the country. He made an example out of the way he staged the T. of his daughter *ləᶜəlt* ↗Zännäbä Wärq, without lavish consumption, just distributing money for absolution (MahZekr 595–98; HSLife 166).

Mersha Alehegne

Täzkar: Mäṣḥafä täzkar

M.t. (**መጽሐፈ፡ ተዝካር**, 'Book of the Commemoration') is a work of ↗Gəᶜəz literature on the Passion of Jesus Christ. It is divided into readings for each day of the week.

M.t. is only found in several relatively recent manuscripts, the oldest being the 17th–18th cent. BritLib Orient. 8819 (StrBritLib 92ff., no. 57). The others are EMML 2860 (18th cent.), 3239 (19th cent.), 4810 (1894) and 4817 (1930–62).

The text sometimes figures under the title *Ḥəmamatihu lämädḫaninä* (EMML 4810, 4817). The M.t. is clearly different from the other compositions on the same subject (*Mäṣḥafä ↗gəbrä ḥəmamat*, *↗Dərsanä maḥyawi*, and *Täzkarä mädḫən*, 'Commemoration of the Saviour', other "Passions"), although of course having some connection with them: it is often found bound together with one or more of the other texts, or with some Miracles of Jesus (*↗Täʾammərä Iyäsus*) and Täklä Maryam (↗Mäbaʾa Ṣəyon) accomplished in the days of the Passion, "personified as *Täzkarä Mädḫən*" (EMML 1779).

The miracles as listed in ms. EMML 2860 are:

1) the young man who threw down the bread of the memorial feast of *abunä* Mäbaʾa Ṣəyon because of his bad temper;
2) ↗Täklä Ḥawaryat, who went into seclusion until the Lord revealed to him that he should observe the memorial day of his death;
3) the blind woman from Wäräb in Qʷäläzen whose sight was restored when she touched her blind eyes with her fingers that had touched the cup from which she drank at the feast of the memorial day of the death of Our Lord;
4) a servant who was serving when the Passion and Death of Our Lord was being commemorated became sick because he had slept with his wife the previous night;
5) the story of the woman from Dorit whose rooster was carried off by a kite.

These miracles can be also called *Täzkarä Mädḫən*, and are absent from EMML 3239 and BritLib Orient. 8819.

Src.: EMML nos. 1779, 2860, 3239, 4810, 4817; StrBritLib 92ff., no. 57 [ms. Orient. 8819].

Paolo Marrassini

Tea

T. (*Camellia sinensis*, Amh. **ሻይ**, *šay*, Tgn. **ሻሂ**, *šahi*, Orom. *Šaay*, from Arab., شاى, *šāy*) as a beverage and plantation, is a late introduction to Ethiopia. Apparently, the plant was introduced during the first half of the 19th cent., as Blondeel (in PankEcon 204) notes that he saw some bushes at Gondär in the 1830s. In 1928, Rowland, an English T. planter from Kenya, started to sow seeds in Ǧimma but found that rainfall was insufficient for the healthy growth of the bushes. In Käfa conditions were more favourable and some 3,000 seeds were sown; the project, however, was brought to an end by the Italian war of 1935–36. The Italian mission took an interest in T. cultivation as well and sowed seeds of the *doolia manipuri* variety from the Brooke Bond plantations in Burma in Käfa, Korya, Šoma, Maǧi and Illubabor.

After World War II, the introduction of T. was encouraged by Arab and Indian traders, at least in the urban areas. Large-scale T. plantations were not established until the 1980s when the Ethiopian government launched in Illubabor the "Gomaro" and in Käfa the "Wuš Wuš" projects. Since then, domestically produced black T., which is processed and packed in Addis Abäba, has made considerable headway in establishing itself as a hot beverage, even though the national T. consumption with 5,000 tons is a far cry from that of ↗coffee (with an annual estimated domestic consumption of about 100,000 tons).

Nowadays, T. is one of the standard drinks in the **ቡና፡ ቤት** (*bunna bet*, 'coffee house'). It is cheap and mainly consumed with sugar, e.g., by members of the middle class. In southern Ethiopia, T. was of only little significance until the 1980s. However, with the increasing number of T. houses run by Somalis it has become popular there as well. Besides, before the occupation of northern Ethiopia many populations in the South (e.g., Dizi, Konso, Boorana) consumed a refreshing T.-like hot beverage made from the leaves of the coffee tree. The leaves were roasted and crushed in a mortar. The brew produced was then seasoned with pepper or unripe dried coffee beans, and drunk as hot beverage. In ↗Dullay, e.g., this kind of drink is called *ḥáaše* (lit., 'coffee-plant').

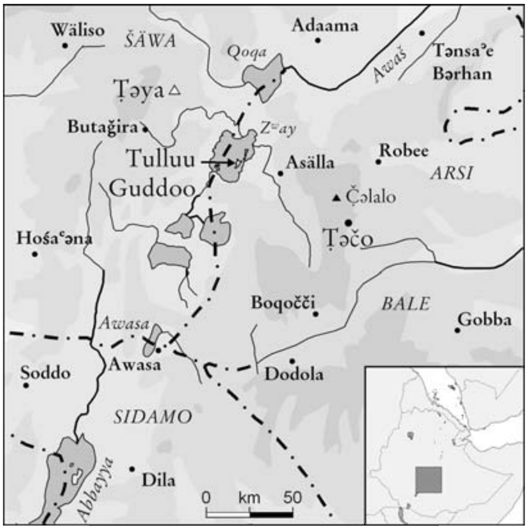
Alexander Kellner

Ṭəčo

Ṭ. (**ጥቾ**) is the administrative centre (2,400 m A.S.L.) of the Ṭäna *wärada* in ↗Arsi zone (Oromiyaa) with 4,841 inhabitants (CSA 2004). It is located in the highlands, halfway along the Robee-Boqočči trail, south of Mount Č̣əlalo (4,139 m A.S.L.). In the 1930s Ṭ. was the provincial capital of Arsi-Kämbata region. Between 1935 and 1940 it hosted the residence of the Arsi *commissariato* governors until this was moved to Asälla (ZerÉth; Lindahl 2006).



The Ṭ. *wäräda* is densely populated (160 inhabitants/km^2) by Arsi ↗Oromo who are mainly farmers and cattle-breeders on the afro-alpine steppes. According to the *Guida* there were 1,000 inhabitants in 1938. In the census of 1984, when Ṭ. was the capital of an *awrağğa* in the Arsi region, it counted 2,433 inhabitants. The 1994 census does not show much growth (2,841 inhabitants) and the Census of 2007 gives only 6,247 inhabitants for the total urban population of the Ṭäna *wärada*. This population stagnation is caused by the isolation of the highland region, in the aftermath of the Bale uprising (1963–67), of villagization and of the building up of state farms.

Alain Gascon

Tedeschi, Salvatore

T. (b. 4 January 1914, Cairo, d. 19 January 1996, Riva del Garda, Trento) was an Italian lawyer and diplomat and a remarkable scholar in Ethiopian Studies.

T. took degrees in Law both in Paris (1935) and Rome (1937), where he also took a degree in Political Sciences (1936). He worked for some years as a lawyer in the Italian and international consular judicial districts in Egypt (1935–50), where he was later legal advisor (1950–57). After entering the Italian diplomatic service in 1957 at the Foreign Affairs Ministry, Rome, he worked in Ethiopia from 1959 to 1971, first appointed as Secretary at the Italian embassy, later Counsellor, and finally Consul General of Addis Abäba. T. qualified in 1969 as a university teacher in the "History of Afro-Asiatic Countries", and gave lectures in 1971–72 at the Libera Università Internazionale degli Studi Sociali "Pro Deo" (at present, Università Guido Carli), Rome, on the ↗Organisation of African Unity. After spending some years in Rome, he ended his diplomatic career as Consul General of Sydney from 1976 to 1979.

During his retirement, T. devoted himself more intensively to study and research. A regular contributor to *Africa* (Rome), the journal issued by the former Istituto Italo-Africano (now merged into Istituto Italiano per l'Africa e l'Oriente) of which he was ordinary, and later honorary member, he wrote numerous articles and notes in periodicals and conference volumes (AE, JES, OrChrP, QSE, RSE, RSO, PICES 3, 4, 5a, 9, 10, CE), totalling some 70 entries, reviews included. T.'s interests mainly focused on both Ethiopic (esp. hagiography, where his entries in *EncSan* and *CE* are quite remarkable) and Arabic sources (the history of Islam and the Red Sea coasts in the middle ages, and the 'History of the Patriarchs of Alexandria') for the study of medieval Ethiopia, as well as on knowledge about Ethiopia in Europe and their mutual relationships from medieval to modern times (ranging from Benjamin of Tudela, Marco ↗Polo, Poggio Bracciolini, Paolo ↗Giovio, Ludovico de Varthema, Giacomo Baratti, and Charles-Jacques ↗Poncet to Guglielmo ↗Massaja). He also found time to publish his reflections on contemporary events and on the institutional situation of the country where he happened to work for many years as a diplomat; his history of Ethiopian journalism has remained unpublished (cp. Ricci 1995: 184f.). Generally characterized by refined erudition and exemplary clarity, T.'s contributions exhibit exhaustive examination of the evidence and sound critical analysis, and have generally proved lasting and reliable.

Təʾəzazä sänbät

T.s. (**ትእዛዘ፡ ሰንበት**, ‘The Commandment of the ↗Sabbath’) is a ↗Betä Ǝsraʾel religious text that has generally been given a place of pride. ↗Halévy chose it as the title of his collection of Betä Ǝsraʾel texts, with six other works (1902). ↗Leslau placed it at the beginning of his *Falasha Anthology*, seeing it as the most attractive of the Betä Ǝsraʾel literary compositions (1951:3). ↗Conti Rossini, who was generally inclined to question the originality of any Betä Ǝsraʾel text, granted that at least T.s. was probably of truly Betä Ǝsraʾel origin (CRAbb 574).

Betä Ǝsraʾel tradition attributes this work to *abba* ↗Sabra, who is said to have established ↗monasticism (s. EAE vol. 5) among them in the 15th cent. Nevertheless, T.s. is a composite work rather than the composition of a single author. The first section of the two published versions of this work (Halévy 1902:133–38; Leslau 1951:11–16) is dependent on Arabic (Christian) sources. (Neither manuscript of T.s. in the Faitlovitch collection contains this material, and it may well represent a later addition to the composition.) The next section is a skilfully edited and censored version of a Christian homily on the Sabbath attributed to ↗Jacob of Serug (↗*Dərsanä sänbät*). After a short interlude, this is followed by a list of laws and commandments for the Sabbath which is heavily dependent on ↗Jubilees, esp. ch. 50.

A similar interweaving of material continues thorough out the book. One of the most striking themes developed in T.s. is the personification of the Sabbath, which appears as a heavenly queen and divine mediator, who intervenes on behalf of her believers saving them on the day of Judgment and rescuing them from the fires of Hell (23, 30–32). However, this personification is not maintained throughout the work. In this context, it is interesting to recall the explanation given by one of d'Abbadie's Betä Ǝsraʾel informants, “Mary is the Christians' mediator; ours is the Sabbath” (Luzzatto 1852:345).

Despite the tremendous interest in T.s., it has not been the subject of a textual study since Halévy, and a critical text based on the careful examination of all existing manuscripts would be desirable and might resolve the provenance of much of its material.

Ṭef

Ṭ. (**ጤፍ**, *Eragrostis tef*, also *Eragrostis abyssinica*, *Poa tef*, *Poa abyssinica*) is, in economic terms,

Amhara settler harvesting *ṭef* near Amba, close to Asosa; photo 1999, courtesy of Christof Herrmann

Ethiopia's most valuable ↗cereal and an important cash crop. Ṭ., whose flour is ideal for making **እንጀራ** (*ənǧära*) ↗bread, is culturally highly estimated, especially among ↗Amhara and ↗Təgrəñña-speakers (in Eritrea also **እንጌራ**, *əngera*). Ṭ. grain is notable among cereals for its outstanding nutritional value, having a high protein content with an excellent amino-acid spectrum – being superior to wheat, ↗maize and the millets in the limiting amino-acid lysine – and also having a good mineral content (notably iron, calcium and zinc).

The individual grains of Ṭ. are by far the smallest of all the cereals: they are the size of a small pinhead (about 1 mm in diameter). They have a thin skin and a relatively large embryo. When ground into flour there is no bran or other wastage, unlike most other cereals; all the flour is useable and nutritious. Ṭ. grain can be stored for several years without losing its viability, a quality that was useful in past times when it was necessary to bury stored grain in containers to avoid it being plundered. Its small size also meant that a very small quantity of grain was sufficient to sow a large area (low seed rate), a further advantage over large-grain cereals in times of ↗famine or war.

The cultivation of Ṭ. is labour intensive. After multiple ploughing (↗Plough), sowing by hand has to be done very carefully on account of the small size of the grain; weeding has to be thorough; harvesting is done by hand, with a sickle; Ṭ. is threshed by the feet of domestic animals, but winnowing is done by hand with a long wooden implement resembling an oar. Ṭ. exhibits a number of unusual agronomic qualities. Its grain will germinate anaerobically under water, allowing it to establish itself on waterlogged clay soils, a feature it shares with ↗*dagussa* (*Eleusine coracana*). It withstands the desiccation that occurs when clay soils dry out towards the end of the season, when deep vertical cracks are formed that break the root connections of cereals, often leading to crop failure. Since pure clay vertisols ("black cotton soils") are common on the Ethiopian plateau these characteristics make Ṭ. a reliable cereal for growing on them. In the dry season, when other cereals fail, it may not be too late to obtain a crop of Ṭ.: some Ṭ. varieties are very short lived and can establish, grow and mature on a single downpour of rain. Though these short-lived types are not highly productive they act as a "stand-by" (catch crop). If Ṭ. fails, the prospect for Ethiopian farmers is bleak.

The straw of Ṭ. is valuable fodder. It is soft, low in fibre and is both easily chewed and digested by domestic animals, which prefer it to other straws. Horses and oxen are fed Ṭ. straw to increase their endurance. The value of Ṭ. as a sown fodder/forage crop was recognized by the British who grew it in South Africa at the time of the Boer War. It is still grown there, and elsewhere, for fodder on a small scale. In contrast, the cultivation of Ṭ. for its grain did not spread far beyond the Ethiopian highlands. There may be a simple reason for this: the production of *ənǧära* is a relatively exacting technology that Ethiopian girls learn in the home. Since Ṭ. grain contains no gluten its flour cannot be leavened with bread yeast. It is "leavened" by fermentation with a mixture of microorganisms; this produces bubbles that, upon baking, form the characteristic "eyes" of *ənǧära*. The successful establishment of Ṭ. as a grain crop in other lands therefore requires the know-how of *ənǧära* fermentation and the appropriate micro-organism; this only appears to have happened in Yemen in past times. Recently, much interest has been shown in T. flour in other countries as a health food, particularly useful for gluten intolerance and coeliac disease sufferers.

Ṭ. is unusual among cereals in having a naturally free-threshing grain, a characteristic that has been introduced into some cultivated wheats but is still absent from most other cereals. It is a relatively rare feature of a few wild grass genera, notably *Sporobolus* and *Eragrostis*, and Ṭ. is assigned to the latter genus. However, *Eragrostis tef* is a cultigen, a plant unknown in the wild; it has arisen over the millennia as an artefact of human agriculture and is endemic to Ethiopia. Its nearest wild relative, and presumed ancestral species, is the much smaller and far less productive *Eragrostis pilosa*. For a crop effectively confined to a relatively small area of Africa it is surprisingly diverse, with many varieties and land-races that indicate it has long been in cultivation. Attemp to improve Ṭ. have for several decades been based at the Agricultural Research Centre at Däbrä Zäyt where a collection of Ṭ. germplasm is held.

Ṭefut: Mäṣḥafä ṭefut

The M.ṭ. (**መጽሐፈ፡ ጤፉት**, lit. 'The Book of *ṭef* Grains') is a collection preserved in one manuscript kept in the church of Däbrä Ǝgziᵓabəḥer Ab on ↗Amba Gəšän. It contains the ↗Octateuch, the ↗Gospels, the ↗*Senodos,* as well as historical texts relating to the reigns of ↗Dawit II and ↗Zärᵓa Yaᶜəqob and documental records, the most ancient among which refers to the time of ↗ᶜAmdä Ṣəyon I and the most recent to ↗Śarṣa Dəngəl. The name M.ṭ. is probably linked with the shape of its particularly thin script.

The manuscript is richly illuminated. Its iconography is similar to that which one finds in the manuscripts of the ↗*Täᵓammərä Maryam* also preserved on Amba Gəšän, as well as of the ↗*Dərsanä Maryam* now in the church of Betä Ləḥem, both usually attributed to the *scriptorium* of *aṣe* Dawit II (AfrZion 91f.). According to Fiaccadori (1994: 79f.), the illumination of the M.ṭ. might well reflect – through a series of intermediate copies – an ancient Aksumite model and, thereby, a lost Byzantine prototype.

The production of the M.ṭ. probably extended over many decades. If paintings indicate that certain texts were copied during the reign of Dawit, other texts, such as many land grants as well as a historical text, were added during the reign of Zärᵓa Yaᶜəqob. The historical text speaks of the foundation of the Amba Gəšän churches of Däbrä Ǝgziᵓabəḥer Ab and Däbrä Maryam by Zärᵓa Yaᶜəqob, as well as his gift of a piece of the True Cross and other ↗relics.

A modern copy of the M.ṭ. was prepared for the church of ↗Däbrä Bərhan Śəllase in Gondär. It includes all the notes and documents except for the one published by Caquot which had been added throughout years to the M.ṭ., as well as a compilation of other texts and documents from Amba Gəšän manuscripts (esp. the Gospel of Däbrä Maryam and the *Mäṣḥafä ↗milad*; s. Kropp 2004: 214f., 217). It is on this copy (now in the BritLib, Orient. 481) that all the studies on the documents originally copied in the M.ṭ. have been based (with the only acception of Caquot 1955). Most of these texts concern the church of Däbrä Ǝgziᵓabəḥer Ab, but sometimes also members of the royal family, such as one of ᶜAmdä Ṣəyon's wives (Kropp 1989–90). Among the documents there is a famous decree of Zärᵓa Yaᶜəqob dividing Təgray into two "dioceses", one given to ↗Däbrä Bizän and the other to ↗Däbrä Maryam, the two major monasteries of the ↗Ewosṭateans (Conti Rossini 1923).

The M.ṭ. is considered one of the most sacred objects of Amba Gəšän. Jealously kept under lock and key during the year, it is shown to the faithful on the occasion of great feasts, particularly on 21 *Mäskäräm*, the day of the arrival of the True Cross at Amba Gəšän (cp. ↗*Mäsqäl*).

Təgray

T. (**ትግራይ**; Amh. Təgre) is a historical region and a regional state of Ethiopia. The official name of the state is **ብሔራዊ፡ ክልላዊ፡ መንግሥቲ፡ ትግራይ** (*Bəḥerawi Kəlləlawi Mängəśti Təgray*, 'Təgray National Regional State'). It encompasses all the territories of ↗Təgrəñña-speakers (and a few minority groups closely linked with them) in Ethiopia; T. is separated from the northern Təgrəñña territories by the River ↗Märäb, now serving as the state border to ↗Eritrea.

T.'s official language is ↗Təgrəñña. T. is situated between 12°–15° N and 36° 30'–40° 30' E and comprises 53,638 km^2 (according to the Tigrai Investment Guide); to the north, it borders to the state of Eritrea, to the west to northern ↗Sudan (↗Kassala and ↗Qadarif provinces), to the south to the Amhara *kəlləl*, and to the east to ↗ᶜAfar *kəlləl*. T. has ca. 4.3 million inhabitants (CSA 2005). The greatest part of the population (ca. 80 %) are agriculturalists, contributing 46 % to the regional gross domestic product (2002/03). The highlands (11.5 % *däga* [Tgn. *dəgʷəᶜa*], 40.5 % *wäyna däga*) have the highest population density, specially in eastern T. and central T. The much less densely populated lowlands of T. (*qʷälla*) comprise 48 % of T.

The great majority of inhabitants are Orthodox Christians (95.5 % in 1994), with the exception of a small, but important Muslim subgroup (↗Ǧäbärti) and a few Catholics (mainly ↗Irob). Protestantism is only a very recent urban phenomenon. Despite a general impression of ethnic and cultural homogeneity, there are a few ethnic minorities, especially at the borders of T., belonging to non-Təgrəñña groups, such as the ↗Saho-speaking ↗Irob at the north-eastern border to Eritrea, the ↗Rayya Oromo in the south-east (mostly speaking Təgrəñña today), the ↗Agäw-speaking ↗Ḫamta in ↗Abärgalle north of ↗Wag, a few ↗Kunama in the Ḥabäša-Kunama *wäräda* east of ↗Ḥumära, and scattered peripheral groups in the western lowlands, such as the Č̣are of the ↗Ṣällim Bet (related with the ↗Gumuz) and "↗Tuḵrir" in the Humära area (EllLusAnt). Some of these groups have adopted Təgrəñña as their first language.

T.'s administrative capital is ↗Mäq̱älä. Administratively, T. was divided into four, later six zones (*zoba*), which replaced the former *awraǧǧas* in 1991 (names with number of inhabitants of the four original zones in the year 2005 [CSA 2005] with their capitals): Western Zone (Məᶜrabawi *zoba*, i.e. 'western zone', ca. 1 million inhabitants; Ḥumära), Eastern Zone (Məbraqawi *zoba*, ca. 800.000 inhabitants; ↗ᶜAddigrat), Central Zone (Maᵓkälay *zoba*, ca. 1.3 million inhabitants; ↗Aksum), Southern Zone (Däbuḇawi *zoba*, ca. 1.2 million inhabitants; ↗May Č̣äw); in a recent administrative reform some of these were split and first a North-Western Zone (Səmenawi Məᶜrab *zoba*; Ǝnda Śəllase Šire) and later a South-Eastern Zone (Däbubawi Məbraq *zoba*; Mäq̱älä) were created.

T. went through numerous administrative changes in the course of its history. In 1991 T. was radically reshaped. During the reign of ↗Ḫaylä Śəllase I, and also the following *Därg* period (↗Provisional Military Administrative Council), T. did not yet encompass ↗Wälqayt (until 1991 having been part of ↗Bägemdər), while ↗Ǝndärta in eastern T. extended over large ᶜAfar areas including the ↗salt plains, which were given to ᶜAfar *kəlləl*. Still in the 1930s the regions south of Ǝndärta, i.e. ↗Wäǧǧärat and ↗Angot, formed the separate governorate called "Southern T." (ZerÉth 396). Modern T. is the result of a merger of diverse historical northern provinces (with Təgrəñña- and Agäw-speakers), which were often independent from each other.

Ancient provinces of Təgray

Today's unity of Təgrəñña territories south of the Märäb river is a rather modern phenomenon. Most northern provinces were ruled by their own governors, often descending from local dynasties (s. below) and preserving a high degree of autonomy within the empire, e.g., in legal and judicial issues, taxation etc. Only rarely these territories were unified under one ruler.

The core of today's T. was the most important northern province and bore the name "T." (henceforth called "T. proper"). Usually it controlled adjacent territories, which might be the reason why the term T. began to be used for the entire north. T. proper basically encompassed only ↗ᶜAdwa, Aksum (Tgn. Aḵsum, Aḵʷsəm, Gəᶜəz also Akʷsəm) and ↗Yəḥa (Tgn. Yäḥa), and regularly extended over ↗Ḥawzen (with Amba Ǝnda Ṣəyon) and ↗Ǝntiçço. It included sometimes wider areas, such as ↗Šire and ↗Tämben, which, however, kept their own separate identities and often their local governors.

Ḥawzen was an important province seemingly already in Aksumite times (with important early rock-hewn churches, s. e.g., Plant 1985: 175f.); according to the *Gädlä Märqorewos*, in the 13th cent. Ḥawzen encompassed wide areas from today's Ḥawzen to the ᶜAfar salt plains in the east. Consequently, over the centuries the realm of T. regularly extended over all these territories (s. ill.: 17th cent. map). Tämben was included into T. already in the 17th cent. (LudHist I, iii, § 28), and at times also well before. An ancient permanent boundary of T. proper to the south is the ↗Täkkäze, in ancient sources equalled with the ↗Nile River (HuntGeogr 42). Therefore T. proper together with its dependencies was occasionally also called Täkkäze Məllaš ('beyond the Täkkäze').

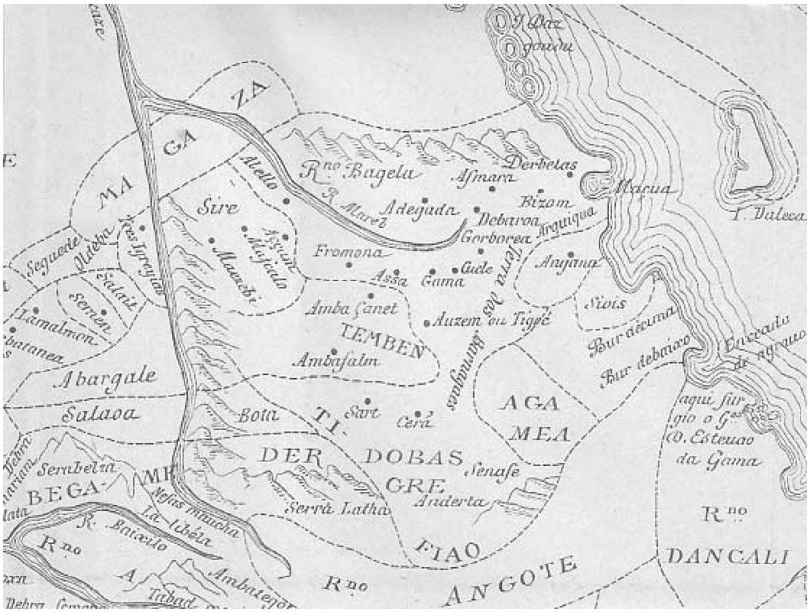
Areas of Təgrəñña-speakers currently under Təgrayan administration

Over a long period, the capital of T. proper was Ḥawzen in the (sub-)province Ḥaramat. Already in the 17th cent. this town served as a seat of governors (PerrZarY, annex: Ḥawzen was then also "called Təgre"). In the 19th cent. it again served as the capital, e.g., of ↗Wəbe Ḥaylä Maryam and *nəguś* ↗Nəguśe. ᶜAdwa assumed the role of a capital in the 18th cent. under ᶜAmdä Haymanot, and again later (starting from the 1880s in competition with the new capital Mäqälä).

T. proper was of strategic importance, both symbolically, as it included the sacred town of Aksum, and economically, due to important trade routes from the east (i.e. ᶜAgäma and Ǝndärta) and the north. It included fertile plains (e.g., to the west of Aksum), and strategically important mountains. "The one who controlled Amba Ǝnda Ṣəyon controlled T." (Markham 1869: 263; s. Tsegay Berhe in PICES 14, 554). Still in the 20th cent. T. proper was a province of its own in the framework of a wider homonymous province, also called T. (ZerÉth 393). Even if well before the 20th cent. occasionally the term "T." already extended over areas outside T. proper, local parlance preserved the old provincial names, and the term "T." is still used by rural people of T. as referring only to ᶜAdwa *awrağğa*, while other regions of modern T. are still considered to be "outside T." by elders and rural people (Smidt in WenDAE II, in preparation).

Several names of the other northern provinces in today's T. are very ancient (for example, the ↗ᶜAgamä were already mentioned in the ↗*Monumentum Adulitanum*), and persisted from their first mention in ancient ↗inscriptions or medieval documents until modernity, while others only existed temporarily, shaped for the needs of newly appointed governors. Historical provinces are Šire, ↗Adyabo, ↗Ḥaramat (with Ḥawzen), ↗Gärᶜalta, Tämben (or Wärᶜi *məllaš*, its border river Wärᶜi separating it from T. proper), ᶜAgamä (including the Irob mountains), ↗Ṣəraᵓ (in the 20th cent. replaced by the ↗Kələttä Awləᶜalo *awrağğa*), ↗Wämbärta (with Aṣbi and Därа), Ǝndärta (historically including the Arho saltplains of the ᶜAfar lowlands, with the *bäᶜalgäda*, ↗*Balgäda*, the controller



Extract from a map of Ethiopia after d'Almeida and others, 1662 (redrawn ca. 1680), showing the northern provinces: Təgray ("Tigre") with the ᶜAdwa region, Ḥawzen and Ǝndärta in that time was unified with the realm of the *bahər nägaš* ("Terra dos Barnagaes"), but ᶜAgamä ("Agamea"), Tämben, Bur, Šire being separate provinces (note: Aççum = Aḵsum, Anderta = Ǝndärta, Arquiqua = Ḥərgigo, Assa = Assam, i.e. later ᶜAdwa, Auzem = Ḥawzen, Bagela = Baqla, Cerá = Ṣəraᵓ, i.e. Agulaᶜ, Daleca = Dahlak, Dobas = Dobaᶜa, Guele = Gʷalᶜa, i.e. later ᶜAddigrat, Lamalmon = Limulima, Maçua = Massawa, Magaza = Mäzäga, Oldeba = Waldəbba, Salaoa = Säläwa, Sart = Saḥart, Seguede = Ṣägäde); from PerrZarY, annex

of the salt trade), ↗Säḥart, ↗Säläwa, Wäǧǧärat, ↗Rayya ᶜAzäbo (submitted only in the 19th cent. by *aṣe* ↗Yoḥannəs IV), and in the west ↗Ṣällämt and Wälqayt (originally encompassing only the western T. highlands), and finally the ↗Mäzäga lowlands, a former Muslim sultanate in the west successively included into the sphere of influence of Wälqayt. Some smaller territories were at times independent from the rulers of these greater provinces; the exact boundaries could change quickly following the political (and military) fortunes of their rulers (for several provinces of the north which existed then separately see the tax registers of *aṣe* ↗Tewodros II; Girma-Selassie Asfaw – Richard Pankhurst 1978).

The spiritual core of T. was and is Aksum. Even if being formally under the rulership of the central province (T. proper), the town enjoyed a special status, as a free city with its own self-government. Its administrators were the ↗*nəburä əd*, a governor appointed by the Ethiopian ruler, and the *qarigeta*, the mayor elected by the male members of the seven "Aksumite clans" of Aksum, Mäläkya Aḵsum, Bägiᶜo, Fərhəba, Kudukʷi, Wäldmaybiḥ, Aḵoro und Näfas. These encompassed the entire whole indigenous city population, who was not to pay any taxes (for new research on the self-government of Aksum s. Muluwork Kidane-mariam 2010; Smidt in WenDAE II, in preparation). The *nəburä əd* represented the sphere of the Ethiopian state and often descended from local leading families; if he was a layman, he appointed an *afä nəburä əd* ('speaker of the *n.*') for the administration of church issues. Aksum as the guardian of the Tables of the Law (*ṣəlatä muse*, also identified as *tabotä ṣəyon*; ↗Ark of Covenant) was regarded as "a church". On this ground its priests did not allow *aṣe* Yoḥannəs IV to permanently establish his royal *kätäma* there (s. the plan in DAE I), who therefore had to found another capital. The city population managed to defend their traditional self-government – with the *qarigeta* being independent from the *nəburä əd* – even throughout the 20th cent. politics of centralization by *aṣe* Ḥaylä Śəllase I.

First mention of Təgray in ancient sources

The oldest inscriptions and texts referring to the population of the Aksumite kingdom and its neighbours do not know the term T. yet; they show an ethnic diversity, which has partially disappeared today. A variant of the term T. first appears in a 10th-cent. gloss to ↗Cosmas Indicopleustes, i.e. after the Aksumite period; according to this source important groups of the region were the "Tigrētai" and the "Agazē" (i.e. ↗Agᶜazi), the latter being the Aksumites (HuntGeogr 43; Wolska-Conus 1968; cp. also the Təgrəñña writer Fesseḥa Giyorgis 1987:173f., who extends the term *bəherä* Agᶜazi, i.e. Aksum, over all of Ethiopia; BerTarik uses the term *mədrä* Agᵓazit [sic] for the Eritrean highlands).

The toponym T. is probably originally ethnic; the "Tigrētai" then meant "the tribes near ↗Adulis" (HuntGeogr 43, 45). They correspond to the ↗Təgre groups living in the same area today; however, a historical identity between today's sub-groups and the 10th cent. groups cannot be supposed, as this could not explain the existence of the toponym "T." for the Aksum–ᶜAdwa area. It should be concluded that T. groups lived along the main route between Aksum and the coast, and later separated, both ethnically and linguistically. There is no indication that the term T. could be explained through Gəᶜəz **gärärä* ('subdue'), with the meaning 'the submitted' (in supposed contrast to the "free" Agᶜaziyan linked with the rulers of Aksum), as this could not explain why the most important province took the name T. The term might even not be Ethiosemitic and predate the Sabaean presence in Ethiopia. It is not excluded that the term *tkʾr.w* ("Tekaru"; SerHist 25) from a list of southern peoples and countries allegedly subdued by Pharaonic Egypt in the 15th cent. B.C. may already be linked with the term T.; in this case it should mean a region within or in the vicinity of ↗Punt.

Population history

T. was densely populated since ancient times; research in Lake sediments of ↗Ḥašəngä show that ecological change started with first dense settlements ca. 4,000 years ago. Today's T. region is the result of a complex process of internal migrations, cultural assimilitation and also expansion (in western T.), as well as of unification, separation, and re-unification of diverse Təgrəñña sub-groups and provinces; starting from an early age T. was marked by the dynamics of interaction between Cushitic-speaking groups (probably the most ancient population of T.) and Semitic-speakers, whose language and political culture marked T. deeply. Placenames are usually of Cushitic and Semitic origin; several of the latter can be linked with toponyms in southern Arabia. Pre-Aksumite inscriptions show that T. was marked by a Sabaic-influenced kingdom (↗DᶜMT), which had merged with a local culture. In later Aksumite times migration again linked both sides of the Red Sea, with Aksumite settlements also on the Arabian side. Toponyms indicate that the T. highlands had an important (Pre-)Agäw population in ancient times (the house-style specific for Agäw regions reaching up to Aksum, in a region with Agäw toponyms); north of it there was a ↗Beğa migration after the fall of Aksum, and later several migrations of Agäw groups (↗Adkämä Mälgaᵓ; ↗Bilin).

Overpopulated T. was a source for migrations over centuries, e.g., to the south, numerous southern groups claiming origin from T. The history of migration (↗Population history) also links much of the Eritrean highland population with T. Oral tradition maintains that the Təgrəñña groups of Ḥamasen and ↗Akkälä Guzay descend from a 13th-cent. leader, called "*nəguś*" Meroni in the tradition, who had led his followers from T. to the Eritrean highlands (assimilating the older population of partially Beğa background). There are numerous other examples of groups who migrated from T. at different times. For example, oral traditions collected by Conti Rossini (1942: 162, 189, nn. 12–13) report on such migrations (cp. ↗Wəqro). The important ↗Ǝggäla sub-group is found both in T. and Akkälä Guzay. One of the last important migrations from T. took place in the 19th cent., when *aṣe* Yoḥannəs IV placed Təgrayan lords as governors over the ↗Märäb Məllaš (i.e. mainly the Eritrean highlands), such as *ras* ↗Alula Ǝngəda from Tämben. Many Tämbenay settled especially in the Asmära area, mixing with the local inhabitants. The foundation of the Italian Colonia Eritrea attracted further migrants from T., including Muslim Ǧäbärti merchants.

The population of T. has preserved ancient self-designations, usually linked with the names of their historical provinces (at least some of which might originally have been ethnonyms); etymologically some can be linked to the Ethio-Sabaean past (e.g., Ṣəraᵓ), but most are of unclear etymology. Inhabitants of T. call themselves Tägaru (Tgn. sg. Təgraway; Amh. pl. Təgrawiyan [neolog. from Gəᶜəz], Təgre). Examples for other ancient province names and self-designations are: ᶜAgamä (nisba: ᶜAgamä), Rayya (Rayya), Ṣəraᵓ (*Säbʾa* Ṣəraᵓ; in the Aṣbi area Ṣərəᵓti for a sub-group), Tämben (Tämbenay) etc. In oral tradition, the terms Agᵓaziyan and Sabawiyan for the inhabitants of T. proper and ᶜAgamä are still in use. Other ancient ethnonyms are still preserved in names of villages or small districts (e.g., the 8th/9th cent. Gämbela [HuntGeogr 43], now a village south of Mäqälä; the "kingdom" Agabo, known from the stelae of Maryam ᶜAnza, in village names in eastern T. [Kropp in preparation]).

Cultural heritage

The cultural heritage of T. is particularly rich. T. hosts the UNESCO world heritage site of the Aksum stelae park (↗Stelae), numerous medieval ↗rock-hewn churches, with a special concentration in eastern T. (Teweldemedhin Josief 1970; Plant 1985; Lepage – Mercier 2005) and other church buildings dating from the ancient Aksumite period (such as Däbrä Damo monastery), often richly painted (↗Painting). Archaeological research has been able to document a great density of cultural remains from the stone age until medieval times (Godet 1977).

T. as the core of the Aksumite Empire bears the oldest witnesses of Christianisation of the region. The monastery ↗Ǝnda Abba Sälama, an important, but remote pilgrimage site in the mountains of Tämben, is said to host the grave of Frumentius (↗Sälama Käśate Bərhan; CRStor 258); monasteries and churches attributed to the ↗Nine Saints are found all over T. The sometimes rich ↗manuscript collections of churches and monasteries are under threat due to economic decline of the Church (following the 20th cent. land reforms; ↗land tenure); they preserve some of the oldest surviving manuscripts of Ethiopia (such as in the monastery ↗Ǝnda Abba Gärima near ᶜAdwa).

Most important for the reconstruction of the history of regional interrelations, political and genealogical alliances and dependencies, governors, and ancient administrative structures are land charters, documenting *gʷəlti* and *rəsti* rights (↗*Gʷəlt*; ↗*Rəst*; cp. CrumLand; HuntLand). The most prominent text preserving legal documents – some allegedly Aksumite – is the *Liber Axumae* (↗*Aksum*: *Mäṣḥafä Aksum*), which documents traditions on Aksum and Aksum Ṣəyon, land rights, and duties towards the church. Written documents are amended by a rich, and often very strictly transmitted oral tradition on ↗genealogies and land rights, poetry, songs and legends which form a rich intangible heritage of T.

In the course of history, many sanctuaries in T. were affected by war, especially in the 16th cent., when the armies of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī occupied most of T., destroying churches and monasteries (however, the Aksumite Däbrä Damo, which offered refuge to *aṣe* ↗Ləbnä Dəngəl, stayed unharmed). A great part of the ancient manuscript heritage got lost in that period (↗*Futuḥ al-Ḥabaša*; BassHist).

As the home to the oldest Muslim population of Ethiopia, T. also possesses Muslim sites (especially the pilgrimage site of ↗Nägaš; architectural remains in Wägər Ḥariba, and possibly in Maryam ↗Nazret) and inscriptions. In addition, during the 16th cent a group of Portuguese soldiers together with ↗Jesuit missionaries founded the settlement of ↗Fəremona, which included a Catholic church (cp. the Portuguese descriptions of T., Beccari 1912; Barradas 1996). After Catholicism was re-established among a minority by de ↗Jacobis (OMahPh) in the 19th cent., some new churches were built.

Rulers of Təgray

A "Təgrayan dynasty" in the proper sense never came into existence, the competing dynasties of the respective T. provinces being too strong. At times, local provincial rulers managed to establish their rule over most Təgrəñña provinces.

Temporarily, the northern provinces were unified under one to two rulers, since at least the 14th cent. mainly the ↗*təgre mäkʷännən*, usually seated in the Ḥawzen or ᶜAdwa area (i.e., T. proper), and, further north, the ↗*baḥər nägaš*, who controlled the trade routes to the ↗Red Sea. Only rarely all territories were unified in one hand; examples being *däǧǧazmač* ↗Kəflä Waḥəd in the late 16th cent., the 17th cent. ruler *däǧǧazmač* ↗Habśəllus (appointed over the huge territory "↗Bambolo məllaš" extending from Gondär over T. into today's Eritrea), his son *däǧǧazmač* ↗Gäbrä Krəstos of ↗Ḥamasen, in the 18th cent. *däǧǧazmač* ↗ᶜAmdä Haymanot, succeeded by the much more powerful *ras* ↗Mikaᵓel Ṣəḥul, and, finally, in the 19th cent. *aṣe* Yoḥannəs IV and his family members.

The 18th cent. "maiordomus" of Ethiopia Mikaᵓel Ṣəḥul formed a greater T., which after him virtually became a separate kingdom. He was succeeded by *raᵓsi* ↗Wäldä Śəllase of Ǝndärta, who ruled T. independently in the ↗*Zämänä mäsafənt*; and he in turn by *däggiyat* ↗Säbagadis of the *šum ᶜagamä* dynasty, whose successor was his son-in-law ↗Wəbe of the Amharic-speaking ↗Səmen (Adhana Haile Adhana 1998: 44). Rulers of Təgrayan provinces were almost always of Təgrayan origin; in this sense, Wəbe's rule was a new phenomenon and is often perceived in oral tradition as a period of "oppression by an outsider". However, even the rule by Təgrayan princes were often perceived as such by locals, if they did not descend from their own local dynasties; this regularly motivated popular support to numerous competing princes (e.g., ↗Kaśa Golǧa against Kaśa Mərča, the later Yoḥannəs IV).

There was no strong concept of a "pan-Təgrayan" ethnicity, local identities often being stronger. Some areas never or only rarely submitted to the rule of a Təgrayan overlord, but stayed under their own autonomous rulers (such as Ḥamasen for most of the time, Wälqayt, Wäǧǧärat, Rayya, Zəbul etc.); this was in a way solved by *aṣe* Yoḥannəs IV, who due to his descent from all important Təgrayan dynasties could rally support from most Təgrayan regions (BTafY; ZewYohan). After his accession to the imperial throne, T. was governed by his uncle ↗Arʾaya Śəllase Dəmṣu, who died shortly after Yoḥannəs. Arʾaya's successor *raʾsi* Mängäša Yoḥannəs, the Emperor's son, was only to some degree able to keep T. under his control. *Aṣe* ↗Mənilək II used the situation to partition again T. along older borders between several governors, who went into war against each other immediately after his death (e.g., ↗Gäbrä Śəllase Barya Gabər of Aksum and ↗Səbḥat Arägawi of the ʿAgamä dynasty).

Later, T. was given as a fief to other descendants of Yoḥannəs. Thus the first "Təgrayan" dynasty was created, which, however, depended on support of the Šäwan-dominated state. In a brief attempt to exploit Təgrayan discontent with Šäwan rule for his own power interests, ↗Ḫaylä Śəllase Gugsa from that dynasty allied with the Italians in the war of 1935–36 to become ruler of a more autonomous T. This, however, proved to be a political miscalculation. Instead of becoming an autonomous princedom, T. was included into Eritrea within ↗Africa Orientale Italiana. Only when the fortune of the Italian occupants changed in World War II, they placed *nəguś* ↗Śəyyum Mängäša as their governor over T. After the Emperor's return from exile, he was confirmed as a governor (with the title ↗*ləʿul ras*), but mainly nominally. His son, *ləʿul ras* Mängäša Śəyyum, succeeded him in 1960 and was deposed in the ↗Revolution of 1974. After that he was involved in the formation of the armed Ethiopian Democratic Union in the western lowlands, together with General ↗Iyasu Mängäša (s. EAE vol. 5).

This "Təgrayan dynasty" strongly relied on Christian symbolism and deducted their legitimacy from their control of Aksum, which hosts the church ↗Aksum Ṣəyon with the Ark of the Covenant. "Defined by its predominant Christian character, T. formed not only a durable component of the Ethiopian nation but was also part of backbone of the Ethiopian state" (Adhana Haile Adhana 1998:43). The rulership over T. (and Ethiopia) was occasionally identified with the rulership over Aksum Ṣəyon by powerful rulers with connection to T. Consequently, even the term Ṣeyon (↗Zion) could be used in exchange with T. in specific contexts. Yoḥannəs IV called himself *nəguśä ṣəyon* (e.g., on a silver *nägarit* of his godson *ras* ↗Mikaʾel Ali, of Wällo, kept in Aksum Ṣəyon, s. Smidt in WenDAE II, in preparation). Creating a sort of spiritual succession, Mikaʾel Ali called himself *nəguśä ṣəyon* after his coronation as *nəguś* of T. in 1914 (he translating it into Arabic as 'king of T.'; Smidt 2007/08:436f.; cp. also GebMolIyas).

Also the history of ↗titles and ranks in T. shows interesting features and reflects the complex local systems of government. T. knows a wide variety of ancient state and cultural titles and designations of ranks and offices. Their meaning often differed from the meaning these or similar titles have acquired in territories further south (↗Amhara). Some are remnants of an ancient administrative system (many of these old titles have vanished today, e.g., the ↗*ḥasgʷa* and *ʿaqqabe ṣänṣän* of Əndärta), others are expressions of local cultural and socio-political structures (e.g., *abbo gaz* [↗*Gaz*]; *ḥanta* etc.).

Modern Təgray

Modern T. as a united province has its origin in the unification of its (sub-)provinces by *aṣe* Yoḥannəs IV and his successors. This did not, however, change the ancient claims for autonomy by local leaders and by several quite egalitarian, non-feudalist peasant communities (Abdulkader Saleh et al. 2008). After its hayday under Yoḥannəs, T. was heavily challenged, and was gradually reduced in importance within Ethiopia, and outside influence within T. increased. T. oral traditions preserve numerous poems and legends which report on T. resistance against non-T. lords (to name only few examples, s. Conti Rossini 1906, 1942; for an 1898 *awaǧ* of *raʾsi* Mängäša Yoḥannəs calling for armed resistance against Mənilək II, s. Mekonnen Birhane 1998/99:67f., with further texts on T. resistance; cp. also a war-song of 1906, Smidt 2007).

Much of T. was briefly occupied by the Italians in the foremath of the 1896 Battle of ʿAdwa (↗Italian War, 1895–96). Again, T. was one of the major battle grounds during the ↗Italian War 1935–36, with an initial success by the Ethiopians in the First Battle of Tämben in January 1936, and their dramatic defeat in the Second

Battle a month later; after the Battle of May Č̣äw in southern T. (followed by attacks of Rayya against *aṣe* ↗Ḫaylä Śəllase's army), the Ethiopian government collapsed.

During Italian occupation, T. was included into Eritrea (↗Eritrea: Administrative division), and then after 1941 reunified with restored Ethiopia (s. British Military Administration of Ethiopia, EAE vol. 5). Ḫaylä Śəllase's harsh measures to establish control by the central government, however, quickly led to local resistance. Significantly, the ↗*Wäyyanä* rebellion started in the province of Wäğğärat, which was especially marked by egalitarian structures. After the rebels had captured the capital Mäq̱älä, heavy bombing by the British in 1943 ended the uprising. This was followed by a further process of marginalization of T., which was also heavily affected by the 1970s and 1980s ↗famines (often caused by ↗resettlement measures).

Measures of centralisation, aggressive marginalisation, economic decline and political suppression led to the creation of local armed resistance movements in the 1970s, especially the ↗Tigray People's Liberation Front (TPLF). During the following liberation struggle mainly three options for the political future of T. were discussed among the insurgents: the creation of an ethnic-based independent "Greater T.", incorporating the Eritrean highlands "lost in 1889" (i.e. the "T. Təgrəññi" concept already shortly propagated by the Eritrean politician ↗Wäldä Ab Wäldä Maryam in the 1940s), or the full inclusion of T. into Ethiopia, with T. as the spearhead of liberation of all Ethiopians from oppression; a third option aimed first at "the liberation of T. as such", leaving the question of T.'s role within Ethiopia "to the historical process" (Adhana Haile Adhana 1998: 48). Starting from 1989 T. was under full control by the TPLF, with rock-hewn headquarters in ᶜAddi Gäzaᵓti nearby ↗Mälfa. Social, economic and political reforms, including a major land reform (Smidt 2008), were already started in that period and consolidated when the TPLF took over the government officially in 1991.

T. was strongly affected by the Eritrean-Ethiopian war of 1998–2000 (partially caused by unsolved contradictions between local rights and international legal obligations, cp. Smidt in Abdulkader Saleh et al. 1998: 293–321; for cartography cp. Ciampi in PICES 14), but has witnessed an economic revival since then. The process of historization of T.'s role in the radical change of government in Ethiopia in 1991 has just started. There are already serious studies on the origins of the liberation struggle (Gebru Tareke 1991). The internal structures of the early TPLF and the history of its leading figures are still under much discussion, but subject of first studies and accounts (e.g., Solomon Inquai 2007; Haylay Ḥadgu 2009, and cp. its counter-work Asgädä Gäbrä Śəllase Wäldä Mikaᵓel 2009).

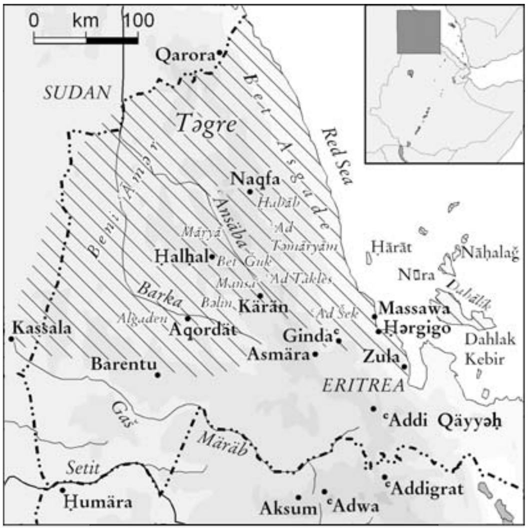
Təgre

Təgre language



T. is a northern ↗Ethio-Semitic language spoken in ↗Eritrea (provinces Northern Red Sea, ᶜAnsäba, Gaš-Barka, and Dahlak Archipelago) by ca. 800,000 people (1997 Census, s. Gordon 2005:112); there are also some T.-speakers in Sudan. Saleh Mahmud (2005:70) establishes three major dialect groups, consisting of the following dialects: 1) Sāḥəl [or Ḥabāb], Barkā [or Beni ᶜĀmər], Māryā Ṣallām; 2) Mansaᶜ, Bet Ǧuk, Māryā Qayāḥ; 3) Samhar (cf. also Morin 1996). A variety spoken on the Dahlak Kebir island of the Dahlak Archipelago, traditionally considered to be a further T. dialect, is claimed by Simeone-Senelle (2006) to be a separate language (cf. also Saleh Mahmud 2005:73, n. 3; ↗Dahlak islands: Haka na Dahālík). The present survey is based on the Mansaᶜ dialect, described by Raz (1983 etc.).

The language is used in everyday communication as well as in mass media and as a medium of education in primary school (Ethiopic ↗script is employed). Collections of oral literature in T. have been written down and published by Rodén (1913) and Littmann (1910; 1911; 1949). Bible translation into T. was initiated at the end of the 19th cent. by the Swedish Mission in Eritrea; the entire New Testament in T. appeared in 1902. The first original novel in T. was published recently (Maḥammad-ᶜAli Ibrāhim 2007).

Consonantal inventory (consonants in brackets are rarely used): labials (*p*), *b*, (*p̣*), *f*, *m*, *w*; alveolars *t*, *d*, *ṭ*, *s*, *z*, *ṣ*, *n*, *r*, *l*; palatals *š*, *ž*, *č*, *ǧ*, *č̣*, *y*; velars *k*, *g*, *q*, (*ḫ*); pharyngeals *ḥ*, ᶜ; glottals *h*, ᵓ. Vowels are: *i*, *u*, *e*, *ə*, *o*, *a*, *ā*. *ə* is defined by Raz (1983:6) as a mid-central vowel. Vowel length is phonemic only for the vowel *a* (however, in the majority of contexts the opposition between the short and long *a* is both quantitative and qualitative: [ä] vs. [ā]). In word-final position, the opposition between *a* and *ā* is neutralized.

Vowel harmony and assimilation of vowels to ejective (*ṭ*, *ṣ*, *č̣*, *q*) and pharyngeal consonants can be observed (cf. Palmer 1956; Raz in PICES 6).

Stress is non-distinctive and depends on the position of the word in the phrase.

Nouns distinguish masculine and feminine genders. For animate nouns, grammatical gender coincides with the biological; for inanimate nouns, gender is morphologically determined: nouns with suffixes *-at*, *-it*, or *-t* are as a rule feminine, other nouns are masculine. There is, however, a certain number of morphologically unmarked feminine nouns (e.g., *gabay* 'road').

Direct object is unmarked; sometimes the preposition *ᵓəgəl* 'to' can be employed as marker of a definite direct object, which is then as a rule copied by a pronominal suffix attached to the verb: *ᵓəgəl la-bāb dabᵓay-u* 'He shut the door' (lit. 'To the-door he shut-it').

Adjectives mark their feminine forms either by suffixes (*-at*, *-it*, *-t*), e.g., *qərč̣āy* 'curly-haired' (masc.) – *qərč̣āyt* (fem.), or by vowel change, e.g., *ḥaddis* 'new' (masc.) – *ḥaddās* (fem.).

Plural number can be expressed by suffixes (mostly by *-āt*, *-otāt*, *-ām*, *-ātāt*), or (so-called "broken plural") by transfixes (a combination of vowels inserted in certain positions), sometimes combined with prefixes or suffixes (*ramšat* 'edge' – pl. *rəmaš*; *raḥəm* 'belly' – pl. *ᵓarḥām*; *qaraf* 'bark', pl. *qararrəf*, *maswad* 'leather bag' – pl. *masāwəd*). There exist correlations between certain singular and plural forms, but generally the choice of the plural morpheme is unpredictable.

Plural of adjectives can also be marked either with suffixes (*-ām* for masc., *-āt* for fem.) or by transfixes (*fadāb* 'brave' – pl. *fadāyəb*).

Indefiniteness is unmarked; definiteness is marked by the article *la*: *garhat* 'a field' – *la-garhat* 'the field'.

Independent personal pronouns are: 1st pers. sg. *ᵓanā*, 2nd pers. sg. masc. *ᵓəntā*, 2nd pers. sg. fem. *ᵓənti*, 3rd pers. sg. masc. *hətu*, 3rd pers. sg. fem. *hətā*, 1st pers. pl. *ḥənā*, 2nd pers. pl. masc. *ᵓəntum*, 2nd pers. pl. fem. *ᵓəntən*, 3rd pers. pl. masc. *hətom*, 3rd pers. pl. fem. *hətan*. Personal pronouns as objects and possessors are expressed by suffixes attached to verbs and nouns respectively.

Question words are 'who' *man*, 'what' *mi*, 'which' *ᵓayi* (sg. masc.)/*ᵓayā* (sg. fem.)/*ᵓayom* (pl. masc.)/*ᵓayan* (pl. fem.), 'when' *maᵓaze*/*mədol*, 'where' *ᵓət ᵓayā*, 'how' *kaᵓafo*.

Numerals '1' and '2' are inflected for gender, the rest are uninflected. In numerals from 10 to 99, the tens precede the further numeral units and the conjunction *wa-* is inserted between: *salāsā wa-samān* '38'; for the numerals from 11 to 19, *wa-* is optional: *ᶜasər wa-ᵓarbaᶜ*/*ᶜasər ᵓarbaᶜ* '14'. A noun qualified by a numeral is in the singular: *salas*$_1$ *ᵓənās*$_2$ 'three$_1$ men$_2$'.

Verbal stems are divided into morphologically unmarked (*qatla* 'to kill'), and derived stems: type *qattala* (*rabbaba* 'to produce a lot of smoke' < *rabba* 'to smoke slightly'; the majority of verbs of this type are underived), type *qātala* (*qātala* 'to kill many people' < *qatla* 'to kill'), type *qatātala* (*katātaba* 'to rewrite several times' < *katba* 'to write'). These stems can be extended by the prefixes of the causative (*ᵓa-*, *ᵓat-*, *ᵓatta-*), and the passive (*tə-*). A separate verbal class is formed by complex verbs with unchangeable root and conjugated auxiliary verb (*wadā* 'make', *bela* 'say', *ᵓabala* 'make say', *gaᵓa* 'become'), e.g., *qaf wadā* 'shrink'. Verbs are conjugated for person, number, gender. They distinguish between indicative, jussive (*yəqtal*) and imperative (*qətal*) moods; in the indicative mood, past (*qatla*) and non-past (*qattəl*) tenses are distinguished. Analytical verbal forms (employing auxiliaries *hallā*/*ᶜala* 'to be'; *nabra* 'to live') are used to express durative and remote past aspects. A special construction employing the preposition *ᵓəgəl*, the jussive and the copula *tu* is used to express the future: *ᵓəgəl ləblaᶜo tu* 'they will eat'. Negation is expressed by the enclitic *ᵓi-*.

Deverbal nouns are functionally and formally close to Arabic *maṣdar*, being derived with the help of various transfixes, prefixes and suffixes (*bašla* 'to cook, boil' > *bəšlo* 'cooking', *ragṣa* 'to tread' > *mərgāṣ* 'treading'). Participles of the underived stem have the pattern *qātəl* for the active and *qətul* for the passive form.

Word order is Subject-Object-Verb. Sentences are divided into nominal and verbal. In verbal sentences, the predicate is expressed by a verb: *ka*$_1$*-la*$_2$*-ḥayat*$_3$ *ᵓəgəl ṣāləm*$_4$ *nasᵓa*$_5$ 'And$_1$ the$_2$ lion$_3$ took$_5$ Ṣaləm$_4$'. In nominal sentences, two constituents are connected by a copula *tu*, which in the forms of 1st and 2nd pers. coincides with the respective personals pronouns and in 3rd pers. is derived from the corresponding pronouns by omission of *hə-*; the copula takes the final position: *ᵓanā*$_1$ *šeḫ*$_2$ *ᵓanā*$_3$ 'I$_1$ am$_3$ a *šäyḫ*$_2$'; *ᵓəllan*$_1$ *ᶜarbəyāt*$_2$ *qālyāt*$_3$ *tan*$_4$ 'These$_1$ cars$_2$ are$_4$ expensive$_3$'.

The qualifier usually precedes the qualified: *wəqqul*$_1$ *dabər*$_2$ 'a high$_1$ mountain$_2$'; *ṣallām*$_1$ *gimat*$_2$ 'a black$_1$ cloud$_2$'.

Possessivity is expressed by a simple collocation of possessed and possessor: *ǧafar*$_1$ *maḥāz*$_2$ ‘bank$_1$ of a river$_2$’, or by a *nota genitivi nāy*: *la*$_1$-*baᶜat*$_2$ *nāy*$_3$ *ḥayat*$_4$ ‘the$_1$ lion$_4$’s$_3$ cave$_2$’.

The ten-word list is: ‘one’ *woro*(*t*)/*ᵓoro*(*t*) (masc.)/*ḥatte* (fem.), ‘two’ *kəlᵓot* (masc.)/*kəlᵓe* (fem.), ‘three’ *salas*, ‘fire’ *ᵓəsāt*, ‘water’ *māy*, ‘sun’ *ṣaḥāy*, ‘moon’ *warəḥ*, ‘blood’ *dam*, ‘tongue’ *nəssāl*, ‘tooth’ *nibat*.

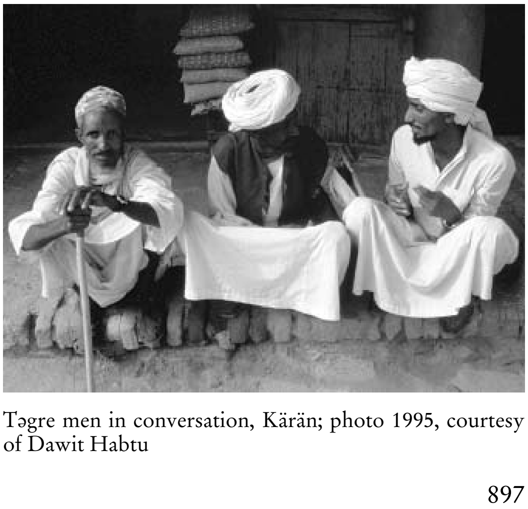
Təgre ethnography

The T. (also Təgray, in the Sudan: Hāsā; in Tgn. Təgrä) are a ↗Təgre-speaking ethnic group in Eritrea, with a minority living in the northern Sudan, living mostly in the wider vicinity of the ↗Red Sea coast, from ↗Zula, ↗Massawa to ↗Qarora and in western Eritrea ↗Aq̠ordät and ↗Täsänäy, up to ↗Kassala in the Sudan (i.e. in the former provinces of ↗Barka, ↗Saḥəl, ↗Sämhar and ↗Sänḥit). The T. are composed of numerous ethnic sub-groups, which were historically quite independent from each other.

As an ethnonym encompassing the whole group, the term “T.” was coined after the language and is quite new, their sub-groups’ identities having been predominant in the past. The term is not to be confused with a former social subgroup of the T., the serf groups, which were known as ↗*təgre*, in contrast to the noble T. groups known as ↗*šəmagälle*. Today, the serf relationships between different T. groups and lineages are abolished. In Sudanese Arabic, the language of the T. is called al-Ḫāṣṣīya, and their self-denomination is Hāsā (already documented in 1864, MunSt 77, as a name for the language of the ↗Beni ᶜAmər, cp. also Heuglin 1868: 96; today, the Təgre-phone Sudanese Beni ᶜAmər call themselves Hāsā, and recently started to use this term to distinguish themselves from Təgre-speakers in Eritrea).

The ethnic structure of the T., as documented since the beginning of proper ethnographical research on them since the mid-19th cent., shows that according to their own traditions and genealogies the T. groups are of diverse origins, of alleged Arabic background, and with Beǧa, Saho and Təgrəñña (↗Akkälä Guzay), and other origins. Among the most important groups are the ↗Mänsaᶜ, ↗Bet Ǧuk, Māryā Qäyāḥ (‘red Marya’, ↗Marya) in northern-central Eritrea (who form one dialect cluster); the ↗Ḥabāb in ↗Sāḥəl, Beni ᶜAmər in ↗Barkā and Māryā Ṣällām (‘black Marya’) in western and northern Eritrea (who form another dialect cluster), and the numerous groups of the coastal region, i.e. ↗Sämhar, also called Mədun (‘[inhabitants of the] cities’, i.e. Massawa and nearby settlements). The latter are to be differentiated from the Dahālík, i.e. the island T. of ↗Dahlak, descendants of groups of T., Arabic and ᶜAfar origin and linguistically quite distinct (first mention Dapper 1652: 662f.). In addition, there are several smaller groups such as



Təgre men in conversation, Kärän; photo 1995, courtesy of Dawit Habtu the ↗Algäden and ↗Säbdärat near the Sudanese border in south-western Eritrea, originally possibly completely separate groups.

The T. are mostly semi-nomadic pastoralists today. The Beni ᶜAmər are almost exclusively pastoralists, focusing on camels, long-horned cattle, sheep, goats and chickens, living almost entirely on their milk and meat, supplemented by sorghum (Shack 1974:75, 77). They follow an annual movement for grazing land and water, in the dry seasons moving to the pastures of the Gaš, Setit and Barka rivers. The Mänsaᶜ, once also exclusively pastoralists, practise a mixed economy of pastoralism and agriculture, living from the meat and milk of their livestock and bread. Also beer is produced by them. Milking and the consumption of milk are subject to cultural norms among many T. groups. Members of the leading groups, the *šəmagälle* (*nabtab* among the Beni ᶜAmər), do not milk their cattle, and also women are prohibited from herding and milking (Shack 1974:77). Belief in the power of natural ↗spirits is wide-spread among T. (for a detailed account s. Mikael Hasama Raka 1984). Among agriculturalist T. groups, sorghum is roasted and scattered over fields as a sacrifice by women if rain is scanty and harvest expected to be slight; men sacrifice a bull and bring it to the church or *šayḫ* (Shack 1974:78).

The history of T. groups shows that their interconnections, both politically and culturally, among each other was occasionally strong, but on the other hand did not reduce the political autonomy of most T. groups. For example the Beni ᶜAmər formed a tribal federation during the ↗Sinnār period in the 16th cent. (Shack 1974:71), which also included other T. groups; the ↗Bälaw under their ↗*nāʾib* leaders established their domination over large T. areas between the coast and the lowlands of today's south-western Eritrea (up to ↗Mäzäga). The Islamizastion of the T. seems to have started only around that period and stayed largely nominal. In the early 19th cent., it was strongly furthered by the preachings of the ↗ᶜAd Šayḫ and the Mīrġanīya brotherhood (later with headquarters in Kassala and Kärän, ↗Islamic brotherhoods), including the leading Christian *šəmagälle* class. This was linked with rising trade connections to the Muslim ports of ↗Sawākin and Massawa and loosening contacts to the Christian highlands (due to the ↗*Zämänä mäsafənt*). Only a few lineages stayed Christian, mainly Mänsaᶜ (e.g., in ↗Gäläb, s. EAE vol. 5). In the 19th cent., following Egyptian expansion, the Beni ᶜAmər *diglal* ('leader') extended his rule over several neighbouring T. groups, such as the Marya, until weakened under the ↗Mahdists (and then Italian and British colonialism) by internal divisions.

The history of the T. is only partially documented and researched. The most important documents on the T. view on their history are the oral traditions in LitPEA and the ↗Sundström papers, oral traditions of diverse T. groups on their history documented around 1900 (of which only the tradition of the ᶜAd Šek has been published so far, Höfner 1961; the others are kept in the ↗Littmann-Nachlass at the Akademie der Wissenschaften, Wien). First mentions in sources produced by travellers and other observers which refer to the T. show a high degree of autonomy of the coastal T. at least. ↗Niebuhr mentions that in his time the coastal regions did not recognize the authority of the Ethiopian ruler anymore; maps produced according to ↗Bruce's report note shortly later that the coast was independent (even if cartographers generally showed a separate political entity called "Coast of Abex" or "Habesch" or similar at the coast, i.e. the Ottoman coastal province ↗Habeš *eyaleti*, whose suzerainty over the coast was only nominal, however, already starting from the 17th cent.; cp. ↗Ottoman Empire).

Ethnonyms and origins

Ethnographic research undertaken in the 19th cent. by the Orientalist ↗Munzinger shows that the T. groups – in publications of that time mostly called "the ↗Gəᶜəz peoples" – did not know a denomination common for all Təgre-speakers, but employed different terms for both the leading groups and their serfs (the *təgre*), and for the diverse autonomous sub-groups. Those T. who claimed leadership and "pure descent" then called themselves ↗Agᶜazi (as documented by Munzinger, MunSt; Bulakh in WenDAE I), i.e. exactly the denomination of the ancient ruling group *ygᶜḏyn* known from Pre-Aksumite ↗inscriptions (supposedly then settling in Akkälä Guzay and ↗ᶜAgame; an ancient relation between the T. and the ↗Təgrəñña-speakers of this region who claim "Agᶜaziyan" origin therefore seems probable). The late 2nd cent./3rd cent. Greek ↗*Monumentum Adulitanum* (*Adulitana II*, RIÉ no. 277), recorded by ↗Cosmas Indicopleustes, mentions the Γάζη ἔθνος. This should mean Gəᶜəz-speaking people, who may be the direct ancestors of the T. (cp., however, the Scholion in the 11th cent. Sinaiticus and Laurentianus manuscripts of Cosmas: Γάζην λέγει τοὺς ʾΑξωμίτας. ἄχρι γ[ὰρ καὶ] τοῦ νῦν ʾΑγάζη αὐτοὺς ὀνομάζουσι, 'Gázē are the Aksumites, and until these days they call themselves Agazē'; cp. HuntGeogr 43; RIÉ no. 380 [with errors]).

Another ancient term which is occasionally identified with the T. are the 10th cent. Tigretês (HuntGeogr 43), meaning the tribes "near ↗Adulis", mentioned in a gloss to the text of Cosmas, and identified either with ↗Təgray (and consequently with the Təgrəñña-speakers), or with the T. They are to be differentiated from the "Gázē" people. It is not excluded that the Tigretês were one of the groups out of which the T. were formed later, as the T. are composed of groups of diverse origins. Until today there is no sufficient explanation of the connection between the terms T. and Təgray, even if both are etymologically identical. It is possible, that the Tigretês settled in different areas between ↗Aksum (the centre of today's Təgray) and Adulis and later split into two different groups.

Another early mention of an ancient group which might be related to the later T. could be the Ḫasa, submitted by ↗^{c}Ezana together with the "Barya" (i.e. ↗Nara; RIÉ no. 189: 9); these could mean people living in the area of today's north-western Eritrea and northern Sudan, which corresponds to the main area dominated by T. groups today, and are most probably identical with the Ḫāsu mentioned by ↗Ibn Ḥawqal (an etymological connection to today's ethnonym Ḫāṣṣīya is possible; to be excluded is a connection to Kasu, RIÉ no. 189: 4, listed as part of ↗^{c}Ezana's titulature, i.e. ↗Kush, meaning the then defunct Sudanese kingdom of ↗Meroe; a connection to ↗Hazo, as suggested recently in EAE 3, 1078, is doubtful for linguistic reasons, and as that clan name is recent). All these groups were unified under Aksumite rule, which easily explains their common language. As a hypothesis it could be suggested that Ag^{c}azi groups at the coastlands gradually submitted several local tribes, such as the Tigretês, and possibly the Ḫasa and several others; this could explain why the serfs were called *təgre*, and their language too. It is also possible, that the transformation of an ethnic term T. into a socio-political term happened much later, e.g. in the Sinnār period, when many T. groups were becoming serfs (*təgre*) of the dominating Beni ^{c}Amər and Balaw groups.

Təgre

The sociopolitical term T. (**ትግሬ**, also *təgray*, pl. *tägärrit*, *tägari*; in Bilin also *məḵiruḵ*^{w}) designated serf groups among the ↗Təgre-speakers, including ↗Beni ^{c}Amər and the sociopolitically related group ↗Bilin (cp. MunSt 235). The T. were subordinated to aristocratic lineages called ↗*šəmagällä* (in the case of Beni ^{c}Amər called *nabtab*, in Bilin *səmgär*). Originally, the term T. was applied primarily in its sociopolitical sense and, in addition, also designated the ↗Təgre language. In the course of the 20th cent. ethnic unification of the Təgre-speaking groups of Eritrea, it also became used as a common ethnonym.

Its etymological origin is disputed. Allegedly there is a relation with Gəᶜəz *gärärä* ('he submitted'; Littmann – Höfner 1962: 573), from which *tägärärä* ('he was submitted') could be formed; however, the reduction to *tägari*/T. (i.e., 'the submitted'?) is not easily explainable. A genealogical relation with a homonymic ancient group at the fringes of the Aksumite kingdom (for the *Tigretai* s. the entry on the Təgre as an ethnic group), part of whom were submitted at some time in history (after the decline of Aksum?), should therefore be a better explanation. "Vassalage" means *təgrəyot*, "to be vassal" *tägra* (or *tətägra*; Littmann – Höfner 1962: 321, or *gärrä*, ibid. 573).

Their obligations included the duty to serve and pay tributes to (mostly Christian) *šəmagällä* lineages and groups. They had, however, the possibility to change their service to another lineage (Shack 1974:79). The "impure" work of milking cows or camels was reserved for T. (ibid. 77). Under ↗Sinnār rule and due to close contact with ↗Massawa and Muslim Beǧa of the northern Sudan, and a partial submission by ↗Balaw, most T. converted to Islam starting from perhaps the 16th/17th cent. This was later furthered by religious lineages such as the ↗ᶜAd Šayẖ. By the early 19th cent., the T. had converted to Islam, followed later by most *šəmagällä*.

In traditional discourse the *šəmagällä* were often seen as the "original owners" (i.e. original settlers) of their country, which justified their aristocratic rule. The situation is, however, far more complex. Among the Bilin, for example, the T. seem to be remnants of an older population submitted by migrating Agäw Bilin groups. Sometimes "indigenous" lineages of Təgre-speakers also lost their status when breaking basic rules (e.g., in war, or by criminal acts, debts, adultery, or even milking cows), followed by a collective downgrading to T. Many T. are descendants of Balaw, who were the ancient rulers and later lost power.

The serf system was subject to considerable debate starting from the end of Italian colonialism. The emancipation movement led by the independence-fighter ↗Ibrāhīm Sulṭān led to a considerable reduction of serf obligations under British administration in 1947–49. During the struggle for Eritrean independence the serf system was finally abolished between the 1960s and 1970s.

Təgre mäkʷännən

T.m. (**ትግሬ፡ መኰንን**, also *təgray mäkʷännən*, *mäkʷännənä təgray*, *təgre mäkʷänn*[*ə*/*i*], lit. 'the judge of Təgray') was the title of an important provincial governor in the Ethiopian empire. The time of the establishment of this office is not known; the first T.m. referred to in the sources seems to be ↗Akḥadom, a contemporary of *aṣe* ↗Dawit II, who also appears elsewhere as *šum* ↗*ᶜagamä* (Bausi 2003, chs. 231, 247, 249; s. also Fiaccadori in preparation).

In the 15th cent., the T.m. was one of the most important officials of *aṣe* ↗Zärᵓa Yaᶜəqob: during his ↗coronation, the T.m. together with the ↗*nəburä əd* stood at the entrance of the ↗Aksum Ṣəyon cathedral compound and prevented Zärᵓa Yaᶜəqob from coming inside, waving with branches of the olive tree in keeping with "the old ritual" (but cp. DillmZarY 18, 75); to this point the Chronicle states that this was the reason why T.m. was also called (or was given the title?) **ዐቃቤ፡ ጽንጽንያ** (*ᶜaqqabe ṣənṣənya*, lit. 'the keeper of the fly wisks', PerrZarY 49f.; cp. ↗*ᶜaqaṣen*). The T.m. acted as governor under *aṣe* ↗Bäᵓədä Maryam (ibid. 145), and was sent to prepare also his coronation (which was postponed because of ↗Ladaᶜ Uṯmān, ibid. 149f.).

At least by the late 14th–early 15th cent., the northern part of Ethiopia adjacent to the ↗Red Sea was divided between two governors: the ↗*baḥər nägaš* for the coastal – relatively small – areas (with the seat in ↗Dəbarwa) and the T.m. for the inland territories (the largest part of today's Təgray) up to ↗Angot in the south. The border between the realms was usually the ↗Märäb River. Under *aṣe* Bäᵓədä Maryam, Ḥayya was "the country [the residence?] of T.m." (PerrZarY 142); later the seat of T.m. appears to be the area of ↗Ḥawzen (as recorded by de ↗Almeida, s. BeckHuntAlm xcviff.; BecRASO V, map), though the T.m. might have had also other residences (↗Wəqro/↗Dängolo, BeckHuntAlvar 176f.). By 1520 the T.m. exercized authority over as far as the lowland ↗Dobaʾa country (BeckHuntAlvar 187ff.).

The names of T.m. during the reign of *aṣe* Zärʾa Yaʿəqob are not mentioned in the royal chronicles, but some can be known from other documents. At least one of them, probably the one who acted at Zärʾa Yaʿəqob's coronation, might have been Akkälom, who had good relations to some of the ↗Stephanites monks (Nosnitsin in preparation). On the contrary, subsequent T.m. were distinguished by their zeal in prosecuting them: Gäbrä Ǝndrəyas, a contemporary of *aṣe* ↗Ǝskəndər and Zärʾa Śännay in the early years of *aṣe* ↗Ləbnä Dəngəl (Beylot 1984:27f.; 1991:7, 10).

For *aṣe* ↗Ləbnä Dəngəl's time, besides Zärʾa Śännay we know of T.m. ʿAmr Qälṣäḥay (CRAxum 30, no. 28); he or another T.m. was deposed and banned and died in ca. 1524, and *balgäda* ↗Robel was appointed T.m. (cp. also BeckHuntAlvar 433f.). By 1531 Täklä Iyäsus was appointed T.m. (CRAxum 37f., nos. 41–42; 40, no. 44; cp. also BassHist I, 103). Degäna was T.m. under *aṣe* ↗Gälawdewos (CRAxum 43, no. 51); Zärʾa Yoḥannəs under *aṣe* Minas (ibid. 43, no. 52). From the long reign of *aṣe* ↗Śärṣ̌ä Dəngəl, ↗Däragot is known as T.m. (ibid. 45f., nos. 56, 57), who for a while had also the title of ↗*baḥər nägaš* (CRHist 128 [text]), before and during Śärṣ̌ä Dəngəl's 1588 campaign against the Turks. Besides, before Däragot, Gäbrä Iyäsus "of Tämben" is attested as T.m. (ibid. 66); after Däragot, the same Gäbrä Iyäsus appears as T.m. while ʿAqʷəbä Mikaʾel was *baḥər nägaš* (after the campaign; ibid. 134; for *šum* Täklä Giyorgis, cp. ibid. 100 [text]).

Differently from the governors of some other regions, the T.m. were appointed by the emperors personally, preferably not from the local ruling families but rather from among the court high-ranking officers (cp. Barradas 1996:2f.). The authority of the T.m. was considerable, since formally he had the upper position among the other 'governors of Təgray' (**ሥዩማነ/ሠየምተ፡ ትግሬ**, *śəyyumanä/śäyyämtä Təgre*), representing the royal power itself. According to the Chronicle, *däğğazmač* Däragot was authorized by Śärṣ̌ä Dəngəl "to appoint and remove from the offices of Təgray according to his wish" (CRHist 128 [text]). However, it is not quite clear if the T.m. always had such high prerogatives. By the middle of the 17th cent. the "regnum Tigre" consisted of more than 25 diverse districts ("praefecturae Tigrenses", LudHist lib. I, cap. 3, §27; somewhat differently in Barradas 1996:4), some of them with their own ruling families and well-established links to the royal court. In these conditions and in view of the absence of the administrative institutions, the task of the T.m. ("the Viceroy of Tygrê", ibid.) was difficult and he himself was much dependent on the support of the emperor (it is not clear if "*däğğazmač* of Təgre" was in fact a T.m. temporarily stripped of some of his power, s. Varenberg 1915–16:24).

After the defeat of *baḥər nägaš* ↗Yəsḥaq the realm of *baḥər nägaš* was merged several times with and separated from that of the T.m. Formally, the latter was frequently in charge of the strategic access to the ↗Red Sea, but the execution of the office became more complex due to its instability, the heterogeneity of the realm and – under the situation of the 17th–18th cent. – increasing difficulty of balancing between the local and royal powers. These were probably the reasons of the frequent reshuffles of T.m. and of the fact that no T.m. was able to build up a strong position of his own.

After Śärṣ̌ä Dəngəl's death, ↗Kəflä Waḥəd held for some time both the title of T.m and of *baḥər nägaš*. Under *aṣe* ↗Susənyos, *ras* ↗Śəʿəlä Krəstos took them over in ca. 1608, but he gave up the office during the popular resistance in ca. 1609, and Amsalä Krəstos was appointed instead. ↗Yolyos was appointed for both offices in ca. 1613 (PerChron I, 114, 129, 142, resp.). *Däğğazmač* ↗Täklä Giyorgis was appointed T.m. by 1619 (ibid. 211; ↗Dəlbä Iyäsus being *baḥər nägaš*). Having assumed the title of *baḥər nägaš*, he rebelled but was defeated and substituted by Qäbʾa Krəstos (ibid. 294f.; Qäbʾa Krəstos had already briefly held the office, ibid. 266). In 1629 the office was given to Aṣmä Giyorgis.

Aṣe Iyasu I cancelled the privileges of Šire (traditionally exempted from the power of T.m.) and transferred the region under T.m. ↗Fares, who could appoint his officer there and became the most powerful governor of the Empire with "44 ↗*nägarit*s", after the number of districts of his province (GuiIohan 165 [text]; BegCron 65). He was confirmed in this office in 1702, but he opposed Iyasu's subsequent decision to send him to Təgray. Though the title of T.m. was confirmed as the fourth after the ↗*nəguś*, in the "precedence order" under Iyasu II and ↗Bäkaffa, by the beginning of the ↗*Zämänä mäsafənt* the real authority of the T.m. was diminishing, and his realm disintegrating giving way to the protracted struggles of the local dynasties. The title became purely honorific and was born by smaller rulers as heritage (still in the 20th cent., e.g., by the governor of ↗Gulo Mäḵäda, GueCopMen 324, n. 1; cp. CRHist 190f. [tr.]).

Təgrəñña

Təgrəñña language

T. (**ትግርኛ**) is the working and school language in ↗Eritrea (ca. 2,400,000 native speakers) and in the ↗Təgray region, Ethiopia (ca. 4,300,000 native speakers). It belongs to the ↗Ethio-Semitic language group, its nearest relatives being ↗Təgre and ↗Gəʿəz.

T. employs Ethiopic ↗script with additional symbols for sounds absent in Gəʿəz and Amharic.

T. is widely used as a language of mass media; a rich literature in T. has developed since the 19th cent.

The first linguistic description of T., based on analysis of written texts, was published by ↗Praetorius (1871). To date, the best grammatical descriptions are those by ↗Leslau (1941) and – for syntax – Voigt (1977). There are also grammars of T. written in T., such as Matewos Ḥagos (1951–53). Several dictionaries have appeared recently; the most extensive are the two monolingual dictionaries (Täkkəʾä Täsfay 1999; Kidanä-Maryam Zärʾəzgi 2008) and a bilingual one (KaneTDic).

Within the present entry, the morpheme junctures are marked as follows: "≡" marks the strongest juncture between obligatory prefixes and suffixes and the kernel morpheme, as in *yə≡säḇr≡u* 'they (masc.pl.) break', "=" marks the juncture for (facultative) object and possessive suffixes: *ʾamṣiʾ≡u=kka* 'he has brought you (masc.sg.)', "-" denotes the weak juncture which connects the proclitic and enclitic elements to the more central morphemes, as enclitic *-ḵä* in *nəss=əḵa-ḵä* 'what about you (masc.sg.)'.

Phonology

The consonantal phonemes are as follows (marginal phonemes are given in square brackets):

labial	*f*	(*v*)	(*p*)	*p̣*	*b*	*m*	*w*		
dental			*t*	*ṭ*	*d*	*n*			
alveolar	*s*	*z*		*ṣ*				*l*	*r*
palatal	*š*	(*ž*)	*č*	*č̣*	*ǧ*	*ñ*	*y*		
velar			*k*	*q*	*g*				
labiovelar			*kʷ*	*qʷ*	*gʷ*				
pharyngeal			*ḥ*		ʿ				
glottal			*h*	ʾ					

The vocalic system of T. consists of seven vowels (*a*, *e*, *i*, *o*, *u*, *ä* and *ə*). The syllable structure is CVC (where C = consonant, V = vowel), both initial and final consonantal clusters being avoided.

Synchronic phonetic alternations include spirantization of *b*, *k*, *kʷ*, *q* and *qʷ* (into *ḇ*, *ḵ*, *ḵʷ*, *q̱* and *q̱ʷ*, resp.), when postvocalic and not lengthened (with marked regional differences).

Indeterminacy and articulatory weakness are a peculiarity of centralized vowels in open syllables before "laryngeals" (*h*, *ḥ*, ʾ, ʿ). This leads to a vocalic fluctuation *ə* ~ *ä* ~ *a*, e.g. *yə≡ssəḥab≡*/*yə≡ssäḥab≡*/*yə≡ssaḥab≡* 'he is dragged', or even to elision of the vowel: *gäza=ʾu*/*gäzə=ʾu*/*gäz=ʾu* 'his house'.

Morphology

Pronouns

The possessive pronouns are expressed through the following suffixes:

	sg.	pl.
3rd pers. masc.	= *u*	= *om*
fem.	= *a*	= *än*
2nd pers. masc.	= *ka*	= *kum*
fem.	= *ki*	= *kən*
1st pers.	= *äy*	= *na*

The possessive suffixes are added to the nominal base (*kälb=u* 'his dog', *kälb=äy* 'my dog'). The phonetic processes on the morpheme boundary include insertion of epenthetic *ə* between two consonants (*kälb=ənä* 'our dog'), spirantization of *k* in intervocalic position (*kälb=əḵa* 'your [sg.masc.] dog'), insertion of glottal stop between two vowels (*gäza* 'house' – *gäza=ʾu/gäz(ə)=ʾu* 'his house').

The personal pronouns, with the exception of the 1st pers., are derived from a base *nəss=* (dialectal *näss=*; usually traced back to *nəfs/näfs* 'soul') to which the possessive suffixes are added (in pl. usually expanded with *=at≡*, and in the 2nd pers. with =(*ə*)*ḵ* = as well):

	sg.	**honorific**	**pl.**
3masc.	*nəss=u*	*nəss=om*	*nəss=(at)om*
fem.	*nəss=a*	*nəss=än*	*nəss=(at)än*
2masc.	*nəss=əḵa*	*nəss=əḵum*	*nəss=(əḵat)kum*
fem.	*nəss=əḵi*	*nəss=əḵən*	*nəss=(əḵat)kən*
1pers.	*ʾanä*		*nəḥna*

The old base of 2nd pers. Semitic pronouns **ʾant-* is preserved in forms of address 'oh you': *ʾan≡ta/ʾat≡ta* (masc. sg.), *ʾan≡ti/ʾat≡ti* (fem. sg.), etc.

The pronominal objects are expressed through suffixes (identical to those of possessive pronouns, except for 3rd pers. masc. sg. *-o*) attached to the verbal form. Certain changes occur on the morpheme boundary, such as gemination of the preceding consonant in imperfect and in perfect 3rd pers. fem. sg.: *gəḇärr⁼=o* 'do (masc. sg.) it!', *qätälätt=o* 'she killed him' vs. *qätäl=o* 'he killed him'.

Demonstrative pronouns of proximity ('this') and of distance ('that') are based on (*ʾə*)*z=* and (*ʾə*)*t=* resp., to which the suffixes of the 3rd pers. are added: masc. sg. (*ʾə*)*z=u*, (*ʾə*)*t=u*, masc. pl. (*ʾə*)*z=om*, (*ʾə*)*t=om*, etc. The base (*ʾə*)*zi*, (*ʾə*)*ti* is also widely used, with zero suffixes in the singular and with respective personal suffixes (sometimes expanded with *-at-*) in the plural, e.g. masc. pl. (*ʾə*)*zi=ʾ(at)om*. The demonstratives are placed either before the substantive or before and after it. The forms without initial (*ʾə*) appear in postvocalic position, e.g. *ʾəz=om qʷälʿu-ziʾ=om* 'these children'.

The relative pronoun *zə=* is used with the perfect (e.g. *zə=mäṣʾ≡ä* 'who came') and imperfect. In the imperfect it causes lengthening of *n* and *t* of the personal prefix (in this position, *z-* can be dropped: *zət=tə≡gäḇr=o/ʾət=tə≡gäḇr=o* 'which you (masc. sg.) make'. The imperfect prefixes *ʾə≡* (1st pers. sg.) and *yə≡* (3rd pers. masc.sg./3rd pers. pl.) are omitted after the relative pronoun: *zə=⁼säḇr⁼=o* 'which I/he break(s)'. Orthographically the two forms are occasionally distinguished: *zə=* vs. *zi=* resp.

Nominals

Nominal bases ending in two consonants attach an epenthetic *≡i* in word-final position (*kälb≡i* 'dog', presuffixal form *kälb=*).

Plural is marked either by suffixes, or by internal alternation and insertion of vowels, often in combination with prefixes and/or suffixes (so-called "broken plurals"). The most widely used suffix is *-at* (with allomorph *-tat* after vowels): *səraḥ* 'work', pl. *səraḥ-at*, *säwra* 'revolution', pl. *säwra-tat*. The epenthetic *≡i* is either elided before the ending *=at*, or is reduced to *ə*: *ʿadd≡i* 'home(town)', pl. *ʿadd=at*, *ʿaddə=tat*. Broken plurals are very common and show manifold formation patterns, e.g. *bərḵi* 'knee', pl. *ʾabraḵ*; *bäq̱l≡i* 'mule', pl. *ʾaḇq̱əlt≡i*, *ʾaḇaq̱əl*, *ʾaḇaq̱əlt≡i*; *mänbär* 'chair', pl. *mänaḇər*, *mänaḇərat*.

The function of the definite article is fulfilled by the demonstrative *ʾət≡u* (inflected for number and gender): *ʾət≡a lam* 'the cow'. Indefinite nouns are unmarked, or the numeral *ḥadä* 'one' is sometimes used to express indefiniteness: *ḥadä mäṣḥaf* 'a book'. The definite direct object can be marked with preposition *nə-* 'to'.

The category of gender distinguishes between masc. and fem., which are expressed mostly through agreement with modifiers and verbs. On adjectives, feminine gender is marked by *≡t* or by vowel changes. On nouns, it is overtly expressed mostly on adjectives and participles. The common paradigms are: a) (passive participle) *kəfut* 'open(ed)', fem. *kəfət=t≡i*, pl. *kəfut=at*; b) (active participle) *gäḇari* 'active, working; worker', fem. *gäḇari=t*, pl. *gäḇar=o*, *gäḇärt≡i*; c) *käbbid* 'heavy', fem. *käbbad*, pl. *käbbädt≡i*.

Verbs

A verbal root consists normally of three or four radical consonants (biradical roots are very rare). Verbs are inflected for tense/aspect/mood (perfect, perf.; imperfect, impf.; converb, conv.; jussive, juss.; imperative, imv.) and for person/gender/number. The forms morphologically marked as converbs can also function as the head of the sentence, expressing resultative.

The system of verbal derivation is traditionally described in terms of verbal stems. Three basic stems are simple stem 0_1 (*gäḇär≡ä* 'he made'), geminate stem 0_2 (*gäbbär≡ä* 'he paid tribute'), and lengthened stem 0_3 (*baräḵ≡ä* 'he blessed').

Membership of the basic stems is almost always lexically determined. Further stems may be derived through prefixes – causative *ʾa≡* (A), reflexive/passive *tä≡* (T), causative-reciprocal *ʾa≡* (At) – and reduplication (frequentative R: 0_R *säḇaḇär≡ä* ‘he broke some things’ < 0_1 *säḇär≡ä* ‘he broke’). The base of the verb usually remains intact with further derivations: 0_2 *bäddälä* ‘to wrong’ > A_2 *ʾa≡bäddälä* ‘to cause to wrong’, T_2 *tä≡bäddälä* ‘to be offended, wronged’, etc.

The table below shows the conjugation of the most frequent 0-, A- and T-stems (for each of three basic stems). All forms are in 3rd pers. masc. sg., the impf. in the 3rd pers. masc. pl. as well:

	0_1	0_2	0_3
perf.	*gäḇär≡ä*	*gäbbär≡ä*	*baräḵ≡ä*
impf.	*yə≡gäbbər*$^{≡}$	*yə≡gəbbər*$^{≡}$	*yə≡ḇarəḵ*$^{≡}$
impf.3pl.	*yə≡gäḇr≡u*	*yə≡gəbbər≡u*	*yə≡ḇarəḵ≡u*
juss.	*yə≡gbär*$^{≡}$	*yə≡gäbbər*$^{≡}$	= impf.
conv.	*gäḇir≡u*	*gäbbir≡u*	*bariḵ≡u*
imv.	*gəbär*$^{≡}$	*gäbbər*$^{≡}$	*barəḵ*$^{≡}$
	T_1	T_2	T_3
perf.	*tägäḇr≡ä*	*tägäbbär≡ä*	*täḇaräḵ≡ä*
impf.	*yə≡gəbbär*$^{≡}$	*yə≡gəbbär*$^{≡}$	*yə≡bbaräḵ*$^{≡}$
impf.3pl.	*yə≡gəbbär≡u*	*yə≡gəbbär≡u*	*yə≡bbaräḵ≡u*
juss.	*yə≡ggäḇär*$^{≡}$	*yə≡ggäbbär*$^{≡}$	= impf.
conv.	*tägäḇir≡u*	*tägäbbir≡ä*	*täḇariḵ≡u*
imv.	*tägäḇär*$^{≡}$	*tägäbbär*$^{≡}$	*täḇaräḵ*$^{≡}$
	A_1	A_2	A_3
perf.	*ʾagbär≡ä*	*ʾagäbbär≡ä*	*ʾaḇaräḵ≡ä*
impf.	*y≡ägəbbər*$^{≡}$	*y≡ägäbbər*$^{≡}$	*y≡äḇarəḵ*$^{≡}$
impf.3pl.	*y≡ägbər≡u*	*y≡ägäbbər≡u*	*y≡äḇarəḵ≡u*
juss.	*y≡ägbər*$^{≡}$	= impf.	= impf.
conv.	*ʾagbir≡u*	*ʾagäbbir≡u*	*ʾaḇariḵ≡ä*
imv.	*ʾagbər*$^{≡}$	*ʾagäbbər*$^{≡}$	*ʾaḇarəḵ*$^{≡}$

Special forms of converb for the verbs 0_1 *gäḇärä* and T_1 *tägäḇärä* are *gäyr≡u* and *tägäyr≡u* resp.

The morphemes for person–gender–number are as follows:

	≡[Impf./Juss.]≡	$^{(≡)}$[Imv.]≡	[Perf.]≡	[Conv.]≡
3masc.sg.	*y*≡[…]$^{≡}$	-	≡*ä*	≡*u*
3fem.sg.	*t*≡[…]$^{≡}$	-	≡*ät*	≡*a*
2masc.sg.	*t*≡[…]$^{≡}$	[…]$^{≡}$	≡*ka*	≡*ka*
2fem.sg.	*t*≡[…]≡*i*	[…]≡*i*	≡*ki*	≡*ki*
1sg.	ʾ≡ […]$^{≡}$	-	≡*ku*	≡*ä*
3masc.pl.	*y*≡[…]≡*u*(=*ta*)	-	≡*u*(=*ta*)	≡(*at*)*om*
3fem.pl.	*y*≡[…]≡*a*(=*ta*)	-	≡*a*(=*ta*)	≡(*at*)*än*
2masc.pl.	*t*≡[…]≡*u*(=*ta*)	[…]≡*u*	≡((*k*)*at*)*kum*	≡((*k*)*at*)*kum*
2fem.pl.	*t*≡[…]≡*a*(=*ta*)	[…]≡*a*	≡((*k*)*at*)*kən*	≡((*k*)*at*)*kən*
1pl.	*n*≡[…]$^{≡}$	-	≡*na*(=*ta*)	≡*na*(=*ta*)

The personal prefixes of imperfect/jussive are followed by the vowel *ə* in all stems except for A and At (where the derivational prefixes take the form *ä*, *ät*: *y*+*ʾa* > *y≡ä*, *y*+*ʾat* > *y≡ät* etc.).

The negative morpheme is *ʾay=…-(ə)n*, e.g. *ʾay=yə≡mäṣṣə*$^{ʾ≡}$*-ən* ‘he does not come’. Converbs do not have negated forms, this function being fulfilled by the negated perfect: *mäṣiʾ≡u* ‘he has come’ – *ʾay=mäṣʾ≡ä-n* ‘he did not come’.

A number of analytic verbal forms express various nuances of tense/aspect. The main auxiliary verbs used in these forms are the verbs of existence *kon≡ä*, *ʾallo*, *näḇär≡ä* and the copula *ʾəyy≡u*, e.g. *kə=*$^{≡}$*mäṣṣə*$^{ʾ≡}$ (ʾ)*əyy≡ä* ‘I shall/will come’, *ʾay=fäläṭ≡ku-n näyr≡ä* (< *näḇir≡ä*) ‘(in those days) I did not know’, *yə≡mmähar≡u näḇär≡u* ‘they used to learn’.

Syntax

The neutral word order is Subject–Object–Verb: *ṣəbbuq*$_1$ *zäräḇa*$_2$ *ᶜaṣmi*$_3$ *ʾaganənti*$_4$ *yəsäbbər*$_5$ ‘the good$_1$ speech$_2$ breaks$_5$ the bone$_3$ of the demons$_4$’. Elaborately developed and very popular is the formation of the cleft sentences, in which the main verb is relativized. E.g., *kämzi ʾəyy≡ä zə=gäḇär≡ku* ‘I made it thus’ (lit. ‘I am thus that I made [it]’), *ʾanä ʾay=kon≡ku-n zə=*$^{≡}$*wäddəq̱*$^{≡}$ ‘I shall not fall’ (lit. ‘It is not me who I shall fall’).

Generally modifiers precede the modified. Thus a demonstrative, adjective and a relative clause precede the noun. A marked exception is the possessive construction in which the governed noun follows the head, e.g. *Kəlləl Təgray* ‘state of Təgray’, *mängəst≡i ʾErtəra* ‘government of Eritrea’, *zätä sälam* ‘peace talk’. Only the analitic possessive construction with genitive marker *nay* ‘of’ allows both word orders: *nay resa sanduq̱* ‘coffin’ (lit. ‘box of a dead body’) vs. *qəlṭafä nay ṣəḥfät* ‘fastness of writing’.

Vocabulary

T. has for a long time been enriched by words taken from Gəᶜəz. There is some influx of Cushitic vocabulary; other sources of lexical borrowings are Amharic, ↗Arabic and ↗Italian. The ten-word list is as follows: ‘one’ *ḥadä* (fem. *ḥanti*), ‘two’ *kələttä*, ‘three’ *sälästä*, ‘fire’ *ḥawi*, ‘water’ *may*, ‘sun’ *ṣäḥay*, ‘moon’ *wärḥi*, ‘blood’ *däm*, ‘tongue’ *mälḥas*, ‘tooth’ *sənni*.

Dialects

There are many T. dialects; most of them are not properly described. The most divergent dialects are located in Southern Təgray (s. Voigt in PICES 15).

↗Təgrəñña literature; ↗Tigrinya Language Council

Rainer Voigt

Təgrəñña literature

The beginning of Təgrəñña written tradition is (apart from some isolated words in old historical works written in ↗Gəᶜəz) due to Western influence in the 19th cent. Even though ↗oral literature in Təgrəñña must have existed throughout the history of the language, it was not until the end of the 19th cent. that fairy-tales, myths, legends, riddles and chronicles started to be recorded thanks to efforts of such scholars as ↗Praetorius (1883), ↗Gallina (1902, who edited a collection by a native author, Gäbrä Mädḫ̮ən Dəgnäy), ↗Kolmodin (KolTrad I–II), ↗Faïtlovitch (1910), and ↗Conti Rossini (1942). Likewise, another type of traditional oral texts with a long history, the Statutes of ↗Customary Law (**ሕጊ፡ እንዳባ**, *ḥəggi əndabba*, **ሕጊ**, *ḥəggi*, **ሥርዓት**, *śərᶜat* or **ዋዕላ**, *waᶜla*), were recorded for the requirements of the Italian colonial administration and published in the 20th cent. (ed. Macchia 1918a, 1918b, 1918c; *Sərᶜat Adkämä Məlgaʾ* 1944, as well as Conti Rossini 1948–71; s. also later editions of customary law by Yaqob Beyene [1995, 1998, 1999, 2002–03]).

As is the case with many other languages of Eritrea and Ethiopia, the first printed production in Təgrəñña, offered to the public by the middle of the 19th cent., was due to the activities of the ↗missions (cp. ↗Incunabula: Early prints in Ethiopia and Eritrea). The ↗Swedish Evangelical Mission and the Catholic mission published numerous religious treatises and partial ↗Bible translations. The first printing office (Catholic) was established in 1863 in Massawa (where the first religious treatise – **ትምህርተ፡ ክርስቶስ**, *Təmhərtä Krəstos*, 'The Doctrine of Christ', 1867 – appeared), and was transferred in 1879 to Kärän and in 1912 to Asmära. The Swedish printing press was founded ca. 1870 in ↗Ǝmkullu near Massawa and was later transferred to Asmära; its treatises and translated Bible excerpts had a great literary influence. However, the first Təgrəñña Bible translation was published not in Ethiopia but in St. Chrischona (Basel) in 1866 (s. ↗Bible: Bible translations into Təgrəñña). Among the first indigenous translators one should mention ↗Täwäldä Mädḫ̮ən Gäbrä Mädḫ̮ən and *däbtära* Matewos from ᶜAdwa. The ↗New Testament, issued in 1909 in Aksum (with the second improved version in 1933), exercised a great influence on the development of T. literary style.

The beginning of secular T.l. is associated with the name of ↗Fəśśəḥa Giyorgis Abiyäzgi, who published in Rome in 1895 his **ብዛዕባ፡ እንካብ፡ ጦብያ፡ ንኢጣልያ፡ መንገዱን፡ ነዙ፡ ሃገር፡ እዙይ፡ እውን፡ ብምርኣይ፡ አብ፡ ሰብነቱ፡ ጦብላሕ፡ ዝበሎ፡ ጦብላሕታን** – *Notizie del Viaggio di un Etiopico dall'Etiopia all'Italia*, i.e. travel notes by an Ethiopian on his journey from Ethiopia to Italy, based on his personal experience (English tr. by Hailu Habtu 2000). His history of Ethiopia (**ታሪኽ፡ ኢትዮጵያ**, *Tarik̲ Ityop̣ya*) was only published after a century by Yaqob Beyene as *Storia d'Etiopia* (Napoli 1987, with translation; Mäq̲älä ²2000/01).

From the end of the 19th cent. onwards Təgrəñña gained a new importance: as the language of the capital and the most important indigenous language of the Italian *Colonia ↗Eritrea* (1890), it started to be taught in schools. On the initiative of the colonial administration several Italian–Təgrəñña handbooks were issued (on Eritrea, the Təgrəñña language, hygiene, etc.), printed in the Franciscan printing office. The Catholic printing office issued between 1912 and 1930 a series of eight "textbooks", among them *Manuale di letture scelte italiane–tigrai ad uso delle scuole indigene* (Asmara 1916), a handbook of selected Italian–Təgrəñña texts for use in indigenous schools (s. Tekeste Negash 1987: 72f.).

The Swedish Evangelical Mission, which continued its work up to its expulsion in 1932, produced mostly books of a religious nature. Thus, Teres de Pertis and Bayru ᶜƎq̲ʷbit translated into Təgrəñña the Swedish version of the *Doctrina Christiana* (ትምህርቲ፡ ክርስትና, *Təmhərti krəstənna,* 'The Christian Doctrine', Asmära 1910), and – from Italian – John Bunyan's *The Pilgrim's Progress* (ብሕልሚ፡ ዝረአዮ፡ መገዲ፡ ክርስትያን, *Bəḥəlmi zərräʾayo mägäddi krəstəyan*, 'The Christians's Progress Seen in a Dream', Asmära 1934). Modern non-fiction books were also published by the Mission, e.g. the monolingual manual of obstetrics by C.M. Groth and Franc Lindblom (መጽሐፍ፡ መወልዳን/*Manuale di ostetricia*, Asmära 1928, tr. by Teres de Pertis – Gərma Ṣəyon Gäbrä).

Literary expression seems to have developed in Təgrəñña more so than in Amharic within the framework of religious literature. The educated parts of the population were familiarized with the written language through such important publications as the anthology ↗*Bərhan yək̲un*; the monthly publication – in fact, the first Təgrəñña newspaper – መልእኽቲ፡ ሰላም (*Mälʾək̲ti sälam*, 'Peace Letter', from 1909 on); and ናይ፡ ህዝብ፡ ኢትዮጵያ፡ ኡነተይና፡ ፈታዊ (*Nay həzbə Ityopya unätäyna fätawi*, 'The True Friend of the Ethiopian People', from 1916 on). Moreover, the didactic materials published by the Protestant Swedish mission in particular, but also by its Catholic counterpart, furthered the knowledge of writing, language normalization and arithmetic, e.g. መጽሐፍ፡ ፊደል፡ ብዘረባ፡ ትግርኛ (*Mäṣḥaf fidäl bəzäräba təgrəñña*, 'The Spelling Book in Təgrəñña Language', Asmära 1905, ^{2}1922), ትምህርቲ፡ ቍጽሪ (*Təmhərti qʷəṣri*, 'Arithmetic', Asmära 1923, tr. by Gäbrä Krəstos Täklä Haymanot from A. Tron's *Manuale di aritmetica*), the primer reader ቀዳማይ፡ መጽሐፍ፡ ንባብ (*Prime letture tigrigna*) (Asmära 1928). In this way the foundations for the creation of the Təgrəñña literary language and the dissemination of ↗literacy were laid.

The use of Təgrəñña experienced a new dimension in 1941 with the coming of the ↗British Military Administration and the establishment of a ↗Tigrinya Language Council. In 1942 the first ↗*Eritrean Weekly News* appeared in print which also contained many literary texts. In the time of the ↗Ethiopian–Eritrean Federation it became the bilingual (with Arabic) ዘመን (*Zämän*, 'Time'), and was renamed as ሕብረት (*Ḥəbrät*, 'Union') after the union with Ethiopia. After the independence of 1991 the main newpaper was called ሓዳስ፡ ኤርትራ (*Ḥaddas Ertəra*, 'New Eritrea', 1991ff.). Other important periodicals were ሓንቲ፡ ኤርትራ (*Ḥanti Ertəra*, 'One Eritrea', 1950–52) with its bilingual (Təgrəñña and Arabic) successor ↗*Dəhay Erətra*, and bilingual ኢትዮጵያ (*Ityopya*, 'Ethiopia', 1947–62).

As for the shaping of linguistic expression, special mention should be made of ↗Wäldä Ab Wäldä Maryam, who rendered outstanding services to the language during his intermittent editorship of the *Eritrean Weekly* and is seen as the "father of the modern Təgrəñña language".

Through federation with (1952) and annexation by Ethiopia (1962) Təgrəñña lost its status as a school and administrative language. Still, books in Təgrəñña continued to be published. The years between the 1940s and 1960s can be seen as the most productive phase in the history of T.l., when Təgrəñña established itself in all areas of literary production. Many works were translated from Amharic and from Western languages, such as John M. Faulkner's *Moonfleet* by Täsfa Ǝgziʾ Gäbrä Ǝgziʾabəḥer (ሙንፍሊት, *Munflit*, Asmära 1967), Daniel Defoe's *Robinson Crusoe* by Musa Aron (ሮቢንሶን፡ ክሩሶ, *Robinson Kruso*, Asmära 1957) and William Shakespeare's *Romeo and Juliet* by Yosef Habtä Mikaʾel (ሮሜዮን፡ ዡልየትን, *Romeyon Žulyätən*, 'Romeo and Juliet', Asmära 1968, tr. from Amharic). A book by José María Sánchez Silva *Marcelino pan y vino* (in Ital. tr. *Marcellino pane e vino*), turned into a popular film, was freely translated into Təgrəñña by Yəsḥaq Gäbrä Iyäsus. This adaptation, ማርቆሳይ፡ ወይኒ፡ ምስ፡ ኅምባሻይ (*Marqosay wäyni məs ḫəmbašay*, 'My Marcus – Wine with my Bread', Asmära 1973), became one of the better known works of T.l.

Təgrəñña's own traditional fairy-tales, legends and proverbs were presented to the public by Yaᶜəqob Gäbrä Iyäsus Ḥebo, whose collection ዝናን፡ ተረትን፡ ምስላን፡ ናይ፡ ቀዳሞት (*Zənnan tärätən məssəlan nay qäddamot*, 'Legends, Stories and Proverbs of the Ancestors', Asmära 1949) offered well prepared material in the narrative sections, occasionally expanded by the editor himself. He popularized a narrative style that proved ground-breaking for subsequent literary work. Another collection of traditional stories was published by Täk̲lay Zäwäldi (ወግዒ፡ ቀዳሞት, *Wägᶜi qäddamot*, 'Stories of the Forefathers', Asmära 1967).

What is seen as the first Təgrəñña novel, **ንዝተዓስከረ፡ ንሓደ፡ መንእሰይ፡ ዚርኢ፡ ሓደ፡ ዛንታ** (*Nəzətäᶜaskärä nəḥadä mänᵓəsäy zirəᵓi ḥadä zanta*, 'A Story of a Conscript', Asmära 1949/50; also called *Ḥadä zanta* 'A Story'; Engl. tr. by Amanuᵓel Sahle 1988) by Gäbräyäsus Ḥaylu, was written in 1927, but its publication was only possible in 1949/50. This historical novel tells of an Eritrean who joins the Italian army and who after seeing action in Libya returns to his homeland. This was followed by works of Täk̲lay Zäwäldi (**ወጋሕታ፡ ናጽነት**, *Wägaḥta naṣənnät*, 'The Dawn of Freedom', Asmära 1954), Ṣägga Iyäsus Ǝyasu (**ንእግዚአብሔር፡ ዝስአኖ፡ ነገር፡ የልቦን፤ ትንሳኤን፡ ዓወትን**, *Nəᵓəgziᵓabəḥer zəssəᵓano nägär yälbon*: *tənsaᵓen ᶜawätən*, 'Everything is Possible for God: Resurrection and Victory', Asmära 1952) and by Yəsḥaq Yosef (**ኃይሎም፡ ወዲ፡ አስመራ**, *Ḫaylom wäddi Asmära*, 'Ḫaylom, the Asmaran', Asmära 1967).

The genre of the political novel is represented by such works as **ዋይ፡ አነ፡ ደቀይ፤ ሰኣን፡ ምምልካት'ዶ** (*Way anä däqqäy – säᵓan məməlkat'do*, 'Alas, My Children! For Want of Drawing Attention to', Asmära 1967/68) and **ንመን'ዩ፡ ዝነግሮ** (*Nəmän-əyyu zənägro*, 'Whom Shall I Tell?', Asmära 1973/74) by Abäba Täsfa Giyorgis, the only woman novelist of her time, as well as **አይንፈላለ** (*Aynəffälalä*, 'We do not Want to Separate', Asmära 1966/67) by Məsgəna Täk̲ästä.

Problems of urban society (consumption of alcohol and prostitution) are treated in **ወርቅሃ** (*Wärqəha*, 'W.', Asmära 1965) by Musa Aron, one of the most famous Təgrəñña novelists, **መን'ዩ፡ በደለኛ** (*Män-əyu bädäläñña*, 'Who is the Guilty One?', Asmära 1963) by Arᵓayä Bälay and Abrəha Gäbrä Həywät's **ምሸት፡ ምሸት፡ መርዓ** (*Məšät məšät märᶜa*, 'Every Evening a Wedding', Asmära 1967/68). Bärhe Arᵓaya treats the importance of education in modern times in his **ወጠጦ፡ እንዳቦይ፡ ዓንዱ** (*Wäṭäṭo əndabboy ᶜAndu*, 'The Billy-Goat of Mr. ᶜAndu', n.p. 1967/68). The style of many of these stories is moralizing and intended to educate the people.

During the period of the Amharization in schools and administration (from 1962) and intensified pressure after 1974 by the Communist *Därg* regime little appeared in Təgrəñña apart from Communist writings and translations from Russian (e.g., Chekhov). However, numerous publications, often coloured by Communist ideology, were issued in the field by the ↗Liberation Movements (esp. ↗Eritrean People's Liberation Front). These publications included Təgrəñña textbooks, used in the underground schools which, with Təgrəñña as the language of instruction, helped re-establish it as the literary language. In parallel the ↗Tigray People's Liberation Front introduced Təgrəñña as their national and literary language by using Təgrəñña teaching materials in their underground schools in Təgray Province.

Since achieving independence for Eritrea in 1991 (officially 1993) as well as autonomy for Təgray within Ethiopia literary production in Təgrəñña has increased in Eritrea, and also appeared for the first time in Təgray. Glorification of the fight for freedom became one of the major themes in T.l. Thus, ᶜAlämsäggäd Täsfay, whose first novel had appeared in the field (**ወዲ፡ ሓደራ፤ ካብ፡ ባድመ፡ ናብ፡ ሳሕል**, *Wäddi Ḥadära*: *kab Badəmä nab Saḥəl*, 'The Son of Ḥadära: from Badəmä to Saḥəl', [ᶜArrag] 1983), further analysed his war experiences in a collection of reminiscenses, short stories and theatre plays under the title **ክልተ፡ ቅነ፡ ኣብ፡ ድፋዓት** … (*Kələttä q̲ənä ab dəfaᶜat*, 'Two Weeks in the Trenches …', Asmära 1997; tr. Id., *Two Weeks in the Trenches – Reminiscences of Childhood and War in Eritrea*, Lawrenceville, NJ – Asmara 2002). In 2001, his historical work appeared, entitled **አይንፈላለ፤ ኤርትራ** 1941–51 (*Aynəffälalä*: *Ertəra 1941–51*, 'We do not Want to Separate: Eritrea 1941–51', Asmära 2001). Another woman writer, Gännät Səyyum, published such novels as **ሽጎም፡ ሐድገይ፡ ሐርነት፡ እዩ** (*Šəgom ḥadgäy ḥarənnät ᵓəyyu*, 'The Torch of my Bequest is Freedom'), Asmära ^{2}1991.

Poetry in Təgrəñña, including lyrics to songs, became an important part of T.l. during the struggle for independence. In 1992, a small anthology of Eritrean poetry appeared, **መዝሙር፡ ተጋዳላይ** (*Mäzmur tägadalay*, 'Chants of a [Freedom] Fighter', ed. Gərmay Gäbrämäsqäl, Asmära 1992), which contained 20 poems in Təgrəñña and six in Təgre. It was followed by several books of Təgrəñña poetry, e.g. **ሳሕል** (*Saḥəl*, Addis Abäba 1994), by Solomon Ṣäḥaye, the author of the Eritrean national anthem.

A number of Təgrəñña writings in prose and verse have been written and published in the Eritrean ↗diaspora in Europe (esp. Sweden), the United States and Middle East (s. Ghirmai Negash 1999: 198f., Cantalupo – Ghirmai Negash 2008; Asräs Täsämma 1998).

Among the few monographs dealing with T.l. one should mention Haylu Habtu's work (1981) covering the period up to 1974, and Ghirmai

Negash's (1999), for the period up to 1991. The most comprehensive bibliography of Təgrəñña literary production in Eritrea (up to 1993) was collected by Agosṭinos Tädla (1994).

Rainer Voigt

Təgrəñña-speakers

The T. are an important ethno-regional group in Ethiopia and Eritrea, unified principally by their language ↗Təgrəñña (**ትግርኛ**). They mainly inhabit the National Regional State of ↗Təgray and central ↗Eritrea, with ↗diaspora communities in many countries (including a T.-speaking ↗Betä Ǝsraᵓel minority in Israel). In Eritrea they comprise about 40 % to 50 % of the population, i.e. above two million people (and additionally half a million in the diaspora), in Ethiopia there are about 4.5 million T., according to the 2007 census, most of them in Təgray (with 4.17 million T.; Population Census Commission 2008: 85, 87). The great majority are Orthodox Christian, but there are minorities of Muslims, Betä Ǝsraᵓel, and, since the 19th cent., Protestants in Eritrea and Catholics mainly in ↗Akkälä Guzay and ↗ᶜAgamä.

Most T. are traditionally agriculturalists, practicing plough agriculture (cultivating *ṭaf* [↗*Ṭef*], sorghum, millet, wheat, maize etc.) and also keeping cattle, sheep and goats (but usually without stock-breeding), and in many areas bees (↗Bees and beekeeping; ↗Milk and milk products). Some T. groups have a strong local identity and used to have their own traditional, quite autonomous self-organization, sometimes dominated by egalitarian assemblies of elders, sometimes by leading families or local feudal dynasties. In some areas the ↗meritorious complex played a considerable role in achieving a social status, which led to the creation of local honorary titles (such as *ḥanneta* or *ḥanta*, s. ↗Elephants) and social institutions (such as ↗*Gaz*, 'raiding'), and, historically, to an active involvement in the ↗warfare of Christian Ethiopia; through this, even the sons of simple peasants could rise considerably in the state hierarchy.

The daily life of T. is highly influenced by religious concepts. For example, the Christian Orthodox fasting periods are strictly observed, especially in Təgray; but also traditional local beliefs, such as in ↗spirits, are widespread (cp. also ↗*Ṭälsäm*). In Təgray the language of the church remains exclusively Gəᶜəz; in Eritrea also Təgrəñña is used in the Orthodox Church context, but rather as an exception (different from Protestant churches, well-enrooted in Ḥamasen and urban areas of Eritrea; cp. ↗Bible translations: Təgrəñña).

T. society is marked by a strong ideal of communitarianism and, especially in the rural sphere, by egalitarian principles. This does not exclude an important role of gerontocratic rules (↗Gerontocracy) and in some regions such as the wider ᶜAdwa area, formerly the prevalence of feudal lords, who, however, still had to respect the local landrights. T. are sometimes described as "individualistic" (Bauer 1985), due to elements of competition, jealousy and local conflicts. This, however, rather reflects a strong tendency to defend one's own community and local rights against – then widespread – interferences, be it from more powerful individuals or the state.

T. communities are marked by numerous social institutions with a strong networking character, where relations are based on mutual rights and bonds. Economic and other support is mediated by these institutions. In the urban context, the modern ↗*əddər* and ↗*əqqub* have taken over the functions of traditional associations. In most rural areas, however, traditional social organizations are fully in function. The *ḥawənnät* ('brotherhood') is composed of all descendants in the male line from an ancestor seven generations before, or, in cases of influential lineages, sometimes more (↗Genealogy). All members of such an extended family are linked by strong mutual obligations (Smidt 2008: 253–56). Villages are usually perceived as genealogical communities, consisting of several lineages (↗*Ǝnda*).

Another important association is, in Təgray, the *səwaᶜ sänbät* ('Sunday chalice [association]'; cp. Amh. ↗*Sänbäte*), of which several exist in every village, in some areas named after saints. Every man is a member of such an association, which assembles on Sunday in a private home. On this occasion ↗*ənǧära* and *səwa* (↗*Ṭälla*) are consumed, considered ↗*ṣäbäl* by the participants. Within these associations, economic and other problems are addressed, based on the principles of consensus and mutual help (ibid. 246–53). Parallell to this, there are also church associations (↗*Maḫbär*; ibid. 257f.), and neighbourhood communities, e.g., for the purpose of collective work on each other's houses.

Village assemblies (↗*Bayto*) decide on local political matters, now reformed according to principles of the modern state both in Təgray (with the main assemblies on the *ṭabiya* level) and in Eritrea. Another important cultural and social institution is that of the elders (↗*Šəmagəlle*). They traditionally pass on an often detailed "oral historiography" of T. subgroups (the most important collection being KolTrad), "oral registers" of ↗land tenure, genealogies and the origins of settlements. Land rights were inherited by families or whole village communities. Only in regions under firm domination by feudal lords, such as ᶜAdwa or Ǝnṭiččo, could such traditions be thwarted by more powerful lords. ↗Plowden reported in 1852, that local office holders preserved detailed oral knowledge of tax obligations, boundaries and property rights, which were respected by overlords. Based on such traditions even settlements long deserted, but continuing to exist in the minds of people, could be fully "re-created" by the original settlers' descendants (Pankhurst 1966: 78).

A remarkable heritage of T. groups are their ↗customary laws (in Eritrea: *ḥəggindabba*, 'law of the fathers'). In Eritrea, several T. groups have elaborated them as written law books, which are still valid locally (subsidiary to state law). In Təgray, customary law is also still partially practised, especially for marriage and inheritance, but to some degree even in political self-organization and penal cases (↗Law and Judiciary: Traditional legal institutions; Traditional law books). It is also of great importance for conflict resolution (Abdulkader Saleh et al. 2008: 138f., 264–68; Shimelis Gizaw – Taddese Gessese 2008; Smidt in WenDAE I).

The T. are, despite a general impression of homogeneity, composed of numerous subgroups with their own socio-cultural traditions. Among these there are the ᶜAgamä of eastern Təgray, mentioned already in the ↗*Monumentum Adulitanum*; the autonomous ↗Ṣänᶜadäglä and Märätta of Akkälä Guzay in Eritrea; the Ḥamasenay, agriculturalists in ↗Ḥamasen and cattle herders in ↗Humära; the egalitarian ↗Wäǧǧärat of south-eastern Təgray. Many others, sometimes numbering only a few thousands and scattered over several districts, could be listed. Usually they define themselves through common descent, but in some cases also as a political confederacy uniting different groups (such as the ↗Šäwᶜattä Ansäba on the north-western borders of the Eritrean highlands). Assimilation processes, which still continue, have led to the inclusion of other ethnic (sub-)groups. For example, Agäw settlers in Säraye, the ↗Adkämä Məlgaᵓ, became T. several centuries ago; some ↗Bilin villages near ↗Kärän now also belong to the T.

The subgroups are composed of descent groups and lineages. Often these are called 'Däqqi …', sometimes also 'ᶜAd …', after a common ancestor, such as the Däqqi Täsfa of the western lowlands of ↗Säraye or the ᶜAd Däggiyat, a name for the ↗Ṣäᶜazzäga dynasty of the ↗Märäb Məllaš. In addition, there are ancient, more vague group-designations above the level of subgroups, used by elders as identity-markers: Agəᶜaziyan ('descendants of the ↗Agᶜazi') for the inhabitants of ᶜAgamä and Akkälä Guzay, and Sabawiyan for the people of Aḵsum (or Aḵʷəsəm, in Amh./Gəᶜəz ↗Aksum) and Yäḥa (Amh. ↗Yəḥa).

A usually urban and semi-urban sub-group are the Muslim T., who form around 5 % of the T. population (in Eritrea called ↗Ǧäbärti, a term often rejected, however, by Muslim Təgrayans). Most are merchants, but some are peasants with traditional landrights (on this s. Pankhurst 1966: 103f.), such as in their sacred town ↗Nägaš in eastern Təgray, and in a few other street settlements, e.g. Wəq̱ro Märay near Aksum (with the mosque used by the Muslims of Aksum) or ↗Ǝntič̣č̣o. In the past, many Muslim T. also acted as servants for wealthy farmers and nobles. Most settled near trade routes and in important towns, such as ↗Asmära and Kärän in Eritrea, or ᶜAdwa, Ǝntič̣č̣o, ᶜAddigrat, ↗Wəq̱ro, or Mäq̱älä in Təgray. Arabic ↗inscriptions prove a Muslim presence in eastern Təgray along trade routes (in ↗Ǝndärta and ↗Ṣ́əraᵓ) already starting from around the 9th or 10th cent. Islam as practised by T. has barely been studied yet, but seems to be marked by influences of diverse origins, from the Sudan, Egypt, and Muslim communities of the ↗Yemen and the Ḥiǧāz (↗Arabia). According to tradition, the festival of Āšūrā, on 10th *Muḥarram*, was introduced in 1664/65 by a council chaired by a Muslim of Tämben, which decided to make Nägaš a ↗pilgrimage (*ziyāra*) centre with *Āšūrā* as the annual day of pilgrimage; suppressed later, the festival was revived in the 1990s (Wondimagegn Buzuayeu 2006). The T. Muslims are Sunnis, and *Āšūrā* is celebrated as a day when "prophets" (e.g., Moses) were "relieved from difficulties", which is also an allusion to Nägaš as the asylum for the persecuted followers of Prophet Muḥammad. The festival may have been established as a response against Shiᶜite influence, possibly from the Zaydites of the Yemen, whose connection to the coast (↗Baylūl) is known from the 17th cent. (cp. ↗Ottoman Empire).

There are several peripheral T. groups, marginalized due to their origin and/or socio-economic role in society. Examples are ↗blacksmiths in Eritrea, who developed their own secret language or jargon (undocumented yet); musicians' groups such as the "*č̣ärra wäṭa*" (a term regarded as pejorative, Amh. ↗*Azmari*) and *ḥamen* (vocal singers, Amh. ↗*Lalibäločč*), often from the ↗Ǝggäla subgroup; and potters (↗Pottery) and other craftsmen. There are also ethnically different T. (sub-)groups especially in the peripheries of Təgray, such as the ↗Ṣällim Bet, a subdued "black" group in the western lowlands, who were regarded as serfs "of the Ḥabäša".

It is difficult to identify an ethnonym common to all T. – and also their language has different self-designations. In Təgray it is also called **ቋንቋ፡ ትግራይ** (*qʷanqʷa Təgray*), while all, especially rural, T. may use the term **ቋንቋ፡ ሐበሻ** (*qʷanqʷa Ḥabäša*; more rarely in Eritrea also **ቋንቋ ፡ ትግርይና** *qʷanqʷa Təgrəyna*). The Amharic term *Təgre* for the T. (not to be confused with the ↗*Təgre*) is not a self-designation, and, perceived as inappropriate today, is replaced by Amh. *Təgrawiyan*. Təgrayans, who are mostly T., call themselves *Tägaru* (sg. *Təgraway*, also *Təgray*). In rural areas, however, many prefer their subgroup's name, such as Wälqayte (of ↗Wälqayt), ᶜAgamä (most of whom accept the term Təgraway, however, today), Wäǧǧärat, or ↗Rayya ᶜAzäbo (of Oromo origin; ↗Azaboo). In turn, Eritreans understand *Tägaru* as a geographic term only fitting to the inhabitants of Təgray. In Eritrea the T. are generally called *Təgrəñña*; this is not accepted in Təgray, where this term designates the language only (but a rarely used traditional Təgrayan term designating all T., *Təgray Təgrəññi*, 'Təgrayans [and other] T.', follows a similar pattern).

The only self-designation accepted by almost all T., both in urban and rural contexts, is **ሐበሻ** (Ḥabäša), with some exceptions (e.g., in Aksum the term is rarely used). The term connotes a strong feeling of belongingness, and in this sense is a real ethnonym, the only one encompassing all T. (Smidt 2005). In some, especially rural, contexts it even excludes non-T. groups such as Amhara (who, however, also call themselves [H]Abäša, a fact which is ignored by some rural T.), the *Amḥaru* [sg. *Amḥaray*] sometimes not being perceived as members of the "we-group" (ibid. 393). There are indications that the exclusive self-identification of T. with the term Ḥabäša is ancient (in a 15th cent. text the term Ḥabasi is translated with "Təgray", ibid. 392). By extension, however, the term [H]Abäša is often understood by modern Ethiopians as meaning 'Ethiopian'; following an identical pattern of "nationalization" of the ancient ethnonym, it is often used by young Eritrean T. to designate "Eritrean".

Over the centuries, small groups of T. migrated outside Christian Ethiopia, some of them preserving ↗interethnic clan-relations. In the 19th cent., T. were employed as gunmen in Oromo kingdoms, many of whom seem to be ancestors of Ǧabartii clans (not meaning 'Muslim' [cp. ↗Ǧäbärti] in this context, but 'soldiers of the *mooti*'; Ishihara in PICES 15, 121). T. Muslim traders settled in the Gibe states; one example is *naggaadee* Abdulmanna of the early 19th cent. from Tämben, whose descendants taught the Qurʾān in Gomma (↗Trade; Ishihara in PICES 15, 121ff.). T. appear in different ethnic contexts today. Some Naggaadee ('trader') clans of the Oromo Gibe states are called Tigeroo, Tigre or Tigrii, descendants of Muslim traders. Another Naggaadee group are the Tigrii Warğii (a sub-group of the Warğii Tuulama, originally from Awaš; cp. ↗Wärğih), who are present in Addis Abäba, Sandafaa, Šanoo, and Sabbata, Šäwa, and are active in all urban centres of Oromiyaa. The Tägaro or Təgäro (< Tägaru) are one of the 34 noble clans of the ↗Käfiččo (such as the "Nagado Tigroč" family, whose Christian ancestors arrived in ca. the 17th cent.; Bieber 1920; Ishihara in PICES 15, 122, 126). In some cases the Amharic term Təgre is used to designate a local clan or group, such as the former Kawona Təgre ('T. dynasty') of the ↗Wälaytta kingdom, of northern Christian origin. Still today, there is a clan group called Təgəra in Wälaytta. They are said to be ethnically connected with a clan of the same name of ↗Ǝndagäñ. There are numerous other groups, who claim origins from T., such as ↗Gurage lineages from "↗Guraᶜ" and the ↗Zay of the Zʷay lake from ancient Aḵsum.

Ṭəlahun Gäśśäśä

Ṭ.G. (**ጥላሁን፡ ገሠሠ**, given name Dandana; b. 27 September 1940, Addis Abäba, d. 19 April 2009, Addis Abäba) was an Ethiopian singer, whose many epithets included "King of Ethiopian pop" and "King of the Stage". He received a lifetime achievement award for this from the Ethiopian

Fine Art and Mass Media Prize Trust as well as an honorary doctorate from Addis Ababa University (2005).

Ṭ.G. was born to Oromo parents, Ayyaano Guddata and Gete Gurmu, and raised in Wäliso by his grandmother. When his mother remarried Gäśśäśä Nəguśe, Ṭ.G. was baptized and assumed his Christian name.

Already in Wäliso, Ṭ.G. was known for his musical talent. At the Ras Gobäna Dač̣i School (previously Giyon School), he became the star of the school band, which was organized by the Sudanese director Shidad. There, he met his future mentor, Eyuᵓel Yoḥannəs, from ↗Hagär Fəqər Tiyatər. In 1953, Ṭ.G. joined Hagär Fəqər Tiyatər, where he began working with singers such as Fərew Ḫaylu and Däse Wälelləññ. In 1956, he joined the ↗Imperial Bodyguard orchestra. From that time, Ṭ.G. influenced the development of Ethiopian modern music through his masterful elaboration of traditional songs and styles. He became the most charismatic and imitated artist; this was due to his vocal style, with its tremendous range of dynamics, his manipulation of extremely long notes, embellishment of melodies, and use of witty lyrics that related to everyday life.

Ṭ.G.'s contributions to Ethiopian music included over 450 songs covering a wide variety of themes, such as love, nature, nationalism, economics, and social issues. For his critical texts, he was arrested under both ↗Ḫaylä Śəllase I and the ↗Provisional Military Administrative Council (*Därg*).

His songs in ↗Oromiffaa paved the way for other Ethiopian languages to "make" the popular music scene.

Ṭ.G.'s name became a trademark for his associates and contemporaries involved in the production of his songs.

Ṭ.G. repeatedly mentioned his unhappiness during his lonely childhood, the trauma of his mother's murder, the health problems resulting from his diabetes, and the loss of close friends. In his last years, he established the "Ṭəlahun Gäśśäśä Initiative for Diabetic Victims Venerable Children Association".

Ṭ.G. was buried in the cemetery of the ↗Qəddəst Śəllase Cathedral in Addis Abäba. His funeral, attended by many state officials, was broadcast on state television. He is survived by members of his family, which in the course of his life included six wives and 15 children.

Simeneh Betreyohannes

Ṭəlahun Gəzaw

Ṭ.G. (**ጥላሁን፡ ግዛው**, b. ca. 1940, d. 28 December 1969, Addis Abäba) was a student leader. He was the son of a wealthy landowner from Təgray who divorced from his mother. His pre-university education was in mission boarding schools in Aqaqi and Addis Abäba, and in the Ḫaylä Śəllase I Secondary School. His half-sister was Princess Sara Gəzaw, the widow of ↗Mäkʷännən Ḫaylä Śəllase.

Ṭ.G. expressed a strong dislike for the royal house. In 1968 he narrowly lost the election for the presidency of the Union of Students of the University of Addis Ababa (USUAA; ↗Addis Ababa University) to Mäkʷännən Bišaw. The contest was perceived as a struggle between radicalism/commitment to the Ethiopian masses, represented by Ṭ.G. and reactionary reformism, represented by Mäkʷännən. Others, the university leadership included, saw it as a fight between extremism/fanaticism and reason/moderation. Disappointed, Ṭ.G., withdrew from the university for one year. Upon his return, he had expanded his knowledge of revolutionary literature and Ethiopia. He was close to the activists during the troubled spring of 1969.

In November 1969, whilst he was a third year political science student, Ṭ.G. was elected President of the USUAA. He became president in the same month as the ultimate challenge to the regime appeared in the student paper *Struggle* on the status of, and the policy towards, the ethnic diversity of the country.

There ensued new waves of unrest in secondary schools all over the country and USUAA submitted ultimata to the government that Ethiopian University Service teachers would be withdrawn unless a number of conditions were met. Anti-government pamphlets were distributed in increasing numbers. There was a change of mood: the writings were more frantic and urgent, with a new rhetoric of violence. Government media did not conceal the fact that the intentions of the students had to be quelled. The university president, ↗Aklilu Habtäwäld, also conveyed the general feeling of imminent government punishment.

Ṭ.G. was shot while walking outside the campus in the Afənčo Bärr area. It was commonly believed that he was murdered by the security police. After his death students took his body from the nearby hospital and brought it to the university. Thousands of students from all over Addis Abäba came to the main campus to mourn his death. It all ended in tragic confrontation with the guns and bayonets of the ↗Imperial Bodyguard. The death of Ṭ.G. undoubtedly contributed toward raising the level of political consciousness of the average student and enhanced the feeling of alienation from the regime.

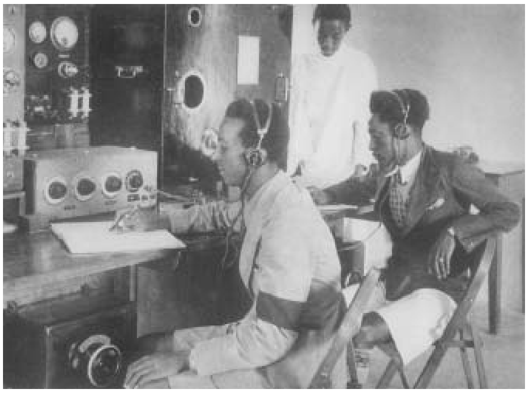
Telecommunications

T., as well as the building of the ↗railway and the introduction of a modern ↗postal system in Ethiopia made major contributions to the politics of consolidation and modernization of *aṣe* Mənilək II's empire.

The first telegraph line followed the construction of the railway to ↗Djibouti. The Emperor required Alfred ↗Ilg and Léon ↗Chefneux's company to built the telegraph line at its own expense, and that all government calls should be free of charge (PankEcon 306f.). By 1898 the line ran from Djibouti via ↗Dərre Dawa to ↗Addis Abäba. By 1903 it also served ↗Harär.

The Italians constructed a second telegraph line from ↗Asmära to Addis Abäba in 1902–04. It had stations at Italian consulates, the first one in ↗ᶜAdwa. The main line went from Addis Abäba via ↗Wärrä Illu, ↗Däbrä Tabor, connecting ↗Däse, ↗Mäq̱älla, ↗ᶜAdwa and Aksum to run over the Eritrean frontier to Mändäfära to reach Asmära (PankEcon 340).

A telephone was installed in 1902 in the Emperor's residence in the intended new capital ↗Addis Aläm. The telegraph station in Däse was operated by an Italian commercial agent Annaratone who could listen to telephone calls between Ethiopian military leaders. A post office was opened in Dərre Dawa in 1906 and functioned mainly as a telephone station. The French consulate was important in that town. Portable telephones could be connected to the telegraph lines, so in the early 1900s it was possible to make calls, e.g., from ↗Aqaqi to the capital in this way. A station at Balči was located on the route from the coast to Addis Abäba, and it became usual in the early 1900s to phone the Emperor from there to obtain travel permission.



Broadcasting from Harär station; from Rikli 1935: 63

Further lines were constructed and by 1918 southern provincial centres like ↗Ǧimma, ↗Gambella or ↗Bure as well as the southern provinces like ↗Sidamo and ↗Bale were tethered with the capital by Italian construction (De Castro 1915: 231; PankEcon 340).

The foundation stone for a radio station at Aqaqi was laid on 21 July 1931. The Italians dominated its construction and operation, but in 1936 they (like the British later) destroyed the possibility of radio communication from there. The Italian consulate in ↗Gondär was limited by the Ethiopians and had difficulties with its own separate mail connections. A post office, opened in 1932, had a telephone, but it could be difficult to contact Addis Abäba from there. A powerful radio station in Harär was inaugurated in 1934 which could communicate with the army's field radios. The Italians extended T. during their occupation of 1936–41 (↗Africa Orientale Italiana; cp. *Guida* 175 et passim). After the liberation, an international loan was given to modernize the telephone network. With this loan the Imperial Board of Telecommunications (IBTE), was created in in 1953. Practically all equipment was supplied by the Swedish company LM Ericsson, which explains that by 1955 about 1/3 of IBTE's foreign employees were Swedes. As an example of the extent of the network, Däse had some 90 telephone numbers in the 1950s, and Harär had

236 numbers according to a printed telephone directory of 1967.

T. advanced technically, so that by the year 2000 there were about 20,000 Internet users and 17,800 cell phones. In the commercial sector and in the countryside, however, people tended to continue using telefax. An Ethiopian e-mail provider also emerged. For a printed index of commercial telephone numbers, "Ethiopian Yellow Pages" began to be issued annually in year 2000. It uses the English language and is edited by Americans. The 2003/4 edition has 988 pages.

Tellez, Balthazar

T. (also Teles, b. 11 January 1596, Lisbon, d. 20 April 1675, Lisbon) was a Jesuit author (↗Jesuits). Of mixed (Portuguese-British) noble background (his father was Captain John Tilly), he entered the Jesuit Noviciate in Coimbra in 1610. He made his profession of simple vows, in 1612, to join the Society of Jesus and of four solemn vows, in 1631. He taught humanities, philosophy and theology at Braga, Coimbra, Évora and Lisbon, and held positions of responsibility: he was rector of the Irish seminary of St. Patrick, of the college of St. Antão and preposite of São Roque. In 1657 he was appointed Jesuit provincial in ↗Portugal, a position he held for four years.

T. earned a reputation as an author. He composed a widely popular *Summa universae philosophiae* (1642) and, on the request of the Jesuit General Muzio Vitelleschi (1615–45), he produced two books on the history of the Portuguese Province and, resp., of the Jesuit mission in Ethiopia (1645–47 and 1660). The latter was a revised edition of Manoel de ↗Almeida's homonymous treatise. T. was largely faithful to the original text but embellished its narrative with a baroque style and added some information by consulting missionary records (cf. Tellez 1660: 6r). The work also contained an engraving by Peter van Lisebetten, after a painting by Philip Fruytiers, as well as the famous map of Ethiopia by Almeida.

The *Historia geral da Ethiopia* or excerpts of it had editions in French (1671), Dutch (undated) and English (1710). This work can be considered the official Jesuit narrative of the Ethiopian mission. It was also the last one authored by a Jesuit priest, for this episode was subsequently recounted only by such northern European authors as Hiob ↗Ludolf, Johann Michael ↗Wansleben, Michael Geddes and James ↗Bruce.

Təmhərtä ḫ̮əbuʾat

T.ḫ̮. (**ትምህርተ፡ ኅቡኣት**, 'the Doctrine of Mysteries', *Doctrina Arcanorum*, also **እልመስጦአግያ**, *Ǝlmäsṭoʾagya*, 'Introduction into the Mysteries', *Mystagogy*, from Gr. μυσταγωγία) is a short Gəʿəz theological treatise, known in two distinct recensions or text-types.

The first text-type, the T.ḫ̮. proper, is more common. It was probably translated from a Greek *Vorlage*. It is found in many manuscripts together with other Ethiopian theological and liturgical treatises, such as the Ethiopic ↗*Testamentum Domini*, ↗*Haymanotä abäw*, and ↗*Gəbrä ḥəmamat*. Sometimes it is bound together with the Missal, *Mäṣḥafä* ↗*qəddase* (Lifchitz 1940: 28–35).

The second, less common text-type, is the *Ǝlmäsṭoʾagya*, which is a translation from Arabic. In the early Church this kind of text was recited for the baptized faithful after the catechumens had been dismissed. Whilst Jesus, as the central celebrated figure, was described and praised without his name being mentioned directly, the initiated in the mysteries of the Christian faith knew who was intended.

The oldest known manuscript of the T.ḫ̮. seems to be BritLib Orient. 597, fols. 257r–259v (WrBriMus 137), dating back to the 15th cent.

The main themes of the T.ḫ̮. are the glorification of the Cross and of the Crucified, the victory of the Redeemer against Satan and personified Death, the descent to and the stay of Christ in Sheol between his death and his resurrection.

The T.ḫ. is used in liturgy and in ↗magic. The liturgical use, formerly more frequent, has nowadays been reduced to the recitation of the T.ḫ. in a few celebrations (Hammerschmidt 1960:44). On the contrary, the use of the text in magic is increasing; it reflects the belief that a text which praised the victory of Christ against the Devil and Death can also protect against demons and illness.

The T.ḫ. (or its parts) also occurs in ↗magic scrolls and in small codices worn as amulets (↗*Ṭälsäm*; cp. Lifchitz 1940:27f.). It was printed in Ethiopia for the first time in 1925/26 (↗Incunabula; Simon 1942:200). In later prints it appeared as part of popular collections of ↗prayers (cf. *Säbattu kidanat* 1959) and frequently in the form of very small booklets (e.g., T.ḫ. 1989).

Ṭəmqät

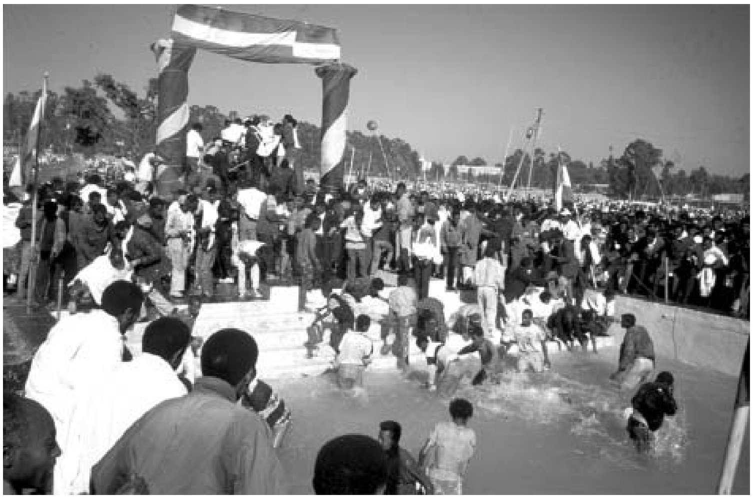
Ṭ. (**ጥምቀት**, 'Epiphany' [but lit. 'Baptism']; called also *Astärʾəyo*, lit. 'manifestation', or *Epifanya*) is one of the most festive of the nine major annual ↗feasts of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC). It is celebrated on 11 *Ṭərr* [19 January] and commemorates the Baptism of Christ by ↗John the Baptist in the River Jordan. It develops the theme of the manifestation of Christ as the Son of God revealing himself to mankind, with the Holy Spirit descending in the form of a dove and the voice of the Father coming from Heaven (Mt 3:13–17; Mk 1:9–11).

The festivities begin in the afternoon of the previous day, with ceremonial processions that start from parish churches and are directed to a more or less distant ↗water point in commemoration of Jesus going from Galilee to the Jordan (Mt 3:13). The priests carry the ↗*tabot*(*s*) of their church, preceded by deacons holding ↗crosses, censers (↗*Maʿəṭänt*) and ringing bells. The bishop(s) may follow the priests; the singing Sunday school students and the faithful may also join the procession.

The water site symbolizing the River Jordan, the same every year for each parish church, can be a river, a pond, a pool or a tank or a barrel. The *tabots* are placed in a tent used as a sanctuary (↗*Mäqdäs*) awaiting the liturgy which takes place the next morning. All night, in another, larger tent nearby, the ↗*däbtära* and ↗*märigeta* sing the services and hymns for the Epiphany. The faithful spend the night in ↗prayer either in the tent with the *däbtära*, or in other tents nearby, or in the open.

After the night prayers and the morning liturgy, the ↗*aqqʷaqʷam* takes place. Then the clergy proceeds to the water for the blessing. The Gospels are read at the four cardinal points of the water spot. Candles – usually three, to symbolize the Holy ↗Trinity – are floated on the water. One of the priests or the bishop plunges a hand cross into the water three times in the name of the Holy Trinity, while praying. Subsequently, the faithful jump into the water if the body of water is large enough and people sprinkle each other abundantly with the blessed water, and acquire a spiritual blessing. They take back home blessed water in bottles.

Later, after a common meal, most of the *tabots* are brought back to their respective churches in the same processional way. The *tabots* dedicated to Archangel Michael remain as his feast is cel-



Ṭəmqät celebration on Ǧan Meda, Addis Abäba; photo 1994, courtesy of Dirk Bustorf

ebrated the next day and they are carried back after the liturgy of the following day. That day (12 *Ṭərr*) the Miracle at Cana is also celebrated (s. Fritsch 2001: 60 no. 68).

The parishes of central Addis Abäba churches carry their *tabots* to ↗Ǧan Meda where a special pool has been constructed (s. ill.). In ↗Gondär, the 17th-cent. rectangular pool "Fasilädäs Bath" is filled by pumps for the ceremony; the ecclesiastics stand in the tower and the faithful crowd around. In ↗Lalibäla, a rock-hewn tank in the courtyard of Betä Maryam is used for the festivities (and at other places where such a basin is available, e.g., at ↗Gännätä Maryam, ↗Mikaʾel Amba, ↗Mäʿaquddi; cp. also ↗Dəgum, Mäṭära, Yəḥa).

Ṭ. is well documented in historical sources. For example, it is known that in the 15th cent., at the time of ↗Zärʾa Yaʿəqob, a pool, 14 arms long and 8 arms wide, was dug at ↗Däbrä Bərhan inside the church enclosure of Betä Qirqos. Zärʾa Yaʿəqob tried to introduce the celebration inside the church, in accordance with the then Coptic practice (s. Cerulli 1950: 451, but cp. Monneret de Villard 1950). The contemporary custom is, however, to celebrate outdoors. In the 16th cent., Francisco ↗Alvares attended the rites of Epiphany at the court of ↗Ləbnä Dəngəl and described a special deep tank, with steps and a large tent over it. The 17th-cent. Pedro ↗Páez also describes the feast. The Jesuit missionaries misunderstood Ṭ. as an annual rebaptism; but the EOTC has always underlined that Ṭ. is a commemoration of Christ's Baptism, and does not replace the Sacrament of ↗Baptism.

In 1933 *ətege* ↗Mänän founded the Ethiopian monastery of the Holy Trinity on the bank of the Jordan, near the site of Christ's Baptism. According to tradition, Ethiopian hermits used to inhabit the place prior to the monastic foundation.

The Ethiopian imagery of the baptism of Christ in church murals (the oldest being the one in ↗Yəmrəḥannä Krəstos church, dating back to the 12th cent.) as well as in manuscript illuminations is obviously related to early Christian and Byzantine art (cp. ↗Painting). However, unique features have been developed in Ethiopia. A frequent representation, showing John the Baptist in the river beside Christ, both immersed up to their waists or chests, is possibly inspired by Ethiopian ceremonies of the Epiphany. The role and positioning of the angels in the composition are also peculiar to the Ethiopian tradition.

Ṭəmqät: Mäṣḥafä ṭəmqät

The M.ṭ. (**መጽሐፈ፡ ጥምቀት**, ‘Book of the [Feast of Christ’s] Baptism’, or ‘Epiphany Ritual’) is the name of the liturgy for the annual commemoration on 11 *Ṭərr* (6 January of the Julian = 19 January of the Gregorian calendar, corresponding to the Feast of the Epiphany) of the ↗*Ṭəmqät*, i.e. the ‘Baptism of Christ’, in the River Jordan, one of the most important feasts of the ↗Ethiopian Orthodox (Täwaḥədo) Church. In manuscripts and printed editions, the M.ṭ. is sometimes grouped with the *Mäṣḥafä* ↗*krəstənna*, the service book for the administration of Christian ↗Baptism, to which the name of M.ṭ. or *Mäṣḥafä krəstənna zäṭəmqät* is also given. The confusion between the feast and the Christian baptism is also at the origin of the centuries-long false opinion that the Ethiopians were anabaptist, i.e. that they repeated the baptismal rite once a year (cp. von Arnhard 1886: ii–xiv).

On the occasion of the feast, the water either of a river (certainly so originally, as is confirmed by the iconography, cp. Monneret de Villard 1950, against Cerulli 1950) or of an artificial basin (in both cases called *Yordanos*, i.e. ‘Jordan’) is used to bathe, to drink and to sprinkle, and is credited with all sorts of curative and apotropaic power, including that of remitting sins (cp. LudHist lib. III, cap. 6, §§43–38).

The M.ṭ. was first published and translated by von Arnhard (1886) on the basis of ms. München, Bayerische Staatsbibliothek, Cod. aeth. 33, of the 19th cent., fols. 13–17 (cp. SixBay 54, no. 33, *olim* “Cod. aeth. 29”). The archbishop of Salerno, Marc’Antonio Marsilio Colonna (cp. Columna 1586: 521–27) had already published a curious Gəᶜəz text (purportedly depending upon the ↗*Sənkəssar* and arranged by *abba* Yaᶜəqob, the prior of ↗Santo Stefano dei Mori, by order of Pope Paul III) of the rite of the blessing of water, in Arabic writing (due to the lack of Gəᶜəz characters) with a phonetic transcription in Italian letters and a Latin translation. The text was reprinted with the omission of the Italian transcription by von Arnhard (1887: 405ff.; cp. Id. 1886: vi f.), together with a reconstructed Ethiopic text. Columna (1586: 505ff.) had also published the text (repr. in von Arhard 1886: 39–42) and Latin translation (*ibid.* viii–xii) of a Syriac liturgical text, parts of which correspond word by word to the Gəᶜəz text (in turn, probably from the Arabic), which confirms the antiquity of the liturgy in Christian Oriental churches.

The M.ṭ. mainly consists of Biblical readings. According to von Arnhard’s text and to catalogue descriptions (cp. ms. EMML no. 1198 [hereafter EMML], dating to 1881–96), the readings are as follows:

> (10th hour of the night = 4 a.m.): Ps 51 (?); Ex 14: 21–15:1 (EMML Ex 7: 21–8:1); Is 35: 1–10; Mic 7: 14–20; Joel 3: 21–27 (EMML Joel 3: 16–21); Ps 29: 3 (EMML omits this and the following readings for this hour); Mt 3: 1–17; Ps 69: 1; Josh 3: 14–17; Is (?); prayers for the sick, the traveller, rain, and the water of baptism;
> (11th hour = 5 a.m.): Ps 69: 3; Josh 3: 14–17; Is 49: 1–6 (EMML Is 44: 1–6); Jer (? EMML Baruch 3: 9–12); Ezek 36: 25–29 (EMML Ezek 37: 25–29); Ps 77; Mk 1: 1–11; prayers for the fruits of the earth, the waters of the rivers, the king, and against evil spirits;
> (12th hour = 6 a.m.): Ps 114: 1–2; 2 Kgs 2: 19–22; Is 63: 11–64: 9; Zech 14: 4–9; Dan 9: 20–25 (EMML Dan 9: 21–25); Ps 70 (EMML omits); Ps 113: 3–4; Lk 3: 1–23; prayers for those who have fallen asleep (the dead), for those who bring (offerings), for the catechumens;
> (1st hour = 7 a.m.) Gal 3: 18–29; 1 Jn 5: 5–11; Acts 13: 16–21; Ps 113: 1–5; Jn 1: 6–17; other prayers for peace, the bishop and the community, and then the Nicene creed, the prayer of ↗Severos of Antioch (Sawiros), responses, blessing (*burake*) and the prayer of ↗penance (*ṣälotä nəssəḥa*).

Some manuscripts seem to attribute the M.ṭ. to Sawiros, probably on the basis of one of the last prayers (cp. ms. EMML no. 925, 20th cent.). In some mss. the proper M.ṭ. and the relevant Biblical readings are arranged separately, cp., e.g., ms. Ṭānāsee 147 = Dāgā Esṭifānos 36 (SixTana III, 170f., no. 36; 16th cent.), with M.ṭ. on fols. 42vb–58rb, and readings from O.T. and N.T. for the Feast of *Ṭəmqät* on fols. 3ra–41rb, only partly listed in the text edited by von Arnhard (here indicated with *):

> *Ex 14:21–15:1; Ex 15:20–16:1; *Josh 3:14–4:18; 1 Kgs 18:22–39; *2 Kgs 2:1–22; 2 Kgs 5:9–15; Song 5:2–7:3; Ezra (?); *Is 35:1–10; Is 40:3–31; Is 43:1–44:6; *Is 63:11d–64:8; *Mic 7:7–20; *Joel 4:16–21; *Zech 14:4–9; Jer (?); *Ezra 36:23b–37:14; *Dan 9:15–25a.

There are at least 56 manuscripts in the EMML collection, of which only few can be dated to the 18th cent. at the earliest:

> cp. EMML nos. 2853, fols. 2r–38r; 3020, fols. 38r–59r; 3135 (1764–75); 3167; 3332 (18th/19th cent.); 3597, fols. 2r–27r; 4245 (1746–55), fols. 109r–131r; 4567, fols. 45r–73r. Cp. also VatLib Cerulli Etiop. 87, 1922/23, fols. 22r ff. (RaiCer 74)

An archaic liturgy for the Feast of *Ṭəmqät*, very different from both the M.ṭ. and the other Oriental texts for the blessing of waters, is known from the remarkable ms. VatLib Etiop. 4 (GréTisVat I, 17f.), 14th cent., fols. 148r–151v (still unpublished; for an evaluation of the manuscript, cp. BrakKirche 161f.), where the word *epäfanya*, 'Epiphany' (also in the ↗*Senodos*, cp. BauSen 48, 85 [text], both at § 20) is specifically mentioned.

Alessandro Bausi

Tənśaʾe Zägubaʾe

The T.Z. ↗Printing Press (ትንሣኤ፡ ዘጉባኤ) is the first official publishing press of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC).

T.Z. was established in 1937 A.M. [1943/44 A.D.]. The original proposal came from *mämhər* Raswärq Wäldä Mädḫən, the then Head of the Education and Training Department of the Patriarchate. It was accepted by Crown Prince ↗Asfa Wäsän Ḫaylä Śəllase who donated two printing machines worth 280,000 Lira (*Zena Betä Krəstiyan* 1946: 214f.). The Crown Prince's private donation was part of Emperor ↗Ḫaylä Śəllase I's initiative to document the Church's written heritage after the Italian occupation. The original staff numbered five members. The first publication, on the Emperor's approval, was the bi-weekly *Zena Betä Krəstiyan* which was assigned the task of reporting on the intense negotiations between the EOTC and the ↗Coptic Church of Alexandria on account of the former's independence. Another biweekly publication for the same purpose, *Täklä Haymanot*, was later launched by the same printing press. The T.Z. also supported the Emperor's ↗literacy campaign by publishing the Ethiopic syllabary ↗*Abugida* and *Hahu* and *Fidäl ḥawarəya*. The first book published by the T.Z. was the *Yäyoḥannəs wängel mägbiya* in 1942.

The Printing Press was initially run under the History and Composition Department of the Patriarchate of the EOTC; later it was placed under the Evangelism and Publication Department. As with all Church-related publications, the manuscripts submitted to the T.Z. had to be approved by the Scholars of the EOTC (*Yäliqawənt gubaʾe*; ↗Liq) and the Holy Synod (↗Churches and church administration; ↗Law, canon law).

The current Patriarch of the Church, *abunä* Ṗawlos, served as Director of the Press and is said to have improved its general organization and efficiency. Today, the T.Z. is one of the Church enterprises which has an autonomous administrative body under the Patriarchate and continues to have close connections to the *Yäliqawənt gubaʾe* for editorial works.

Mersha Alehegne

Ṭəntä haymanot: Mäṣḥafä ṭəntä haymanot

M.ṭ. (መጽሐፈ፡ ጥንተ፡ ሃይማኖት, 'Book on the Beginning of Faith') is an anonymous Gəʿəz protology, i.e. a book on the creation of the world. It retraces the Creation narrative with a special emphasis on the creation of the angels up to the birth of Seth which happened six years after Abel's death and closes with a genealogy of the O.T. patriarchs up to Abraham and Isaac (cf. Witakowski 2007: 333).

It seems that an important source of the M.ṭ. is the Gəʿəz version of the *Hexaemeron* of Ps.-Epiphanius (↗*Aksimaros*), and perhaps to a lesser degree, the ↗ *Qalemənṭos* (ibid.). The M.ṭ. in turn became an important source of the "Vienna Protology", extant in a 17th/18th-cent. ms. (Wien, cod. aeth. 19/4, fols. 56–63, ed., tr. Haffner 1912; cf. Witakowski 2007: 333). Whether it is correct to state that it is a "commentary" to the *Aksimaros* as claimed by Ricci (RicLett 836) is an open question. As is the case with the *Aksimaros*, the M.ṭ. is attributed to Epiphanius of Salamis († 403).

Several manuscripts of the M.ṭ. are extant:

BN d'Abbadie 125 (CRAbb III, 13, no. 131), fols. 193r ff.; BN Éth. 146 (ZotBNat 246), fols. 214–31 [apparently without the title]; Kebrān 35, fols. 71–98 (HamTana I, 166); BritLib Orient. 753 (WrBriMus 215, no. 322), fols. 68ff. [end of the text not specified in the catalogue]; BritLib Orient. 818 (WrBriMus 310, no. 391), fols. 145–60.

The oldest manuscript is BN d'Abbadie 125 (17th cent.); the other manuscripts are from the 18th cent. Haffner (1930: 106) states that there are two recensions of the text. According to Conti Rossini's catalogue (CRAbb IV, 198f., no. 214), the ms. BN, d'Abbadie 67 is not of M.ṭ. (contrary to Haffner 1926: 364), but of the *Aksimaros*.

According to Grohmann (after Baum 2002: 338), Haffner was working on an edition of the M.ṭ. for decades, but his work remained unpublished and was lost after his death in 1941. The edition, translation and an in-depth analysis of the contents and its relation to other texts of Ethiopian Adamic literature are all desiderata at the time of writing.

Stefan Weninger

Ṭəntyon

The Ṭ. (**ጥንትዮን**, or *ṭəntəwon*, from Greek τῶν θεῶν, '(day) of the (planetary) gods', but often explained by scribes as meaning 'at the beginning', in false analogy to Gəᶜəz *ṭənt*, 'beginning') or solar epact (*abäqte ṣ́äḥay*, also *ṭəntyon ṣ́äḥay*), is the number corresponding to the weekday on which the Ethiopic New Year (1 *Mäskäräm*) falls. Ṭ. ranges from 1 = Wednesday to 7 = Tuesday. Its counterpart counting Sunday as 1 is referred to as the (Day of) John (*Yoḥannəs*).

The term Ṭ. has probably been in use since the 14th cent.; it is not used in ↗ Abušakər's chronological treatise, even though the number for the solar epact (the weekday for 1 *Thoth* of the Coptic calendar) is used in calculations. The fact that "1" corresponds to a Wednesday is probably connected to introducing the system in the Era of Incarnation.

Ṭ. is used, in combination with the lunar epact (↗ *Abäqte*) and the day of the Jewish New Year (↗ *Mätqəᶜ*), for calculations of moveable ↗ feasts of the Ethiopian Christian ↗ calendar, and is always provided in the calendric tables (532-year tables, or 19-year tables; it may sometimes be confused with *Yoḥannəs*; s. ↗ computus).

In particular, Ṭ. is necessary to calculate the date for Easter (↗ *Fasika*) or, more directly, the earlier feast of Nineveh, which is uniquely determined by Ṭ. and the number of the year cycle.

Knowing the weekday of 1 *Mäskäräm* (Ṭ.) one can define the weekday for each year's *mätqəᶜ* and therefore the weekday for the Jewish Passover (*mätqəᶜ* + 190 days). *Fasika* would then fall on the first Sunday after the Passover.

For example, if the Jewish New Year has been calculated to correspond to the 7 *Ṭəqəmt* of the Ethiopian calendar and one knows that the Ethiopian New Year fell on a Sunday (Ṭ. = 5), 7 *Ṭəqəmt* would be a Monday. Thus Passover (190 days later, 17 *Miyazya*) is a Tuesday, and the *Fasika* should take place five days later, on Sunday, 22 *Miyazya*.

Ṭ. is also used in traditional astrology and numerology (↗ Magic) whilst multiples of 7 play a role that indicates a connection with the days of the week (↗ Numbers in EAE vol. 5). Even the number of rainstorms was calculated on the basis of a formula (Ṭ. + 5 days of *Pagʷəmen* + 1 day) x 10 = the number of downpours.

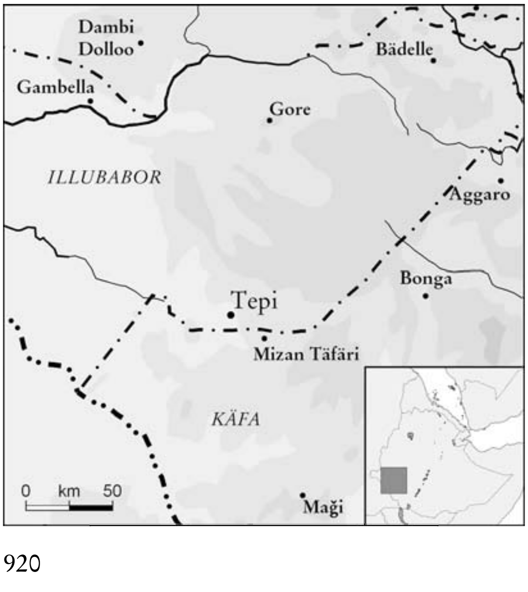
Evgenia Sokolinskaia

Tepi

The city of T. (also Tippi, 7° 12' N, 35° 25' E, 1,250 m A.S.L.) is located in south-west Ethiopia, in the southern part of what was formerly Illubabor, was then transferred to Käfa, and is now in the Southern Nations, Nationalities, and People's Region. It is said to be named after a ↗Mağaŋgir man who used to have a hive in the large tree that stood in the market. The population has greatly increased since the 1970s (18,357 inhabitants in 2005; CSA 2004).

During the ↗Italian war 1935–36, there was a small Italian military presence at T. The surrounding countryside has long been multiethnic, including significant numbers of Mağaŋgir, ↗Šakačo, ↗Šeko, ↗Käfa and ↗Oromo. Most of the city's residents are from other parts of Ethiopia. In the 1980s, as a result of the ↗famine, a large number of people from other provinces were resettled nearby. Under the new ethnic federalism this has led to conflicts, since no ethnic group comprises a majority.



T. had airline service since the 1960s. An elementary school was begun in T. about the time the Italians left and since about 1980 it has had a high school. Electricity became available in 1984. All-weather roads were begun in the late 1970s, and by 1988 they extended in three directions: south to ↗Mizan (built with Cuban help), south-east to Šišinda (toward Bonga) and north to Gore. It has long been a market and commercial centre for the area.

T. has Orthodox churches, a mosque and Protestant churches. There is also a strong following of a local spirit cult to Bulafo and Ginabo.

T.'s landscape is hilly and was densely forested. The area claims to be Ethiopia's center for turmeric, and also exports much coffee (private and plantation), cardamom, ginger, maize, honey, wax, timber, sugar cane and fruits. Due to the fly-borne disease trypanosomiasis, cattle are rare in the area, so none are used for plowing. The disease also prevents equines from being raised there. North-east of T., there is an inactive shield volcano also called T. (2,728 m A.S.L., 7° 25' N, 35° 25' E).

Təqəmt ↗Calendar, Christian (Month)

Ṭəqur Anbäsa

Ṭ.A. (**ጥቁር፡ አንበሳ**, 'Black Lion[s]') was the name of a group of patriotic young Ethiopians, largely intellectuals, who sought to organize armed ↗resistance to the Italian invaders in 1936 (↗Italian war 1935–36). Reacting to the Emperor's appointment of *ras* ↗Ǝmməru Ḫaylä Śəllase as Regent, based at ↗Gore in the west of the country, they made their way to ↗Wälläga, where they placed themselves under his nominal command. Some 350 in number, and operating on the basis of a "progressive" written constitution, they have been described by Bahru Zewde (2002: 203) as constituting "perhaps the most coherent, if short-lived", Ethiopian intellectuals' opposition to the Fascist occupation. They comprised young ex-cadets of the ↗Holäta Military Academy and graduates of the Täfäri Mäkʷännən Secondary School in Addis Abäba, as well as about 50 defectors from ↗Eritrea. Presided over by ᶜAlämwärq Bäyyänä, a British-educated veterinarian – and blessed by Bishop Mikaᵓel of Gore – their leadership included Eritrean-born Bälay Ḫaylä Ab; a Holäta graduate, Kəfle Näsibu; the young Oromo nobleman *ləğ* ↗Yəlma Däressa (just before, still engaged in the separatist ↗“Western Galla Confederation” project); the elderly Goǧǧame, Gäbru Dästa (↗Gäbrä Ǝgziᵓabəher Dästa); Fäqadä Śəllase Ḫəruy, son of the pre-war Foreign Minister ↗Ḫəruy Wäldä Śəllase; and Bənyam and Yosef Wärqənäh, the sons of *hakim* ↗Wärqənäh Ǝšäte, the Ethiopian minister in London.

Militarily the Ṭ.A.’s principal achievement was the so-called “Bonäyya incident” of 27 June 1936, which involved the burning to the ground of three Italian aeroplanes at Bonäyya near ↗Naqamtee. In the accompanying engagement General Magliocco, second-in-command of the Royal Italian Air-Force in East Africa, Colonel Canderni, the former Italian military attaché in Ethiopia , and ten other Italian officers were killed. The Italians retaliated by launching a heavy aerial bombardment, after which the Ṭ.A., fearing further reprisals, on the local population, as well as on themselves, withdrew westwards as far as the ↗Goǧäb River. Their retreat was blocked there by far stronger enemy forces, which obliged the Ṭ.A.s to surrender late in December 1936. Many members of the group were later killed in the ↗Graziani massacre of February 1937. Memories of the Ṭ.A. subsequently served as a patriotic inspiration, and led to the naming during the *Därg* (↗Provisional Military Administrative Council) regime of Addis Abäba’s largest hospital as the Ṭ.A.

Tərdaᵓ Gäbäz s. vol. 5

Təргʷame

In the Ethiopian ↗Bible commentary tradition, T. (**ትርጓሜ**, lit. ‘interpretation, explication’, but also ‘translation’) is the designation given to local commentaries written in ↗Gəᶜəz. These make up a corpus that comments on all the books of the ↗Bible.

T. developed between the 13th and the 16th cent., mainly in the monastic theological centres of Gondär, Goǧǧam and Wällo. T. commentaries are traditional in that they draw, directly or indirectly, much of their material from sources found in earlier Christian writings. They blend these sources with local scholarship so as to make their content suitable for their local audience (Habtä Maryam Wärqənäh 1970/71: 213ff.). The content of the interpretation found in the different T. varies much from one manuscript to another. This is especially evident in the treatment that different T. give to the same Biblical book. In this sense, the T. do not constitute a unified corpus comparable to the ↗*Andəmta*.

T. is characterized by relatively little elaboration but instead by austere and direct formulation. T. frequently uses the typology, whereby the *typoi* used by the O.T. books find their fulfilment in the N.T., more specifically in the life of both Christ and the Church. T. frequently has recourse to allegory and paraphrases to clarify the meaning of the Biblical text. T. combines a kind of exegesis containing authoritative interpretations with a certain tendency to vulgarization, with the written exegesis more scientific in nature. Some T. manuscripts (e.g., Wien Cod. Aeth. 16) seem to be the work of a single author, whose concern is to explain the text from a sapiential point of view.

The patristic sources identified in the *T. Orit* (commentary to the ↗Octateuch, hereafter T.O.) are texts by such authors as ↗John Chrysostom (e.g., ms. BN d’Abbadie 28), Abū l-Farağ ᶜAbdallāh b. aṭ-Ṭayyib and Theodore bar Koni. ↗Hippolytus of Rome, ↗Gregory of Nazianzus and Theodoret of Cyrrhus are said to be the sources of the commentary on Dan and the Minor Prophets contained in ms. Wien Cod. Aeth. 16.

Patristic sources behind the ↗*Təргʷame wängel* (commentaries to the ↗Gospels) are mainly Theodore of Mopsuestia, John Chrisostom, ↗Cyril of Alexandria, ↗Gregory of Nissa, ↗Eusebius of Cesarea, ↗Athanasius, ↗Severus of Antioch, all somehow present in the Graeco-Syro-(Copto)-Arabic chain (Cowley 1983: 37; EAE vol. 1, 573f.). Most influential was the Gospel commentary by Ibn aṭ-Ṭayyib, translated from Arabic into Gəᶜəz in 1522/23 (Cowley 1987: 5; WrBriMus 201).

The named sources to the *T. Ṗawlos* (commentary to the Pauline ↗epistle, T. Ṗawlos) contained in ms. BritLib Orient. 13,830 are Cyriacus of Nisibis, John Chrysostom, Athanasius, Ayləyayus, Ephraim, Ḥanan (probably Hannan of Hedhaiyabh), Theodore of Mopsuestia, Wäldä Näharayn and Agob (probably Aḥob of Qaṭar; s. Cowley 1983: 37). A reconstruction of the lines of transmission of material from the Graeco-Syro-(Copto)-Arabic commentary tradition into Gəʿəz can be seen in Cowley (1983: 39).

At times, the sources used from the various authors are acknowledged explicitly, as is the case at the end of the commentary to Lk (BritLib Orient. 731). This contains a detailed list of the names of church fathers, whose scholarship had been incorporated in the commentary: Egypt (15), Syria (7), Armenia (7), Rome before the separation (7), and Greece (6). However, in most instances, T. do not quote sources explicitly.

Many of the T. manuscripts have been traced and classified by Cowley (1983: 36–40; 1987: 5; 1988: 443ff.). Besides, several T. have been edited and published, either as a complement to critical editions of Biblical books or in full. E.g., the T. on the Minor Prophets found in mss. Wien Cod. Aeth. 16 and Berlin Or. Quart. 986 were reproduced in the critical editions to Hos and Mic (Fuhs 1971, 1968) and Dan (Löfgren 1927); and in the critical edition to commentaries on Mic (García 1999: 326–39). Comment on excerpts from Is, Job, Dan, Prov, Hos, Jer, the prophecy against Pashhur, Wisdom and Zk is contained in the ↗*Gəbrä ḥəmamat* (Wäldä Mikaʾel Bərhanä Mäsqäl 1949/50: 358). Finally, an annotated translation of *T. Qälämis*, a commentary on the book of the ↗Revelation, found in ms. BritLib Orient. 13830, was published by Cowley (1983: 65–156).

The T. follow the same two-part method of interpretation applied by all other Ethiopian Bible commentaries: the first part contains the quotation, while the second part contains the exegetical commentary. Some T. provide a lengthy edition of the Biblical text, divided into parts, but following a different order than that of the modern chapter and verse structure (e.g., ms. Berlin Or. Quart. 986). Most commonly, the T. make use of a handful of technical terms and abbreviations so as to introduce the part being treated. So, the edition of the Biblical portion is normally introduced by the term **ቃል** (*qal*, 'word', here 'text'), **ንባብ** (*nəbab*, 'reading'), or in the case of T.O., **እምቃለ፡ ኦሪት** (*əmqalä orit*, 'from the word of the Octateuch' or 'from a quotation from the Law'; s. EMML no. 2101). Some T. give short quotes of the Biblical text that end with **ዘ** (*-zä*, short for **ዘይቤ**, *zäyəbe*, 'that which says'; s. BN d'Abbadie 156). Other T. also divide the portion under study into parts of similar size, but limit themselves to quoting only the first word followed by **እ፡ ኀ፡ ይ** (*ə ḫa yə*, for **እስከ፡ ኀበ፡ ይቤ**, *əskä ḫabä yəbe*, 'until when it says') and the last word of the portion (BN d'Abbadie 157). Finally, some T. limit themselves to quoting only selected verses of the book under study, which they normally introduce with the term *qal* (Wien Cod. Aeth. 16).

The second part, i.e. the commentary proper, is usually introduced with the term **ፍካሬ** (*fəkkare*, 'interpretation'; s. Berlin Or. Quart. 986, EMML no. 2101) or simply **ፍ** (*fə*). Some T. use the term "T." to introduce a somewhat lengthy commentary (Wien Cod. Aeth. 16). Others use **ይቤ** (*yəbe*, 'it says').

The same word or passage under study may be given several interpretations. These are also introduced by formulae or technical terms such as **አው** (*aw*, 'or'); **ቦ፡ ዘይቤ** (*bo zäyəbe*, 'there is one who says') or simply *bo*; **ወቦ፡ እለ** (*wabo əllä*) or **ወቦ፡ እ** (*wabo ə*, 'there is [one] who [says]'); or **ዳግም** (*dagəm*, 'also'; cf. Säyfä Śəllase Yoḥannəs 1994/95: 121f.; García 1999: 25–31; EAE vol. 1, 573f.).

In the 16th cent. the process of translating Gəʿəz Bible commentaries into Amharic began. A conscious effort by local scholars to harmonize and standardize the commentaries in Amharic resulted eventually in the phasing out of the Gəʿəz commentary tradition. However, the T. continued to be the main source of the new *Andəmta* commentaries. One example of this traditional influence can be seen in the *Andəmta* to Mt 2:3, where there is a reference to an earlier T. *wängel* (Bərhanu Gäbrä Amanuʾel 2004: 73).

Miguel Angel García

Tərgʷame wängel

The T.w. (**ትርጓሜ፡ ወንጌል/ወንጌላት**, 'Interpretation of [or Commentary on] the Gospel[s]', cp. ↗*Tərgʷame*) is the title of two so far unpublished works of ↗Gəᶜəz literature.

The first text contains scholia from writings of the Church Fathers (e.g., ms. EMML no. 2797, incipit fol. 2r; EMML no. 2088, incipit fol. 2r), including ↗Severos of Antioch, ↗Cyril of Alexandria, ↗John Chrysostom, ↗Gregory of Nazianzus, etc. Cowley (1983:37, 1988:47, 53) identified it as the *Copto-Arabic Gospel Catena*. It was translated from Arabic not later than the 16th cent., as the date of the earliest manuscript indicates (EMML no. 2088, 16th cent.; BritLib Add. 16,220, early 17th cent.).

The second text was identified by Conti Rossini (1900:272) and Guidi (GuiSLett 68f.) as the work of the Jacobite exegete Dionysius Bar-Ṣalībī (12th cent.), supposedly on the basis of the colophon in ms. BritLib Orient. 732 (17th cent., WrBriMus no. 309; the same text is in EMML no. 2158), which says that the work was translated *əmləssanä surəst ḫabä ləssanä ᶜəbrayəsṭ* ('from the Syriac into the Hebrew [here: Arabic?] language'; Cowley 1983:37, 1988:48). The text is on the other hand regarded as the Gəᶜəz version of the *Commentary on the Gospel* by Abū l-Farağ ᶜAbdallāh b. aṭ-Ṭayyib, an 11th-cent. East Syrian ("Nestorian") philosopher and physician, and secretary to two successive *catholicoi* of his Church. Perhaps influenced by the same colophon, Cowley (1988:53, stemma) suggests that Ibn aṭ-Ṭayyib wrote in Syriac and translated his work into Arabic. However, since otherwise nothing is known about Ibn aṭ-Ṭayyib's writing in Syriac (whereas the Arabic text is extant), it seems possible that he did not write originally in Syriac, but used Syriac sources, such as the extensive Biblical commentary by Ishoᶜdad of Merw (9th cent.), another East Syrian exegete. Ibn aṭ-Ṭayyib's *Commentary* (1018) soon found its way into the hands of West Syrian ("Monophysite") redactors (GrafLit II, 166ff.), and in this version it eventually reached Ethiopia. According to the colophon in ms. BritLib Orient. 732, it was translated (from Arabic) into Ethiopic in 1522/23, under *aṣe* ↗Ləbnä Dəngəl (s. WrBriMus 201). According to a note in ms. EMML no. 7122 (Cowley 1984–86:7ff.), Ibn aṭ-Ṭayyib's commentary was, at least in the part concerning the O.T., an object of an otherwise unknown controversy.

The manuscripts do not provide the name of the author at the beginning of the text, and since Ibn aṭ-Ṭayyib begins his comments on successive Gospel verses by quoting John Chrysostom (other authorities are Cyril of Alexandria, Gregory of Nazianzus, ↗Ephrem the Syrian, etc.), in the extant catalogues his T.w. is sometimes attributed to this Church Father (e.g. EMMLno. 368). Another reason for this attribution could be the fact that Ibn aṭ-Ṭayyib seems to have been called "John Chrysostom the Eastern" (Gäbrä Ǝgziʾabəḥer Ab Yoḥannəs Afä Wärq Məśraqawi, s. BritLib Orient. 732; but also already in Arabic, s. GrafLit II, 169).

The oldest Ethiopic manuscripts date from the 17th cent. (Paris, BN Éth. 65; BritLib Orient. 732; EMML no. 2158, from 1607–32 [Lk, Jn]).

As the part concerning Mt is the largest, it is sometimes transmitted separately (e.g., ms. BritLib Add. 16,248).

In some younger manuscripts, from the 18th cent. onward (e.g., EMML no. 630), the text of the T.w. is preceded by an Amharic introduction, and some copies (EMML no. 679, 20th cent.) have both Amharic and Gəᶜəz introductions.

There is also an Amharic commentary on the Gospels (**የወንጌል፡ ትርጓሜ**, *Yäwängel tərgʷame*, e.g., EMML no. 277 [Mt, Mk, Lk], 279 [Jn], 20th cent.), but it is not clear whether it is a translation from Gəᶜəz, and, if so, which T.w. was its *Vorlage*. The Scriptural passages, commented in Amharic, are quoted in Gəᶜəz (e.g., EMML no. 674 20th cent. [Lk, Jn]).

Terra demaniale

During the period of Italian rule in Colonia ↗Eritrea, the term T.d. (Ital. 'domanial land'; also *demanio*; Tgn. **ዶመንያለ** *domänyalä*) denoted those areas of land which had been made the property of the Italian crown. While the Ethiopian rulers had traditionally claimed rights over large areas of land, these claims were, in practice, largely theoretical. The Italian Crown and the Italian colonial authorities, however, took control over a wide range of lands in Eritrea. In addition to agricultural lands to be granted to Italian colonists, claims were exercised over roads, ports, beaches, forests, and many other categories of land (Jordan Gebre-Medhin 1989: 57). Also lands that had been lost by their original owners for political reasons could become T.d. lands as could lands over which no clear indigenous title could be established. While the expropriation of lands in Eritrea began soon after the Italian conquest, it was the Italian land statute of 1909, revised in 1926, which first introduced T.d. land as a clear concept (Pankhurst 1966: 192f.). This decree asserted Italian state ownership over lands below an altitude of 350 m in the Western Lowlands and below 850 m in the Eastern Lowlands, if not already occupied by settlers.

Territoire Français des Afars et Issas (T.F.A.I.) ↗Djibouti

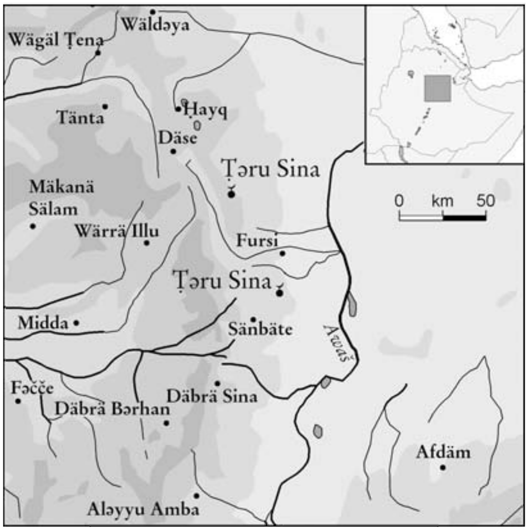
Ṭəru Sina

Ṭ. (**ጥሩ፡ ሲና**) is located in Arba Wayu *qäbälä* in Ğille Ḍimugaa district, in the Oromiyyaa zone of the Amhara regional state (formerly in southern ↗Wällo province). The surrounding area is inhabited by three different ethnic groups, ↗Amhara, ↗Argobba and ↗Oromo. Ṭ. is a ↗*zāwiya* of the Qādirīya ↗Islamic brotherhood established in 1949 by *šayḫ* Səraǧ Muḥammad Awwäl (b. ca. 1875, d. 1972) from Dana, Wällo. Ṭ. is not to be confused with another *zāwiya* in Wällo by the same name of ↗Ṭəru Sina (s. below).

Šayḫ Səraǧ Muḥammad became known as a peace broker in an ethnic conflict between the Amhara and the Oromo in the 1930s and early 1940s. The cause of the conflict was related to land resources which were contended between the pastoralist Oromo and sedentary agriculturalist Amhara. Killing for fame and the celebration of the killer (s. ↗Meritorious complex) was also another factor for the conflict. The government put an effort to end the conflict but failed.

Šayḫ Səraǧ Muḥammad was then on the onset of his religious mission. In conflict resolution he cooperated with the state officials of the area and was successful because of his religious wisdom, his oratory skills and the miracles he is widely believed to have performed as a Ṣūfī *šayḫ*. The *šayḫ* was rewarded with land by *aṣe* ↗Ḫaylä Śəllase I and the community for the significant role he played in restoring peace in the area. *Šayḫ* Səraǧ established his shrine as centre of Islamic learning and mediation.

Unlike most customary institutions which handle conflicts on ad hoc bases (cp. Pankhurst –



Getachew Assefa 2008) Ṭ. has regular hearings weekly on Mondays where conflicts of diverse nature are handled ranging from group conflict to individual conflict and both civil and criminal matters. Although Ṭ. is located in Oromiyyaa zone it also serves Christian Amhara from the neighbouring zone. After *šayḫ* Səraǧ's death the educational activities at Ṭ. stopped but the weekly gatherings and the biannual *ziyāra* (s. ↗Pilgrimage, Islamic) in August and October continued to be carried out.

Meron Zeleke

Ṭəru Sina

Ṭ. (**ጥሩ፡ ሲና**) is a settlement located between Kämise and Ḥarbu towns in the Ç̣affee-Golana Dawa-Rahmedo *wäräda*, in the Oromiyyaa zone of the Amhara *kəlləl* (formerly South ↗Wällo province; for location s. map for Ṭəru Sina above). It is a ↗*zāwiya* of the Qādirīya Ṣūfī Muslim brotherhood, allegedly established ca. 1950 by *šayḫ* ᶜAbduṣṣāmad ᶜAbdarraḥmān, who was educated in Muslim lore at the famous shrine of ↗Annaa (s. EAE vol. 5) in Rayyaa, northern Wällo.

Ṭ. is not to be confused with the homonymous Qādirīya *zāwiya* in the Amhara Region (↗Ṭəru Sina above), with which it, however, shares features that suggest a similar background. Both emanate from the Ṣūfī Muslim tradition, cherish the memory of Muslim saints and are places of Muslim learning and worship. The Ṭ. discussed here is more a place of retreat and religious reflection and less a centre of local conflict mediation (unlike the other Ṭ.). Both are relatively minor centres that stand in the shadow of the Gäta, Daana, Ǧämma Nəguś and Annaa shrines.

Ṭ. lies on a secluded wooded hilltop and consists of two settlements: one for females and one for males (off-limits for females), in total ca. 250 persons (in 2008). A large wooden mosque stands at the centre of the settlement. There are restrictions on entering Ṭ. and the place has a monastery-like atmosphere, as evident in the male-female division, sexual abstinence, strict standards of cleanliness, and the organization of *corvée* labour. The daily life is organized around religious services. The inhabitants study religious works, pray and fast, and some produce Muslim religious ↗manuscripts and amulets. They do not actively proselytize, avoid politics and try to live an exemplary religious life. They neither cultivate nor keep livestock, and most provisions are supplied to them by local farmers and visitors/benefactors. They, however, prepare their own food in collective kitchens.

The area around Ṭ. is inhabited by the ↗Amhara, ↗Oromo, and ↗Argobba. Local inhabitants regularly come to Ṭ. for religious advice and sometimes to ask for mediation in local disputes. They also occasionally send wayward children (notably young males) to stay in the shrine for a period of recovery (Abbink 2008: 130).

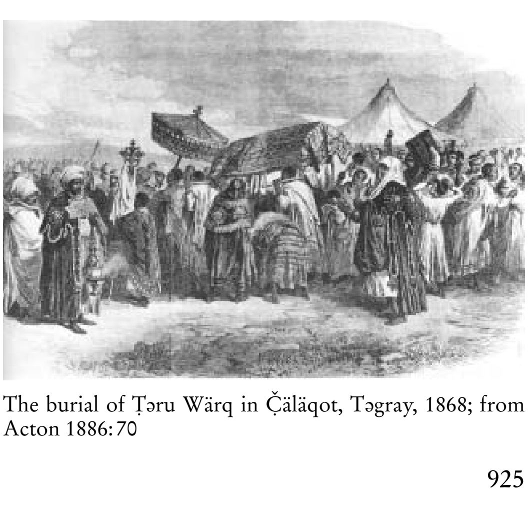
Jon Abbink

Ṭəru Wärq Wəbe

Ṭ.W. (**ጥሩ፡ ወርቅ፡ ውቤ**, originally Ṭərunäš; d. 1868) was the daughter of *däǧǧazmač* ↗Wəbe Ḫaylä Maryam and the second wife of *aṣe* ↗Tewodros II.

Ṭ.W. and Tewodros were married in mid–1860, two years after the death of his first wife, ↗Täwabäčč (Stern 1862: 112f., 118f.; MonVidTheo 24). It is possibly due to a figurative comparison of her beauty to gold that Ṭərunäš's name became Ṭ.W. Even with her father still in prison she belonged to a politically powerful lineage. She received the news of her father's death in



The burial of Ṭəru Wärq in Ç̣äläqot, Təgray, 1868; from Acton 1886: 70

1867 at ↗Mäqdäla, where she seems to have resided much of the time (MonVidTheo 45).

Ṭ.W. was the mother of ↗ᶜAlämayyähu Tewodros, one of Tewodros's two known surviving sons. After the British expedition defeated Tewodros's army at Mäqdäla, on 10 April 1868, Ṭ.W. and her son passed into the hands of the English, who took them along when they left the country. Ṭ.W., however, died en route, and was buried at ↗Čälaqot in Təgray (FusTeod 49).

Donald Crummey

Teruzzi, Attilio

T. (b. 5 May 1882, Milano, d. 26 April 1950, Procida, Naples) was an Italian colonial officer and politician.

T. as a young lieutenant served with the Italian army in Eritrea from 1901 to 1911. In 1912 T. accompanied the Vth Eritrean Battalion in Lybia, he then fought in ↗World War I. In 1920 he joined the Fascist movement. In November 1921 he was nominated vice-secretary and then high commissioner of the Partito Nazionale Fascista. From November 1926 to May 1928 T. was governor of Cyrenaica and partially succeeded in "pacifying" the region. In January 1929 T. was nominated Militia chief of staff and a member of the Grand Council.

During the ↗Italian war 1935–36 T. organized six black shirt divisions and headed one of them. In 1937 he was appointed undersecretary at the Ministero dell'↗Africa Orientale Italiana (A.O.I.) and in October 1939 became Minister.

The years at the Ministero were mainly devoted to quelling the Ethiopian ↗resistance. Graziani's policy of ruthless repression had been very ineffective, leading to an increase in resistance activities. In 1938 the appointment of Amedeo di ↗Savoia signified a new policy of appeasement. Although in opposition to the Duke, T. was also well aware that, with the limited resources at his disposal, there was no alternative to this policy. T. visited A.O.I. in 1938, 1939 and 1940.

T. also had to defend the A.O.I. on the eve of ↗World War II, but the lack of adequate resources rendered this target almost impossible. When the conflict started, the empire fell to British troops in less than a year.

After the Grand Council vote against ↗Mussolini, T. remained loyal to the *Duce* and joined the Italian Social Republic. After the fall of the Republic, T. was sentenced to 30 years in prison but was soon released. He spent his last days in Procida.

Ṭəso Gobäze

Ṭ.G. (**ጥሶ፡ ጎበዜ**; d. 31 March 1868; also Ṭərso Gobäze) was a 19th-cent. interim ruler of ↗Bägemdər and a rebel against Emperor ↗Tewodros II.

Ṭ.G. first appeared in ↗Wälqayt in 1863 (RubInd 241). His rebellion provoked the Emperor to sack both ↗Dämbəya and ↗Gondär which only increased Ṭ.G.'s popularity. 1864 proved a critical year for the Emperor who suffered heavy defeats in both ↗Goǧǧam and ↗Šäwa, following which he withdrew towards ↗Mäqdäla. Thereafter, his power steadily declined and the area he controlled shrank with it, leaving plenty of room for rebels. Meanwhile, Ṭ.G., taking advantage of the Emperor's growing unpopularity and his withdrawal, seized control of Bägemdər including Gondär from where he also made incursions into ↗Təgray. By the end of the year all the territory between Lake ↗Ṭana and the ↗Täkkäze River including Gondär had fallen into the hands of Ṭ.G.

By 1868 Tewodros's sway was confined to the immediate environs of Mäqdäla, where, in April of that year, he was defeated by the British expeditionary force under General ↗Napier and committed suicide. Ṭ.G.'s ambition to control the central provinces was contested by *wag šum* Gobäze Gäbrä Mädḫən (*aṣe* ↗Täklä Giyorgis II) of Lasta. The two met in battle at Qäha on 3 March, a few days before the Battle of Mäqdäla. The *wag šum* prevailed, killing Ṭ.G. in the process, thereby ending the latter's brief political career (BTafA 597; Lämläm in ms. BN Éth. 259, fol. 5v).

Donald Crummey

Tessämme Darge ↗Darge Śahlä Śəllase

Testa, Zenone Albino

T. (b. 29 May 1914, Vertova, Bergamo, d. 19 September 1982, Bergamo) was a ↗Capuchin friar and Apostolic Vicar for the Latins in Eritrea. He received the Capuchin habit when he entered the noviciate in 1 January 1930 and made his religious vows one year later. T. was ordained priest in Milan on 7 August 1938.

On 18 September 1939, T. left for the Mission in Eritrea from the Italian port of Brindisi and upon his arrival he was appointed deputy secretary of the Apostolic Vicar, Giovanni C. Luigi Marinoni. In 1940 he became the director of the Istituto S. Giuseppe in Asmära, which took care of the "meticci", i.e. people of mixed "race" and in 1947 he was appointed parish priest of the (Latin) Cathedral. From 1958 to 1959 he served as major superior (*Custode*) of the Capuchins in Eritrea. On 1 August 1959, T. was named bishop, titular of Tinista (Mauritania) and Coadjutor (bishop with the right of succession) to Mgr. Marinoni.

After some difficulties, mainly of a political nature, T. was consecrated bishop on 9 April 1961 in the Cathedral of Bergamo. T. succeeded bishop Marinoni as Apostolic Vicar on 12 August 1961 and led the Vicariate until 1971 trying to implement the guidelines of the Second Vatican Council at which he had participated. Not endowed with the diplomatic skills nor with the charisma of his predecessor, he nonetheless was equally active in the pastoral ministry. He tried to foster ecumenical dialogue and was involved in social activities, such as schools, with an increased attention to the local population.

On 25 June 1971, T. resigned his post for health reasons and returned to Italy. He went to live in Bergamo, at the Capuchin provincial clinic. From 1974 on, his mental conditions deteriorated dramatically and T. completely lost his memory. He died after a long illness.

Tedros Abraha

Testamentum Domini

The T.D. (Gəᶜəz **ኪዳን፡ ዘእግዚእነ፡ ኢየሱስ፡ ክርስቶስ**, *Kidan zäʾəgziʾənä Iyäsus Krəstos*, 'Testament of Our Lord Jesus Christ'), with the ↗*Senodos* and the ↗*Didəsqəlya*, is one of the major canonico–liturgical works of the ↗Ethiopian Orthodox (Täwaḥədo) Church. As with other works of the same genre, the purpose of the T.D. is to establish upon the basis of a pseudo-epigraphical authority – in this case, Jesus Christ in person – rules and prescriptions for the right organization of the Church and Christian practice. Transmitted by more than 20 codices (besides the 9 manuscripts listed by Beylot 1984: viif., cp. some 13 additional manuscripts in Bausi 1992: 42, n. 42, none of which antedates the 15th cent.), linguistic evidence seems to indicate that the T.D. belongs to the limited number of Gəᶜəz works translated from the Greek in the ↗Aksumite period.

The T.D. consists of 60 chapters and is clearly subdivided into two parts. The work opens with a shorter apocalyptic section where Christ appears to the Apostles and to the holy women (Mary, Martha and Salome) after the Resurrection, announcing the end of the world (chs. 1–6): this section is quite similar to chs. 5–6 of the Gəᶜəz ↗*Testamentum Domini* in Galilee (often transmitted in the same mss. as the T.D.), from which it probably derives. The subsequent canonico-liturgical section is one of the several reworkings of the so-called *Traditio Apostolica* and systematically deals with the teachings given by Christ to the Apostles concerning the building of the church, the ordination of the ecclesiastical hierarchy, from metropolitan (*pāpās*), to bishop, presbyter, deacon, subdeacon, reader, as well as the respective ordination prayers. In particular, ch. 16 contains the "Anaphora of Our Lord Jesus Christ", also widely attested as an independent text (↗Anaphoras; cp. Harden 1922; Hammerschmidt 1961: 15); and ch. 22 contains the ↗*Təmhərtä Ḫəbuʾat*, which has a rich textual tradition as an independent text, including a second recension known as *Ǝlmäsṭoʾagya*, i.e. Gr. μυσταγογία, 'Mystagogy', certainly a version from the Arabic (cp. Hammerschmidt 1960: 44ff.). The condition of widows, virgins, lay people, catechumens, and Eucharistic and baptismal orders and prayers are also dealt with at large in the T.D. The work ends with the Ascension of Christ.

The long investigation carried out after the discovery and publication of the Syriac version of the T.D. (cp. Rahmani 1899) has reached the almost unanimous conclusion (cp. Coquin 1974; Ellwardt 2005) that the work, one of the last products of the pseudo-apostolic literature, was originally composed in Greek in the 5th cent. (*contra*, cp. Drijvers 1994). The almost totally lost Greek original is attested by three integral versions in Syriac, Arabic, and Gəᶜəz, plus a few Latin and Georgian fragments, and the widely attested Coptic version of the *Mystagogy*. The Syriac was certainly translated in 687 by James of Edessa, as stated in a colophon, and is also transmitted within the "Clementine Octateuch" (cp. Vööbus 1975: 1–49 [text], 27–64 [tr.]); a second recension of the apocalyptic part is also known. Four different (not yet edited) Arabic versions are known, which to various degrees rely upon a Coptic *Vorlage*, thus revealing, to the contrary of what is usually believed, the early circulation of the T.D. in Egypt: (1) a free version; (2) a very slavish version in the canonical collection of Macarius; (3) a version in good Arabic, but with some Copticisms; (4) a version included into the Arabic *Didascalia* (cp. Ellwardt 2005: 23ff.). The Gəᶜəz version of the T.D. is probably an independent translation upon a Greek *Vorlage*. Yet, the editor's attempt at establishing the critical text by comparison with the Syriac versions (cp. Beylot 1984: viii) has sometimes obscured some peculiarities of the Ethiopic tradition (cp. Cowley 1986).

As for other similar works, the normative and referential character of the T.D. is sanctioned by its frequent quotations in the works of *aṣe* Zärᵓa Yaᶜəqob, where, together with the *Senodos* and the *Didəsqəlya*, it was assumed and quoted as the paradigm of the true Christian law (cp. Bausi 1992: 42, n. 43).

Alessandro Bausi

Testamentum Domini in Galilee

The T.D.G. (Gəᶜəz **ኪዳን፡ ዘነገሮሙ፡ እግዚእነ … ኢየሱስ፡ ክርስቶስ፡ ለ፲ወ፩አርዳኢሁ፡ በገሊላ**, *Kidan zänägäromu Ǝgziᵓənä … Iyäsus Krəstos lä 11 ardaᵓihu bäGälila*, 'Testament that Our Lord … Jesus Christ told to his eleven disciples in Galilee', cp. ms. Stuttgart, Württembergische Landesbibliothek, Cod. orient. fol. 49, fol. 31rb, in SixDeu 463; instead of 'eleven disciples' other mss. have 'twelve disciples') is the title given by Guerrier (1907, 1913) to a Gəᶜəz apocryphal work of the ↗Ethiopian Orthodox (Täwaḥədo) Church, where two original writings, still distinguishable, have merged: (1) a later apocalypse of Jesus to the Apostles in Galilee (very similar to the introductory chapters of the ↗*Testamentum Domini*), prefixed to the following section and probably dating to the 4th/5th cent. (chs. 1–11 in ed. Guerrier 1913; Erbetta 1981: 38–41); (2) the so-called *Epistula Apostolorum*, 'Letter of the Apostles' (chs. 12–62), the *incipit* of which is marked in the Ethiopic tradition by a passage where the word *mäṣḥaf*, 'book, writing' appears (cp., e.g., SixDeu 463 from the manuscript in Stuttgart, *Kidan zänägäromu wäzäkäśätä lomu Ǝgziᵓənä … läᵓardaᵓihu. Wäzäkämähi käśätä Iyäsus Krəstos läᵓardaᵓihu mäṣḥafä əntä maḥbäromu läḥawaryat*, 'Testament that Our Lord told and revealed … to his disciples. And how Jesus Christ revealed to his disciples the book of the congregation of the Apostles').

The *Epistula Apostolorum*, the most important section of the T.D.G., is an ancient Christian apocryphal writing composed in Greek ca. 160/70 A.D., and translated in turn into Coptic (the version is extant in one damaged manuscript of the 4th/5th cent., cp. Schmidt – Wajnberg 1919; *Clavis Patrum Copticorum* no. 0034), and Ethiopic (the only witness to chs. 1–6, 31–37, 49–51, probably from the Arabic); one Latin palimpsest fragment of the 5th/6th cent. is attested. Its origin has been variously located in Syria and Asia Minor, as well as in Egypt, where the Coptic version attests that the T.D.G. certainly circulated. Chs. 1–12 of the *Epistula* (= T.D.G. chs. 12–23) constitute what more resembles a 'Letter of the Apostles' consisting of a 'writing' on the powers and virtues of God and Christ, including two confessions of faith, and some episodes of the life of Jesus; chs. 13–50 (= chs. 24–61 of the T.D.G.) are a dialogue in form of questions of the Apostles and answers of Jesus, concerning Christ's pre-existence, incarnation and parousia, the mission of the Apostles, Christ's descent into hell, the last judgment, and final recommendations; ch. 51 (= ch. 62 of the T.D.G.) ends with Christ's Ascension in Jerusalem. As it is clear from its contents, the writing combines the genre of the "epistle", to which it has been attributed also on the basis of two marginal notes in the Latin fragment, with that of the "dialogue".

As a rule, all the Ethiopic manuscripts which contain the *Testamentum Domini* also contain the T.D.G., which immediately follows it almost without interruption. The edition by Guerrier (1913) is based upon the ms. BritLib Orient. 793, with reference to the variant readings of the mss. BritLib Orient. 795, and BN d'Abbadie 51, 90, 199; the translation by Wajnberg (in Schmidt –Wajnberg 1919), and those which have followed, also considered the ms. in Stuttgart (already used by DillmLex viii); for other mss. cp. Pérès (1994: 57f.).

The *Vorlage* of the Ethiopic could be Arabic: yet, no definitive research has been undertaken on the subject and there are clues to a Greek-dependent textual component too (cp., e.g., *ibid.* 121, n. 35; Guerrier 1913). Like other similar works, quotations of the T.D.G. are reported in writings of *aṣe* Zärʾa Yaʿǝqob, such as the *Homily in honour of Sabbath* (cp. *ibid.* 20, n. 12; Getatchew Haile 1982: 192 [text], 216, nn. 13f. [tr.]). Quotations from the *Epistula Apostolorum*, chs. 3 and 16, and are also likely to be found in the *Kǝbrä Nägäśt*, chs. 68 and 96 (cp. Beylot 2008: 420).

Alessandro Bausi

Tewodros ↗Fǝkkare Iyäsus

Tewodros I

Aṣe T. I (**ቴዎድሮስ**; r. 1413–14) was one of the sons of *aṣe* ↗Dawit II and *ǝtege* ↗Ṣǝyon Mogäsa (GuiSyn I, 696). According to the ↗*Täʾammǝrä Maryam*, T. was supported by most of the clergy against his own father. However, it seems that Dawit was not overthrown and T. only ascended the throne upon his father's death (Colin 1987: 31).

According to a version of the ↗*Sənkəssar* preserved at Däbrä Bizän (Sapeto 1857: 437f.) T. was killed nine months after his ascension to the throne, in a military campaign against the ↗ʿAdal sultanate. His death at the hands of Muslims is probably one of the reasons why the Ethiopian *Sənkəssar* considers T. a saint; his ↗*täzkar* is celebrated on 29 *Säne* (GuiSyn I, 695f.).

In Ethiopian tradition, *aṣe* T. is frequently identified with the mythical namesake king evoked in the ↗*Fəkkare Iyäsus* as a "king of the east" who will reign during 40 years of peace before the end of the world.

According to the Chronicle of *aṣe* ↗Bäʾədä Maryam, the body of T. was translated from its original burial place to the royal necropolis founded by Bäʾədä Maryam at ↗Atronsä Maryam in Amhara (PerrZarY 171f.). According to later traditions, however, his body was translated to ↗Tädbäba Maryam instead (Spencer 1972: 70).

Marie-Laure Derat

Tewodros II

Aṣe T. II (**ቴዎድሮስ**, regnal name; birth name Kaśa Ḫaylu, "horse name" Abba Taṭäq; b. ca. 1820, d. 13 April 1868; r. 1855–68) is one of the outstanding rulers in the history of Ethiopia. He is commonly credited with the termination of the ↗*Zämänä mäsafənt* period, the first attempts at re-unifying the country, and introducing Ethiopia into the modern world. A wide range of sources (works of ↗historiography; travel reports; numerous pieces of ↗epistolography) document T.'s reign in detail.

  III. Tewodros and the Ethiopian Orthodox Church
  IV. Tewodros as a national hero

A. The history of Tewodros's reign

I. Rise to power

T. (the then Kaśa) was born to Ḫaylä Maryam Wäldä Giyorgis (Ḫaylu), a petty nobleman from ↗Qʷara, and *wäyzäro* ↗Attəṭṭägäb. The origin of his mother, supposedly of impoverished Gondärine nobility, and the fact that later she was to endure hardships, generated a tradition that she was a ↗*kosso*-vendor (but cp. RubTew 25ff.). When Ḫaylä Maryam disappeared from the scene, Attəṭṭägäb withdrew to a monastery in Gondär, and sent her son to be educated at the monastery of Čänkar Täklä Haymanot. Ca. 1830, when the place was looted by *ras* ↗Yəmam, as a result of a feud between him, *däǧǧazmač* ↗Wəbe Ḫaylä Maryam and *däǧǧazmač* ↗Maru (Täklä Ṣadəq Mäkʷəriya 1968/69: 52ff.), the boy narrowly escaped mutilation and death. He probably also spent some time in the monastery of ↗Maḫbärä Śəllase.

By ca. 1835, T. was at Fänǧa in Dämbəya, at the court of his much elder half-brother *däǧǧazmač* ↗Kənfu, who at that time governed a wide region known as ↗Maru Qämmäs. There, T. received his military training and developed his own aspirations to rule this domain. Towards the end of 1838, Kənfu made T. leave his house after a quarrel (a tradition relates that this was because of the prophecy that one day T. would rule over Kənfu's own sons) and seek asylum in Goǧǧam. Upon Kənfu's death in 1839, Kənfu's sons and uncle, Wälde Täkle, were disinherited by *ras* ↗Ali Alula and his mother, *ətege* ↗Mänän Libän, in favour of ↗Bərru Goššu, the son of Mänän's general *däǧǧazmač* ↗Goššu Zäwde; they were defeated in October 1839, at Qʷənzəla. Later, Maru Qämmäs was seized by *ətege* Mänän (ZanLitTheod 6; RubTew 23f.; cp. the account in CRReal §§ 62–64).

After briefly serving *däǧǧazmač* Goššu, T. returned to Qʷara and started his career as a

↗*šəfta*. Success brought him fame and many followers (Täklä Ṣadəq Mäkʷəriya 1968/69: 65f.), and by the mid-1840s he threatened Mänän's rule in Qʷara. To win his loyalty Ali Alula offered T. the hand of his daughter ↗Täwabäčč and the governorship of Qʷara, an offer which T. accepted. In 1846, however, T. entered Dämbəya, and in January 1847 occupied Gondär whilst Ali was campaigning against *däǧǧazmač* Wəbe. When in June Mänän returned to Gondär, T. defeated her and took her prisoner, together with her husband *aṣe* ↗Yoḥannəs III. Ali reconciled with T., giving him Maru Qämmäs and the title of *däǧǧazmač* (RubTew 38). In 1848 T. entered the ↗Sudan, where he fought an unsuccessful battle with the Egyptians at Dabarki, and witnessed their superior military organisation and technology (CRNuov 396 [III.i]; ZanLitTheod 13; RubTew 40).

Relations between T. and Ali completely collapsed in 1852, when Ali ordered that T.'s land be given to Goššu Zäwde. On 27 November 1852, in the first of a series of battles that were to bring him to the throne, at ↗Gur Amba, T. defeated and killed Goššu. The following year, on 12 April 1853, he defeated Ali at Bəččəñ in Bägemdər (in the so-called Battle of four *däǧǧazmačočč*). In May, T. burnt down ↗Däbrä Tabor, Ali's residence. Ali made a desperate attempt to stop T.'s advance on 29 June 1853 at ↗Ayšal, but was defeated again and fled to Yäǧǧu, the homeland of the Wärräsek dynasty. This flight ended both Ali's political career and the era of Yäǧǧu domination (MorTeod 158). Some historians mark this event as the end of the *Zämänä mäsafənt* (cp. RubTew 43); and even the beginning of the modern history of Ethiopia (s. Tubiana 1965: 166).

In the following year, T. defeated Bərru Goššu of Goǧǧam (MorTeod 159). Later that year, at the Council of ↗Amba Č̣ara, he laid down one of the fundamental policies of what was to become a revived Solomonic kingship, when he reconciled *abunä* ↗Sälama III with *əč̣č̣äge* Wäldä Maryam, proclaimed Sälama's ↗*Karra* doctrine official, had himself elevated to ↗*nəguś*, and entered into a religious marriage with his wife Täwabäčč. On 9 February 1855, T. defeated his last adversary Wəbe Ḫaylä Maryam, in the Battle of ↗Däräsge, following which he had himself anointed by Sälama and crowned as *nəguśä nägäśt* in the church of ↗Däräsge Maryam. His regnal name referred to a prophecy in the work known as the ↗*Fəkkäre Iyäsus*, announcing the coming of a messianic king by this name (MorTeod 160; RubTew 51).

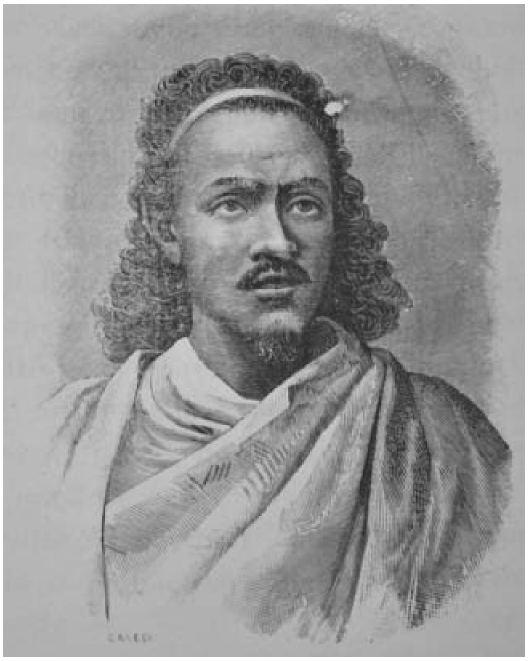

Fig. 1:Engraving of Kaśa, the future *aṣe* Tewodros II; from MasMis vol. 2, 205

II. The reign of Tewodros II: 1855–68

By 1855, T. had a reputation for invincibility. He established his capital at Däbrä Tabor, founded the church of Mädḫane ʿAläm there and transferred *abunä* Sälama to his court. He now focused on unifying the disintegrated empire.

In March 1855, he campaigned in Wällo to bring the Wärräsek and the ↗Mämmädočč under his control. T. fought ↗Wärqitu, Ali Adara of Wärrähimano, and Sädiq Danqa, and by September 1855 much of the province was in his hands. The Wällo-Oromo submitted; and T. captured ↗Mäqdäla, which he turned into a treasury, a political prison for his defeated adversaries and, eventually, into his new capital. Presaging the violence which was to mark his later years, he is said to have had the hands of 47 captured Oromo amputated (MorTeod 162).

In October 1855, accompanied by *abunä* Sälama, T. entered ↗Šäwa at Gəšše. The following month, the ruler of Šäwa, ↗Ḫaylä Mäläkot, died before he could offer battle and his grandmother, ↗Zännäbä Wärq, his mother, Bäzzabbəš, and his half-brother, Ḫaylä Mikaʾel, submitted to T., who gave to the latter the governorship of

Šäwa with the title of *märəd azmač*. Šäwan resistance continued under *ato* Bäzzabbəh, who eventually was defeated by T.'s officer *ras* ↗Əngəda Wärq. T. captured Ḫaylä Mäläkot's widow and his nine-year-old son Śahlä Maryam (future *aṣe* ↗Mənilək II) and other Šäwan nobles, and took them to Mäqdäla (for a short time, Śahlä Maryam was married to T.'s daughter ↗Alṭaš). T. went through Šäwa fighting the Oromo, and reached ↗Däbrä Libanos (MorTeod 164), but soon had to leave Šäwa.

In March 1856 T. crossed the ↗Abbay into Goǧǧam, looking for ↗Tädla Gʷalu, who escaped. T. captured another rebel, Čäkkʷäl, and appointed Əngəda Wärq as governor of Goǧǧam. Before he could face a fresh rebel, Täsämma Goššu, his army was affected by an epidemic, and he moved from Goǧǧam to spend the rainy season near Gondär. Soon, two episodes revealed underlying tensions between T. and the Orthodox clergy. In September 1856, a confrontation took place between T., on the one hand, and the clergy, led by *abunä* ↗Sälama, on the other, over revenues and precedence. In December the Coptic Patriarch Cyril IV visited Ethiopia. T. accused him of spying for ↗Saʿīd *bāšā* of Egypt and arrested him (MorTeod 167f.).

T. spent most of 1857 in central Ethiopia, chasing ↗Amäde Bäšir and his brother Libän, whom T. had appointed over Mäqdäla, but who had defected.

In 1858, foreshadowing the years to come, T. continued to face rebels. He defeated and hanged *wag šum* ↗Gäbrä Mädḫən and subdued Wag and Lasta. In the meanwhile, Wəbe's nephew ↗Nəguśe Wäldä Mikaʾel, assisted by his brother Täsämma, overthrew T.'s appointee in Təgray Kaḥsay, the son of *daǧǧazmač* ↗Säbagadis, and challenged T.'s rule from the north. Campaigning in Bägemdər and Wällo was interrupted by the sudden sickness, then death on 19 August 1858, of his beloved wife, Täwabäčč. This was the first of a series of personal blows which may have contributed to the deterioration of T.'s character.

In 1859, T. hunted Amäde Bäšir, severely punishing the Wällo Oromo. He then turned his attention to Šäwa, where, in October 1859, he suppressed the rebellion of *abeto* ↗Säyfu Śahlä Śəllase. The massive punishment that followed lived on in folk memory (s. MonVidTheo 21). Šäwa was still not completely under T.'s control, despite the large tribute provided by Ḫaylä Mikaʾel (MorTeod 174), whom T., however, replaced with *ato* Bäzzabbəh. In 1860, he turned his attention to Təgray (cp. ↗Russel). In March of that year, T. married Wəbe's daughter, *wäyzäro* ↗Ṭəru Wärq, who bore him his only legitimate son, ↗ʿAlämayyähu. In that same month, his nephew ↗Gärad Kənfu, who had joined Nəguśe, killed T.'s close friend, the British Consul ↗Plowden. Revenging his death, T. lost another close friend and advisor, *liqä mäkʷas* John ↗Bell. In 1861 T. captured, and cruelly executed both Nəguśe and his brother Täsämma. The deaths of Plowden and Bell dealt T. another traumatic blow, though the defeat of Nəguśe probably marked the peak of his power.

In 1862, despite his great efforts and some success, T.'s realm was still far from stable. Complete victory over regional lords and rebels remained elusive, while resistance to T.'s policy and methods kept growing. In addition, the Egyptians again threatened the Sudanese border. In 1863 T. defeated Tädlä Gʷalu in Goǧǧam, killing nearly 7,000 of his soldiers; Tädla himself managed to escape. In the same year, Bäzzabbəh rebelled in Šäwa, and ↗Ṭiso Gobäze in ↗Wälqayt. Lasta fell into the hands of *wag šum* Gobäze (Gäbrä Mädḫən's son, the future *aṣe* ↗Täklä Giyorgis). On 30 June 1865 young Mənilək escaped from Mäqdäla, and made his way to Šäwa where he deposed Bäzzabbəh.

In 1865 there were clear signs that T.'s real power was weakening. His officers and chiefs were conspiring against him, his soldiers were deserting his army, and local governors were searching for ways to reassert their autonomy. By 1866, T. was isolated and hated by most of his subjects, and had lost control over the larger part of his realm. In December he attacked and pillaged ↗Gondär and sacked its churches, which he perceived as bastions of sedition. In 1867, desperate, he burnt Däbrä Tabor and retreated to Mäqdäla.

III. The fall of Tewodros

T.'s end was brought about not by his own rebellious subjects, but by the military force of a foreign power, the ↗Napier expedition, the result of the dispute about European captives ("the Abyssinian question"), which had started as early as 1862. On 30 October 1867, British military forces landed at Zula and set out towards Mäqdäla in order to free the captives (67; s., e.g., Markham 1869: 340), encountering no resistance from the local chiefs and people. On 10 April 1868, the invaders defeated T.'s army and killed his general ↗Gäbrä Ḥəywät Goššu at Aroge (↗Fala). After a short siege, Mäqdäla fell on 13 April, Easter Monday. In the evening, before the British soldiers could reach him, T. committed suicide. On their withdrawal from Ethiopia, the British presented Kaśa Mərč̣a, one of the local princes whose support was crucial for the expedition, with a large supply of ammunition, a circumstance that later helped him ascend the throne as *aṣe* ↗Yoḥannəs IV.

B. Assessment of Tewodros's reign

I. Tewodros's foreign politics

The wish to establish contacts with Europeans and European states was not uncommon among 19th-cent. Ethiopian lords. T., however, appears to have been the first to develop a strategic vision of an exterior policy for Ethiopia, with a kind of an "international project" for other Christian states, his allies by definition, in which the "new" Christian Ethiopia would have its place and be treated as an equal. As a part of this policy, T. wanted to remove the Egyptians and get direct access to the ↗Red Sea (RubInd 55ff.). T. clearly saw the necessity of an alliance with a European state and actively sought it. At the same time, T. realized the European states' immense power, and the possible danger of their infringing on Ethiopian sovereignty.

T.'s policy and vision of how to reform and modernize Ethiopia was much shaped by his personal relations with Europeans. The first Europeans whom T. befriended were the Englishmen Bell and Plowden, the latter giving full support to T. by 1855. A visit from the missionaries ↗Krapf and ↗Flad in April 1855 resulted, with the help of ↗Gobat (RubActa II, no. 5), in the arrival of the first missionaries of the ↗St. Chrischona Pilgermission in 1856. The St. Chrischona missionaries, were prepared to serve the Emperor as artisans, and a few of them, notably ↗Waldmeier and ↗Saalmüller, became T.'s close friends.

Initially disposed well to all Europeans, T. favoured the British, associated with ↗Protestantism. After the expulsion of Catholic missionaries, who had turned to Nəguśe, a fact of which T. was aware, the French became unwelcome at T.'s court (cp. ↗Lejean). T. repeatedly wrote to a few European monarchs, including Napoleon III and the Tsar Nikolai I, asking for craftsmen, weapons and technology, but a dream he particularly cherished was that of an anti-Muslim alliance with the ↗United Kingdom and of a personal "friendship" with Queen Victoria. T., however, could not have been aware of the complexities of changing European politics (by 1862, Britain had switched to a pro-Turkish policy), and was unable to distinguish between the personal opinion of individual Europeans (Bell and Plowden) and the official position of their respective governments. As in many other cases, personal qualities of T. and his "erratic" and "mercurial" behaviour also played a significant role. The tension with the Europeans was thus not an unlucky coincidence (cp. Waldmeier 1886: 78–86), but rather a logical development.

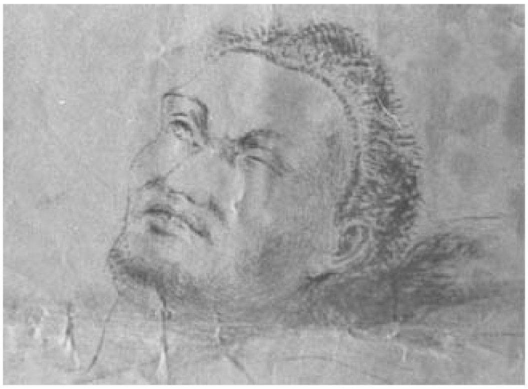

Fig. 2:Portrait sketch of *aṣe* Tewodros II after his suicide by R.R. Holmes, 13 April 1868; from the collection of Ken Doig

After Plowden's death, his replacement as British consul, ↗Cameron did not arrive until 1862. In October of that year, T. sent via Cameron his famous letter to Queen Victoria asking for an exchange of embassies and help against the "Turks" (Girma-Selassie Asfaw – Appleyard – Ullendorff 1979: xiif., no. 3b; RubActa II, no. 117; RubTew ill. pp. 48f.), whom T. wanted to see not only defeated on the Red Sea coast and the Sudanese border (from Qʷara, ↗Mätämma to ↗Kassala), but also expelled from ↗Jerusalem. He never received a reply to this letter (nor to letters he had sent in 1857 and 1861). In 1863, T. began to understand that his hopes for support from European states would not be realized, and he became very sensitive to the behaviour of foreigners. Instructions from the Foreign Office, that Cameron keep his distance from, and make no commitments to, T., created problems and the discovery that the British had sided with the Turks insulted the Emperor. The same year, he placed the St. Chrischona missionaries in custody. The situation worsened thanks to the quarrelsome behaviour of the French consul, Guillaume ↗Lejean, unsatisfactory correspondence with the French Government, and the still more offensive behaviour of the missionary to the Betä Ǝsraʾel, Henry ↗Stern, which led to the arrest, in October 1863, of Stern and his colleague, ↗Rosenthal (RubTew 85f.). In early 1864 T. imprisoned Cameron and other Europeans.

In July 1864, yet another British agent, ↗Rassam, came to Massawa (with Henry Blanc and ↗Prideaux), but was allowed to proceed only after months of correspondence and reached T. only in January 1866. Artisans were promised in exchange for the prisoners and Flad was sent to Britain to fetch them, with a letter from T. (Rassam 1869, vol. 2, 100). Finally, Rassam was also imprisoned. On 21 August 1867, the British decided to send a military expedition to Ethiopia. Tragically, until the very last T. continued to hope for the friendship of, and an alliance with, Great Britain (cp. Pankhurst 2008: 63) and made desperate attempts at reconciliation.

II. Tewodros as modernizer and reformer

T.'s role as modernizer and reformer is discussed in many studies (Pankhurst 1965; Crummey 1969; Morgan 1969; Pankhurst in Taddese Beyene – Pankhurst – Shiferaw Bekele 1990; RubTew etc.). The wish to acquire modern (military) technology and bring craftsmen had been expressed by several Ethiopian lords before him. However, T. was the first to believe that a modernized centralized state was the only way for the Empire to be restored and survive, and to gain acceptance among "civilized countries".

T. was highly interested in technical innovations. With the cannon-casting efforts of his Gafat artisans (esp. Saalmüller, ↗Hall, Waldmeier), T. sought to realize his dream of producing ↗firearms in Ethiopia; he initiated construction of ↗roads, tried cart- and boat-making and introduction of ↗printing. Despite their tentative nature, as precedents, these innovations were significant.

As in the case of technology, T. aspired to a wide range of changes which would help him create a unitary state in which the monarch alone would have the supreme power. T. tried to replace local lords with appointed governors and administrators responsible directly to him, and (re)gain control over the local ↗tributes and revenues. Also T. pioneered in keeping the records of tribute (cp. Pankhurst – Germa-Sellassie Asfaw 1978).

The most important reform was an attempt at creating a standing army: building up regular, disciplined regiments with subsequent integration of all local military forces; introduction of payment for the soldiers; prohibition of traditional pillaging (endeavours in which T. himself was inconsistent, mostly applying the techniques of traditional warfare unchanged).

Simplification of custom duties, prohibition of the slave trade (↗Slavery) and some judicial reforms were also attempted, including the abolition of blood feud, limitations to polygamy, and introduction of collective criminal liability. T. actively adhered to his role as the supreme and just judge (referring to the ↗*Fətḥa nägäśt*) and tried to reduce crime by all possible means. (However, especially during the last period of his reign, T. frequently took recourse to excessive punishments or mass executions and even random killings).

As far as land politics was concerned, T.'s decree limiting the number of ministrants in the churches and confiscating redundant church lands, subjecting them to taxation (MonVidTheo 27f. [text] = 34f. [tr.]; CrumLand 205), rectified the imbalance which had emerged during the ↗Gondärine Kingdom and which had favoured ecclesiastical tenures over military tenures.

T. firmly believed in his being "elected by God" to the throne, and he claimed for himself a link to the ↗Solomonic dynasty (RubTew 49; Crummey 1988: 17–23). Reviving the old ideal of a vigorous warrior-king (blurred after a number of puppet-kings of the *Zämänä mäsafənt*), he added to court culture new features, exemplary for the entire country and sometimes going much against Ethiopian custom such as personal participation in road construction.

While T.'s attempts and determination – revealing quite an extraordinary personality – won great admiration among Europeans (cp., e.g., Plowden 1868: 455–59), they scored less sympathy among T.'s Ethiopian subjects. There is still no coherent picture of T.'s reforms, but they look spontaneous and uncoordinated, and in principle had hardly any chance for success. In addition, T. was not much concerned about the social consequences of his measures (cp. Crummey 1969: 465), nor did he really understand the depth of the problems he had to tackle. Despite some initial sympathy and support, it soon turned out that T.'s policy affected negatively nearly all groups of the population. Encountering growing opposition everywhere and having no institutionalized means to carry out his reforms, nor, despite his being from Qʷara, an assured political base, T. increasingly resorted to violence (cp. Crummey 1971).

After T.'s death, his reforms were discontinued and his innovations fell out of use; however, it is widely recognized, that many of T.'s visions were realized, though in different forms and with a different tempo, in the policies of Mənilək II and ↗Ḫaylä Śəllase I. In this sense T. – in spite of his apparent failure – is justly called "the father of modern Ethiopia" (RubTew 90; cp. Crummey 1969).

III. Tewodros and the Ethiopian Orthodox Church

T. was a deeply religious person, who grew up within the cultural context of Orthodox Christianity. He believed that a strong and vital Church was a necessary foundation for the survival of the ↗monarchy. He saw Ethiopia as a Christian state and considered ↗Islam its enemy. Initially, but briefly, his reign was marked by an alliance with *abunä* Sälama who praised the new monarch (Crummey 1969: 462; CrumMis 141) and gave him full support. In turn, T. tackled the issue of the unity of the Church. In Šäwa he pursued the adherents of the ↗*Śost lədät*; he was also harsh to the followers of the ↗*Qəbat* and ↗*Ṣägga* teachings, all seen as heretics by *abunä* Sälama, who insisted that the only true interpretation of faith was the *Karra* doctrine. Catholic missionaries were expelled. As to the Protestants, T. intended to employ them exclusively as craftsmen and was in favour of lay missionaries (CrumMis 116–20; cp. Appleyard et al. 1985, no. 26). Finally, he allowed them to preach among the Betä Ǝsraʾel on the condition that all converts become members of the Ethiopian Orthodox Church (cp. ↗London Society for Promoting Christianity among the Jews).

However, tensions between T. and the Church, as well as *abunä* Sälama personally, soon emerged. After ascending to the throne, T. revealed his plans concerning the landed property of the Church (CrumLand 205). In October 1856 he quarrelled with Sälama over the issues of landed property and of monarchical versus ecclesiastical authority (MorTeod 168f.; RubTew 70f.). They were reconciled by Ethiopian clergy and the Coptic Patriarch Cyril, but from that moment onward their relationship deteriorated. The rupture was complete in 1864, when Sälama was imprisoned in Mäqdäla.

Full of messianic vigour, T. developed his own view of Christian life and the reformation of the Church, in which the latter would be fully submitted to the State and its head. Despite T.'s personal religiosity, pious life and rigorous anti-Muslim stance, his harsh treatment of the clergy, and support of such innovations as the ↗Bible in Amharic made him deeply unpopular with the clergy. T.'s underestimation of the role and strength of the Church contributed to his isolation and fall.

IV. Tewodros as a "national hero"

Apart from the scholarly debate about the personality of T. and his historical role, which still goes on, his controversial and tragic, but magnificent figure acquired in the 20th cent. an important and symbolic place in the self-consciousness of many Ethiopians, as well as in a new Ethiopian nationalism and state ideology. The image of T. appeared in the murals of the ↗Parliament building, inaugurated in 1931. To subsequent generations T. appeared as the first of the three great 19th-cent. Ethiopian emperors. Quite a number of works of ↗Amharic literature are dedicated to T., e.g., by ↗Bərhanu Zäryəhun, ↗Gərmaččäw Täklä Ḥawaryat, ↗Abbe Gubäñña, ↗Ṣäggaye Gäbrä Mädḫən (cp. Taye Assefa 1983: 115–28); several scenes from his life, like "the judgement of T." and "the suicide of T.", became recurrent topics of folk ↗painting. Reinforcing T.'s image, a replica of his great cannon "Sebastopol" was recently inaugurated at the T. square in Addis Abäba.

Tewodros

Wag šum T. (**ቴዎድሮስ**; fl. 1740s) was a grandson of ↗*wag šum* Assər I (fl. 1680s) in the line of local rulers of ↗Wag and ↗Lasta and a contemporary of *aṣe* ↗Iyasu II. T. came to power in a period of intense power rivalry within the family of Assər I, and his nephew *wag šum* ↗Arʾayo.

In 1740 *aṣe* Iyasu campaigned at the head of a large army to ↗Wag. When he arrived at the ↗Täkkäze crossing, he sent a stern warning to T. reminding him to pay his annual ↗tribute. T. paid in the form of cattle, and the planned invasion was averted.

In order to assure his suzerainty, Iyasu made another expedition to Wag in 1746. His army, on the way to ↗Säqoṭa, destroyed many towns and seized numerous animals, they also received help from T.'s son, Məhərka. In Säqoṭa Iyasu spent five days in the house of *wag šum* ↗Näʾakkʷəto Läʾab but afterwards chased him and his son ↗Gigar out of town, they had to retreat to ↗Wäfla. Subsequently Iyasu reinstated the family of Assər to power and officially appointed one of T.'s sons, either Täklä Häymanot or Məhərka, as *wag šum* (cp. GuiIyas 128–40). T.'s later life remains unknown.

Wudu Tafete Kassu

Tewoflos

Aṣe T. (**ቴዎፍሎስ**, regnal name Aṣrar Sägäd; r. 1708–11, d. 14 October 1711) was the brother of *aṣe* ↗Iyasu I, who died in 1706, and was the second ruler to succeed him, after the assassination of his nephew and Iyasu's son ↗Täklä Haymanot I.

T. came to the throne at the instigation of one of the court notables, ↗Yosṭos, who would later, in turn, depose him. In his first round of appointments, T. made Yosṭos the governor of ↗Səmen and Təgray.

On 3 August 1708, shortly after his accession, T. issued a proclamation establishing the doctrine of ↗*Qəbat* as the official teaching of the Ethiopian Orthodox Church (BassÉt 63f.; BégCron 90; DombrChr 86), thus ending the domination of the ↗*Täwaḥədo*.

It is possible that already the deposition and subsequent murder of Iyasu had been at the hands of *Qəbat* partisans from Goǧǧam. Iyasu's successor, Täklä Haymanot I, continued, to their disappointment, to support *Täwaḥədo*, with the result that he was assassinated during a hunting excursion in Goǧǧam. T., finally, took the side of the *Qəbat* party.

T.'s proclamation was challenged by the *Täwaḥədo* party who protested that doctrinal matters were not like matters of landed property, *rəst* and *gʷəlt*, and were not to be resolved just by royal edict, but first required discussion in council. T. argued that his proclamation did not reflect hostility towards their doctrine, but was a measure designed to allow him to rule Goǧǧam – a reflection of how deeply doctrine and regionalism had become associated. However, T.'s actions went well beyond a gesture designed to placate Goǧǧam. He appointed a *Qəbat* follower to the post of ↗*ᶜaqqabe säᶜat*, previously a preserve of the *Täwaḥədo* clergy. For over a year and a half he neglected to appoint an ↗*əčč̣äge*, the leader of the monks of St. Täklä Haymanot at ↗Däbrä Libanos who were major proponents of *Täwaḥədo* teaching. He also patronized a contemporary Ethiopian saint, *abunä* ↗Abranyos, a noted *Qəbat* proponent, and endowed his monastery with land (Raineri 1983:601; Bausi – Lusini – Taddia n.d.). To legitimate his religious views, T. also dedicated his most notable foundation, the church of ↗Ḥamärä Noḫ in Gondär (1709; ms. BritLib Orient. 508, fol. 278r), to the 318 Fathers of the Council of ↗Nicaea.

T. quickly avenged the deaths of his predecessors. On 13 October 1708, he sentenced Iyasu's murderers to death. Iyasu's wife, *ətege* ↗Mäläkotawit, and her brother, P̣awlos, were hung in the main square of Gondär (BassÉt 64). The gunmen, who actually had shot Iyasu, were themselves shot. The murderers of Täklä Haymanot were executed by spear thrust.

T. spent the early months of 1710 in ↗Dämbəya and ↗Wägära (two regions bordering on Gondär) and ↗Səmen, killing bandits and thieves who had plundered and killed people on the main roads and in churches (DombrChr 93; cp. BassÉt 65; BégCron 92).

T. faced the challenges of several pretenders, one in the first half of 1710, the other in the latter half. The latter was put forward by Tige, formerly governor of Səmen, who had assembled a large army of Oromo troops. This insurrection was quelled in a major battle at ↗Yəbaba in early April 1711.

There were two ↗famines in T.'s reign: the drought from September 1708 until June 1709; and an even worse one the following year (DombrChr 254f.).

Although his reign was marked by political and sectarian conflict, T. did find time for more strictly administrative matters. In 1709 he visited ↗Ǝste, where the royal horses were bred and pastured and had them inventoried.

Shortly before his death, T. granted land to ↗Däbrä Daga Ǝsṭifanos, for commemorative services for his predecessors Zärᵓa Yaᶜəqob, Dawit, Zädəngəl, Fasilädas, as well as for himself. Then he "transferred" to Yosṭos "the power in his kingdom" (DombrChr 258). T. died of illness and was buried at Ṭädda, a foundation of his father.

Tewoflos

Əčč̣äge T. (**ቴዎፍሎስ**, b. Wägära, d. after 1896) was a 19th-cent. head of ↗Däbrä Libanos in Šäwa.

When T. (for ill. s. ↗Photography) was a ↗hermit, he prophesied to *däǧǧazmač* Kaśa Ḫaylu (the future *aṣe* ↗Yoḥannəs IV) that the latter would become emperor. When the prophecy was fulfilled, Yoḥannəs showed his gratitude by appointing T. the 55th ↗*əčč̣äge* of Däbrä Libanos in 1872. Another reason for the appointment may have been Yoḥannəs's wish to have an adherent of ↗*Karra*, the doctrine Yoḥannəs supported, as head of Däbrä Libanos which for several centuries had followed the ↗*Yäṣägga ləǧ* doctrine. In any case, Yoḥannəs seems to have revered T., even bowing to him when they met. T. was also present at the ↗coronation of Yoḥannəs, who later also made T. ↗*liqä kahənat* of Šäwa (Ḫəruy Wäldä Śəllase 1988/89:114).

Trying to settle the conflict between *Karra* (based mostly in Təgray and Goǧǧam) and *Yäṣägga ləǧ* (dominant in Šäwa), Yoḥannəs summoned a synod in ↗Boru Meda in 1878. The resulting edict banned the *Yäṣägga ləǧ* doctrine, threatening those who would not renounce it with severe punishment (Ḫəruy Wäldä Śəllase 1988/89:114). Yoḥannəs tortured *Yäṣägga ləǧ* monks who would not recant, but T. is reported to have intervened and stopped the execution.

Soon upon his ascension to power in 1889, ↗Mənilək II deposed T. and appointed his own father confessor ↗Gäbrä Śəllase *əčč̣äge* (CerDLib III, 164; BTafA 695). He also deposed T. as *liqä kahənat*, replacing him with *abunä* ↗Matewos, bishop of Šäwa and later metropolitan.

T. withdrew to ↗Aksum where he also became involved in political events. In 1892, he convened a meeting in ↗ᶜAdwa, attended by *ras* ↗Alula Ǝngəda, *ras* ↗Ḥagos Täfäri and *ras* ↗Mängäša Yoḥannəs, in order to discuss the conduct towards the Italians in Eritrea (Conti Rossini 1935:76).

The British traveller ↗Wylde met the aged T. in Aksum and conversed with him. He described T. as a very pleasant and intelligent person (Wylde 1900: 158). Besides religion and politics they even discussed the taxation system of Ethiopia, which T. considered too burdensome (↗Tributes and taxation).

T. is also reported to have been in close contact with some Italians such as ↗Baratieri and even uttered proclamations in their favour. It was known that T. showed more sympathy to the Italians than to Mənilək (Wylde 1900: 158). He died of pneumonia sometime after 1896 (ibid.).

Tewoflos

Abunä T. (**ቴዎፍሎስ**, birth name Mälᶜəktu; b. 24 April 1909, Däbrä Gännät Elyas, Goǧǧam, d. 14 July 1979, Addis Abäba) was the second Patriarch of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC).

T.'s parents were *ato* Čämbäre Wəbe and *wäyzäro* Zäritu Adällahu. T. completed the first and second stages of traditional ↗education at his home parish, ↗Däbrä Gännät Elyas. In 1927, he travelled to the Šäwan monastery Addis ᶜAläm Maryam where he studied commentary (↗*Mäṣḥaf bet*) under *nəburä əd* Ḥaddis Täkle (later *abunä* ↗Yoḥannəs). He received monastic orders at ↗Däbrä Libanos of Šäwa in 1937 and was ordained priest by *abunä* Abrəham, the then Archbishop of Goǧǧam.

Soon after the Liberation from Italian occupation, T. became abbot (↗*Mämhər*) of the Mäkanä Śəllase monastery in Addis Abäba and later *liqä śəlṭanat* (↗*Liq*) of the modern church of ↗Qəddəst Śəllase. After five years of service, he was elected to one of the bishops in 1947 and was ordained by Joseph II of Alexandria as bishop of ↗Harär with the name of T.

T. was also appointed by Emperor ↗Ḫaylä Śəllase I as regent for *abunä* ↗Basəlyos, the first Archbishop (January 1950) and later Patriarch (June 1959) of the autonomous EOTC. Upon the death of Basəlyos in 1970, T. became Patriarch on 9 May 1971.

T. introduced a number of reforms. He attempted to bring the EOTC into the 20th cent. by introducing modern educational methods both in the theological schools and in the churches. He reorganized the administrative structure of the church from the patriarchate to the parish level. He opened Parish Councils and Sunday School departments, both at the diocese and parish level. He introduced the first modern church constitution, called *Qalä ᶜawadi*, to bring bureaucracies in order and unify the administrative structures of the church at all levels. He also understood the importance of the church's engagement in alleviating social problems in the country and hence established the church's development wing, the Development and Inter-church Aid Commission. The commission did a remarkable job in response to the catastrophic famine of 1973/74.

T. is today perceived as the most far-sighted leader of the Church. Anticipating future developments, he invested much money in constructing business and residential complexes in the capital and the regions, thereby securing reliable sources of income for the EOTC (Märša Alläḵäññ 2004: 57). Aware of the problem of the disappearance of the literary heritage, he inspired Walter Harrelson to initiate the ↗Ethiopian Manuscript Microfilm Library project. He himself was also engaged in research and publication. He edited and published a commentary to the ↗Psalter (1957/58). T. also reviewed EOTC representation abroad, elevated its status to an archdiocese and appointed *abunä* Atnatewos as its head. He encouraged ecumenical relationships with other Oriental and Eastern Orthodox Churches. In January 1965, he convened the first conference of the Heads of Oriental Orthodox Churches in Addis Abäba. T. also represented the church at the establishment of the World Council of Churches and began the process of rapprochement with the Roman Catholic Church, which, however, earned him some internal opposition.

After the ↗Revolution, the ↗Provisional Military Administrative Council (*Därg*) suspected T. of corresponding with the leadership of the monarchist Ethiopian Democratic Union. When T. ordained five new bishops (including *abunä* Ṗawlos, the fifth Patriarch of the EOTC), the *Därg* arrested him on 3 March 1976 accusing him of acting without government approval. T. along with other top imperial officials was executed on

14 August 1979. *Abunä* ↗Täklä Haymanot was elected the third Patriarch.

On 10 August 1992, following the fall of the military regime, T.'s remains were unearthed, and reburied in full ceremonial state at the Gofa Qəddus Gäbrəᵓel church which he himself had built in southern Addis Abäba. The EOTC canonized him as a martyr.

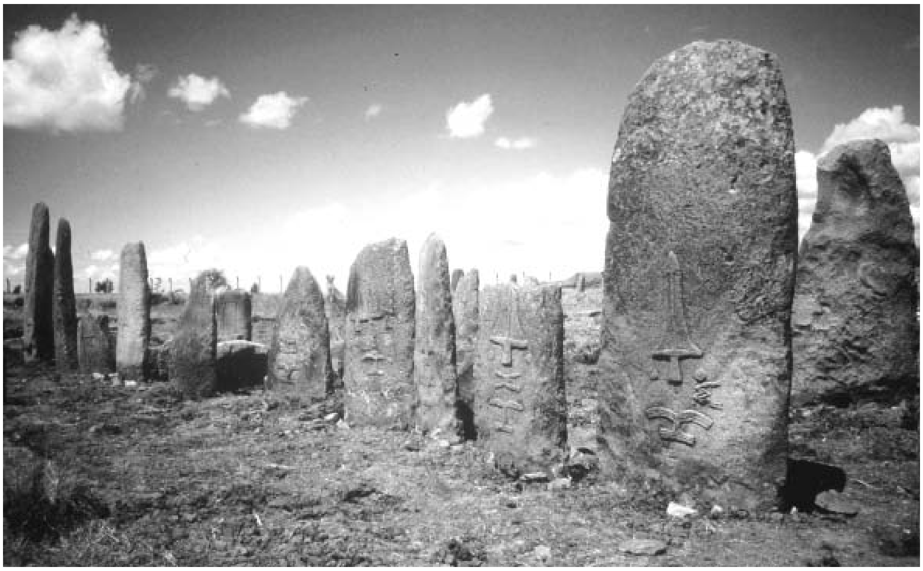
Ṭəya

Ṭ. (also Ṭiya, 8° 26' N, 38° 36' E) is a town located in ↗Soddo *wäräda*, Gurage zone (for location s. map for Ṭəčo). It is best known for its adjacent archaeological site, which was included on UNESCO's World Heritage List in 1980. In 2004 the population of the town was 3,210 (CSA 2004).

The site of Ṭ. was visited by François ↗Azaïs and Adolf Ellegard ↗Jensen in April 1935. It was the object of three excavations in 1982, 1990 and 1991 and of restoration in 1998 directed by Roger Joussaume (Joussaume 1995). It comprises three groups of ↗stelae. The first group is composed of some 40 stelae forming an area about 50 m long and orientated south-west/north-west. Behind the stelae, slabs standing on their sides form polygonal spaces in relation to tombs below them. To the north, four stelae form a second line where the biggest stela of the site is located (over 5 m). It shows 19 swords carved on two registers. The top of this stela was relocated to the park of the ↗Institute of Ethiopian Studies in Addis Abäba. To the west, another group with four standing stelae has not yet been studied.

The stelae are flat slabs worked with the help of metal adzes. They contain a basal perforation of a few centimetres in diameter that is situated at ground level when standing. On the first level, a branched design, normally in relief, is topped by an X or upside-down W sign, sometimes with two circles in relief. This symbolic triad forms the first level of decoration of the stela. The second level, when it exists, is formed of swords, with the points upwards when they are alone and upside down when they are in groups.

All the stelae studied have been found to be associated with tombs placed behind the deco-



The restored stelae of Ṭəya; photo courtesy of the author rated side of the stela. The bodies were placed at a depth of some 2 m. Often with knees bent and lying on one side, they may be superposed in the same grave by other bodies separated by a slab.

The 45 tombs that have been excavated contain 54 skeletons. The tombs containing two bodies include a male and a female. No young person was buried in the cemetery and it can be hypothesized that it was reserved for the elite. 2/3 of the people buried were between 20 and 30 years old and the average height was 1.70 m for males and 1.62 m for females.

In the tombs, some beads in multicoloured glass forming bracelets were found as well as necklaces, earrings in bronze, a bracelet and an iron pin. Cattle breeders, the people of Ṭ. consumed grains such as sorghum and millet.

Carbon 14 dating indicates an occupation from the 12th and 13th cent. A.D. The end of the site may be associated with the beginning of the Christianization of southern Ethiopia in the 14th cent.

Theatre

Theatre in Ethiopia

As with many African countries, pre-colonial T. in Ethiopia is under-researched. We know the ↗*azmari* tradition of singer-musicians has existed for many hundreds of years amongst the ↗Amhara the Ethiopian Orthodox (Täwaḥədo) Church has long had a range of performance traditions, including ↗*aqqʷaqʷam* and an elaborate poetry tradition of ↗*qəne*. *Zar*, a form of ↗possession predominantly dance-ritual performed by women, has long been widespread though under-reported since it is approved by neither Christian or Muslim authorities. However, the performance traditions of Ethiopia's plethora of ethnic groups, especially those outside the Christian heartlands, have been little studied and knowledge remains minimal.

Modern T. dates back to ca. 1921, when ↗Täklä Ḥawaryat Täklä Maryam's play **ፋቡላ፡ የአውሬዎች፡ ኮሜዲያ** (*Fable. Yäʾawrewočč komediya*, 'Fabula. The Comedy of Animals'), influenced by the fables of La Fontain, was staged at the court. This thinly veiled vehicle of criticism was promptly banned. Until ↗Ḫaylä Śəllase I came to the throne in 1930, modern T. was only seen in the handful of modern high schools operating in the capital of ↗Addis Abäba.

Ḫaylä Śəllase sought to use drama both to signify his modern credentials and to support his imperial status. In the period between 1930 and the Italian invasion of 1935 the Emperor commissioned school-master playwrights ↗Yoftahe Nəguśe and ↗Mälʾaku Bäggosäw to produce between them five plays for special court production. This work was supported by drama as a focus at the govermental Lycée Menelik II where the nation's first T., a large zinc shed, was constructed in 1934. What is significant is that Ethiopian T. developed as a partnership between court and an elite with European influences. Productions were all in Amharic, and emphasis was put on fine, flowery language. Acting and actors were seen as relatively unimportant. Actors were schoolboys pressed into service and no women were seen on stage. From Europe was taken the idea of the proscenium arch stage, the concept of dialogue-oriented drama, and European ideas of theatrical form were broadly appropriated.

Under the Italian occupation of 1936–41 all cultural production was suppressed. However, the return to independence was directly related to the establishment in 1941 of Ethiopia's first professional theatre company, *Yähagär Fəqər Maḥbär* (Ethiopian Patriotic Association). The Association had its origin in the cultural agitation against the Italian invasion. It was transformed into the ↗*Hagär Fəqər Tiyatər* in 1957/58. This venue put on variety-style performances which remain popular to this day, with a professional *azmari* company, privileging ↗*qəññət* in the widely popular dance, song and music traditions of the *azmari.* Short drama productions were largely improvized around a scenario produced by a playwright since the actors were illiterate. The most prominent of the populist scenario producers of the period was Iyoʾel Yoḥannəs who produced over 70 scripts in the course of a long career.

In the following years more T. were built in the capital. The City Hall Company was set up in 1946/47 and in 1955 the Ḫaylä Śəllase I Theatre was built as a focus for the Emperor's silver jubilee celebrations. Imperial support led to a dramatic writing vogue amongst the elite.

Most prominent of the aristocratic playwrights was *ras bitwäddäd* ↗Mäkʷännən Ǝndalkaččäw. Other prominent names of the 1940s and 1950s include ↗Käbbädä Mikaʾel and ↗Gərmaččäw Täklä Ḫawaryat, while 1949/50 saw the first play written by an Ethiopian woman, Sənəddu Gäbru's **የኢትዮጵያ፡ ሕዝብ፡ ናፍቆት** (*Yäʾityop̣ya Ḥəzb Nafqot,* 'The Longing of the Ethiopian People') about the massacre of Ethiopians in Addis Abäba by the Italian general ↗Graziani. These plays were never popular drama, but were for court circles, and the playwrights had rather peculiar ideas about form. Plays ran up to thirteen acts, many in verse, and stage directions were often not separated out from dialogue (KaneLit 21).

Ethiopian T. underwent a radical change in 1959 when ↗Ṣäggaye Gäbrä Mädḫən became the first of a key group of young writers, actors and directors, including ↗Mängəśtu Lämma, Täsfaye Gässäsä, Däbbäbä Ǝšätu and Wogayyähu Nəgatu, to return from taking up T. scholarships in Europe and the USA. The young Ṣäggaye was appointed Vice-Director of the Ḫaylä Śəllase I Theatre (later National Theatre) and promptly set about promoting his own taste in T. This featured a series of his own plays, plus translations of classics such as Molière and Shakespeare. For the first time world T. was being seen in Amharic and serious original plays such as Ṣäggaye's **የከርሞ፡ ሰው** (*Yäkärmo Säw,* 'Next Year's Man') were focusing on the lives of ordinary people. What was important about this new generation was not only that it was much more technically assured as to the nature of drama than the aristocratic generation which preceded it, but all those who had travelled abroad had become significantly radicalised. Consequently the T. became both much more widely popular, and began to come under scrutiny from the Emperor who obsessively and personally read and censored all plays put forward for production. By this time, women had entered the Ethiopian stages. The first actress, Sälamawit Gäbrä Śəllase had been employed in 1954, but almost all actors had very low status and correspondingly low wages, while the playwright directors were admired and took a substantial cut of box office receipts.

Although T. had been developing a radical edge throughout the sixties, it became a true political force in 1974, as part of the growing tide of events leading to the overthrow of the monarchy. In February 1974 Ṣäggaye Gäbrä Mädḫən threw his lot in with the army grouping, the *Därg* (↗Provisional Military Administrative Council), which would soon seize power. His **ሀ ሁ፡ በስድስት፡ ወር** (*Ha Hu bäsəddəst wär,* 'ABC in Six Months') portrayed a soldier as the hope for a better future. Once Ḫaylä Śəllase had been overthrown in September 1974 the now uncensored T. became a focus for debate as to the political way forward. Playwrights like ↗Abbe Gubäñña, ↗Mängəśtu Lämma and Täsfaye Gässäsä all put on works damning the old regime and suggesting strategies for political transformation, while actors took part in demonstrations demanding change.

A patriotic play on stage in 1935; from Rikli 1935: 48

This honeymoon period was hugely influential but lasted a relatively short time. By late 1975 censorship was once more in place.

During the late 1970s the military government tightened its grip on the T., but also expanded its use as a propaganda tool. Two new T. were opened in the capital, but more importantly the state embraced agit-prop drama as a means of conveying its messages across the country. Youth associations were encouraged to produce drama explaining the new state and there is evidence that for some years at least this form was a popular means of getting information out, especially to the illiterate peasantry in the countryside.

By the late 1970s the T. and its output were firmly under state control and playwrights moved away from politics towards more historical plays, comedy and uncontroversial translations of foreign classics, a policy which has largely continued for fear of state reprisals. Developments have largely been in training and the spread of theatrical expertise.

In 1978 a Theatre Arts Department was set up at ↗Addis Ababa University and this has gradually driven up acting standards and the status of actors as well as developing new playwrights and directors. The introduction of women graduates also led to some challenges to the endemic sexism of the Ethiopian theatre establishment. The government has sought to send graduates into the regions to promote good practice, though this policy has been so under-funded that the impact has remained minimal outside major towns. The T. remains popular but is no longer dominated with radical intellectuals, rather it has become popular entertainment for middle and lower-middle class families and youth.

With the overthrow of the *Därg* in 1991 many hoped that T. would be allowed more freedom. A limited youth T. movement has developed, but as in many African nations with the arrival of cheap video technology, many leading T. personnel have moved into independent video production where financial returns are often much higher than in the theatre.

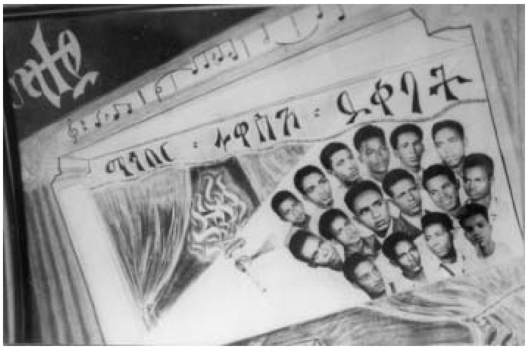
Jane Plastow

Theatre in Eritrea

T. arts in Eritrea can be divided into the performance forms of the nine ethno-linguistic groups and urban T. Indigenous performing arts (religious and secular) are largely music-, song- and dance-based and practiced widely. Urban T. arts were initially introduced with Italian ↗colonialism in the form of neo-naturalistic drama, variety shows, concerts and operas. Originally they were not accessible to Eritreans due to rigid race segregation under Italian colonial rule.

Eritrean theatrical activities on urban stages started during the ↗British Military Administration (1941–52), owing to an emergent Eritrean nationalism and better access to education (school drama). Following the success, and subsequent censorship, of Bärḥe Mäsgun's anti-colonial play **ዘሓለፈ፡ ንብረት፡ ኤርትራ** (*Zəḥaläfä nəbrät Ertəra*, 'The Past Condition of Eritrea') under the Unionists (↗Unionist Party), the first indigenous T. association, *Maḫbär täwasəᵓo däqqäbbat* [MaTäDä] ('Association of Indigenous Theatre' or, in their own words, 'The Native Comedy and Dramatic Association') was founded in 1947. Among its formative members were ᶜAlämayyähu Kaḥsay, ᶜAli Saᶜid, Täsfay Gäbrä Mikaᵓel and many teachers. MaTäDä mounted Təgrəñña drama, variety shows and the 1st National Singing Contest in 1956, after which it fell apart. A second association, *Maḥbär məməᶜbal hagärawi ləmdi* ('Association for the improvement of national customs') followed from 1957–60. *Maḫbär təyatər Asmära* ('Asmära Theatre Association', [MaTəA]), initiated in 1961 by Täwäldä Rädda and Təkkabo Wäldä Maryam, proved to be the most prolific Eritrean theatre association. Under the leadership of ᶜAlämayyähu Kaḥsay, it operated until the mid-1970s in the areas of comedy, stage drama and music. Popular artists such as the singer Täbärək̠ Täsfahuñ originated from the group. Censorship and political repression under the Ethiopian regime led to MaTəA's decline. Some artists were coerced to stage pro-government propaganda, others joined the liberation fronts, the ↗Eritrean Liberation Front (ELF) and ↗Eritrean People's Liberation Front (EPLF).

Cultural activities in the ELF – mostly music, agitprop and dances of selected ethnic groups – started under Romädan Gäbrä in 1968, but took more professional form under Nəguśä Ḫaylä Mänsaᶜay and Bäräk̠ät Mängəśtäᵓab in the mid-1970s until the political demise of the ELF in the



Contemporary advertisement for the first Eritrean theatre association MaTäDä, by ᶜAlämayähu Kaḥsay (2nd row, 3rd from left); photo courtesy of Osman Aḥmed (upper row, 2nd from right) early 1980s. The EPLF encouraged cultural work from ca. 1975, in the form of a succession of full time central cultural troupes and innumerable smaller amateur ones in all departments. They produced variety shows dominated by music, song, and dance representing all Eritrean nationalities, along with short educational and political sketches. Stage drama became more prominent when a Division of Literature and Drama was introduced in 1981 in the Department of Political Orientation, Education and Culture. Among its formative cultural officers was ᶜAlämsägäd Täsfay, author of the well-known EPLF play *The Other War* (1984).

Since independence various professional dance, music and/or drama groups have been working under the People's Front for Democracy and Justice' Cultural Affairs Division, the Ministry of Education and the Ministry of Defence. Amateur groups often operated in secondary schools, the university, churches or under the National Union of Eritrean Youths and Students. Säwit Children's Theatre provides popular entertainment for the young, with their own programme on Eri-TV, the national broadcasting service. Cross-cultural theatre projects have also been undertaken, in collaboration with e.g. the Norwegian Playwrights' Association and the University of Leeds. While the 1998–2000 Eritrean-Ethiopian war saw an upsurge in patriotic theatre activities, stage drama is now largely seen during festivals and National Holidays. Increasingly, theatre artists produce for television or for the rapidly growing local film industry ("Eriwood"). The successful production of Bäyyänä Ḫaylä's philosophical play **ወግዒ፡ ልቢ** (*Wägʾi ləbbi*, 'Heart to Heart Talk') in 2008 hints at a new direction stage drama might be taking. T. arts in their various forms are enormously popular in Eritrea, with urban drama and long-established performance forms increasingly overlapping these days.

Christine Matzke

Theodosios of Alexandria

T. (Eth. **ቴዎዶስዮስ**; d. 22 June 566) was an anti-Chalcedonian patriarch of Alexandria.

T. was a disciple of ↗Severus of Antioch, whose anti-Chalcedonian stance (cp. ↗Chalcedon, Council of) he shared, and secretary of ↗Timothy III of Alexandria, whom he succeeded in 535. In the same year opposition rose against T. The archdeacon Gaianos, a supporter of ↗Julianism, was elected anti-patriarch, but expelled three months later. In 536 Emperor Justinian summoned T. to Constantinople and demanded that he join the Chalcedonian party. T. refused and was formally deposed in 537 but remained under the protection of Empress Theodora. In 565, Justin II permitted T. to return to Alexandria, but T. died and was buried in Constantinople.

T. was the leading ecclesiastical and theological authority among the adherents of ↗Monophysitism, particularly after Severus's death in 538. It was he who consecrated ↗Jacob Baradaios as bishop (543) and in 563 he consecrated his *synkellos*, Paul of Bēṯ Ukkāmē, Monophysite Patriarch of Antioch (CPG nos. 7140–42). T. actively supported missionary activities: ca. 543 he sent a priest Julian to ↗Nubia, and shortly before his death he consecrated a priest of his entourage, Longinos, as bishop of Nubia.

T.'s works, in which he fought for Monophysite orthodoxy and unity, survive mostly in translation: only six fragments in the original Greek have been preserved, three of which are citations in the work by ↗Cosmas Indicopleustes (CPG nos. 7130–32; Orlandi 1971: 175). In Syriac, the *Tome to Theodora*, the *Letter to the Armenians* and the *Theological Discourse* (CPG nos. 7134–49; Chabot 1907, 1933; Van Roey – Allen 1994) have been preserved; in Coptic, some homilies

(CPG nos. 7150–53; Orlandi 1971) and the *Encomium of Michael the Archangel* (Budge 1915), as well as the *Encomium on John the Baptist* (Kuhn 1966, 1975) have survived, and, in Arabic, five homilies and the *Letter to the Alexandrians* (CPG nos. 7154–59; GrafLit I, 420f.).

In spite of his Monophysite fame, T. was regarded as a heretic by the 15th-cent. ↗Giyorgis of Sägla, who, in his *Mäṣḥafä ↗məśṭir*, opposes T.'s alleged view of Christ's passion against his will (YaqMist I, ch. 15).

The ↗*Haymanotä abäw*, translated into Ethiopic in the 16th cent., preserves:

1) an extract from the *Synodal Letter* (**ጦማረ፡ መልእክቱ**, *Ṭomarä mälʾəktu*) to Severus of Antioch (CPG no. 7134), written when he became patriarch of Alexandria (Syriac version: Chabot 1908: 5–11; 1938: 1–5);
2) *Homily on the consubstantial Trinity*, against impious men written 'after his expulsion' (**ድርሳኑ፡ እምድኅረ፡ ስደቱ**, *dərsanu əmdəḫrä səddätu*);
3) *Letter to the Alexandrians* written from exile (CPG no. 7159);
4) five *Anathematisms*, drawn from the same *Letter.*

A 17th-cent. manuscript of the *Haymanotä abäw* (ms. EMML no. 1) has a miniature showing T.

T. is also referred to as one of the authorities in the 18th-cent. treatise ↗*Haymanot rətəᶜt*.

Witold Witakowski

Theodosios of Antioch

T. (Eth. **ቴዎዶስዮስ**, baptismal name Romanos; d. 896) was a Patriarch of the Syrian Orthodox Church. Before his election, he was a monk in the monastery of Qartmin, where he was educated as a physician. Since the Syrian Orthodox Church had not had a patriarch for four years, the congregations put some pressure on their bishops and, as a result, Romanos was chosen the new patriarch by the synod at Amid in Mesopotamia. He assumed the name T. and was ordained on 5 February 887. Little is known about his activities as a patriarch, except that he ordained 33 bishops. He was buried in Qartmin on 1 June 896.

His writings in Syriac include: an *Admirable Collection of Medicine* (not preserved), a very detailed commentary on (Pseudo-)Hierotheus's *On the Hidden Mysteries of the House of God* (a 6th-cent. forgery of a pantheist Stephen BarSudhaile), and a collection of 112 maxims and proverbs partly translated from Greek, partly his own, all with brief explanations.

In Arabic he wrote a Lenten homily and a so-called *Synodal Letter* to Michael III, the Coptic patriarch of Alexandria. The *Letter* was of the kind that every new Syrian Orthodox patriarch sent to the head of the ↗Coptic Church (and *vice versa*), to confirm the ecclesiastical communion between them.

The only text of T.'s in Ethiopic is a fragmentary translation of the *Letter*, included in the ↗*Haymanotä abäw* (no. 40 in the Addis Abäba edition, 1993/94: 405–08). Although the *Haymanotä abäw* is a frequently copied work, only one manuscript, EMML no. 1, dated 1667–82, is illuminated and contains T.'s miniature (along with those of other 36 fathers).

Theodotos of Ankyra

T. (Eth. **ቴዎዶጦስ**, Tewodoṭos, **ቴዮዶጦስ** Teyodoṭos, **ቲዮዶጦስ** Tiyodoṭos) was a bishop of Ankyra in Galatia (today Ankara). As a metropolitan of Galatia, he attended the Council of ↗Ephesus (431), or rather the part chaired by ↗Cyril of Alexandria, and signed the deposition of ↗Nestorius, whose friend he had previously been. He participated in the delegation of the Cyrilian bishops to Emperor Theodosius to inform him about the actions of John, patriarch of Antioch. John excommunicated him at a synod in Tarsos in 432. Cyril wrote him a letter in 438 showing that, notwithstanding the agreement of 433 between the latter and John of Antioch, the Nestorian controversy was not over. Nothing is known of T.'s later vicissitudes. Since his successor was ordained by Proclus, patriarch of Constantinople, who died in 446, T. had probably died before that date.

T.'s Greek works (CPG nos. 6124–41) are not well preserved. Two homilies on the Nativity of Christ are added to the Acts of the Council of Ephesus (CPG nos. 6125–26). He wrote also an *Exposition of the Symbol of ↗Nicaea* (CPG no. 6124), three anti-Nestorian treatises preserved only in Syriac (CPG no. 6131), and one which has been preserved in Greek (CPG no. 6127).

In Ethiopic, two homilies by T. are included in the ↗*Qerəllos*, and, like the rest of the collection, entered ↗Gəᶜəz literature during the ↗Aksumite period. The first is a version of the Greek CPG no. 6127, *Against Nestorius* (Weischer 1979: 42–53). It explains Nestorius's deposition, which was pronounced in Ephesus on the day of the feast of John the Evangelist (8 *Ḥamle* = 2 July). The second (Weischer 1979: 122–33; DillmChr 103–06), not preserved in the original Greek (CPG no. 6132), develops the topic of Mt 16: 13–19, but begins with a eulogy for Cyril. The theological importance of the homilies can be illustrated by the fact that the Amharic commentary on the *Qerəllos* (known from a late ms. EMML no. 1669, dated 1952–57) devotes two folios to the commentary upon T.'s text.

The dogmatic collection ↗*Haymanotä abäw* also includes extracts from T.'s works. Weischer (1979: 182–91) identified eight quotations, of which the first six come from the *Second Homily on the Nativity* (CPG no. 6126), the seventh has not been identified, and the eighth is from the *Homily against Nestorius* (Weischer 1979: 50).

The *Homily* (↗*Dərsan*) *on St.* ↗*George of Lydda* is traditionally attributed to T. The attribution is probably apocryphal, though it already appears in Coptic tradition (Budge 1930: 54). The *Homily* is frequently copied alongside the Acts of St. George, where it usually precedes the actual ↗*gädl*.

Witold Witakowski

Theological College of St. Paul

The T.c. (**የሰዋስወ፡ ብርሃን፡ ቅዱስ፡ ጳውሎስ፡ መንፈሳዊ፡ ኮሌጅ**, *Yäsäwasəwä bərhan qəddus Ṗawlos mänfäsawi kolleǧ*, 'Säwasəwä Bərhan [lit. 'the ladder of light'] St. Paul Theological College') is one of the three theological colleges of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC; the other two being ↗Holy Trinity Theological College, Addis Abäba, and Kāśate Bərhan Frumentius Theological College, Mäqälä).

The T.c. was originally founded in 1942, soon after the Liberation from the Italian occupation, as an orphanage, to teach basic church education for children who had lost their parents in the war and for those patriots who were handicapped during the Fascist persecution. The land in western Addis Abäba (today Kolfe-Qäranəyo district) was donated by Empress ↗Mänän. The objective was later revised in order to recruit the best theologians for the service of the EOTC and to teach secular education (grades 1–8). After completion, students were sent to ↗Holy Trinity Theological College for further studies. Many students later joined the then Ḫaylä Śəllase University College (↗Addis Ababa University), which was under the same administration. After the ↗Revolution, the secular section was separated and taken over by the government, becoming Sälam Bärr elementary and junior school. The T.c. continued teaching exclusively traditional church education. It was inaugurated as "Säwasəw Bərhan" St. Paul Higher Theological Seminary by the Holy Synod, thanks to the efforts of Patriarch *abunä* ↗Täklä Haymanot, in 1978. The first dean was *abunä* Bärnabas, the then Secretary General of the Holy Synod and Archbishop of ^{c}Asäb. The second dean was Bishop *abunä* Ṗawlos (the current Patriarch).

The T.c. has two main programs: the ↗*mäṣḥaf bet*, specializing in ↗Bible commentary (two streams, for O.T. and N.T.), and *kors*, i.e. different (over 20) seminary courses in "units", such as biblical studies, dogmatic theology, church history, practical theology, social sciences, language studies.

The courses are taught in Amharic. The N.T. commentary cycle takes five years, O.T. seven years and the seminary courses four years. The graduates receive a "theological diploma", confirmed by the administrative board and issued by the Holy Synod.

In 2005, the T.c. Seminary was promoted to College and got its present name.

The graduates of the T.c. are assigned in many positions as preachers, teachers of Sunday Schools and administrators in different hierarchies of the church. Many bishops, members of the Holy Synod, are graduates of the T.c.

Amsalu Teferra

Theology, Ethiopian

Theological discourse in Ethiopia emerged with the introduction of ↗Christianity as the official religion in ↗Aksum in the first half of the 4th cent. A.D., even if T. in the strict sense of a systematic presentation of doctrine, dogma and spirituality of Orthodox Christianity as proposed by its adherents did not exist in the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC) until a much later point.

At that early stage, as soon as the first Christian writings (primarily the ↗Bible and such writings as the ↗*Qerəllos*, ↗*Traditio apostolica*, etc.) reached Ethiopia, Christians faced the need to learn and expound Christian doctrine. The understanding had to be in line with the Church, which had accepted ecumenical councils from ↗Nicea to ↗Ephesus, but had rejected the decisions of the Council of ↗Chalcedon concerning the nature of Christ (↗Christology), following the ↗Coptic Church (cp. ↗Monophysitism). It is sometimes said that Ethiopian T. basically did not go far beyond the T. of those first councils. Due to the long-term relative isolation of the EOTC, theological thinking in Ethiopia did not change much throughout centuries.

During the 12th–16th cent., a large corpus of writings of the Church fathers was translated into Gə^{c}əz and was assimilated by the EOTC (↗Athanasius; ↗Basil the Great; ↗Eusebios of Caesarea; ↗Eusebios of Herakleia; ↗Gregory of Nazianzus; ↗Gregory of Nyssa; cp. ↗*Haymanotä abäw*, ↗John Christosom; *Mäṣḥafä* ↗*ḥawi*, etc.). The central theological issues were those that received particular attention in the context of the development of ↗Gə^{c}əz literature (e.g., such subjects as the Creation, cp. ↗*Aksimaros*, ↗*Śənä fəṭrät*; ↗*Ṭəntä haymanot* etc.).

The traditional teaching of the EOTC was (before the 20th cent.) not written down in a systematic and comprehensive way (cp. ↗*A^{c}əmadä məśtir*). The first overviews of Ethiopian doctrine and rite were prepared by outsiders. The first who can be called an Ethiopian theologian was the 14th–15th-cent. *abba* ↗Giyorgis of Sägla.

It is not clear how public theological discourse was in 14th–17th-cent. Ethiopia. In any case, it was not a purely intellectual exercise but had a great practical influence on the life of the society, whether in regard to the performance of the Sacraments (↗Baptism and Confirmation, ↗Eucharist, ↗Matrimony, ↗Ordination, ↗Penance, ↗Unction of the Sick) or in more general daily issues (cp. ↗Eschatology; ↗Feasts; ↗Law: Canon law; St. ↗Mary; ↗Saints).

The isolation was brought to an end by the arrival of the ↗Jesuits in the 16th cent. and their attempt to impose ↗Catholicism. When the EOTC was reinstalled, several conflicting "theological schools" emerged: ↗*Karra* (cp. also ↗*Hulätt lədät*), ↗*Qəbat*, ↗*Ṣägga* (with *Śost lədät*). The discord, which continued well into the 19th cent., when ↗*Täwaḥədo* finally established itself as the ruling creed, had a formative impact upon the course of Ethiopian history.

The Coptic metropolitan (↗*Ṗappas*) was formally considered the final recourse in all theological issues. Though in many cases theological disputes were solved through the emperors of the ↗Solomonic dynasty, the metropolitans always pronounced their opinions (↗Gäbrəʾel and Mikaʾel on the ↗Sabbath; the metropolitans of the ↗Gondärine kingdom; cp. ↗Sälama III) and some of them greatly enriched Ethiopian theological thought (cp., e.g., *abunä* ↗Sälama II "the Translator").

From the period of the ↗Gondärine kingdom onward, theological discourse in the sense of explication of the Scriptures and the Church fathers (↗*Andəmta;* ↗Exegesis; ↗*Tərgʷame*; ↗Bible commentary tradition) became a subject of the upper level of traditional ↗education (↗*Mäṣḥaf bet*). These studies, which developed almost completely within local cultural settings (being refined and cultivated in a number of churches and esp. ↗monasteries), represented the best systematized knowledge in Ethiopia for centuries.

Theological discussion in pre-modern Ethiopia had a predominantly polemical character and involved a basically negative assessment of the "opponent religion" or point of view. In his *Mäṣḥafä* ↗*məśtir,* Giyorgis of Sägla principally argued against "heresies" (cp. ↗Arius; ↗Eutychius; ↗Nestorius; ↗Origen). The writings of *aṣe* Zärʾa Yaʿəqob were directed against non-Christian religious practices (↗*Ṭomarä təsbəʾət*), the opinions and doctrines of ↗*Ayhud*, ↗Stephanites, and asserted an exclusively Orthodox Trinitarian doctrine (↗Trinity) and ↗Mariology (*Mäṣḥafä* ↗*milad*; *Mäṣḥafä* ↗*śəllase*). An example of anti-Islam discourse is the ↗*Anqäṣä amin* by *əččäge* ↗ʿƎnbaqom. An apologetic exposition of the faith of EOTC is the *Confessio* of *aṣe* ↗Gälawdewos. Later, the representatives of competing theological schools promoted their views in oral discourse (cp. ↗*gubaʾe*) or in writing (cp. ↗*Haymanot mäsiḥawit*; ↗*Haymanot rətəʿət*, etc.).

The limitations of traditional T. were clearly revealed in the 19th cent., with the coming of the ↗missions, promoting ↗Catholicism and ↗Protestantism in Ethiopia. In the 20th cent., the idea of "modern" theological studies (comprehensive, systematic and comparative, with a more positive attitude to other confessions; yet incorporating the national features) was understood as a vital necessity by the EOTC, and its realisation started with the foundation of ↗Holy Trinity Theological College in 1944 (symbolically, for a while a faculty of Addis Ababa University), followed by some other institutions (↗Theological College of St. Paul).

Theophilos of Alexandria

T. (Eth. **ቴዎፍሎስ**, Tewoflos, **ቴዮፍሎስ**, Teyoflos, **ቴኦፊሎስ**, Teʾofilos; b. ca. 345, d. 412) was a Patriarch of Alexandria from 384/387 to 412.

While suppressing the remnants of paganism in Egypt and destroying temples, T. built several churches in Alexandria. Although initially an admirer of ↗Origen, T. condemned his doctrine at a synod in Alexandria in 400, turning against those monks who adhered to Origenism. Some of the latter, the so-called Tall Brothers, went subsequently to Constantinople to seek support of ↗John Chrysostom. This, and the rise of Constantinople as the most important ecclesiastical centre in the eastern part of the Roman Empire, was the reason of T.'s campaign against John Chrysostom, which ended with the latter's deposition at the synod "Of the Oak" near Chalcedon (403). Ensuing riots made T. retreat to Alexandria and appeal to Pope Innocent I. John also appealed, and T. was excommunicated at a synod in 405. Alexandria's communion with Rome and Constantinople was only restored in 419, when T.'s successor and nephew, ↗Cyril of Alexandria, restored John's name to the diptychs (Russell 2007: 34).

T. is venerated as a saint by the ↗Coptic Church (15 October) and Syrian Orthodox Church (17 October). The ↗Ethiopian Orthodox (Täwaḥədo) Church commemorates him on 18 *Ṭəqəmt* (25 October, BudSaint 162–65; ColSyn VII, 94–101).

T. wrote extensively, but perhaps due to the conflicts he gave rise to, most of his works are preserved in fragments only, and/or in translations (CPG nos. 2582–2682). Important are three *Festal* (paschal) *Letters* (epistles 16, 18, 19; in Hieronymus' Lat. tr. 96, 98, 100, CPG nos. 2585, 2586, 2588) of the years 401, 402 and 404 respectively, which address the problem of Origenism. So do the circulars to the bishops of Palestine and Cyprus, and to other bishops (CPG nos. 2597–99). Out of his homilies only one is fully preserved in Greek (*Homily on the mystic* [*i.e. the Last*] *Supper*, CPG no. 2617) and two, possibly authentic, in Coptic (*On the Crucifixion* and *On the Penitence*, CPG nos. 2622–23). A *Treatise against the Origenists* (CPG nos. 2683), preserved in Latin, is perhaps his composition too. Two letters sent to Jerome have been preserved among the latter's correspondence, also a letter to ↗Epiphanius of Salamis (CPG no. 2599), and synodal letters to bishops of Palestine and Cyprus (CPG no. 2596), as well as the above mentioned *Festal Letters* of the years 401, 402, and 404. An *Epistle to Emperor Theodosius* (preserved completely in Latin, CPG no. 2593) is a preface to the Easter cycle that T. suggested the Emperor to adopt. Other T.'s letters are preserved in small fragments only or are completely lost.

In Ethiopic following compositions are attributed to T.

Two excerpts from T.'s writings are extant in the ↗*Haymanotä abäw*, the first, 'concerning the faith' (**በእንተ፡ ሃይማኖት**), is on the Council of ↗Nicaea; and the second is an extract from the 21st *Festal Letter* (CPG no. 2589; Graf 1937: 383), on the Incarnation.

In other texts T. is quoted as a theological authority, for instance in: *Mäṣḥafä* ↗*ḥawi* (WrBriMus 253, no. 348 [Orient. 253]).

Some of the versions (or manuscripts) of the *Mäṣḥafä* ↗*gənzät* (of the 19th and 20th cent., e.g. EMML nos. 2638 or 3618) contain a *Homily on the departure of the soul* (**ድርሳን፡ በእንተ፡ ፀአተ፡ ነፍስ**) attributed to T.

Other attributions (or authentic works, but not identified) include:

A Homily on the Three Youths in the fiery furnace (Dan 3) in a *Gädlä* ↗*sämaᶜətat* manuscript (d'Abbadie 179, 17th/18th cent.; CRAbb 173, no. 163), to be read on 10 *Gənbot*;

A Homily for Lenten Fast: in a homiliary, ms. EMML no. 1956 (ca. 1400);

The Homily (also known as *Vision of Theophilus*) *on the House in which the Holy Virgin lived on Mount Qusqām* (*Qʷəsqʷam*) (CANT no. 56; CPG no. 2628; Conti Rossini 1912), a story of the flight of the Holy Family to Egypt, to be read on 6 *Ḫədar*, is often included in the ↗*Dərsanä Maryam*, a collection of various texts devoted to Mary. It is said to have been recorded by one Ger(ə)los, who heard it from T. himself. Gianfrancesco Lusini (s. EAE vol. 2, 138) dates it to the middle of the 14th cent. Most of the manuscripts are rather new (19th–20th cent.), but the oldest, EMML no. 1833, is from the 14th cent. Here the *Homily* is a separate text (the *Dərsan* was not yet compiled).

An abbreviated version of the *Qʷəsqʷam* homily is extant in the ↗*Täʾamməra Maryam* (Budge 1900), e.g. in EMML nos. 2059 and 2060 (both of the 17th cent.), but also known from manuscripts of the 20th cent., e.g. EMML no. 1606.

T. appears in an episode in the Miracles in the ↗*Dərsanä Rufaʾel*: after three days and nights in a grave he is resuscitated by the archangel. The earliest text witness is EMML no. 1835 from the epoch of *aṣe* Zärʾa Yaᶜəqob.

There is also a non-legendary account of T.'s life (**ዜናሁ፡ ለቴዎፍሎስ**), extant as an introductory part of the Life of ↗Cyril of Alexandria (**ዜናሁ፡ ለቄርሎስ**). The latter is usually copied as a sort of preface in the manuscripts containing the *Qerəllos*, e.g. in EMML no. 639 (19th cent.), but may also stand separately, as in EMML no. 2847 (17th cent.). The whole account is based on the ↗*Sənkəssar* and the historiographical works of ↗John of Nikiu, ↗*Abušakər* and ↗Giyorgis Wäldä ᶜAmid.

Theophilos the Indian s. EAE vol. 5

Thesiger, Wilfred Gilbert

T. (b. 25 March 1871 Simla-Calcutta, Punjab, India; d. 31 January 1920, Brighton, England) was a British diplomat who served as the British Minister Plenipotentiary in Addis Abäba from December 1909 to early 1919, when he left the country. T. was born to a noble family, a son of General Frederick Augustus Thesiger, 2nd Baron Chelmsford, one of the leading officers in the 1867–68 ↗Napier campaign against *aṣe* ↗Tewodros II. T.'s elder brother, Frederick John Napier Thesiger, 1st Viscount Chelmsford, was the viceroy of India (1916–21). In 1909 T. married Kathleen Mary Vigors and they had four sons, three of them born in Ethiopia. His eldest son was Wilfred Patrick ↗Thesiger.

Before serving in Ethiopia, T. held a number of diplomatic positions in different countries, such as Turkey, Italy, Serbia, Russia and the Belgian Congo. His experience also included participation in the Boer War in 1900 and 1901. He held the rank of Honorary Captain and was awarded the Distinguished Service Order. During his service in Ethiopia, T. was decorated by *ras* Täfäri (later *aṣe* ↗Ḫaylä Śəllase I) with the Order of the Star of Ethiopia (1st Class; s. also ↗Orders and Decorations).

T.'s stay in Ethiopia spanned an eventful period, from the last years of *aṣe* ↗Mənilək II, *ləǧ* ↗Iyasu's rise to power and his decline, to the initial period of ↗Zäwditu's, respectively Täfäri's, reign. T. played an important role in developing relations between Ethiopia and the ↗United Kingdom. In accordance with British policy towards Ethiopia, he actively supported the growing influence of *ras* Täfäri Mäkʷännən. Before the ↗coup d'état 1916 (s. EAE vol. 2, 1081) T., with the help of Johannes ↗Semerjibashian, the second interpreter for the British Legation and a school friend of *ras* Täfäri, stayed in close contact with the future heir to the throne. During the coup d'état and the following Battle of ↗Sägäle, T. and his wife took care of Täfäri's eldest son, ↗Asfa Wäsän, who was looked after in the British Legation in Addis Abäba.

World War I and the internal power struggles in Ethiopia were the major issues during T.'s service. His diplomatic reports provide an interesting analysis of the development of the political situation in Ethiopia, especially, in view of a possible engagement of Ethiopia on the side of the Axis, which the British tried to prevent. T. changed his mind about advising a policy of non-interference, instead suggesting action against Iyasu in the days before the coup (Mosley 1964: 88) as well as supporting Täfäri's call for British planes to bomb Mäqdäla, where Iyasu retreated after the coup (ibid. 118).

T. also pushed the (never successful) project of constructing a ↗Ṭana Lake dam, worked against arms trade and cross-border slave raiders.

Hanna Rubinkowska

Thesiger, Wilfred Patrick

T. (b. 3 June 1910, Addis Abäba; d. 24 August 2003, London) was an explorer, writer and at times a British officer fighting for the liberation of Ethiopia (↗World War II).

T. was a son of Wilfred Gilbert ↗Thesiger and grew up in Ethiopia. In 1930, after studies at Eton and Oxford, T. returned to Ethiopia, invited to ↗Ḫaylä Śəllase I's coronation, as an honorary attaché to the Duke of Gloucester. He then undertook an explorating journey through the ↗ᶜAfar desert, carried out with Somali and ᶜAfar guides; in 1933/34, funded by the Royal Geographic Society, he returned to explore the ↗Awaš up to the yet unknown Lake Abhe and became one of the first Europeans to visit the ↗Awsa sultanate. His diary focuses on hunting and curiosities, quite in the manner of 19th cent. explorers.

In 1934 T. joined the Sudan Political Service, was appointed to Northern Darfur, and then to the Western ↗Nuer District, where colonial presence was still weak (1938). In 1941 T. joined ↗Wingate's brigade, earning a decoration for capturing an Italian fort of 2,500 troops, and then fought in Syria and northern Africa. In 1943–44 he served as advisor to the governor of ↗Wällo, ↗Asfa Wäsän Ḫaylä Śəllase, under the ↗British Military Administration of Ethiopia (s. EAE

Wilfred Patrick Thesiger in the desert of Oman, 1948; collection of the Pitt Rivers Museum

vol. 5; ↗United Kingdom of Great Britain). A life of extensive travelling in southern Arabia, Iraq, Iran, Afghanistan, Pakistan, India, the Sudan, Ethiopia (1959/60, 1966) and Kenya followed. From 1968 he lived with his adoptive son Lawi Leboyare, a Samburu, in Maralal, Kenya. From the late 1950s, T.'s travel reports and photo books, especially on his life with Arab nomads, earned him a name as one of the last great explorers. T. was knighted in 1995.

His autobiography (1987) contains valuable information on the history of early-20th cent. Ethiopia. In 1993, T. left his rich negative and photo collection to the Pitt Rivers Museum in Oxford, who made a detailed catalogue of it available in 2004.

Tigray People's Liberation Front

The TPLF (Tgn. ሕዝባዊ፡ ወያነ፡ ሓርነት፡ ትግራይ; *Ḥəzbayawi Wäyyanä Ḥarənnät Təgray*, 'Popular Struggle for the Freedom of Təgray'; popularly known as ↗*Wäyyanä*), according to its official history, was established on 18 February 1975 in Dädäbit, western Təgray. Within 16 years it grew from a few dozen men into the most powerful of the various armed ↗liberation movements in Ethiopia. Leading a coalition of movements named the Ethiopian Peoples' Revolutionary Democratic Front (EPRDF) since 1989, and with the help of its ally, the ↗Eritrean People's Liberation Front (EPLF), it inflicted a total military defeat on the *Därg* regime (↗Provisional Military Administrative Council) and established on 28 May 1991 a new regime that has ruled Ethiopia ever since. The TPLF and the EPLF are the only African liberation fronts whose armed struggle against a militarily vastly superior enemy, conducted as a 'protracted peoples' war', ended with a total military victory and skillfully combined the struggle for national self-determination with radical socio-economic changes.

The TPLF is in a way the product of the marginalization of Təgray within Ethiopia after ↗Mənilək II of Šäwa had become emperor in 1889. The Təgrayan traditional elite and peasantry had a strong regional identity and deeply resented the decline of Təgray. Memoirs of the armed revolt of 1942–43 (the "first [*qädamay*] *wäyyanä*") against the re-establishment of imperial rule after ↗Italian colonialism remained alive and provided an important reference for the new generations of educated Təgrayan nationalists.

At Ḫaylä Śəllase I University (↗Addis Abäba University), from the early 1960s onwards, Təgrayan students, inspired by Marxist ideas of revolution and armed national liberation struggle, fully participated in the Ethiopian ↗student movement spearheading the rising opposition against the rule of ↗Ḫaylä Śəllase I.

To address the specific grievances of Təgray within the empire, Təgrayan students created the Political Association of Tigrayans (PAT) in 1972 and the Tigrayan University Students' Association (TUSA). PAT developed into a radical nationalist group calling for the independence of Təgray, establishing the Tigray Liberation Front (TLF) in 1974. In TUSA emerged a Marxist trend favouring national self-determination for Təgray within a revolutionary transformed democratic Ethiopia. Whereas the multinational left movements subordinated the national self-determination of the Ethiopian nationalities to class struggle, the Marxists of TUSA argued that due to the existing inequalities among Ethiopian nationalities, revolutionaries must use the struggle of Ethiopian nationalities for self-determination as the launching pad for the ultimate socialist revolution.

In February 1974 the Marxists within TUSA welcomed the Ethiopian ↗Revolution, but opposed the *Därg* as they were convinced that it would neither lead a genuine socialist revolution nor correctly resolve the Ethiopian nationality question. Three days after the *Därg* took power, on 14 September 1974, seven leaders of this trend established the *Association of Progressives of the Tigray Nation* (Tgn. ማሕበር፡ ገስገስቲ፡ ብሔር፡ ትግራይ, *Maḥbär Gäsgästi Bəḥer Təgray*), also known as Tigrayan National Organization (TNO): ᶜAlämsägäd Mängäša (nom de guerre: Ḫaylu), Amməḫa Ṣ́äḥay (Abbay), Arägawi Bärḥe (Bärḥu), Ǝmbay Mäsfən (Śəyyum), Fäntahun Zärʾaṣəyon (Gidäy), Mulugeta Ḥagos (Asfäḥa) and Zärʾu Gäsäsä (Agᶜazi). TNO was to prepare the ground for the future armed movement of Təgray.

It secretly approached both the ↗Eritrean Liberation Front (ELF) and the EPLF for support but the ELF already had relations with the TLF. In November 1974 the EPLF agreed to train TNO-members and allowed EPLF-fighters from the Təgray community in Eritrea, among them Mäḥari Täkle (Muse), to join the TPLF. The first batch of trainees was sent to the EPLF in January 1975.

On the night of 18 February 1975 eleven men including Gäsäsä Ayyälä (Səḥul), Gidäy, Asfäḥa, Śəyyum, Agᶜazi, and Bärḥu left Ǝnda Śəllase for Səḥul's home area of Dädäbit, where they established the TPLF (original name: ተጋድሎ፡ ሓርነት፡ ሕዝቢ፡ ትግራይ, *Tägadlo Ḥarənnät Ḥəzbi Təgray*, 'The Struggle for the Freedom of the People of Təgray'). Wäldä Śəllase Näga (Səbḥat), Lägäsä Zenawi (Mälläs) and others soon joined the original group and, after the arrival of the trainees from Eritrea in June 1975, the TPLF had about 50 fighters. It then chose a formal leadership composed of Səḥul (Chairman), Muse (Military Commander) and the seven TNO-founders. Bärḥu was appointed as political commissioner. Səḥul played a crucial role in helping the nascent TPLF to establish itself among the local peasantry.

Although some successful raids established its military credibility, the TPLF grew to only about 120 fighters in early 1976, but a rapidly expanding clandestine network of supporters in the towns and support base among the peasantry provided vital supplies and intelligence. On 18 February 1976 a fighters' conference elected a new leadership: Bärḥu (Chairman), Muse (Military Committee), Abbay (Political Committee), Agᶜazi (Socio-Economic Committee), Śəyyum (Foreign Relations), Gidäy, and Səbḥat. Mälläs became head of the political cadre school.

The underground headquarters of the Tigray People's Liberation Front from 1989 to 1991, ᶜAddi Gäzaʾti, Tämben, Təgray; photo 2005, courtesy of Wolbert Smidt

In mid-1976 the TPLF published its Political Manifesto, which stressed Təgray nationalism over class struggle and called for the establishment of an independent Təgray encompassing Təgray proper and the Təgrəñña-speaking areas of ↗Gondär (↗Wälqayt), ↗Wällo and ↗Eritrea. Meant to attract Təgray nationalists, the Manifesto antagonized Təgrayans committed to Ethiopian unity and the EPLF, which took umbrage at its Greater Təgray chauvinism.

The first three years of its existence were marked by a constant struggle for survival, instable cooperation with the Eritrean forces, and power struggles against the other Təgrayan fronts: in 1975 the TPLF liquidated the TLF, in 1976–78 it fought back the Ethiopian Democratic Union (EDU) in ↗Šire and in 1978 it fought the Ethiopian Peoples' Revolutionary Party (EPRP) in eastern Təgray. Besides this the Front had to suffer heavy losses due to the *Därg's* offensives in the region.

Although the TPLF, the ELF and the EPLF co-operated during the *Därg* offensives of 1976 and 1978 in Təgray and Eritrea, no stable alliance was formed. The ELF resented the liquidation of the TLF and viewed the relations between the EPLF and the TPLF as a serious threat. Since 1977 the ELF and the TPLF had conflicts over the issue of Eritrean settlers in western Təgray, who were organized under the ELF and rejected the TPLF-land reform.

Relations with the EPLF also did not develop smoothly. Its material support was much less than the TPLF expected. Politically the EPLF preferred the multi-national EPRP to the ethno-regionalist TPLF with its then separatist agenda.

In February 1979 the TPLF held its first regular congress. It declared its struggle to be the second *wäyyanä* (*kalʾay wäyyanä*) and changed its Tǝgrǝñña name to *Ḥǝzbayawi Wäyyanä Ḥarǝnnätä Tǝgray*. It adopted a new political programme calling for self-determination within a democratic Ethiopia with independence as an option only if unity proved to be impossible.

Following the *Därg's* victory in the ↗Ogaden War in February 1978, Mängǝśtu Ḫaylä Maryam's new alliance with the Soviets and the revolutionary growth of his armed forces, the TPLF momentum seemed to slow.

In retrospect however, it is apparent that the 1978-85 period further strengthened the TPLF. The *Därg's* increasingly alienating intervention, the front's handling of the famine and of the refugee problems, as well as the foreign connections it built through its mission in Khartoum, all enabled the movement to mobilize and better equip more fighters and prepare for a change from guerrilla to frontal battles. Also, in the mid-1980s, developments within the TPLF led to a conceptual change from a struggle for the liberation of Tǝgray to that of all Ethiopia.

The TPLF succeeded in turning the catastrophic ↗famine of 1984–85 to its overall advantage. In early 1985 it organized a march of over 200,000 famine victims from Tǝgray to Sudan to draw international attention to the plight of Tǝgray. Its humanitarian branch, the Relief Society of Tǝgray (REST), established in 1978, received large amounts of international humanitarian aid for famine victims and small-scale development projects in liberated Tǝgray, which the TPLF skillfully exploited to generate huge funds for its own operations.

In July 1985 a congress of a few hundred selected cadres established the Marxist-Leninist League of Tǝgray (MLLT). The MLLT was conceived to be the nucleus of the future Marxist-Leninist vanguard party for the whole of Ethiopia. The MLLT invited the genuine revolutionaries in the ranks of the *Därg* regime, which was then busy organizing its own communist party, the Ethiopian Workers Party, to join it.

After the congress, the TPLF and its mass organizations were ruthlessly brought under the control of the MLLT, dissenting cadres among them TPLF-co-founders Gidäy and Bärḥu, were purged. Unconfirmed rumours also speak of some secret executions.

In December 1988 the TPLF and Ethiopian Peoples' Democratic Movement (EPDM, a TPLF-loyal splinter group from the EPRP, founded in 1980) founded the EPRDF as the nucleus of the envisaged United Democratic Front. In spring 1989 first the MLLT and then the TPLF held a congress. Abbay was elected Chairman of both but towards the end of 1989 Mälläs became the chairman of both organizations. In May 1989 the EPDM established the Ethiopian Marxist-Leninist Force (EMLF). In July 1989 MLLT and EMLF created the Union of Ethiopian Proletarian Organisations. In April 1990 the TPLF formed the Ethiopian Democratic Officers Movement from politically re-educated captured Ethiopian officers to undercut the Free Officers Movement formed in 1987 by exiled Ethiopian officers in opposition to the *Därg*. In May 1990 Oromo-members of the EPDM and politically re-educated Oromo-Prisoners-of-War founded the Oromo People's Democratic Organization (OPDO) to deny the Oromo Liberation Front the claim to be the exclusive representative of the Ethiopian Oromo. In November 1990 an Oromo Marxist-Leninist Movement was established within the OPDO. Also in 1990 the TPLF created the Afar Democratic Union to undercut the Afar movements. Before 1985 it had already helped to establish liberation fronts in ↗Gambella and ↗Beni Šangul.

In early 1988 both the EPLF and the TPLF went on the offensive. The developing situation in both Eritrea and Tǝgray but also the shifting international context after the demise of the Soviet bloc induced the TPLF and EPLF to put their differences aside and to resume military cooperation. In 1989 the EPRDF formed a shadow government of Ethiopia administering the liberated areas under its control.

Reflecting the changed international context after the demise of Soviet communism by 1990 the TPLF internationally avoided references to Marxism-Leninism. In February 1991 the EPRDF launched its final offensive against the *Därg* regime assisted by a large EPLF-contingent. When on 28 May 1991 the EPRDF entered Addis Abäba and took power as the Provisional Government of Ethiopia, the TPLF had 80,000, the EPDM 8,000 and the OPDO 2,000 fighters. The total number of TPLF-members was well beyond 100,000.

Reacting to the international political context after the demise of the Soviet Union the EPRDF/TPLF dropped all Marxist references in its political discourse, adopted a programme of democratic change based on multi-party democracy, ethnolinguistic federalization and a mixed economy.

Tigrinya Language Council

The T.L.C. (Tgn. **ናይ፡ ሓበሻ፡ ቋንቋ፡ ምኽሪ** *Nay Ḥabäša qʷanqʷa məḵri* or **ዋዕላ፡ ቋንቋ፡ ትግርኛ** *Waᶜla qʷanqʷa Təgrəñña*) was an advisory institution founded in 1944 by the author, then a senior officer of the ↗British Military Administration (B.M.A.) of ↗Eritrea, after it had been decided to strengthen the use of ↗Təgrəñña in administration and public life in Eritrea.

Firstly, writing in ↗Təgrəñña required a measure of standardization in its modes of spelling. Secondly, Təgrəñña needed some adaptation to contemporary demands (e.g., the vocabulary of war and modern martial equipment necessitated the fashioning of suitable technical terms). Thirdly, the limited experience of writing Təgrəñña among the local population entailed that means of expression as well as syntactical and stylistic conventions and patterns had to be devised which were likely to meet with fairly general acceptance. It was therefore thought that it would be useful to establish a limited pilot scheme which might perform, on a modest scale, what the Hebrew and Arabic Language Academies did in their grander spheres.

Thus the T.L.C. was set up, composed of representatives of the churches and of a few of the most experienced practitioners of the language. The writer and grammarian *abba* ↗Yaᶜəqob Gäbrä Iyäsus, a Catholic priest, was elected President of the T.L.C., while *qäšši* ᶜUq̲bazgi Mikaᵓel, representative of the Seventh Day Adventists, became its Vice-President. The only British member was the author; further notable Eritrean members were ↗Tädla Bayru (until mid-1944), ↗Wäldä Ab Wäldä Maryam, and, as a "technical member", *abunä* ↗Marqos (who also retreated some time after Tädla Bayru, s. Ullendorff 1988: 196f.).

The influence of the T.L.C. on the development of a literary Təgrəñña language was rather low, contrary to first expectations. For example, even if the B.M.A. publication ↗Eritrean Weekly News, mainly edited by Wäldä Ab, was actively involved in the discussions, it subsequently developed its own style, independent of the T.L.C. This was due to a general tendency towards "Eritreanization". However, the adaptation of new words for modern spheres of politics and technology was partially successful. The T.L.C. ceased its activities in 1946.

Many years later, *aṣe* ↗Ḫaylä Śəllase I projected the foundation of an Amharic Language Academy and informed himself about the T.L.C. In 1972 a law was enacted to create such a body, following therefore the example of the T.L.C. (↗Ethiopian Language Academy).

Edward Ullendorff

Tiling, Maria von

T. (later Klingenheben-von Tiling; b. 13 February 1886, Riga, Russian Latvia, d. 11 November 1974, Hamburg) was a German African linguist.

T. went to school and was trained as a teacher in Germany and later took up teaching in Goldingen (Latvian: Kuldiga) in Kurland (Latvian: Kurzeme). In 1916, Carl Meinhof invited her to join him as a scientific assistant at the *Seminar für Kolonialsprachen* at the then *Kolonialinstitut* (founded in 1908) in Hamburg, which, at the founding of the University of Hamburg in 1919, was renamed *Seminar für Afrikanische und Südseesprachen*, i.e. Department of African and South Sea Languages. Here she taught Swahili and later Somali and Galla (= ↗Oromiffaa), in spite of her not having followed courses in African languages as a student.

Her work in this Department with informants of these languages resulted in a series of works, most important of which are her contributions on Somali. In her doctoral thesis (1925, s. also Czermak 1926) she explored Somali phonetics (Berbera dialect) with the help of texts that are transcribed more narrowly than usual – an investigation that has so far not been superseded by more recent works. In more extensive contributions she investigated ↗Ğäbärti, a southern dialect of Somali (1921/22, 1924/25).

In 1927 T. married August ↗Klingenheben; they had one daughter. In 1930 she followed him to Leipzig University. They returned to Hamburg in 1936, when Klingenheben succeeded to Meinhof's chair, but T. no longer pursued any further research on African topics.

Rainer Voigt

Ṭimbaaro

Ṭimbaaro language

Ṭ., or Ṭambaaro, is a slightly divergent dialect of ↗Kambaata (↗Highland East Cushitic language group). The lexical similarity between Ṭ. and Kambaata is 95 %. Although Ṭ. is little documented, the available data suggest that speakers of both dialects can communicate without difficulty. According to the census of 1998, the number of Ṭ. speakers is 82,803, among whom 51,541 are monolingual. Ṭ. is spoken in the Omo Šäläqo *wäräda* of the Kambaata-Ṭambaaro Zone (Southern Nations, Nationalities and Peoples' Region, SNNPR).

The consonant phonemes of Ṭ. are: labials *b*, *f*, *p̣*, *m*, *w*; alveolars *t*, *d*, *s*, *z*, *ṭ*, *n*, *l*, *r*; palatals *č*, *ğ*, *š*, (*ž*), *č̣*, *y*; velars *k*, g, *q*; glottal ʾ, *h*. Consonant gemination is phonologically distinctive. Ṭ. has a five vowel system (*i*, *e*, *a*, *o*, and *u*) with a phonemic length contrast.

The grammar of Ṭ. and Kambaata is remarkably similar. The Ṭ. case system is as elaborate as that of Kambaata: nominative (*adab-oo* 'boy'), accusative (*adab-aa* 'boy'), genitive (*iitt-a* 'of love'), dative (*koh-eha* 'to the guests'), locative (*mentič-oon* 'on the woman'), instrumental (*biṭ-iin* 'with the stick'), ablative (*geb-eeč* 'from the market'), oblique (*min-e* 'in the house'). Unlike in Kambaata (where the feminine marker *-ta* is employed), the gender of Ṭ. nouns is usually not marked overtly but only reflected in modifiers and verbs: cp. Ṭ. *azu* 'milk' and *hiṭi* 'grass' with Kambaata *azu-ta* and *hiṭi-ta.*

In the pronominal systems of Ṭ. and Kambaata, only the dependent possessive / object pronouns display minor differences in the 1st and 2nd pers. pl.: cp. Ṭ. *mini-ʾne* with Kambaata *mini-nne* 'our house' and Ṭ. *mini-kiʾne* with Kambaata *mini-ʾne* 'your [pl.] house'.

The verbal system of Ṭ. is largely identical with that of Kambaata. In the indicative, three aspects are distinguished in main verbs: perfective (*mass-eemmi* 'I took'), imperfective (*mass-aammi* 'I take') and progressive (*lall-ayyoo* 'he is appearing'). One of minor differences is that the negative marker *-baᵓa* is preceded in the perfective by an aspect marker *-um* (*mass-um-baᵓa* 'I did not take'), and not by *-im* as in Kambaata. The jussive verbs are characterized by *-uni* in the affirmative (*mass-uni* 'let him take!') and *-un-ka* in the negative (*mass-un-ka* 'let him not take!'). The imperative morphemes are *-i* (sg.) / *-iyye* (pl.) for positive (*mass-i* / *mass-iyye* 'take!') and *-tooti* (sg.)/*-toonooččiyye* (pl.) for negative (*mass-itooti*/ *mass-itoonooččiyye* 'don't take!'). Converbs are so far known to exist only in the perfective.

Relative clauses are the base of some adverbial clauses: *an marumbu ǧaan* 'when I did not go' (*ǧ-aan* [Loc.] 'at the time'); *maru hooggoommi daafiha* 'because I did not go' (*daaf-iha* [Dat.] 'for the reason').

Some of the recorded lexical differences between Ṭ. and Kambaata are Ṭ. *zaguma*/Kambaata *samaga* 'leopard' and Ṭ. *zakkaᵓ-*/Kambaata *waačč-* 'swim'. Cognate lexemes may have different but related meanings: *muummi* Ṭ. 'head' / Kambaata 'hair'.

Ṭ. ten-word list: *matu* 'one', *lamu* 'two', *sasu* 'three', *giira* 'fire', *waa* 'water', *arriičču* 'sun', *aganču* 'moon', *qegi* 'blood', *arrabi* 'tongue', *inqu* 'tooth'.

Yvonne Treis

Ṭimbaaro ethnography

The majority of the Ṭ. inhabit the Omo-Šäläko *wäräda* of Kämbata–Ṭimbaaro Zone (Kambaata-Ṭambaaro Zone) in the Southern Nations, Nationalities and Peoples' Region. According to the census of 1994 (CSA 1994:122) they numbered 79,614. The favourite area of settlement and the capital Durgee are situated at an altitude of ca. 2,000 m A.S.L. In the west it is bordered by the gorge of the Omo; in the south the Šapa river demarcates the border with ↗Wälaytta. In the north and east the ethnic and linguistic boundaries with ↗Hadiyya, ↗Dubamo and ↗Donga are fluid.

According to their oral traditions (BrKam 27–29, 56f.) the ancestor of the Ṭ. was Mola who, in the genealogies, is placed 14 to 15 generations ago. He is said to have lived in Yemererra in Sidaamaland, where he died. Following a dispute with neighbouring groups his seven sons, the founders of the "original" Ṭ. clans Yaga, Taasee, Kuᵓtna, Waga, Sambaata, Addee, Agoora, migrated to their present domiciles. Mola's memory has been kept until the present by the term *Lamolemola* ('the seven of Mola') and oaths are still made by invoking his name. The traditions claim that he was married to Manǧoole, an alleged daughter of the ↗Hadiyya leader Boyaamo, who can be identified as a contemporary of *aṣe* Zärᵓa Yaᶜəqob (r. 1434–68; BrHad 85f.). It is more likely, however, that the ancestors of the Ṭ. left Sidaamaland during the turbulences of ↗Aḥmad b. Ibrāhīm al-Ġāzī's *ǧihād* against the Christian empire in the 1530s. Approximately three decades later they invaded the area north of the Šapa River which was thinly occupied by Hadiyya nomads of the Wiitto-Giira group. No details are known of the history of Ṭ. from the 17th to the 19th cent. In an Oromo song Ṭ. is mentioned as a Muslim principality with a chief called Negita (CerFolk 1922:43, 45). However, Islamic influences resulted only from contact with the ↗*fandaanano* religion of the Hadiyya, and a ruler Negita is not known in oral tradition.

Some information on the Ṭ. were collected by Borelli (1890:331ff., 346, 439), who passed through the area in 1888, and by Antoine d'Abbadie (AbbGeogr 64, 89, 94, 101ff., 187, 233). The Ṭ. were agro-pastoralists and known for their commercial activities including slave trading in the regions west of the Omo.

The T. claim that their ancestors took the *laha*, a ring made of yellow metal, as a symbol of legal leadership, from Yemererra, their country of origin in Sidaamaland. Their socio-political organization was basically characterized by a monarchic institution and not by a ↗*gadaa* age-class system of the Oromo type. However, the position of the ↗*woma*, the king, was neither strictly hereditary nor vested with absolute power. To a considerable extent the governmental structure involved egalitarian and democratic features. Each of the seven clans elected a leader (*magaba*), and this council of elders appointed a chairman called *korifiira*. This dignitary organized and supervised the installation of the *woma* with all its ritual implications such as anointing the candidate and passing the *laha* to him. The ideal concept involved circulating the kingship among the original clans, whereas those clans of different descent incorporated at a later stage were excluded. This system, however, obviously did not function in this way, because historical data reveal that the *woma* were mostly elected from the "eldest" and strongest clan, the Yaga (BrKam 127f.). The ceremonial functions, performances, socio-religious duties, ritual prescriptions and proscriptions were basically similar to the general pattern of divine ↗kingship as found among many ethnic groups of southern Ethiopia. In particular, the appointment and funeral of the monarch demanded an enormous amount of organizational consideration and activity. The *woma* was the supreme spiritual representative and the highest judge of his group, but he was not directly involved in administrative and military functions.

Between 1889 and 1893 Ṭ. suffered severely from epidemics of rinderpest, smallpox and cholera. By 1891 the Amhara conquest of the area by *ras* ↗Wälde Aššagari was completed, and Ṭ. became part of the Ethiopian province of Kambaata. The ↗*gäbbar* system was introduced and *mälkäñña* from northern Ethiopia received land grants for usufruct in the region of Durgee. The last *woma* Bačoore (ca. 1888–94) of the clan Yaga was appointed *balabbat*, a position which was later adopted by the Sooro-Hadiyya. The dignity of the *woma* was transferred within the Yaga clan to Atiiso (ca. 1894–1928), Anneebo (ca. 1928–34), Asäffa (ca. 1934–36) and then Bäyyänä until this tradition was obviously abandoned by the Revolution of 1974.

Orthodox Christianity was introduced among the leading families after the Amhara conquest. From the 1960s onwards, most of the population converted to Protestant congregations. There are minorities of Roman-Catholics, Muslims and a dwindling rest of followers of the *fandaanano*-like "traditional" ↗religion.

The higher elevations of Ṭ. are a fertile area where ↗*ənsät* is cultivated as a highly productive staple food. It was also known for sweet potatoes and bananas. However, the area is increasingly suffering from overpopulation and draught so that measures of resettlement have been proclaimed and implemented since the 1980s.

Time and Space

In many societies of the Horn of Africa, a complex variety of cultural concepts and representations of T. and temporality as well as of S. can be identified. The categories of T. and S. are fundamental cognitive concepts for the formation of any mental, social or cosmological order. The temporal and spatial dimensions, in general, are integral to each other. For systematic reasons, however, they are treated separately in this article.

Time

Every understanding of T. (Amh.: ጊዜ, *gize*) is based on socially constructed concepts. The notion of T. covers a multitude of aspects, and its cultural conceptualisation varies according to context and purpose. Thus a broad "temporal diversity" of different local and sociocultural T. has to be considered. Likewise, within any given society different complementary concepts of T. (e.g., cyclic, linear or helical) can be identified. They may be correlated with each other to form a general temporal framework that simultaneously has cosmological and practical dimensions, framing the temporal structure of its worldview.

T. concepts are necessary to coordinate the activities of the group, be it to organize ritual or political gatherings or to fix the T. for cyclical economic activities, e.g., in agriculture or as part of the transhumance-cycle. The social conceptualisation of T. includes a) the measurement of duration (or T.-reckoning), b) the definition, by narrative or ritual means, of temporal sequences as well as of fixed dates and ↗calenders, and c) the establishment of hierarchies of cultural significance among such temporal units.

Many T. concepts as well as modes of measurement or reckoning of T. derive from the correlation of natural rhythmic processes including regular astronomical phenomena (i.e. the motion of the ↗Sun, the ↗Moon and the stars) and the cycles of vegetal and animal life. The temporal structure is further determined by the agro-ecological seasons (s. also ↗Climate) as well as by the succession of terms of cultural commemoration and other regular social events (cp., e.g.,

↗Feasts) in the life of the group (cp. e.g., Turton – Ruggles 1978: 585–600).

Life-time and life cycle

The basic temporal structure of an individual's life-T. is, in most societies, a life cycle which is determined by a succession of rites (e.g., ↗Initiation), which both enable, and mark, the passage from one social status to another or from one phase of life to the next. This passage is realized by ritual acts which redefine the initiate's position within the cosmological and social order.

While the age of a person counted in years is, traditionally, of minor interest, the "social age" or generation class has great importance, as evidenced by the authority that seniority has in all Ethiopian cultures (cp. ↗Gerontocracy; ↗*Šəmagəlle*). Thus, the life cycle of the individual is, in many Ethiopian cultures, interwoven with the "life cycle of the group" which is organized by age- and/or generation groups (↗Age-group system), such as, e.g., the ↗*gadaa* system.

Hours and days

In many Ethiopian cultures the T. between two sunrises makes up one 'day' (Amh.: **ቀን**, *qän*). This is again divided into 'day' (*qän*) and 'night' (Amh.: **ሌሊት**, *lelit*). The day, and, according to Ethiopian counting, the first hour, starts with the rising of the sun at about 6 a.m. 'Morning' or 'early day' (Amh.: **ጥዋት**, *ṭəwat*) is superseded by 'midday' (*qän*) and then by 'evening' (Amh.: **ማታ**, *mata*) which ends with the twelfth hour of the day (i.e., 6 p.m.) followed by 'dusk' (**ምሽት**, *məšət*). After sunset the first hour of the night starts. This division of the day has its equivalent in the Ethiopian Orthodox liturgical day (*Säᶜatat*, *Mäṣḥafä* ↗*säᶜatat* [s. EAE vol. 5]). The Muslim day is structured by the prescribed five ritual prayers (*ṣalāt*) which are determined by the different phases of sunlight.

In day-to-day practice the concept of the 'hour' (Amh.: **ሰዓት**, *säᶜat*) is far from the modern idea of objective precision. Before the introduction of the clock (in many rural areas still today) hours were estimated by the correlation of natural phenomena, such as, e.g., luminance, the length of the shadow, the position of the sun or birdsong.

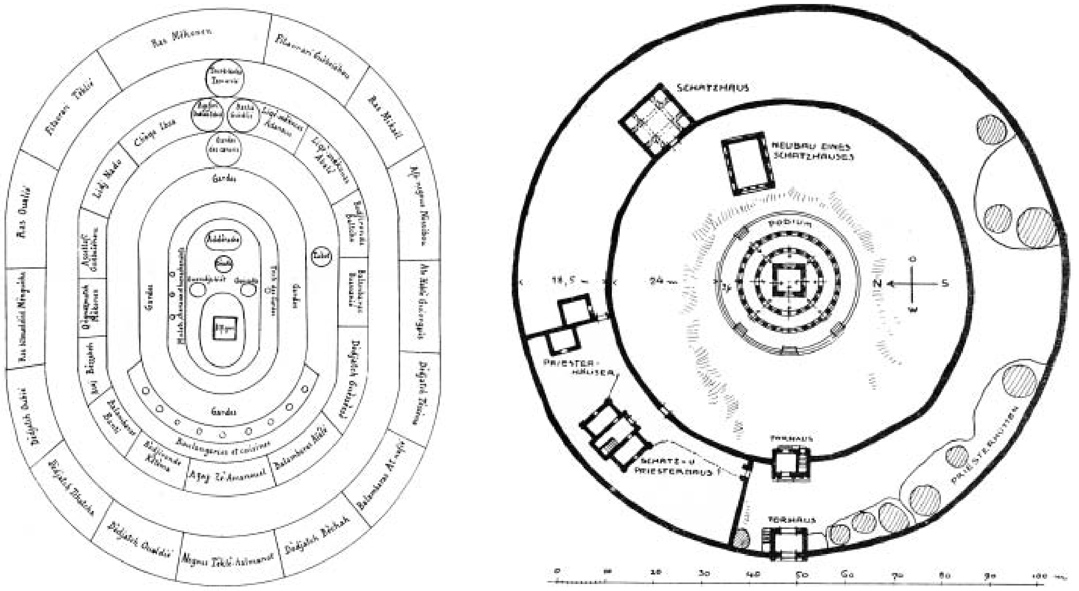
The first Ethiopians who possessed clocks were noblemen who received them as ↗gifts from European travellers (e.g., a big mechanical clock game from Venice given to ↗Dawit II [I], Rainieri 1999). At the end of the 19th cent. there was already a considerable number of clocks in use at Mənilək's court. Moreover, the Swiss Edouard ↗Evalet, who later became instrumental in importing clocks, was employed as imperial clockmaker. Apart from a large clock displayed at Mənilək's palace, visible and audible from afar, the first public clocks were probably those installed at the main railway stations. Today, the traditional concepts of the day and the hours coexist with the 24-hours day according to international convention.

Weeks, months and years

Days are subsumed under longer temporal units, such as weeks and months. The northern highlanders, and today's Ethiopian mainstream culture, know a 'week' (Amh., **ሳምንት**, *sammənt*) as a sequence of seven days starting on Sunday (Amh.: **እሁድ**, *əhud*). The week is structured by the different significance ascribed to every single day. Orthodox Christians, e.g., differentiate between the weekly ↗fasting days (Wednesday, Friday) and the non-fasting days. For them the ritual apex of the week is *Sänbät* (↗Sabbath) on Sunday while for the Betä Ǝsraᵓel it is on Saturday. The most important saints as well as central theological concepts are objects of monthly veneration at their shrines (e.g., days of commemoration, such as ↗*Lədäta* [*lämaryam*] on the first day of a month, *Śəllase* on the third, *Mikaᵓel* on the twelfth, ↗*Kidanä Məḥrät* on the 16th, *Maryam* on the 21st etc.; ↗*Tabot*). Furthermore, every day of the liturgical year of the Ethiopian Orthodox Church is dedicated to a certain saint or martyr. He is commemorated by the reading of his vita as related in the ↗*Sənkəssar*.

Muslims observe 'Friday' (*Ǧumaᶜa*) as their day of public ↗prayer in the ↗mosque. In addition to the great feasts (*ᶜĪd al-fiṭr* and *ᶜĪd al-aḍḥā* [↗*Aräfa*]) and the ↗*mawlid* for Prophet ↗Muḥammad on 12 *Rabīᶜ al-awwal*, many Muslim communities dedicate days of the week as well as monthly and yearly days of commemoration to certain ↗holy men, e.g., among the Harari (cp., e.g., Foucher in PICES 11, 82f.).

In most parts of Ethiopia the week is also represented in the circular system of rural markets: the different weekly markets in a given area are temporally adjusted to each other in order to enable a maximum of partners for barter or trade to meet at one place. Sometimes such markets or market places are called after the specific day on which they are held (e.g., Säñño Gäbäya in Däse).



Position plan of Mənilək's army during the ᶜAdwa campaign of 1896 (from GueCopMen, Atlas pl. 6) and (on the right) site map of the Mädḫane ᶜAläm church in Aksum (from DAE III, 52), both showing similar spatial concepts

Calendars structure T. in rhythmic form by the correlation of different annual cycles (Amh.: **ዘመን**, *zämän*), such as the regular succession of seasonal agricultural or pastoral activities and the ritual or liturgical year. However, crucial for defining the "year" as the major calendrical unit are the solar and lunar cycles; mostly, these two cycles are made to – or seem to – complement one another. The year is further divided in accordance with the 'seasons' (Amh.: **ወቅት**, *wäqt*). The climatic pattern in the Ethiopian highlands is characterized by the main 'rainy season' (Amh.: **ክረምት**, *kərämt*), the 'little rainy season' (Amh.: **በልግ**, *bälg*) and the 'main dry season' (Amh.: **በጋ**, *bäga*). In accordance with local climatic conditions, other concepts of season may be found.

The months of the Christian Ethiopian calendar are disconnected from the exact moon phases in order to adjust the lunar year with the solar year. The lunar month proper, however, mostly defined by the lunations, is common in many other cultures, e.g., among the Muslims and Oromo. The ↗Boorana have no weeks but twelve 'lunar months' (*ǧiʾaa*), each day having an individual name and spiritual aspect or force (called *ayyaana*, s. ↗Waaqa). Their lunar year is not correlated with the solar cycle or the seasons. Yet again, the ↗Gabbra have a 'week' (Orom. *torbaan*, lit., 'seven') of seven days. These weeks are grouped into six periods that make up one year, while the lunar month is not used as a temporal unit (AsmGada 180f., 188–200; Bassi in EAE vol. 1, 675f.; Elfneh Udessa in PICES 11, vol. 2, 61–70).

Ethiopian Orthodox Christians follow the Julian calendar (*ᶜAmäta Məḥrät* = A.M.) which stays 7 to 8 years behind the Gregorian calendar. The year begins with the ↗New Year celebrations, which already start the evening before (Amh.: **እንቁጣጣሽ**, *Ǝnquṭaṭaš*), in *Mäskäräm*, and is divided into two types of periods, the T. of 'fasting' (Amh. **ጾም**, *ṣom*) and the T. of non-fasting (Amh.: **ፍስክ**, *fəsək*). The most important part of the liturgical year is the Easter cycle (↗*Fasika*; for more details s. EAE vol. 1, 668–73). Among Muslims the ritual apex of the year is, apart from the major feasts, the holy month of ↗*Ramaḍān*.

Many cultures use temporal terms that subsume a certain number of years under categories of a higher order or eras (for details s. articles ↗Calendars, ↗Chronography and ↗*Ṭəntyon*).

Concepts of mythological and historical time

Concepts of T. provide a framework for mythological and historical worldviews. They identify change and repetition and give meaning to the past, present and future (↗Oracles and divination).

Oral historical traditions frequently structure the past with the succession of ancestors, enabling them to harmonize the experience of historical change with concepts of continuity. The ↗genealogy of a lineage is correlated with certain historical events and developments (e.g., migrations; cp., e.g., the case of the Səlṭe, Bustorf 2009:114ff.). Historical periodization is mostly based on 'periods' (*zämän*) of rule of single rulers or leaders as well as of dynasties or, in the case of the Oromo, of a certain *gadaa*.

T. concepts can be identified, e.g., as cyclic, helical or lineal. While, for example, the concept of the Oromo *gadaa* system is helical, the Christian and the Muslim ideas of T. are lineal: Both are defined by the Creation as the beginning, and the Last Judgement (↗Eschatology) as the end of T. In these two Abrahamitic religions the life-T. of the founders, Jesus Christ and Prophet Muḥammad respectively, is considered as the central mythological T. of reference. Throughout history, religious purism or revitalism has tried to re-establish the piety of the early days.

Since the reign of *aṣe* Mənilək II a teleological understanding of historical T. has gained increasing influence due to different ideologies of modernization and progress (cp. article "Chronography").

Dirk Bustorf

Space

The category S. includes the given spatial conditions of the natural ↗environment as well as the S. formed by human activity (e.g., cultivated landscape, built-up S.). A mental dimension, central to this article, is constituted by the representations of S. and the various social meanings applied to different places. The symbolic structuring of S. is essential for any worldview. By dividing S. into spheres, defining places and relations of meaning between semiotic objects, a symbolic "landscape" is constituted which reflects and, at the same time, determines cultural concepts, social relations as well as how people encounter their environment.

The mental representation of S. or places is a primary mnemonic device for historical or mythological narration. The oral narrator links legendary events directly with geographical places. In his worldview the two complementary aspects of mental S. are representations which are based on direct experience and, at the same time, mythological or symbolical landscapes (cp. Bustorf 2009: 40f. and ch. 8). Thus, such locations may become places of "cultural memory" and, as such, resources for the construction of identity. Locations of collective commemoration are often marked by ↗trees, wooden sculptures (s., e.g., ↗*Waakaa*) or grave planks (cp. ill. EAE vol. 3, 431), stones or ↗stelae. In some cases they are protected by certain ↗taboos and regulations, e.g., the prohibition to plough the land, to cut the trees or to speak aloud.

Sacred landscapes

The cosmological understanding of S. in many Ethiopian cultures is based on the distinction between sky and earth. This is reflected in the dichotomies found in some traditional ↗religions (cp. ↗Oromo religion; ↗Waaqa) as well as in the Christian idea of Heaven and earth. According to the ancient Greek *Book of the Wise Philosophers* (Gəᶜəz tr.: *Mäṣḥafä* ↗*Fälasfa ṭäbiban*) S. is the limited sphere between the firm and flat earth and the sky arching above it (Sumner 1974: 219ff.).

Religious ideas or mythology may be anchored in a landscape in the form of sacred places. Many such locations are the destination of a ↗pilgrimage. Typical sacred places are trees or groves, mountain tops, and bodies of water (↗Water; ↗*Ṣäbäl*). In many Ethiopian cultures the ↗grave of an ↗ancestor, a "hero" or a ↗holy man or ↗saint may also fulfil the function of a sacred place. Other locations owe their sacred meaning to mythical events that are believed to have taken place there, such as the origin of a clan, the birth of a holy man, a miracle etc.

At holy places the relationship of the human and the non-human (divine/spiritual or natural) sphere is renovated and balanced by way of rituals (e.g., ↗Sacrifice; ↗*Qəddase*), and people can partake in the spiritual dimension believed to be present. According to a spatial model inherent in many Ethiopian cultures, there is a dichotomy of the social world on the one hand, and an alien and unsafe exterior identified with darkness and the natural environment (bush, wilderness) on the other. The wide-spread topos of the ↗*qʷälla* ↗ecological zone and the waters as areas where ↗spirits dwell and ↗disease is prevalent belongs in the same context. Sacred trees, groves, waters etc. may in some cases be interpreted as a symbolic interface between the two dichotomous spheres.

The sacred landscape of Ethiopian Orthodox Christianity is structured according to Biblical topography and theological concepts. It is centred around ↗Jerusalem, which is identified with Mount ↗Zion, and important stations of Jesus' life. In Ethiopia, which is traditionally interpreted as the new "Holy Land" (s. below), these and other Biblical locations are symbolically multiplied by toponyms (e.g., Nazret, Däbrä Zäyt, Däbrä Tabor) and names of churches or ↗*tabots* (e.g., Däbrä Ṣəyon, Däbrä Sina). The River ↗Abbay is now identified with ↗Gihon, one of the rivers of paradise. Likewise, different elements of ecclesiastical architecture (↗Church buildings; ↗*Mäqdäs*) have symbolical allusions to Biblical places, such as Golgotha, the River Jordan and Bethlehem. The trees around churches according to some traditional interpretations symbolize the garden of Eden.

The circular or octagonal – in Təgrəñña-speaking areas usually rectangular – church building of the Ethiopian Orthodox Church is constructed around the *tabot* which is enshrined in its centre (but portable in principle). It is protected from the "impure" world by a number of concentric dividing walls, which define grades of purity or holiness decreasing from the centre to the periphery. According to canonical ↗law, the houses of the laity have to be separate from the church compound in order not to ritually pollute it. The presence of the *tabot* is believed to bless the area outside the church compound and to protect the human against the non-human sphere, i.e. the wilderness, which is identified with the ↗devil, with ↗demons, dangerous animals, sickness and disorder. However, the preferred place of a monastery or church is the symbolic 'desert' (↗*Gädam*, s. also ↗Hermits) or a 'mountain' (↗*Däbr*), seen as the appropriate site for ascetic practice and the subjection of the "evil" forces identified with such areas (for the symbolic interpretation of the sacred church S. s. ↗*Śərᶜatä betä krəstiyan*).

The spatial order in Islam is structured around the Kaᶜba in ↗Mecca and the holy sites in Medina and al-Quds (i.e. Jerusalem). The unique role of Mecca as the focus of Islamic practice is reinforced by the *qibla* as well as by *ḥağğ* and *ᶜumra*. In Ethiopia and Eritrea the sacred landscape of folk-Islam as well as of the ↗Islamic brotherhoods is constituted by a multitude of shrines (↗*Zāwiya*), most of them only playing a local role. Major sacred places of transregional importance are, e.g., ↗Faraqasa (s. also ↗Momina, in EAE vol. 5), ↗Šonke and especially ↗Šayḫ Ḥusayn, where the stations of the rites of the *ḥağğ* are encoded in the natural landscape, and Nägaš, the mausoleum of al-↗Nağāšī (cp. ↗Təgrəñña-speakers).

Social space and political mythology

Classification by spatial order helps to define power relations and symbolic relations. Inherent in the layout, the construction and the design of buildings are spatial models of socio-political relations, political organization and legitimation. Socio-political structures may also be reflected in the spatial division of common ↗houses.

Lagopoulos and Stylianoudi (2001: 55–95) have shown how the royal or military camp (↗*Kätäma*), as described in the ↗*Śərᶜatä mängəśt*, was designed according to an underlying spatial model that prevailed over centuries and is equally present in the layout and organizational patterns of regional courts, towns and churches. The model is characterized by a "charged centre surrounded by circles of decreasing significance" (LevWax 74f.). The same model can be identified in the concept of the ↗Ark of the Covenant in ↗Aksum as the manifestation of the heavenly Zion or Jerusalem. Its presence makes Aksum the "new Zion" and the symbolic centre of Ethiopia (cp. ill. EAE vol. 2, 753) or the world. During the ↗Zagʷe period, Roha (↗Lalibäla) became another symbolic "copy" of Jerusalem (van Donzel 1998; Lagopoulos – Stylianoudi 2001: 86ff.). While the existence of symbolic and political centres is characteristic of the more centralized societies in Ethiopia, the spatial organization of comparatively egalitarian groups shows only weak or even no real centres, this fact is sometimes reflected in the dispersed settlement patterns (for example cp. Smidt 2008: 280f.).

Timothy of Alexandria

T. (Eth. **ጢሞቴዎስ**, Ṭimotewos [III], called by his opponents "Ailouros", Gr. 'weasel', because of his leanness, d. 31 July 477) was an anti-Chalcedonian patriarch of Alexandria (457–77).

T., a monk in the monastery of Qalamūn (John of Nikiou 88: 14), was brought "by force" (Ps-Zachariah 4: 1) to Alexandria and consecrated presbyter during the pontificate of patriarch ↗Cyril of Alexandria. Together with Cyril's successor Dioscorus, T. attended the Second Council of ↗Ephesus (the "Latrocinium") in 449. He remained loyal to Dioscorus even after the latter's deposition by the Council of ↗Chalcedon in 451. In 457, when the pro-Chalcedonian Emperor Maurice died, T. gained the patriarchal see of Alexandria as usurper, being elected by the anti-Chalcedonians who had a majority in the city, but in opposition to the Chalcedonian patriarch Proterius, who was killed by a mob 20 days after T.'s election.

In a circular to bishops and monks Emperor Leo (457–474) asked for opinions about Chalcedon and the legitimacy of T.'s ordination (Evagrius 2:9) – he had been consecrated by two bishops only – and as the unanimous answer was against T., the Emperor deposed him (460). Instead, a pro-Chalcedonian patriarch, Timothy Salofakiolos, was appointed in Alexandria. T. was exiled, first to Gangra in Paphlagonia, and later (464/5–475) to Chersonesus, Crimea. In exile he continued his anti-Chalcedonian campaign writing letters to various ecclesiastics and communities, thereby becoming the main figure of the anti-Chalcedonian party. After the death of Emperor Leo, Basiliscus, the short-time emperor favourable to ↗Monophysitism (475–76), reinstated T. as patriarch of Alexandria. A year later, Emperor Zeno (476) cancelled all the rulings of his predecessor. T. died before the deposition order could reach him.

T.'s views place him in the line of theological development between Cyril and ↗Theodosius of Alexandria and ↗Severus of Antioch. He was a clear miaphysite, since he also fought against Eutychianism (Monophysitism proper), i.e. he regarded Christ's body as being of the same substance as those of men.

Both in the ↗Coptic Church and in the ↗Ethiopian Orthodox (Täwaḥədo) Church T. is venerated as a saint; the latter commemorates him on 7 *Näḥase* (= 10 August; GuiSyn III, 283; BudSaint 1198).

Few of his writings (originally in Greek) have survived, except for those which had been translated into Syriac or Armenian (CPG nos. 5475–91). His major work, the treatise *Against those who Speak about Two Natures (of Christ)*, is preserved in full only in Armenian and in fragments in Syriac (CPG no. 5475). The *Refutation of the Synod of Chalcedon and of the Tome of* (*Pope*) *Leo* (CPG no. 5482) is preserved only in Syriac. Two letters to his supporters are preserved in Syriac:

> *Letter to the people of Constantinople* sent from Gangra (CPG no. 5476; Ebied – Wickham 1970:337–41 [text] = 357–62 [tr.]; Ps.-Zachariah 4:12, final part);
>
> *Letter to the people of Alexandria* sent from Gangra (CPG no. 5477; Ebied – Wickham 1970:333f. = 351ff.; Ps.-Zachariah 4:12), both directed against those who deny that Jesus Christ's body was of the same substance as that of the human beings.

These two letters are also extant in Gəʿəz. They are preserved in at least two manuscripts of the *Mäṣḥafä ↗məśṭir* by Giyorgis of Sägla (mss. BN Éth. 113 [ZotBNat 129f.], 16th cent.; EMML no. 1831 [EMML V, 290], late 15th cent.) and are included in the so-called *Aksumite Collection*, composed between 447 and 686/87 and known from a unique manuscript dating not later than the 14th cent. (nos. 31 and 32 in Bausi 2006:48). The second letter here seems to be a different edition from the one found in the *Mäṣḥafä məsṭir* manuscripts (Bausi 2006:68f.).

The same *Aksumite Collection* contains an Ethiopic version of T.'s *Refutation of the Synod of Chalcedon* (CPG no. 5482; Bausi 2006:69 no. 34), which is otherwise only known in Syriac. Bausi hypothesises the existence of a collection (*Silloge*) of T.'s writings in Greek which was translated into both Syriac and Gəʿəz (during the ↗Aksumite period) and which survived in the latter version in the *Aksumite Collection.*

Several more writings in Gəʿəz are attributed to T.:

Letter concerning the death of children (CPG no. 5490, Suppl.; preserved in ms. EMML no. 6307, late 16th cent.; cp. Getatchew Haile 1987). Although not preserved in other languages, this letter of consolation, sent to a woman named Arbikya, whose three children had died, is perhaps authentic.

Homily on Archangel Michael included into the ↗*Dərsanä Mikaʾel*, to be read on 12 *Ḫədar*. The author's name is given here as Dämatewos (ed. 1989:24) or Damatewos (e.g., ms. EMML no. 569, ca. 1770). Some copyists corrected it to either Dämatrəyos (i.e. 'Demetrios', e.g., ms. EMML no. 1433, 18th cent.), or Dorotewos (ms. Ṭānāsee 74 = Dabra Māryām 16, 19th cent.), but, since this *Homily* is an abbreviated version of the *Homily* of T. known in Coptic (and Arabic; Müller 1959:161f.), those "improved" forms met in Ethiopic manuscripts must be regarded as garbled or overcorrected.

Homily on the Church of the Rock (ed. Colin 2001), also extant in Coptic (partially) and in Arabic (in two editions; ed. Boud'hors – Boutros 2001). According to Colin (2001:6) the homily was composed not earlier than the 6th–7th cent., whereas the Ethiopic translation (from an Arabic text close to the shorter edition), was done perhaps in the second decade of the 18th cent. The translation date could possibly have been earlier (Bausi 2002:478). It tells of the construction by T. of the church on a rock at the Mountain of the Bird (Ǧabal aṭ-Ṭayr), where the Holy Family stayed during the flight to Egypt. The homily was apparently composed in order to reclaim some prestige for this place of pilgrimage, less famous than that of Qusqām. It is often found in the ↗*Dərsanä Maryam* (e.g., ms. BritLib Orient. 604, 1716–21, or BN d'Abbadie 158, 18th cent.).

T. is mentioned in some episodes of the ↗*Täʾammərä Maryam* (CerMaria 72f., 206): in a vision Mary appears to him in the Church of St. Pachomius, and also to a priest who since his childhood always accompanied T. Mary tells T. about her stay in Egypt and the places she visited there, particularly Ašmunayn, a story that includes an account of her meeting with thieves. Also the visit to Däbrä Qʷəsqʷam (Qusqām) is mentioned (e.g., in mss. EMML no. 3872, 16th cent., EMML no. 2952, ca. 1720).

The aforementioned *Aksumite Collection* as well as some manuscripts of the ↗*Senodos* contain the *Canonical Responsa* (Bausi 2006:70, no. 36; Id. 2005). The *Responsa,* known in Greek, Syriac, Armenian, Coptic and Arabic versions, are generally attributed to another "Timothy of Alexandria", i.e. the patriarch Timothy I (380–85; CPG no. 2520). In the Ethiopic translation, they are attributed to Peter of Alexandria (373–80), as is found in a Coptic manuscript (Bausi 2006:70).

This "Timothy of Alexandria", Timothy I, is also one of the authorities whose canon law rules are quoted in the *Mäṣḥafä* ↗*fäws mänfäsawi* (e.g., in BritLib ms. Add. s. 16205, DillmLond 39a). Because of the wrong attribution found otherwise in Ethiopic, the correct attribution in the *Fäws mänfäsawi* seems to come directly from its Copto-Arabic source.

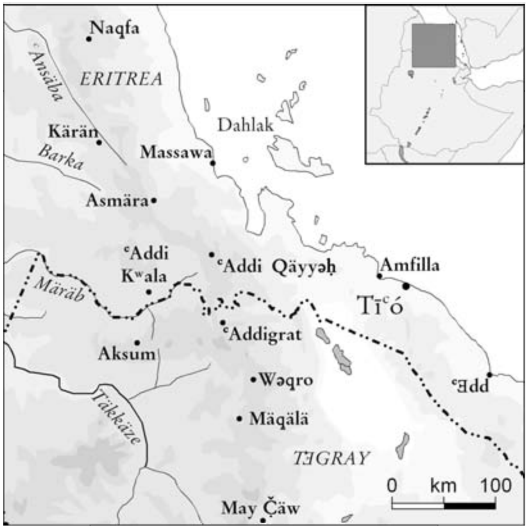
Witold Witakowski

Tī^{c}ó

T. is a coastal town, about 260 km south of Massawa, to the south of Cape Ḥaffalé (the "↗Amfilla" or "Anfile" Bay in colonial literature corresponds to Cape Mi^{c}dir). Also spelled Thio in Italian, the pronunciation [*tī^{c}ó*] seems to be an Italian adaptation from Arabic, instead of the regular Tew^{c}o, a toponym which is also found in the Ḥanle plain (north-west of Djibouti). Derived from the verb *ewe^{c}* 'to climb', 'to extract', the noun T. refers to the three wells in its vicinity: Ḍiḍḍo^{c}ó (in *wadi* ^{c}Adgaban), Dabáyu and Borróyta (MorDicAfar 263).

Ancient foundations of the town are known as Bolo, the modern T. is an Italian creation, whereas Mi^{c}dir is an ancient town with its six mosques. Included in the Dammohoytá territory, T. was the residence of the deputy commissioner under the Commissario della Dancália in ↗^{c}Asab with territorial competence up to the Bôri Peninsula (↗Buri). The local chief of T. had the title of *kabbo markat* (Ital. *capo di mercato*). The town was a centre for the *Aḥmadīya* ↗Islamic brotherhood with its own ↗*šari^{c}a* Court. An *Aḥmadī* congregational mosque was built in 1907 (cp. EAE vol. 3, 209, 214).



In the 1960s, the town hosted the Lutheran Red Sea Mission Team which initiated literacy programs in the ^{c}Afar language.

Didier Morin

Tirmaga

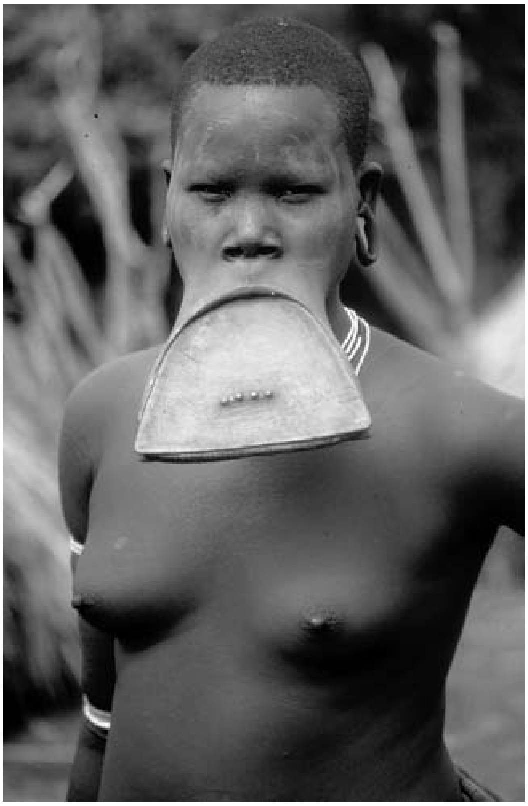
T. (sg. Tirma) is an ethno-linguistic South-East Surmic-speaking group of ca. 7,000 people living in south-western Ethiopia. They inhabit the Benç̌-Maği zone, Surma *wäräda*, between the upper valley of the River Kibiš and the Ethio-Sudanese border, expanding to the north up to the Akobo River (for location s. map for Suri). Ca. 1,000 T. live in the Sudan, in the Eastern areas of the Boma Plateau, among other groups such as ↗Baale and Ŋalam (Boma ↗Murle).

The T. are one of the moieties or sub-groups (next to the ↗Čai) of the ↗Suri. Like the Čai, who inhabit the lowlands between the upper Kibiš valley and the ↗Omo, the T. live in small villages and pastoralist camps. Several families have settled around the missionary station of Tulgit. The T. have the same subsistence economy as the Čai (mainly agro-pastoralism and shifting cultivation of sorghum, corn and garden crops, with hunting, gathering and gold mining as secondary activities) and the same language and culture.

Together with the Čai and the ↗Mursi, the T. believe in a sky-god called *Tumu*. Traditional leadership is embodied by two priest-like mediators called *kòmòréna* (Sg., *kòmòrú* [↗*Komoru*]; today, *wolezogi* in the Tulgit area and *bolo gidañi* in the Mardur area) who belong to the senior age-group of elders (*rórà*).

Warriors (*tègay*) acquire prestige during violent stick fights (*ságine*). To be eligible for ↗marriage, nubile women of the T., Čai and Mursi (but no longer Baale) have their bottom teeth removed and their bottom lips pierced and stretched so as to allow the insertion of a large round clay lip plate (*ḍébé*); some women of the T. and the Čai still wear trapezoidal wooden lip plates (*búrgwi*, cp. ill.).

T. territory has become more accessible with the recent improvement of seasonal roads connecting Dima with the Akobo, Tulgit and the market town of Ğabba. The T., nevertheless,



Tirmaga girl wearing a wooden lip-plate (*burgwi*); photo 2001, courtesy of Christian Bader

remain largely self-sufficient and self-governed, and still have only limited contact with the outside world. Living in a very unstable border region, with easy access to (semi-)automatic weapons and ammunition from southern Sudan, they are persistently in conflict over pasture, cattle and territory with the ↗Ñaŋatom to the South, the Toposa to the East, and the ↗Añwaa and ↗Meʾen to the North; raiding against agriculturist Dizi, Baale and Boma-Murle, is still rife.

Christian Bader

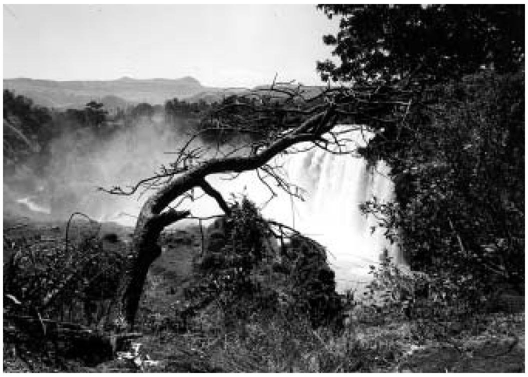
Ṭisəsat

The Ṭ. (**ጢስሳት**, also **ጢስዕሳት**, Ṭisʾəsat, lit., 'fume-fire') falls, also known as the Blue Nile Falls, are located ca. 30 km south of ↗Baḥər Dar where the River ↗Abbay leaves Lake ↗Ṭana and plunges over a 45–55 m cliff made of recent (pleistocene) black and hard basalt and eroded tuffs (for location s. map for Ṭana). From September to October, when in full flood, the flow reaches 8,000 m^3/second and the width of the falls swells from 250 m to 500 m. At the foot of the cliff a dense forest grows around a small lake. During the low water period it sometimes happens that the river only dribbles over the falls.

In 1963 the Ethiopian Electric Light and Power Authority built a run-off power plant in order to produce circa 10,000,000 kwh/year mainly used for the consumers of Baḥər Dar town. There are extension plans which could dry the falls for several months each year and decrease the number of tourists.

About 1.5 km from Ṭ., after passing the "Portuguese" bridge (also **የጢስ፡ ውኃ፡ ድልድይ**, *yäṭis wəha dəldəy*, 'fume water bridge'), built during the reign of *aṣe* Susənyos, the Abbay flows through a deep canyon which cuts Goǧǧam first from Wällo then from Šäwa.

In the vicinity of the falls lies the town of Ṭis Abbay (Baḥər Dar *wäräda*, Mərab Goǧǧam zone, Amhara *kəlləl*). It has 6,998 inhabitants who, besides agriculture, work in the power plant and sell their products and services to tourists (CSA 2004). It is quite a boom town: there were only 2,827 inhabitants in the 1984 census, while the 1994 census (CSA 1998) counted 4,227 inhabitants.



The Ṭisəsat; photo 2006, courtesy of Günter Klatt

Alain Gascon

Tisserant, Eugène-Gabriel

T. (Eugène-Gabriel-Gervais-Laurent T.; b. 24 March 1884, Nancy, d. 21 February 1972, Albano Laziale [Rome]), was a Catholic ecclesiastic and scholar especially interested in the Biblical, Christian and Islamic Orient.

From 1900 to 1904, T. studied theology, Bible, Hebrew, Syriac, Arabic, Armenian, Old Testament and Oriental Patristics at the Grand séminaire of Nancy: fields in which he would later make major philological and historical contributions (most of them collected in Pop 1955). In 1904–05, he completed his education under the guidance of the Dominican scholar Marie-Joseph Lagrange, at the École biblique in Jerusalem, where he met Sylvain ↗Grébaut and also had the opportunity to further his knowledge of Arabic. From 1906 to 1908, in Paris, he attended courses at the Institut catholique, the École pratique des hautes Études, the École des langues orientales and the École du Louvre. Ordained priest in 1907, he graduated with a diploma in five languages (Hebrew, Syriac, Arabic, Ethiopic and Assyrian) at the Institut catholique and a dissertation on the Ethiopic *Ascension of ↗Isaiah* (publ. Tisserant 1909); his mentor and supervisor for Semitic languages, including Gəʿəz, was the learned abbé François Martin, who influenced T. in terms of methodology and textual criticism after his first experiences in Jerusalem.

In 1908, T. became a professor of Assyriology at the Pontifical Roman Athenaeum of Sant'Apollinare, and a keeper ("scriptor") of the Oriental manuscripts in the ↗Biblioteca Apostolica Vaticana: he then had contacts with such important specialists as Alfred Rahlfs, who asked him to draw up a catalogue of manuscripts with Oriental translations of the Septuagint.

T. travelled extensively, not only in Europe: as a special diplomatic envoy of the pope for matters concerning diplomacy (e.g., he was a member of the pontifical delegation to Ethiopia in 1929, reciprocating the official visit paid to Pius XI by the later Emperor ↗Ḫaylä Śəllase I in 1924; s. Pop 1955: 804) and the relationships with Orthodox or Catholic Oriental Churches (e.g., in the Balkans and the Near East, 1923), but also as a scholar, to consult or purchase manuscripts and printed books (in the Near East, 1911–12), and to inquire into the state of library science (in the United States, at the invitation of the Carnegie Endowment for International Peace, 1927). He was thus able to contribute substantially toward the growth, increase and modernization of the Vatican Library, where he became assistant to the prefect in 1919 and pro-prefect in 1930. A monsignor since 1921, he was appointed protonotary apostolic and then cardinal in 1936.

Cardinal Eugène-Gabriel Tisserant at Mariazell (Styria) in 1957, on the occasion of the celebrations for the eighth centenary of the Marian shrine; photo courtesy of the author

A staunch opponent of Fascism and Nazism, T. insisted on "the duty of Catholics to resist the unjust orders of an authoritarian state". He opened the Vatican Library to such great Orientalists as the anti-Fascist Ugo ↗Monneret de Villard and the Jew Giorgio Levi Della Vida (1886–64), with whom he established a long friendship – as he also did with Carlo ↗Conti Rossini and Enrico ↗Cerulli, in whose research and personal circumstances he was much involved. Consecrated archbishop in 1937, T. became dean of the Sacred College of cardinals in 1951. In this capacity, he went again, as a representative of the Pope, on several missions, especially in Africa and in the East: Algeria, Tunisia and Morocco (1954), Egypt and India (1950–51 and 1953), and Ethiopia (1959 and 1967, for the inauguration of the Catholic seminary and, resp., the University of ↗Asmära; s. Mojoli 1973: 34, 124f.). Later, he followed Pope Paul VI in his journeys throughout the world.

T. presided over the conclaves of 1958 and 1963, and was the first person after the Pope to sign the acts of the Second Vatican Council (1962–65). Highly considered by the popes Pius XI and Pius XII, he held a few other prestigious offices in the Roman Curia, among them: Secretary of the then Congregation for the Oriental Church (↗Sacra Congregatio pro Ecclesiis Orientalibus; 1936–59), president of the Pontifical Biblical Commission (1938–46), prefect of the Congregation of Ceremonies (1951–67), and Librarian and Archivist of the Holy Roman Church (1957–71). A much respected scholar, he received several honorary degrees and was awarded such prestigious memberships as those of the Accademia Nazionale dei Lincei in 1958 and the Académie française in 1961.

T.'s various historical and philological interests focused on manuscripts and literature, with special attention to palimpsests and palaeography (s. Tisserant 1914, 1923), but also on the life of the Christian Oriental communities (e.g., Tisserant 1930, 1941) and the history of Oriental studies (cp. Levi Della Vida 1955: 11). He devoted several contributions to Ethiopia and its Biblical and Christian traditions, always envisaged within the major framework of Eastern Christendom. In 1922 he was consulted by the ↗Capuchins in Asmära on how to edit the Ethiopian ↗Bible, the text of which was being prepared for publication by Francesco da ↗Bassano (Vosté 1946:66f.). Especially worth noting is the catalogue of Ethiopic manuscripts in the Vatican Library, prepared with Grébaut (1935–36; GreTisVat). Besides the exemplars acquired by the latter during his 1926 Ethiopian mission, the catalogue comprises those ancient mss. already in the possession of the Library, a few of them from ↗Santo Stefano dei Mori, with a remarkably well-documented excursus on the history of this monastery, its collection and the latter's fortunes by T. himself (GreTisVat vol. 2, 9–32; s. already Tisserant 1925).

Particularly sensitive to the conditions of the Ethiopian students in Rome, T. often promoted the publication of their dissertations on Ethiopian matters; within the jurisdiction of the Congregation for the Oriental Church, he was quite close to the Pontifical Ethiopian College in the Vatican City (↗Santo Stefano dei Mori). Thus, he presided over the celebrations of the 25th anniversary of its canonical foundation in 1955 (when he also consecrated Bishop Urbain-Marie ↗Person, vicar apostolic of Harär), and eventually accompanied Ḫaylä Śəllase during his visit there in 1970 (s. *The Pontifical Ethiopian College* n.d.: 12–15).

T.'s personal library (more than 20,000) was bequeathed to the Grand séminaire of Nancy. His private archives, carefully kept by the association "Amis du Cardinal Tisserant" in Montferrer, a small village in the eastern Pyrenees, are currently the object of research, aimed at publishing the documents they contain (s. *Le cardinal Eugène Tisserant* 2003). To this end, T.'s correspondence with Wladimir d'Ormesson (1940–71), French ambassador to the Holy See during and after World War II, has been thoroughly investigated; it sheds light on several problems of contemporary history, from Vichy to the former Nazi collaborationists, the Cold War and the Catholic Church beyond the Iron Curtain (Guinle-Lorinet 2000).

Tobacco

T. (Amh. **ትምባሆ**, *təmbaho*) seems to have been little known in Ethiopia prior to the 19th cent. This was largely on account of misoneistic opposition from the Church, which regarded both smoking and snuffing as "un-Christian" (cp. also ↗Coffee). This view was reinforced by the fact that both practices were adopted by Muslim merchants in contact with the outside world, as well as by "animist" peoples who allegedly used T. at their ceremonies.

Opposition to T. found expression in various traditional beliefs. Some held that at the Crucifixion the T. plant, the "enemy of [↗]Mary", was the sole plant not to wither in shame. Another tradition declared that the plant was "infamous" because it grew on the grave of the arch-heretic Arius (Borelli 1890: 117; Griaule 1928: 78). A text of the *Dərsanä Raguʾel* dating from late-Gondärine times quoted the Archangel as stating that the T. plant was "worse than [↗]hyena's flesh", and had been "poisoned by the [↗]Devil". Raguʾel reportedly prophesied that if *aṣe* Ləbnä Dəngəl shunned the weed he would defeat Aḥmad b. Ibrāhīm, but otherwise would suffer terrible disaster (Caquot 1957: 91–102).

Despite such beliefs, T. imports, cultivation, smoking and snuffing by the early 19th cent., were widely reported, particularly among Gurage, Oromo and other peoples in the south, less influenced by Orthodox Church teachings. Imported T. was on sale at major markets, where snuff was referred to as **ሱራት** (*surat*), after the Indian T.-exporting port of that name (KaneDic 489). Locally-grown leaves were harvested by women, sun-dried, and pressed by being placed under a bed (Pankhurst 1964: 226).

Opposition to T. was particularly intense during the reign of *aṣe* Yoḥannəs IV (r. 1872–89). He decreed that habitual smokers and snuffers should respectively have their lips and noses amputated. These punishments were however rarely realized – and the ban on T. scarcely enforceable: the British traveller A.B. Wylde (1901: 44f.) reports that the monarch's aide Mərč̣a Wärqe once absent-mindedly attempted to take snuff in the presence of the Emperor, who merely said, "Not before me [...] whatever you do before others". Commercial T. cultivation was meanwhile initiated around ↗Kärän outside the Emperor's control.

Restrictions on the use of T. were weakened during the reign of Mənilək II, when *abunä* Matewos, the Coptic head of the Ethiopian Church, smoked extensively, albeit behind closed doors (Hohler 1942: 126). Mənilək himself adopted a relaxed attitude to T., declaring that addicts should use it discreetly, following the injunction: "Your vice [i.e. T.] under your arms [i.e. in secret] – Your provisions on your donkey [i.e. openly]."

Subsequently, in 1910, Mənilək officially accepted T. when he established a monopoly for its production and import, a lucrative enterprise which he entrusted to an Armenian entrepreneur, Matig Kevorkoff (ZerÉth 212f.; Rey 1923: 202).

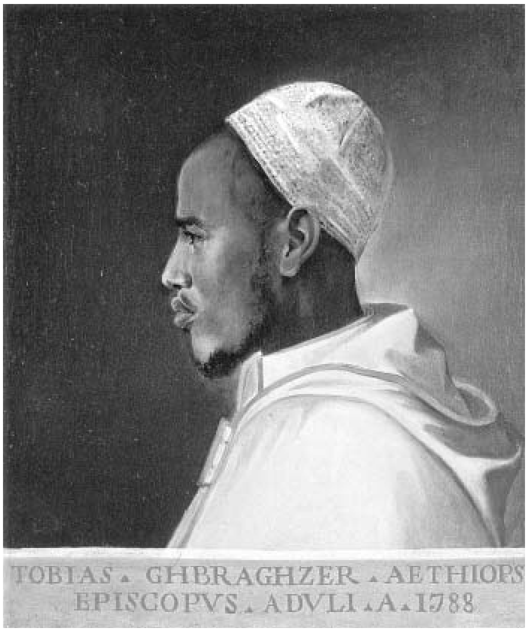
Ṭobiya Giyorgis Gäbrä Ǝgziʾabəḥer

Ṭ. (**ጦቢያ፡ ጊዮርጊስ፡ ገብረ፡ እግዚአብሔር**, Lat. *Tobias Georgius Gheraghzer*, b. 19 June 1755 [or 1750], Däbrä Maryam, Dämbəya, d. 7 May 1801, Cairo, Egypt) was an Ethiopian Catholic Bishop.

Ṭ. was an Orthodox monk, when, in 1781, he and a fellow monk from Šäwa, Gäbrä Krəstos, reached ↗Jerusalem. They continued to Italy, landing at Livorno in August 1782 and proceeding to Rome. At ↗Santo Stefano dei Mori, Ṭ. embraced Catholicism. He was received into the church and took up studies for six years at the Collegio Urbano di Propaganda Fide (↗Sacra Congregatio de Propaganda Fide). There, he copied biblical texts for the then secretary of the Congregation, Cardinal Stefano Borgia, who became his patron: as a scribe and/or owner of manuscripts, Ṭ appears in ms. VatLib, Vat. Borg. Aeth. 1, 12, 22 (fols. II–XII, in Italian, with his translation of an Ethiopic description of Ǝnda Abunä Arägawi at ↗Däbrä Damo, ed. Guidi 1894: 93–96), 23, and 24. In 1788 he sent the latter book he sent from Livorno to his patron in 1788 (s. Ṭ.’s unpublished letter to him in ms. Borg. Lat. 285, fols. 352–53; cp. GreTisVat I, 834, and Nocca 2001: 283). Possibly on account of Ṭ.’s activity as a copyist and purveyor of manuscripts, on the same year, Cardinal Borgia appointed him a member of the Accademia dei Volsci of Velletri (s. ill.).



Portrait of Ṭobiya Giyorgis Gäbrä Ǝgziʾabəḥer, bishop of Adulis, as a member of the Accademia dei Volsci (Velletri), by an anonymous painter active in Rome, ca. 1788; Città del Vaticano, Congregazione per l’Evangelizzazione dei Popoli; from Germano – Nocca 2001: 283

Ṭ. produced a ↗Gəʿəz translation of Cardinal Bellarmine’s *Dottrina cristiana* that was printed by Propaganda Fide in 1786, with a partly autobiographic dissertation by him at the end, 87–93 (s. Mauro da Leonessa 1920: 324f.). He copied further excerpts of this catechism and elaborated it in ms. Vat. Borg. Aeth. 1, fol. 100f. (GreTisVat I, 766).

At the suggestion of the ↗Franciscan Michelangelo Pacelli, lecturer in Arabic and later superior of the mission in Egypt, whom he had befriended, Ṭ. was nominated by Propaganda Fide, and then appointed by Pope Pius VI, as titular bishop of ↗Adulis and Apostolic Vicar of Ethiopia. He was consecrated in Rome, on 24 June 1788, by an Oriental-rite Greek bishop. First, the appointee had to take the usual preliminary oath *de servando proprio ritu*: a customary formula that appears in both the decree of the Congregation and the papal bull, and means ‘about retaining one’s own rite’, i.e. the “Copto-Abyissinan” one, as made clear by T.’s 1797 letter from Cairo to the cardinal prefect of Propaganda Fide (BecRASO XIV, 475, no. 181: “secondo il rito cofto et abissino”). The decree and the papal bull specifically refer to the Gəʿəz rite, of which Ṭ. was thereby the first Catholic Bishop (cp., e.g., O’Mahoney 1987–88: 153 and n. 181), de facto “anticipating” a question that had been raised as early as 1637 (s. ↗Mendez), but was dismissed soon after, and was hardly referred to again before the age of de ↗Jacobis.

Already in 1788, Ṭ. left for Ethiopia in the company of *abba* Mikaʾel Kəflä Giyorgis and Fr. Michelangelo (the latter, having caused some tension, eventually withdrew from the mission). They reached ↗Massawa, via Suez and al-Muḫā, in October 1789.

Ṭ.’s years in Ethiopia were a sequence of persecutions. He stayed at Ṣäʾazzäga, Ǝmbəyto, ʿAddi Gʷaʿdad, ʿOra Betä Mäsqäl, Kämkäm, Däbrä Damo, and perhaps Waldəbba. Hopes concerning his encounter with *aṣe* ↗Ḥəzqəyas were dispelled with ↗Täklä Giyorgis I’s return to power.

In 1792, the Coptic Patriarch Mark VIII of Alexandria excommunicated the Catholic Ṭ. In October 1797, Ṭ. moved to Egypt, where he died of plague. A reliable source seems to suggest that the Latin pontifical vestments preserved at Däbrä Damo – in the vicinity of which he spent three months in 1795 – may have belonged to Ṭ. (whatever their relationship with "his own rite"), who entrusted them to the custody of Mikaᵓel Kəflä Giyorgis (s. the 1800 letter of Propaganda Fide to him in BecRASO XIV, 480; cp. O'Mahoney 1987–88: 167).

Ṭ. was the first black African bishop in modern times. With him, the training of Ethiopian clerics at the Collegio Urbano di Propaganda resulted eventually in the consecration of an autochthonous bishop, which marked a new phase in ↗Vatican's Ethiopian politics since the failure of the ↗Jesuit mission.

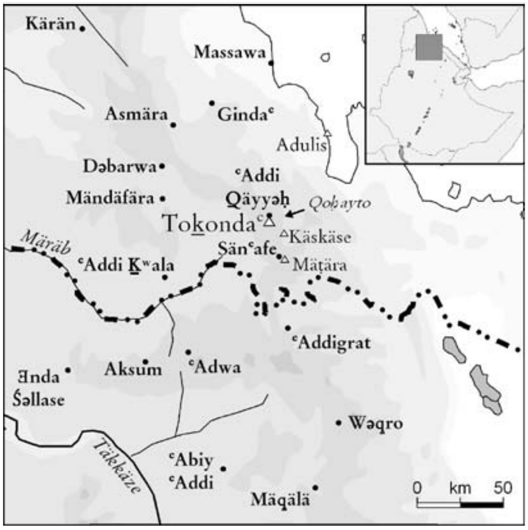
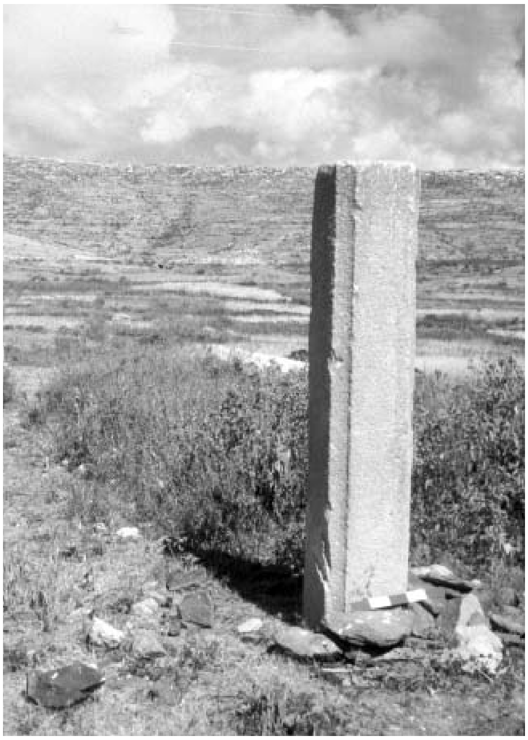
Toḵondaᶜ

T. (**ቶኾንዳዕ**) is a village and an archaeological site, on top and eastern slope of a hill, about 4 km south of ↗ᶜAddi Q̱äyyəḥ (39° 23' 30'' East, 14° 48' 80'' North) in ↗Akkälä Guzay, opposite the plateau of ↗Qoḥayto.

When the ↗Deutsche Aksum-Expedition arrived here on the return from Aksum to Asmära on 20 April 1906 ↗Littmann was told by an Italian officer, Garelli, that there were several graffiti in the village (s. Voigt in WenDAE II) which were documented (DAE nos. 36–39 = RIÉ 85ff., 385). Later another was found by Drewes (RIÉ 88).

Furthermore, Garelli found three major Aksumite buildings in the valley east of the village (A–C). Two of them with podiums were excavated by him, one with two rows of six pillars (ruin C) and another with two rows of five pillars (ruin A). They were described (including plans and reconstruction of ruin C) by Daniel ↗Krencker (DAE II, 143ff.). The area – now agricultural land – was visited by a German archaeological mission led by Steffen Wenig in 1995, 1996 and 1997. Only a few architectural pieces are still existing. The fields are covered with sherds (mainly red wares) and burnt bricks, but also white ground-stone beads were found (Schmidt – Curtis – Zelalem Teka 2008, fig. 5.8). Here was once a major Aksumite site, the first which caravans reached when coming





Pillar from an Aksumite podium building at Toḵonda^{c}; photo 1995, courtesy of the author

up from ↗Adulis through the Ḥaddas Valley. T. was proposed as being a candidate for the ancient ↗Coloë (Wenig 2003: 94).

Some surface finds are kept at the Department for Egyptology and Archaeology of North-east Africa, Humboldt University Berlin.

Ṭomar: Mäṣḥafä ṭomar

The M.ṭ. (**መጽሐፈ፡ ጦማር**, lit. 'The Book of the Letter [from Heaven]'), or **ጦማረ፡ አትናቴዎስ** (*Ṭomarä Atnatewos*, 'Letter to Athanasius'), also known as the *Sunday Letter* (CANT no. 311) is the Ethiopic version of the legend of a letter that fell from heaven in either Rome or Jerusalem and that contained an injunction for celebration of Sunday. It was believed to be sent by Jesus Christ himself.

The *Letter* was extremely popular within Christendom, both Western and Eastern, in the Middle Ages, and versions in many languages exist (Palmer 1986: 344). It is first mentioned ca. 584 A.D., in the letter of Licinianus, the bishop of Cartagena (Spain), who condemned it as a forgery. The original was probably composed in Greek, in Jerusalem in the middle of the 5th cent. (van Esbroeck 1989), and it is from the Greek that the Eastern Slavonic and Christian Oriental versions derive. Recently however, Backus (2005: 1106) suggested that its origin may in fact be Western European, i.e. that the original was composed in Latin.

The text narrates how, in the year 1057 "of Alexander" (= 746 A.D.), on the 25th of Kanun the first (Syriac month = December), during the mass celebrated by the (fictitious) patriarch of Rome (Eth. Romәya), Athanasius (Eth. Atnatewos), in the Church of Peter and Paul, in the presence of 23,000 people and 12,000 priests, a letter appeared outside the church hovering in the air. When Athanasius finished celebrating the mass he spread his chasuble (Eth. spelled *qelasno* for *qelanos*) on the ground and the letter fell upon it. Its sender urged the people to keep the commandments, but particularly to observe the Sunday rest (from the ninth hour Saturday to Monday morning). Should the people fail to obey, various punishments would be sent upon them. Subsequently, a voice from heaven identified the Son as the sender, whereupon the patriarch confirmed that these were the words of God.

The M.ṭ. was translated into Ethiopic from Arabic, in which language there are three versions (GrafLit 296). The Ethiopic is derived from the one based on a Syriac version, which is clear from the dating according to the Seleucid (or Alexander) era and from the use of a month name of the Syriac calendar.

Guidi (GuiSLett 73) places the translation of the M.ṭ. in the mid-16th cent., and the earliest manuscript (ZotBNat 125, no. 111) dates to that period. The M.ṭ. has been copied well into the 20th cent. (e.g., EMML nos. 14 and 151). In most cases the text of M.ṭ. is included in manuscripts that contain the ↗*Haymanotä abäw*.

Witold Witakowski

Ṭomarä təsbəᵓət

The Ṭ.t. (**ጦማረ፡ ትስብእት**, 'Epistle of Humanity') is a work of ↗Gəᶜəz literature. Being probably the first of several works of *aṣe* ↗Zärᵓa Yaᶜəqob and his 'clergy of the Tabernacle' (*kahnatä däbtära*, i.e. the clergy of the royal church in the Emperor's ↗*kätäma*), it is a collection of three homilies designed to be read on the feast days of the ↗Apostles and ↗Evangelists, with each homily assigned to several of them. Each shares the same introduction that deals with the importance of honouring the ↗saints and martyrs by observing their feast days as ordered by the Apostles in their ↗*Senodos*.

The Ṭ.t. was composed with the purpose of eradicating the superstitious practices (↗Magic) that Zärᵓa Yaᶜəqob's (Christian) subjects had taken up (cf. Getatchew Haile 1991:113 [text]: "And the subject of its words is about the worship of God with a heart pure from the filth of the idol of this world, which is the magician").

Until the discovery of the text of Ṭ.t. in ms. EMML 1480, the existence of this work was only known from references to it in other texts. Zärᵓa Yaᶜəqob's *Mäṣḥafä* ↗*milad* (Wendt 1963:95f. [text]) mentions both Ṭ.t. and the *Mäṣḥafä* ↗*bərhan*, indicating thus that the former had been authored first. The Chronicle of Zärᵓa Yaᶜəqob (PerrZarY 75) lists the Ṭ.t. before the other works, another possible indication that the Ṭ.t. was composed first. Finally, the Ṭ.t. is a narrative of the reprisal the Emperor took against those who opposed his ascension to the throne, and according to the colophon, its composition began immediately upon his coronation (on 26 *Säne* [of 1426 A.M./ 1434 A.D.]; Getatchew Haile 1991:113 [text]). The text does not explain the choice of the title.

In the Ṭ.t., Zärᵓa Yaᶜəqob identifies four groups of sorcerers whom he was determined to eradicate: "magicians" (**ጠንቋልያን**, *ṭänqʷalyan*), "soothsayers" (**ማርያን**, *maryan*), and "demons" *dino* (**ዲኖ**) and ↗*däsk* (**ደስክ**). It seems that the *ṭänqʷalyan* and *maryan* were a country-wide phenomenon while the *dino* and the *däsk* were regional. The other regional soothsayers mentioned in the *Mäṣḥafä milad* and the *Mäṣḥafä bərhan*, such as **ፈጸንት**, *fäṣänt*; **ጕዳሌ**; *gʷədale*, **መቃውዜ**, *mäqawze*; and **ጽጕዕ**, *ṣəgʷᶜ*, are not mentioned in the Ṭ.t. The Emperor must have discovered these four as he learned more about divination practices in different regions of his empire (cf. Strelcyn 1972:43–55).

The homilies draw heavily on the condemnation of sorcerers, diviners and soothsayers by the Apostles found in the *Senodos* and the ↗*Didəsqəlya*. Many Biblical stories of plotters and diviners whose lives ended tragically as a punishment for the deadly sin of sorcery are retold. Intending to inspire the faithful with fear, the Emperor quotes repeatedly the Apostles' words in the *Senodos* where they equate the magician with a Jew (↗*Ayhud*). Gal 4:8–10 is frequently repeated. Each major part is concluded with the formula "Glory to God who created us to worship him".

In the introductory section shared by all three homilies, Zärᵓa Yaᶜəqob defends his promotion of the *Miracles of Mary* (↗*Täᵓammərä Maryam*), an effort that was objected to vigorously by the ↗Zämikaᵓelites Gämalyal and Zämikaᵓel. Defending his position, Zärᵓa Yaᶜəqob turns to Rev 11:19–12:1 (Getatchew Haile 1991:4f. [text]).

Whilst written to fight superstitious practices, the Ṭ.t. can also be viewed as Zärᵓa Yaᶜəqob's justification for dealing ruthlessly with people whom he accused of plotting to destroy him through the power of magicians, soothsayers and diviners. A similar report on the destruction of plotting diviners is found in the *Mäṣḥafä bərhan* (CRRicBerhan II, 20f. [text]), but there it is sketchy as it should be seen as a continuation of the story recorded in the Ṭ.t. The list of the plotters includes many of the Emperor's relatives and high ranking officials, including his wife, sister, and in-laws, all of whom are accused of attempting to stop Zärᵓa Yaᶜəqob from ascending the throne. The Emperor justified the punishment he meted out to them by describing it as the wrath of God visited upon them for their violation of their oath of loyalty to him (Getatchew Haile 1991: 66–79 [text]).

Concluding, Zärᵓa Yaᶜəqob recalls a huge manuscript of magic texts found in his palace and destroyed, which had been copied under *aṣe* ↗Yəsḥaq, and once again calls upon his subjects to renounce the wide-spread practice of "magical names" (↗*Asmat*; Getatchew Haile 1991: 91 [text]).

Ṭona

Ṭ. (ca. 1870–1909) was the last king (*kawo*) of the ↗Wälaytta kingdom, deposed in 1894 after the devastation and conquest of his country by Ethiopian imperial forces under *aṣe* Mənilək II. He was the son of Gaga and grandson of the great 19th-cent. King Gobe, whose dynasty was called "Təgre". Ṭ.'ṣ mother was *wäyzäro* Wärqe (or Madalče), the daughter of a famous ↗Arsi chief. His first wife was the daughter of the king of ↗Dawro. Ṭ. had become king in early 1889, after his father Gaga was rejected as unfit to rule and when the Wälaytta people and the advisory council of King Gobe had preferred him, despite his youth, above Gaga's twin brother Haddáro.

Ṭ., who was a man of large physical stature and who had a good record as ruler of one of Wälaytta's sub-districts, ruled for five years before his defeat, and his short reign was marked by implacable opposition to the encroaching imperial forces. Several campaigns by Mənilək's forces against Wälaytta had been defeated in the years before 1894. Ṭ.'s decision to wage armed resistance instead of submitting peacefully to overwhelming force was supported by many, but also criticized within Wälaytta before the final defeat, and several oral traditions persist in asserting that several of the Wälaytta noble class betrayed Ṭ. revealing the weak points in the kingdom's defences to Mənilək (cp. Bureau 1990: 75).

Under Ṭ., Wälaytta remained a centralized, hierarchical kingdom, and Ṭ. formally remained a "divine" king (↗Kingship, divine), but his authoritarian rule was often resented by the peasants and by members of certain rival elite clans. In oral traditions, Ṭ.'s impetuous and stubborn character is repeatedly mentioned. Despite this, the people largely supported the King when he decided to fight the imperial army, especially when they saw that its soldiers, and, in their wake, members of neighbouring peoples, came to loot and destroy the rich Wälaytta countryside. The important queen-mother *wäyzäro* Digitti, second wife and widow of King Gobe, also came to support Ṭ.'s policy, although, before the war, she had pleaded for negotiations with Mənilək.

After the 1894 defeat, which brought devastation and deep impoverishment to the country, Ṭ., in a conversation with *aṣe* Mənilək, admitted his mistake in resisting to the end (Chiatti 1984: 336f.). He was initially allowed to remain as governor but with his now insignificant "court" in Humbo, not Dälbo, and given a Šäwa Amhara wife by Mənilək in Addis Abäba. However, when it was rumoured that he was stirring up trouble among the neighbouring Gamo people (Wanna Wagäšo 2001: 79), he was replaced in 1902 and interned in Addis Abäba, where he died in 1909. His son Fəśśəha (Orobe) became governor. After World War II, his grandson *fitawrari* Dästa Fəśśəha was an administrator of ↗"Wälamo" *awrağğa*.

The memory of Ṭ. among contemporary Wälaytta people is still strong, as evidenced by several families from among the former ruling elites having a photo portrait of Ṭ. on their living room wall, and especially by the evocation in cultural manifestations and songs of Ṭ. as an important historical figure and a kind of "proto-nationalist". Among many Wälaytta people, he is seen as the epitome of past Wälaytta glory and independence, held up in contrast to the dismal state of the country today.

Topography, historical s. EAE vol. 5

Tourism

People have travelled to the ↗Horn of Africa from the earliest times, attracted by its cultural heritage, its geography and to learn from its history and peoples. In the 19th cent., with the rise of ↗expeditions, a great number of foreigners, principally Europeans, visited the region. The accounts that some of these travellers wrote (cp. Henry ↗Salt, William Cornwallis ↗Harris, Arnauld d'↗Abbadie, Eduard ↗Rüppell) contributed to encouraging interest in the Horn of Africa and acting as an incentive to further expeditions and private visits. The first T. infrastructure of the country was the hotel named after ↗Ṭaytu Bəṭul built in the early 20th cent. (↗Hotels).

During the Colonia ↗Eritrea and especially in the ↗Africa Orientale Italiana the Italians promoted a form of T. (cf. Sbacchi 1980: 321ff.). As in Lybia (cp. McLaren 2006: 43ff.), the Italians focused on the enhancement of T. resources (↗roads) to bring a metropolitan level of comfort to the colonial context. An important role in promoting T. was played by colonial media, such as the *Annali dell'Africa orientale italiana* and the *Guida dell'Africa Orientale Italiana*; the latter, issued in 1938 by the Touring Club Italiano (then known as the "Consociazione Turistica Italiana"), reached a first edition of 490,000 (cf. Guida).

T. proper developed after the liberation under Ḫaylä Śəllase I. In the 1960s, T. was recognized as a key economic growth factor and it was then that Habtä Śəllase Taffäsä, head of T. in the Prime Minister's Office, coined the slogan "Ethiopia: Land of 13 Months of Sunshine". In 1964, the Ethiopian Tourist Organization (ETO) was established by Order No. 36/1964, as an autonomous public organization, to promote the industry and to undertake tourist activities. It was later granted the privilege of engaging in duty-free business as a source of income in support of its functions. The proceeds from duty-free sales was invested in setting up a car hire and tour service, which later became the National Tours and Travel Agency, with a design and advertising section, as well as a workshop for the production of handicraft articles, the latter aiming to conserve and promote the country's culture. Moreover, the ETO designed and executed many Ethiopian pavilions for international and local exhibitions, including the Kyoto and Montreal fairs.

Besides supporting the ETO's main activities, the duty-free business itself became a major tourist attraction that contributed to an increase in the number of visitors. ETO was responsible for the formation of the Hotels Association and for the opening of the Catering and Tourism Training Institute (CTTI) in 1969 to provide teaching in basic skills to the personnel needed by the sector. During this early phase of developing the T. industry, ↗Ethiopian Airlines became an important asset by helping reach distant locations from the capital. In the 1960s, tourist arrivals grew at the rate of 12 % a year.

In 1971, the Ethiopian Tourism and Hotels Investment Corporation (ETHIC), a government owned financial intermediary, was set up to provide loans and credit to the private sector engaged in the hotel business. The ETHIC built four ↗hotels in the northern historic/cultural circuit and also served as one of the government institutions that worked with foreign consultants engaged in T. development studies: the Italian Firm IANUS 1965; the American, Arthur D. Little in 1966; and the World Bank, among others.

Following the ↗revolution of 1974 T. was at its nadir for nearly two decades. The industry suffered from the closed-door policy of the military regime, the prolonged civil war and recurrent drought. As of 1974, private hotels, tour operators and travel agencies were nationalized and merged together with the ETO and ETHIC into one department in the Ministry of National Resources Development. Under proclamation No. 182/1980, the Tourism and Hotels Commission was created in order to develop and promote T. by building and expanding hotels and recreational facilities, tour operation activities, and to train manpower for the industry. The National Hotels and the Ethiopian Tourist Trading Enterprise later became corporations and brought under the umbrella of the commission together with the National Tour Operation and Travel Agency and the CTTI. In 1989, the *Därg* (↗Provisional Military Administrative Council) declared a new economic policy, allowing the private sector to build hotels of limited capacity.

Following the overthrow of the *Därg* in 1991, the Ethiopian People's Revolutionary Democratic Front-led Transitional Government declared a market orientated policy. The new policy ended the National Tourist Operation's (NTO) monopoly on tour operations, though the business is still reserved by law for Ethiopians only. It also gave rise to the mushrooming of private owned hotels, travel and tour operation companies, and the privatization of certain hotels that had been under government control. The National Hotels Corporation was dissolved, and those institutions still under government control as well as the NTO and ETTC (Ethiopian Tourist Trading Corporation, now Ethiopian Tourist Trading Enterprise) were transformed into government enterprises, each with a management board to direct its operation. The ETTC was also stripped of its monopoly position and private individuals were allowed to enter the duty-free business.

The Ethiopian Tourism Commission thus became the federal agency responsible for the development of the T. sector. Regional cultural and T. bureaus (departments) have been set up in every regional state since 1992, in accordance with the new federal structure of the country. In 2004, the universities of ↗Gondär and ↗Awasa started degree programs in T. management and hotel management, respectively. Private schools and colleges also began providing low level training in T. in the capital and other urban centres.

In 1997, the CTTI, which is currently administered by the Ministry of Culture and T. (MOCT), acquired the Gännät Hotel for use as a model hotel and the training of T. personnel. The government also allocated funds to the CTTI to enable it to expand its teaching facilities and modernize the hotel. Recently, the government created a MOCT upgrading its T. portfolio and has become the supervising body of the Ethiopian Wildlife and Conservation Authority by Proclamation No. 575/2008.

As part of a strategy for the sustainable development of T. (seen as a means of contributing to economic growth and poverty reduction), the MOCT has begun a pilot project, with technical and financial assistance from the World Tourism Organization, to implement community-based T. in ↗Konso and ↗Arba Mənč̣. The MOCT will also be launching a major project: the Ethiopian Sustainable Tourism Development Project with the assistance of the World Bank.

Recently, T. has grown considerably. International tourist arrivals in Ethiopia in 2008 were 383,400 as compared to 115,000 in 1997. However, in a global perspective, T. remains largely underdeveloped and international arrivals in 2005 represented 1,3 % of the total arrivals in Sub-Saharan Africa (17.6 million). T. in Ethiopia focuses on its historical, natural and cultural heritage. The most popular historical sites are ↗Aksum, ↗Lalibäla, Gondär and ↗Harär. Natural attractions include the national ↗parks and game reserves, the ↗Ṭisəsat Falls and lakes such as ↗Ṭana, ↗Abbayya, ↗Abyata, ↗Z^{w}ay and ↗Langano. Visiting peoples of the ↗Omo region is an important part of the cultural T. offer.

Habte Selassie Tafesse

Tourism in Eritrea

T. in Eritrea grew in the 1990s. International tourist arrivals in the year 1991 were 12,567 and 416,596 in 1996. However, with the Ethiopian-Eritrean war (1998–2000) T. suffered a decline (56,699 international visitors in 1999). The sector has recently improved and in 2006 the international arrivals were 78,000. The main T. attractions include historical sites such as ↗Däbrä Bizän and ↗Massawa as well as natural sites and the Danākil Depression (↗^{c}Afar).

Trade

Trade in antiquity

The earliest evidence of commercial activity in the Ethio–Eritrean region, on the T. routes to and from ↗India, is found in ancient records from ↗Egypt about Pharaonic sailing expeditions to the Land of ↗Punt, an elusive site either along today's Somali or, more probably, northern Sudanese and Eritrean coast. Those expeditions reached their apogee with Queen Hatshepsut, ca. 1495 B.C. (Breasted 1952: 274–78): in exchange for Egyptian axes, daggers, bracelets, and beads, they involved the supply of local myrrh, ↗ivory, ↗leopard skins, monkeys, dogs and slaves (↗Slavery), but also of cinnamon – brought to Punt from India and Ceylon. Likewise, in old Indian texts, pearls and corals are mentioned with reference to the ↗Red Sea.

This was indeed part of the broader traffic framework between the Mediterranean and the

Indian Ocean, ruled by the monsoon (or "trade-winds"), that soon developed around ↗Adulis, a port and an emporium known since Biblical times, and annexed by Aksum only at a much later date (De Romanis 1996:152–56, 159–62) – in the exclusive terms of Red Sea T. monopoly (Fiaccadori 2004:108, 112, 118ff., 126, 137f.). The ascendancy of Adulis was then favoured by the decline of ↗Meroë and the Roman presence in the Red Sea.

Towards the middle of the 1st-cent. A.D., Aksumite foreign exchanges, as well as the already minimal involvement of Meroë on the coast of the Red Sea, are documented in the ↗*Periplus of the Erythraean Sea* (§§4–5): T. was largely based on the inland "metropolis" of Aksum, the huge "port of trade" of Adulis, still independent under King ↗Zoskales, and the town of ↗Qoḥayto, on the route between them. Exports consisted mainly of ↗ivory, rhinoceros ↗horn, ↗hippopotamus hides, tortoise-shell, ↗obsidian, ↗gold and slaves. Imports included cloth and garments; brass, copper and ↗iron; and manufactured goods: axes, adzes, ↗spears, ↗swords, ↗jewellery (with bracelets and anklets), drinking-cups, and glassware (MHAksum 172–76; cp. DAE no. 10 = RIÉ no. 188).

By the 3rd/4th cent., Adulis was fully integrated into the Aksumite organization of "administered trade", thereby offering security and protection, facilities for anchorage and storage for foreign partners. The extent of the relevant exchanges once Aksum had definitively taken over Meroe's role in the Red Sea area, assuming control of the ivory T. between the Nile and the Red Sea, is confirmed by the findings of Aksumite ↗coinage in such distant countries as South ↗Arabia, Palestine, and ↗India (MHAksum 184). Likewise, the Indian (Kuṣāṇa) and Arab (Umayyad and Abbasid) coins, as well as, perhaps, the Islamic textiles (Abbasid, Ṭūlūnid and Iḫšīdid), found at ↗Däbrä Damo might well suggest commercial ties with the Middle and Far East throughout the centuries.

Against a background marked by the long standing military and commercial antagonism between Romans and Persians, the Aksumites acted as middlemen to the former, of whom they were important allies in T. both from the Gulf of Aden and from India and beyond, while the Arabs did the same for the latter. The Aksumite adoption of ↗Christianity – already spread among the foreign ↗traders based in Adulis – was indeed the result of a political and commercial alliance continuing well into the Constantinian era and beyond.

Aksum's inner T. activity has left scant record, but clearly attained some sophistication, as evident from the minting of low denomination copper coins, unlikely to have been used in external transactions. At the onset of the events in ↗Nağrān (ca. 520), ultimately triggered by the rivalry between Rome and Persia, ↗Cosmas Indicopleustes reports on the "silent T." (already known to ↗Pliny for India) as it was practised on the way between Aksum and the gold-producing country of "Sasou" (in Wälläga?), "next to the Ocean" *(Top. Christ.* II, 51ff.; cp. Fiaccadori 1992:48 and n. 16, 76f.). Every other year, the king of Aksum organized a six months expedition to the benefit of foreign traders, who were allowed to go there bringing along oxen and pieces of iron and salt. On reaching their destination they established a camp, and surrounded it with a hedge, on which they placed pieces of meat, ↗salt, and iron; after that, they withdrew. Local people then approached, and placed gold nuggets beside the piece of meat, salt or iron they wanted, and then withdrew in turn. The merchants, leaving the latter items behind, collected the gold or, if unhappy with the proposed exchange, offered more meat, salt and iron, or else removed what they had left. All this was carried out with no exchange of words, given the mutual ignorance of one another's languages.

Yet, already in the second half of the 6th cent., T. was declining in the Red Sea, esp. on its African side with Adulis, owing first to the Persian conquest of Yemen in ca. 570, which destroyed Aksum's external power. A few decades later, the Muslim conquests in 636–42, by causing the eclipse of the Roman prosperity and power, as well as the demise of the Sassanian empire, put an end to the old political and commercial system of the "Erythraean Sea". T. was then largely diverted to the Asian side, i.e. to the Persian Gulf and the overland routes of Arabia; not until the 9th cent. did it revive in the western Indian Ocean to a recognizable degree, yet with quite a different orientation, focusing on new harbours towards the Abbasid capital of Baghdad.

Especially under the ↗Fāṭimids, in the 10th cent., Islamic maritime T. quickly extended into the Red Sea and Egypt, but the Christian kingdom of Ethiopia had already retreated inland and southwards (to Amhara and Šäwa), and was in fact unable reassume its old role.

Gianfranco Fiaccadori

Trade in the middle and early modern ages

Ethiopian T. in the Middle Ages was very largely based on barter (e.g., a dozen eggs or a pinch of pepper exchanged for a handful of grain) and "primitive money", i.e. intermediary commodities serving as an universal exchange equivalent (McCrindle 1929: 52ff.): most commonly, bars of iron or of rock salt (↗*Amole*). Gold, usually weighed by the *wäqet*, or ounce (↗"Measurement", s. EAE vol. 5), and gold and silver coins imported from abroad were also used at several of the most important markets (CrawItin 173).

T. was, however, limited, by geographical difficulties of transport, and other factors. The ↗peasantry, who constituted the most numerous section of the population, lived a subsistence, or self-sufficient, life. Making little use of articles produced by others, they had only minimal need for commodity exchange. Most rulers and much of the nobility on the other hand relied for their consumption on ↗tribute or ↗taxation rather than on T. A certain amount of commerce was, however, carried out by other groups, among them priests, monks, nuns, and ↗handicraft workers, as well as a small number of itinerant or other traders. At least starting from the establishment of the ↗Dahlak sultanate, Muslim traders (↗Ǧäbärti) assured the T. between the Red Sea and the Ethiopian interior (s. also sub-article on traders).

T. was likewise greatly influenced by geographical factors – notably variations in altitude, and hence climate, which caused certain areas to specialize in different types of economic activity, e.g., ↗agriculture in the highlands and pasturage in the lowlands, and myrrh and incense in certain arid areas. Rock salt was similarly available only in the ᶜAfar salt plain. The peasantry was likewise dependant on T. for certain items of commerce which they could not produce, among them plough-shares and spear-heads, pottery, and cotton clothing. These could be obtained only on purchase from specialized craftsmen.

T. in this period, as well as much later, was based virtually entirely on markets, shops of any kind being entirely unknown. Most markets were living on barter, and petty T., in local agricultural produce or livestock, e.g., grain, pepper, chickens, sheep, goats, cattle, donkeys, mules, horses, etc. Such markets, where T. was subject to taxation, were generally held on a weekly basis, on the same day each week, by which they were often named. This enabled itinerant traders to visit several markets weekly. Vendors and purchasers, however, generally lived no further than a day's journey away from their local market.

In addition to such highly localized markets, there were a number of larger fairs, based to a greater or lesser extent on imports or exports. Such markets, which operated more or less on a wholesale basis, provided a lucrative source of taxation for the monarch or his provincial governors. Items of T. at such markets included imported cotton and luxury goods, as well as such exports as slaves, ivory, gold, and civet musk (↗Zibeth). T. at these markets was often heavily dependant on itinerant traders, in many instances Arabs or other Muslims, also ↗Armenian and ↗Greek Christians.

Many long-distance traders, largely Muslims (TadTChurch 41, 81–89), travelled in commercial caravans comprising camels and/or other pack animals. Gathered together such merchants were better able to resist attacks by robbers, or exaction from customs officials. Alvares offers a vivid picture of Ethiopian T. before ↗Aḥmad b. Ibrāhīm al-Ġāzī's time: market T. consisted of "bartering one thing for another" (BeckHuntAlvar 125, 469); and some of the larger caravans consisted of a thousand people or more (ibid. 193). The richest markets, such as that of Wiz, reportedly effected business solely in gold (Stenhouse 2003: 176).

Many caravans carried *amole* for the purpose of T. as well as consumption. Like other commodities, merchants transporting it were obliged to surrender some of it, by way of taxation at ↗*kella,* or customs posts, located all over the country. Such dues constituted a major source of imperial revenue, but ended by weighing heavily on merchants, and often resulted in disputes that hampered commerce.

Ethiopia, by the 14th cent., was spanned by a network of discernable T. routes which linked the country with the Red Sea and Gulf of Aden ports of Africa, and provided the ground for its business, which consisted then mainly of the export of gold, slaves, and some agricultural products; and the import of cloth, clothes, pepper, ↗spices, and sundry manufactured goods. One cluster of routes ran from the country's central highlands: ↗Təgray, Lasta, ↗Goğğam and ↗Šäwa to the northern ports of ↗Massawa, and ↗Sawākin. Another group of routes led from the south-westerly provinces of ↗Damot, ↗Däwaro, ↗Hadiyya, and ↗Bale, via the lowlands of either ↗Ifat or ↗ᶜAdal, to the easterly port of ↗Zaylaᶜ (CrawItin 231).

Several of the above T. routes passed by way of political or religious centres, such as ↗Aksum, ↗Lalibäla, and ↗Berbera; and contributed significantly to their wealth. Control of T. routes, and of the revenues resulting therefrom, was likewise of major importance to the country's rulers. Many of them took a keen interest in the country's import-export T. They were particularly interested in luxury imports, and in the acquisition, after the 14th cent. development of gun-powder, of ↗fire-arms. Conflicts between the Christian monarchs and the Muslim rulers to the east arose in many cases from the struggles, as in the time of *aṣe* ↗ᶜAmdä Ṣəyon, to control the lucrative T. routes to the coast.

Ethiopia's principal exports in this period were destined mainly for Egypt, Arabia and India. Limited quantities of commodities (e.g., cereals, fruits) were likewise dispatched to coastal towns on both sides of the Red Sea and Gulf of Aden.

Imports throughout this time were mainly of textiles, including costly silks, and other luxury goods, among them beautifully coloured vestments, umbrellas and ornamental carpets destined for the nobility and higher priesthood.

T. was then dependent on the ports of ↗Massawa, ↗Zayla^c and ↗Berbera; and on a lesser western route to ↗Sudan. This pattern was to change in the 17th cent., as a result of the establishment of the country's capital at ↗Gondär, in the north-west of the country – a location that increased the importance of T. routes to Massawa and the Sudan, and reduced those to Zayla^c and Berbera. Gondär had a sizable and affluent population of Muslim merchants.

Trade since the 19th century

The above picture holds good for early 19th-cent. T., which is well described by foreign travellers. They provide detailed information on markets and market prices, caravans, T. routes, and import-export figures (PankEcon 346–503).

Technical and other developments, which began to be felt in Ethiopia in the last quarter of the 19th cent., led to a major transformation in T. The invention of the steamboat and telegraph (↗Telecommunications), and the introduction into the region of the ↗Maria Theresa thaler, subsequently followed by the advent of the aeroplane and the radio, were international events, but other developments were Ethiopia-specific. These included Mənilək II's occupation of ↗Harär, which facilitated commercial contact with Aden (↗Yemen) and ↗India; the founding of ↗Addis Abäba, which became the country's mercantile centre; the establishment of the Addis Abäba-Djibouti ↗railway, which accelerated economic activity, and increased the size of transportable articles, and volume of foreign T.; the opening of the ↗Gambela-based river shipping service, which expanded T. with Sudan and Egypt; the installation within Ethiopia of the telegraph and telephone, which led to rapid diffusion of commercial information; the founding of the Bank of Abyssinia (↗Banking system), and the introduction of a national currency, including paper money and postal orders, the grant by Mənilək and his successors of commercial and other concessions; the coming first to Harär and ↗Dərre Dawa, and later to Addis Abäba, and many parts of the country (including the far west) of many foreign merchants, mainly ↗Indians, ↗Armenians and Europeans (mostly French and ↗Greeks); the establishment of the Addis Abäba Municipality, and the granting of land tenure favourable to merchants; the abolition of the *kella* system; the introduction of modern schools, leading to the creation of an indigenous "middle class"; the establishment of the neighbouring European colonies; and the conclusion of the ↗Klobukowski treaty with ↗France which granted special rights to French, and by extension to other foreign nationals.

The subsequent Italian Fascist occupation witnessed an expansion of the ↗road network, led to the expulsion of Indian traders, the replacment of silver thalers by unpopular Italian paper money, and the establishment of state trading corporations (Haile Mariam Larebo 1994:248, index).

Richard Pankhurst

Traders

In pre-modern times, especially in the northern highlands where Christians formed the majority of the population, the occupation of traders (Amh. ነጋዴ, *näggade*) was regarded with contempt and was mostly associated with Muslims, who formed the majority of merchants dealing in long-distance T. Commercial centres tended to be set up near political centres. For example, ↗Aləyyu Amba, located near such centres as ↗Ankobär and ↗Angoläla, was to three quarters populated by Muslims (Johnston 1844:95). Most of the traders attracted to Baso, the commercial centre of ↗Goǧǧam in the 19th cent., were Muslims as well (Abdussamad Ahmad 1989:2). However, there were a handful of wealthy Christian traders in the 19th cent. (PankSoc 207), and some foreign traders from Europe, ↗Sudan, ↗India, Armenia (↗Armenians), Greece (↗Greeks) and ↗Arabia, most of them agents of trading companies stationed abroad (PankEcon 398, 410, 448ff.).

In the 19th cent., when the long-distance T. connecting the ↗Red Sea ports to south-western Ethiopia thrived, Muslim traders migrated from the northern highlands to commercial centres in south-western Ethiopia and played an instrumental role in the spread of ↗Islam. The

Local market in Gondär; photo 2000, courtesy of Jürgen Beil

Oromo kings (↗*Mootii*) benefited from their presence, and Muslim traders were assigned quarters to set up residence near marketplaces, e.g., Mandera near ↗Hirmaata in ↗Ǧimma (Borelli 1890:288; Lewis 1968:94; Soleillet 1886:179).

Traders were organized in caravans carrying their merchandise on camels, mules, donkeys or horses. On the way, they risked losing their merchandise as well as their own lives due to assaults of bandits, and therefore often sought protection from local political leaders along the route, occasionally in exchange for some rare ↗gifts in addition to taxes. Rich caravans were also well-armed and traders needed to feed their troops well and pay regular wages in addition (PankSoc 207; Plowden 1868:126).

Muslim traders from Ethiopia became known in Arab countries as ↗Ǧäbärti (Mittwoch in EI^1, 985; HusIslam 60). The term gradually was applied to the whole Muslim population of Ethiopian highlands (cp. TrIslam 150). It could, however, be more frequently encountered in contexts limited to foreign relations (as, e.g., in AbSea 11, 12, 25, 32, 201) or also exclusively T.: e.g., Mohammed Hassen uses the term Ǧäbärti to refer to Muslim traders from Gondär, Goǧǧam, Wällo, Šäwa and Harär, who engaged in long-distance trade dealing with large-scale merchandise (MHasOr 98).

Besides long-distance traders, there were also local traders, specializing in small-scale trade. Local traders brought their merchandise to local weekly-held markets, meeting places where local peasants exchanged their produce. Merchandise sold or exchanged in these local markets were agricultural and dairy products, various types of livestock, and locally manufactured goods such as pottery, leather crafts, and metal goods made by blacksmiths.

Reference to local traders is quite rare. Oromo traders known as ↗Afkala figure in reports of Antoine d'Abbadie, who calls them "afcala" or "aftãla" and defines them as Oromo merchants originally from Lofe Leeqaa (d'Abbadie 1840:383–86, 569; cp. AbPrince 85). They emerged as a class in the Gibe region in the 19th cent. (MHasOr 88f.).

In the Gibe region there is also a group of people called Naggadee, who claim to be descendants of Muslim traders who had adopted the Oromo language and culture. Their ancestors most probably originated from the northern highlands, as expressed in the subgroup names of the Naggadee, e.g., Infraaze (from ↗Ǝnfraz), Dariita, and "Tǝgre" (Minako Ishihara in PICES 15, 126).

In ↗Käfa, the descendants of Muslim migrant traders are called Naggado, and the subgroup names are similar to those in the Gibe Oromo regions (Ifraaǧo, Nasiro, Tǝgero, etc.). The Naggadee of the Gibe Oromo region and the Naggado of Käfa are also well-known for their exclusive knowledge of civet-cat (↗Zibeth) farming (Minako Ishihara 2003).

Modernization improved the means of transportation and created opportunities for both Christians and Muslims to join in the occupation of T. Nonetheless, there are certain nationalities such as the ↗Gurage, ↗Harari and ↗Somali, well-known for their trading activities. Some merchandise such as ↗*č̣at* and civet are still monopolized by Muslim traders, who have their own network and knowledge in handling them.

Traditio apostolica

T.A. (‘Apostolic Tradition’, Gr. ʼΑποστολικὴ παρα΄δοσις) is the most important canonico-liturgical ancient Christian writing. Once quoted as the “Egyptian Church Order” and later attributed to ↗Hippolytus of Rome – on the basis of the problematic title [Π]ΕΡΙ ΧΑΡΙΣΜΑΤΩΝ [ΑΠ]ΟΣΤΟΛΙΚΗ ΠΑΡΑΔΟΣΙΣ, ‘On the Charisms Apostolic Tradition’, inscribed on a statue discovered in Rome in 1553 and wrongly interpreted as representing the Christian writer Hippolytus, – the T.A. was composed around the first half of the 3rd cent. Almost completely lost in its original Greek, the T.A. has only survived embodied in a palimpsest fragmentary Latin and several Oriental canonico-liturgical collections (Sahidic and Bohairic Coptic, Arabic, Ethiopic), as well as in reworkings in later works and collections, such as the *Epitome of the Apostolical Constitutions* and the *Apostolical Constitutions* (preserved in Greek and in Oriental versions, s. ↗*Didəsqəlya*), the *Canons of Hippolytus* (in Arabic, from Greek and Coptic), the ↗*Testamentum Domini* (in Syriac, Arabic and Ethiopic, originally in Greek), and other writings. Several scholars have attempted to reconstruct the original T.A. from the extant witnesses (cp. Botte 1963; Bradshaw et al. 2002), even though the attribution itself of the name T.A. has recently been questioned (cp. Markschies 1999; Bausi 2009).

The T.A. has been the most influential piece of writing from pseudo-apostolical literature, and covers a wide range of topics of Christian practice: the status of bishops (prayers of ↗ordination included), presbyters, deacons, subdeacons, readers, widows, confessors of the faith, the offering of oil, olives and cheese, the status of catechumens, offices and prayers, baptism, Holy Communion (including the ‘Anaphora of the Apostles’, cp. Horner 1904:11.19–12.16; Duensing 1946:20.10–24.2; Hammerschmidt 1961:13f.), fasting, common meals, offerings to the bishop and their blessing, the Communion service, time of the prayers, the sign of the Cross, and burial.

The Ethiopic version of the T.A. (first published by Horner 1904; better edited by Duensing 1946; thoroughly used for his textual reconstruction by Botte 1963) is embodied in the so-called *Synodus Alexandrina*, attested in Ethiopic by the *71 canons* or *Statutes of the Apostles* (in turn a section of the ↗*Senodos*), of which the T.A. occupies canons 21–47 (ed. Duensing = 22–48 ed. Horner). The Ethiopic version is basically a translation from the Arabic: yet, it has also incorporated archaic passages which cannot be found in its purported Arabic *Vorlage*, including the important “Prologue” displaced in canon 39 (ed. Duensing = 40 ed. Horner: cp. chs. 1 and 30B in Bradshaw et al. 2002: 20ff., 164), baptismal and other prayers (for a detailed comparison, cp. Bausi 2009), which definitely hint at an archaic textual layer and point to a different, probably Greek, *Vorlage*. The “Prologue”, preserved only in the Latin and Ethiopic versions (Horner 1904: 29.5–17; Duensing 1946: 78.12–80.6), is all the more important because it mentions the crucial words “charisms” and “tradition”, reminding of the Greek title on the Roman statue, which has suggested very different explanations (cp. a summary of the question in Bradshaw et al. 2002: 1ff.; Nicolotti 2005).

The new evidence provided by the recent discovery of an archaic *corpus canonum* translated early into Ethiopic (*Aksumite collection*, cp. Bausi 2003; in PICES 15), also including an earlier version of the T.A., has made it clear that the recension of the T.A. transmitted in the *Senodos* represents a complex combination of the earlier (Greek-based) recension, with a later (Arabic-based) textual layer. The archaic T.A. in the *Aksumite collection* (cp. Id. 2006: 56–59; 2009; edition is in preparation), consisting of 38 chapters and with the “Prologue” at the beginning, is a complete independent translation upon the Greek, parallel to the most authoritative Latin version, and much older and more archaic than all the Oriental recensions known so far. The archaic T.A. misses some prayers (also the ‘Anaphora of the Apostles’) which are preserved instead in separate sections of the *Aksumite collections*, i.e. the *Baptismal order* and a euchological section. The new evidence also makes it clear why the composite T.A. of the *Senodos* in the *71 canons* is followed by two “conclusions”, with the sequence: T.A., “first conclusion”, treatise *On the charisms*, “interpolation”, “second conclusion”. In fact, the T.A. of the *Senodos*, with its own “conclusion”, was combined with a number of texts taken from the *Aksumite collection*: *Bap-*

tismal order, euchological passages, “Prologue”, and treatise *On the charisms*, included into the *Senodos* in a revised version, but with the addition of the “interpolation” (Horner 1904: 54.18–57.9: “Decree of the apostles”, a fragment from the *Didache*, ‘Teaching [of the Apostles] XI, 3–5.7-12, XII, 1–5, XIII, 1.3–7, VIII, 1–2, and a passage from the *Didascalia* XII) and of its following “conclusion” (cp. Bausi 2009).

Transliteration, transcription s. EAE vol. 5

Traversi, Leopoldo

T. (b. 30 October 1856, Piancastagnaio, Siena, d. Rome, 3 January 1949) was an Italian medical doctor and explorer, who during his ten years in Ethiopia collected a lot of geographical, ethnic and naturalistic information on the country.

On completing his medical studies, he entered the Sanitary Corps of the Army. Together with the Russian Count Buturlin he arrived in Ethiopia in November 1884. In March 1885, ↗Yoḥannəs IV forced T. to return to ↗Massawa. T. reached ᶜAsäb in June 1885 and from there, together with Adolfo Aprico reached Šäwa, where he became the personal doctor of *nəguś* ↗Mənilək.

During the year 1885 T. explored the ↗Gurage territories, including ↗Zəqʷala, ↗Libido and ↗Soddo. In the first months of 1886 he was the first European to explore the sources of the ↗Awaš. In May 1886 he accompanied Mənilək on military

Leopoldo Traversi in the costume of an Oromo noble, ca. 1887; photo courtesy of the author campaigns against the Oromo, providing important descriptions of Ethiopian military strategies. He became the first European to reach Lake ↗Zʷay. With Mənilək he reached the Arsi highland where he explored the ↗Wabi Šäbälle and its springs. In June 1886 he returned to ↗Ǝnṭoṭṭo, where he organized a meteorological laboratory for the study of the rainy season (*kərämt*). He later continued exploration of the ↗Libido and in 1887 travelled to ↗Ǧimma in the entourage of ↗Abbaa Ǧifaar.

After the departure of Vincenzo Ragazzi and Pietro ↗Antonelli, T. headed the scientific station of ↗Ləṭ Maräfiya. In 1889, he accompanied the Ethiopian delegation of *ras* Mäkʷännən to Italy. In 1890 he returned as director of Ləṭ Maräfiya. In the aftermath of the ↗Italo–Ethiopian Treaty of Friendship and Commerce ("Wəčale"), T. became a messenger between Šäwa and ᶜAsäb, crossing Danakil (↗ᶜAfar) several times. In 1892, T. led a caravan of 630 camels with 2,000,000 cartridges to Mənilək. In June 1894, T. handed Ləṭ Maräfiya over to Luigi ↗Capucci and returned to Italy.

At the end of 1896, as part of an Italo–Ethiopian commission, T. came to Ethiopia to visit the prisoners of ↗ᶜAdwa.

After the fall of the Crispi government T. was forgotten but was exalted later by the Fascist regime as the last survivor of the first wave of Italian ↗colonialism in Ethiopia.

Treaties and conventions s. EAE vol. 5

Trees

Apart from the evident economic value of T. as a source of ↗wood, they play an important cultural role in most societies of the Horn of Africa. The shade provided by T. makes them a classical location for meetings (e.g., the ↗*čaffee* of the Oromo, the ↗*bayto* of the Təgrəñña, the ↗*yäǧoka* of the Gurage, and other traditional courts) and a place of rest for man and his animals. Single big T. serve as points of orientation and they are, like other natural features, used for the demarcation of boundaries.

The bark and/or the leaves of some T. find usage in herbal ↗medicine. The leaves of some T. standing on cultivated fields may improve soil fertility (VSAe III, 156f., 294).

Contiguous ↗forest, according to many traditional concepts, is interpreted as a "chaotic" or even dangerous non-human area, which man only enters for hunting game and collecting herbs or wild honey. Accordingly, hunters and gatherers were often despised by agriculturists. Certain individual T. (preferably *Cordia abyssinica*, *Ficus sycomorus* [↗Sycamore], *Hagenia abyssinica* (↗*Koso*), ↗*Juniperus procera*, *Olea chrysophylla*, *Podocarpus gracilior*) and groups of T. in traditional ↗religion may represent the connection between the human and the spiritual sphere or a a local *axis mundi*. This is, for example, reflected in legends of several Cushitic-speaking peoples according to which important cultural items and ancestors, cultural heroes or religious experts descended from the sky via a T. (VSAe I, 179, 214, 322; BrHad 86, 180). In the old Gurage religion part of the ↗initiation process of a new *wägäpäča dämam* female spirit medium was to stay inside a hollow T. (a beehive) for several days (Gabreyesus Hailemariam 1991: 133–39).

Many T. are thought to be inhabited by a ↗spirit such as, e.g., the *adbär* local protective spirits of the Amhara folk-religion. Sacred T. and groves, sometimes remains of the cleared original forest, are not allowed to be cut and some are symbolically protected by a fence or surrounded by a stone platform (s. ill.). They serve as places for ↗sacrifices and other rituals. Such activities may include the slaughtering of an animal or the primordial offering of crops. A wide-spread custom is the smearing of butter on the bark (VSAe III, 88, 120, 188f., 194f., 198, 344).

T. and ↗euphorbia are often planted on graves or at funeral places, a custom also practised by Ethiopian Orthodox Christians. While in some cultures a T. may grow on every grave, in others a T. exclusively marks the grave of chiefs and important ancestors or hunters and killers. Among the ↗Mao, for example, a green branch was placed in the hands of a deceased hunter which might grow and become a T. (CerPeople 34f.; VSAe III, 223). Sometimes T., like, e.g., at the royal court of Angir (cp. ↗Yäm), T. served as a place for displaying trophies (VSAe III, 328, 344, 352).

The ritual role of certain T. in pre-Christian religions made them a target of Christian missionary activities. In order to show the superiority of their faith, to symbolize the end of “paganism” or to ritually clean the area, early missionaries such as, e.g., ↗Täklä Haymanot, ↗Samuʾel of Däbrä Wägäg, ↗Märḥa Krəstos and ↗Fəre Mikaʾel are said to have cut down sacred T. and to have used their wood for church construction (s. KapMon 118ff.). This practice of the early days of Christianization was maintained over time and, after Mənilək II’s conquest, was still carried out as part of the Christian colonialization in the south (for an example from Gurage s. Bustorf in VarAeth 20, nn. 42, 28). Nevertheless, it is quite usual to find churches located in the midst of a grove, or with big T. in the yard. Within the church compound T. are usually not allowed to be cut because they are in the possession of the church and they belong to the sphere sanctified by the *tabot*. Likewise, around the graves of Muslim holy men, around rural mosques and Sufi centres T. are protected by religious piety.

Dirk Bustorf

Trevaskis, Gerald Kennedy Nicholas

Sir Gerald T. (b. 1 January 1915, d. 14 March 1990) was a British official in colonial Southern Rhodesia (i.e. Zimbabwe), ↗Eritrea and ↗Yemen.

T. was the son of Reverend Hugh Kennedy Trevaskis of the Indian Civil Service. He completed his education at Cambridge, and entered the Colonial Service as administrative cadet in Northern Rhodesia in 1938. In 1939 T. enlisted with the Northern Rhodesia Regiment and made a prisoner of war by the Italian forces in British Somaliland in 1940.

Following the collapse of ↗Africa Orientale Italiana, he was seconded to the ↗British Military Administration (BMA) in Eritrea in 1941, where he remained until 1950, being involved in the formation of British policy in the country. During this period T. served as a colonial officer in most of the administrative districts of the country and produced a number of social surveys of the communities that inhabited them, particularly for ↗Ḥamasen and ↗Kärän. T. showed a keen interest in the historical, geographical and social make-up of Eritrea and his reports were drawn from personal interviews and first-hand observations. In the district of Kärän the ↗Təgre-speaking serfs (↗*Təgre*) were struggling for emancipation from their masters (↗*Šəmagälle*) and T., albeit reluctantly, accepted their demands for reform, within the tribal reorganization of the Western Province.

After June 1941 Lieutenant T. acted as assistant political officer; he was appointed Senior Divisional Officer at ↗ᶜAsäb in 1943, promoted Captain in the following year, and acted as Political Officer at ᶜAddi Wägri (↗Mändäfära). In 1945 he married Sheila James Harrington.

With the end of ↗World War II, the question of Eritrea's future arose and the BMA lifted the ban on political parties in October 1946. In 1947, while Senior Civil Affairs Officer at Kärän, T. was a member of the British delegation to the ↗Four Power Commission of Enquiry of the ex-Italian colonies and wrote an interesting report on the results of the hearings of the representatives of the communities of Eritrea. T. also produced a typescript *Note of Guidance for the District Officer in Eritrea*.

In summer 1950 T. was appointed district Commissioner at Ndola, Northern Rhodesia, but worked also as Liaison Officer for the ↗United Nations Commissions for Eritrea. In 1951 T. served as Political Officer in the Western Aden Protectorate, where he was then appointed High Commissioner for Aden and the Protectorate of South Arabia in 1963–65.

In 1960 T. published the volume *Eritrea: a Colony in Transition, 1941–1952*, a well-written account of the British occupation of Eritrea, albeit from an apologetic perspective. He explained the ↗Ethiopian–Eritrean Federation as the outcome of Ethiopian political activity coupled with the pro-Ethiopian Orthodox Church's position within a time of hardship, economic crisis and social protest. His writings were fiercely criticized (e.g., s. Tekeste Negash 1997: 32); though the subject remains ideologically charged, T.'s accounts remain worth reading.

Tributes and taxation

Tributes and traditional taxation

The traditional fiscal system of Ethiopia was characterized by a seamless transition from Tr. (tributes) to Ta. ([modern] taxation). This is also reflected in the terminology, e.g., Gəᶜəz, **ጸባሕት** (*ṣäbaḥət*) as well as Amharic **ቀረጥ** (*qäräṭ*) and **ግብር** (*gəbər*) can be translated either as 'tribute' or 'tax'. The latter term was additionally used for the ↗*gəbər* banquet sponsored by an important notable or ruler.

Throughout history the submission to a conqueror or the allegiance to a ruler was expressed by the payment of Tr. in kind which, besides its symbolical meaning, could also have considerable material value. Earliest records of such provincial Tr. to the Ethiopian rulers can be found in royal chronicles which list the tributary provinces and in some cases the typical goods they were obliged to send to the ruler. The Chronicle of *aṣe* ↗Yəsḥaq, for example, mentions a long series of vassal territories from where he received goods such as goats, cattle, ↗horses, cotton-cloth, grain or ↗gold (HuntGeogr 92ff.).

The initial Tr. formally established the status of a territorial and political entity as a vassal state or as a province and was followed by regular Tr. which could develop during history into a properly institutionalized tax. Such Tr. were fed by duties levied in the sub-provinces and the revenues generated from the land Ta. (↗Land tenure) collected among the 'peasants' (Amh., **ገበረ**, *gäbbärä*, lit.: 'to pay tribute or tax') by the local administration, according to the old principle "man is free, land is tributary" defined for the first time in an edict by *aṣe* ↗Zädəngəl (CrumLand 62f.).

Ethiopia's traditional system of Tr. and Ta. provided for the upkeep not only of the monarch, his family and courtiers, but also a vast number of nobles and privileged individuals, including provincial and other officials, warriors, and members of the clergy (↗Aristocracy). They all depended for their livelihood on dues, and/or labour services provided by the ↗peasantry, who constituted the majority of the population (s. also ↗*Gäbbar*; ↗*Gʷəlt*; ↗Feudalism), and to some extent by handicraft workers, merchants and hunters.

The peasants were obliged to provide a proportion of their crops in kind, or their value in barter equivalents or cash (s. also ↗Currency; ↗Trade), and a proportion of their livestock, as well as a number of days' labour – working on the land of the king, nobility or church. ↗Handicraft workers contributed a share of their manufactures, many of them articles of ironware (↗Iron), woven cloth and ↗pottery. The merchants yielded a share of their revenue, taken from them as market dues or exacted when they passed through ↗*kella* customs posts, located all over the country. Some agricultural taxes were paid annually, either as a fixed due, or as a specific proportion of the crop – e.g., an *ammǝst* (Amh., **አምስት**, lit.: 'five') –, while other duties were levied on particular occasions, e.g., on the outbreak of war, or when a nobleman needed to construct a house, or hold a banquet.

Some of the earliest European information on Tr. was recorded in the early 16th cent. by Francisco Alvares. He states that the country of the ↗*baḥǝr nägaš* provided *aṣe* ↗Lǝbnä Dǝngǝl with Indian ↗cotton and ↗silk, as well as horses. His annual revenue from ↗Goǧǧam consisted of 3,000 mules, 3,000 horses, and 3,000 large pieces of cloth, besides mules and horses (BeckHuntAlvar 117, 425–29). More detailed data was collected in the early 17th cent. by the Jesuits. Manoel de Almeida noted that the empire's principal source of gold was ↗Ǝnnarya, which had once contributed 1,000 to 1,500 *wäqet* ('ounces', s. also ↗Measurement), later reduced to 500. Goǧǧam provided a further 1,100 *wäqet*, much of which was appropriated by the nobles, as well as over 3,000 pieces of cloth. The peasants of ↗Dämbǝya supplied one load of grain per head. Cattle-owners paid one animal out of ten every three years (BeckHuntAlm 84–87). Provincial revenues included 12,000 head of cattle from Goǧǧam, 6,000 from ↗Bägemdǝr, 5,000 from ↗Tǝgray, and 2,000 from ↗Damot. The population at large was also expected to provide officers of state and other travellers with free meals and accommodation for the night (BeckHuntAlm 79f.; cp. also ↗*Dǝrgo*). Detailed estimates for the sub-districts of Tǝgray were published by both Pedro Páez and Manoel Barradas (BecRASO II, 283ff.; BecRASO IV, 82ff.; Barradas 1996: 7ff.).

The complexity of the system of which such revenues were produced was later described in the mid-19th cent., during the period of the ↗*Zämänä mäsafǝnt* by Walter Plowden (1868: 108): He observed that the peasantry had to pay a high number of different imposts which varied according to the customs of each village. A certain portion in kind had to be paid to the ↗*ras* and sometimes a regular tax in money was additionally demanded from them. The peasants were also forced to furnish oxen to plough the king's lands. Their immediate governor took his share of every kind of grain which he distributed among his soldiers. He had the right to take their animals, butter, ↗honey and every other requisite for subsistence. It was expected from the rural population to receive with joy and feasting whenever he visited them, and he could demand "from them contributions on fifty pretexts", e.g., when going or returning from a campaign, or cases where he had lost a horse or married a wife. He could also expect their aid in case his property had been consumed by fire, or he had lost his all in battle. Likewise, peasants had to provide goods and labour for funeral banquets (ibid.). A key official in the system was the ↗*ċəqa šum*. Holding an influential semi-hereditary position he ensured that the local community, among whom he lived, paid their taxes – and for this service he often received a tenth of the tax and was generally exempt from other fees (United Kingdom 1868: 107; Walker 1935: 184f.).

Traditional Ta. was largely arbitrary and Pearce (1831: 340) observed in the first half of the 19th cent. that the peasants suffered from severe insecurity of their property. Rüppell (1840: 31) argued that *ċəqa šum* and other tax officials being poorly paid, found illicit ways of robbing from the peasantry. Fees were at times so heavy that they had resulted in depopulation in Təgray (Parkyns 1853: 219). Conflict between the peasantry and the soldiers was not infrequent. Pearce (1831: 207f.) relates that the peasants, to protect their grain, would secretly bury it in pits, which they carefully covered over with earth to conceal their identity.

Aṣe ↗Tewodros II's reputation as a reforming ruler rests largely on his far from fully successful attempt to curtail the arbitrary character of traditional Ta. He sought in particular to prevent the exactions which the soldiers levied on the peasantry. He attempted to do this, Plowden reports, by giving his soldiers money, and instructing them not "to harass and plunder the peasants, as before". He also sought to reduce the number of internal customs posts (United Kingdom 1868: 108, 151; PankEcon 523f.). Tewodros' administration had the distinction also of producing the first known detailed Ethiopian tax records. Fragments of them, written in the early 1860s, were looted by the ↗Napier expedition, and are preserved in the British Library. Written in Amharic they reveal that the monarch's revenues from Təgray and Bägemdər respectively amounted to 193,000 and 47,000 ↗Maria Theresa thalers – besides a considerable number of cattle (Pankhurst – Germa-Selassie Asfaw 1978: 1–24).

After ↗Mənilək's conquest of the South, a system of dues was imposed on the region. While some provinces, such as, e.g., ↗Ǧimma Abbaa Ǧifaar, could maintain a semi-independent status and were expected to pay an annual Tr. until the first half of the 20th cent. (cp., e.g. Guluma Gemeda 2009: 78–85, for the system of Ta. within the Kingdom of Ǧimma s. LewJimm 43, 91f., 97-100f., 117, 124), in most of the conquered areas the system of land tax and work duties became the main instrument for the control and exploitation of the subdued population. The land directly subdued by Mənilək had to pay taxes exclusively to the Emperor (*madbet*, 'palace'). But the rest of the conquered land and the right to collect dues from the *gäbbar* living on it was distributed to the church (↗*Sämon*) and to a greater part among the ↗*mälkäñña*, many of them northern Ethiopian ↗*näfṭäñña* settlers, as ↗*mädäriya* or *gʷəlt* land (BrHad 307f.).

Aṣe Mənilək II carried out a substantial tax re-organization. This involved the imposition in Šäwa in 1892 of an ↗*aśrat*, or 'tithe', on agricultural produce. This tax proved difficult to implement, and was modified on several occasions (GueCopMen 324f.; MahZekr 294f.; PankEcon 506f.). Another tax which proved very lucrative at this time was levied on elephant-hunters, who, when killing a beast, were obliged to give Mənilək the first tusk to fall on the ground (↗Ivory; PankEcon 509). Yet another development during Mənilək's reign was the increasing payment of taxes in cash rather than in kind. Typical of this trend was the imposition of a cattle tax of one thaler per cow imposed to help finance the construction of the Djibouti-Addis Abäba ↗railway. By 1902 57% of Mənilək's revenues reportedly came in cash. Many peasants, however, insisted on paying in kind – and many than one days' work every third day (PankEcon 510f.). An arbitrary element in Ta. meanwhile remained. Augustus Wylde comments that the tax-collector always "wanted something for himself", while his guards and servants expected "to receive free rations". Some governors were, however, more considerate, notably *ras* ↗Alula Ǝngəda, under whose rule the peasants could improve their position (Wylde 1901: 262, 264). The abuses implicit in the system were denounced by early Ethiopian intellectuals, notably ↗Gäbrä Ḥəywät Baykädañ and ↗Afäwärq Gäbrä Iyäsus (Bahru Zewde 2002: 111–27).

Such criticism was only partially met by *aṣe* ↗Ḫaylä Śəllase I's legislation of 17 September 1930 abolishing personal service. This stated that "all obligations of personal service" were "entirely abolished" and that "no governor" was entitled to exact such services. One article specified that cultivators should not work on the land of governors unless this was voluntary, and did not exceed three days per annum in lieu of land tax. Another Article stated that the making of granaries for the administration was restricted to two months labour performable only in off-agricultural seasons. It was also laid down that peasants should not work for landlords for more than five days a year. The land tax was shortly afterwards standardized by a pre-invasion law of 9 May 1935. This established a uniform tax of 30 thalers, per *gaša* unit of land, i.e. the equivalent to approximately 40 hectares (MahZekr 295ff.).

For many peasants the alleviation of fiscal burdens during the Ḫaylä Śəllase era remained only nominal. Especially in the South, where they severely suffered from the arbitrariness of the local ↗*mälkäñña* landlords, this contributed to their support of the ↗Revolution and the subsequent land reform (cp., e.g., BrHad 369–76, 383, 387, 390f.).

Richard Pankhurst

Modern taxation

Ethiopia's modern T. system has a chequered history, evolving in a largely ad-hoc manner from the 1940s in response to the state's rising expenditure requirements.

In the traditional polity, state revenue consisted of tithe and tribute rather than monetary T. The ↗*gʷəlt* and ↗*gäbbar* systems (based on payment of tribute in kind) formed the basis and the means which supported the entire political, social and economic hierarchy (s. sub-article "Tributes and traditional taxation"). Although a rudimentary Ministry of Finance had been formed just prior to *aṣe* ↗Mənilək II's death, there was "no distinction between the finances of the monarch and those of the state" (Eshetu Chole 2004: 64). While the 1931 ↗constitution provided for an annual budget, this reflected the young monarch's aspirations for a modern bureaucratic state, rather than Ethiopia's fiscal reality (Bahru Zewde 1986); no budgets were produced prior to the Italian invasion in 1935.

After the restoration of *aṣe* Ḫaylä Śəllase I in 1941 the need to finance a centralized state with a growing army and burgeoning ministries prompted the fiscal reforms of the mid-1940s which focussed largely on land, trade and excise taxes. While legislation was piecemeal, and 'tax' (**ግብር**, for the cultural background s. ↗*Gəbər*) collection was frequently ineffective, the reforms nevertheless established a tax framework which remained largely intact until the ↗Revolution.

A 1942 law provided for the payment of a monetary land tax (↗Land tenure), to replace tributes in kind gradually. This was extended to cover tithe payments in 1944. Tax rates varied according to land use, quality and region. However, implementation was piecemeal. Landlords ignored, resisted or evaded paying tax. The ↗Ethiopian Orthodox (Täwaḥədo) Church – a major landowner – was exempted from land tax. The Second Five Year Plan of 1962 aspired to implement progressive T. on land holdings; but with entrenched landed interests at play the land-tax remained a negligible source of revenue. In 1967 tithe payments were replaced by a more comprehensive, and ostensibly more equitable and efficient, "tax on agricultural income". In practice however, landlords continued to shift the tax burden to their impoverished tenants. Again, resistance and evasion was the norm, with grievances over agricultural T. fuelling the ↗Goǧǧam uprising of 1968. Specific taxes to cover the costs of the expansion of education (1947) and health

(1958) services were also levied according to a formula linked to land holdings, but neither generated significant funds. Overall, the tax system as experienced by the bulk of Ethiopia's rural population was highly iniquitous. "Rather than serving as a means of redistribution, the tax system therefore aggravated existing inequalities" (Eshetu Chole 2004: 75).

Diverse import duties accounted for a quarter of government revenues in the decade prior to the revolution, while export tariffs – notably on hides, skins and ↗coffee, an additional coffee surtax being introduced in 1964 – were less successful in raising sustained revenues. This was in part due to sharp fluctuations in the world price of coffee. In 1966 coffee prices plummeted, severely denting government revenues. It was only in 1969/70 that tax revenues recovered to the level of the mid-1960s.

'Income tax' (**የገቢ፡ ግብር**, *yägäbi gəbər*) in Ethiopia dates from 1944 with Schedule A covering employment, Schedule B rents from land and buildings, and Schedule C income from businesses and professional activities. Again, piecemeal implementation meant that, like land taxes, income taxes did not generate significant revenues during the imperial era. This left assorted indirect and transaction taxes to raise the bulk of state revenues. Rudimentary import taxes, notably on alcoholic ↗drinks, cigarettes and textiles, had been introduced as early as 1931. The alcohol tax was expanded in 1943 and from 1954 to 1955 a raft of new taxes on both imported and locally produced consumer goods were implemented. These covered items such as ↗salt, sugar and textiles. A blanket import tax of 12 % both generated considerable revenues and offered nascent domestic manufacturers a modicum of tariff protection.

Despite the ad-hoc nature of the tax system, widespread evasion and setbacks such as the 1966/67 collapse of coffee prices, revenues nevertheless grew steadily; rising from 123 million *bərr* in 1955 to 618 million *bərr* in 1973 (Eshetu Chole 2004: 74). In the 1960s taxes on goods and services represented 67 % of all revenues, with 40 % of all revenue derived from foreign trade. The significance of tax revenue for the imperial state should not be underestimated; during the 1960s non-tax revenues (from grants, loans aid etc) represented only 9.5 % of total government income; 90 % of all state revenue was raised from within Ethiopia (Wogene Yirko 1994: 22).

A final characteristic of the imperial T. system of note was its high degree of centralization. Provinces were not granted autonomy to raise tax or to manage their expenditure. This aspect was first reinforced by the state-socialist government from 1974, the *Därg* (↗Provisional Military Administrative Council, and then reversed by the successor Ethiopian People's Revolutionary Democratic Front (EPRDF) government in 1991.

The *Därg*'s revolutionary emphasis on land-nationalisation, state-owned enterprises and accelerated industrialization had necessitated a series of fiscal changes. Consequently state-ownership of land expanded the land-tax base, while a massive increase in state-sector employment magnified the income tax base. The collection of direct taxes quadrupled to 2,317 million *bərr* in 1988, representing almost 70 % of total government revenue (Getachew Gebre 1992: 303). In keeping with its egalitarian ethos, marginal rates of income tax were set punitively high over relatively low thresholds (set at *bərr* 600 for rural incomes). While incomes below this paid *bərr* 10 tax via their Peasant Associations, ad-hoc quotas of grain delivery imposed on the peasants translated into an extremely high real tax burden, unconsciously echoing the predation of the imperial tribute system.

In terms of state revenues, nationalization had also generated a significant new non-tax revenue by the 1980s in the form of a 5 % capital charge and a 90 % 'residual surplus' (effectively a tax on profits). These were levied on state-owned enterprises and channelled into state coffers. By 1988, Ethiopia's ratio of tax revenue to Gross Domestic Product (GDP) stood at 30 %, which was higher than most low-income economies at this period.

Despite this, hikes in government expenditure, the sclerotic impact of the state-socialist policies, and deleterious impact of civil war and famine on state finances all weakened the T. system inherited by the transitional government in 1991. Expressed as a proportion of overall economic activity, state revenues and expenditure had tripled under the *Därg*, revenue rising from 11 % of GDP in 1974 to almost a third in 1988 (Getachew Gebre 1992: 303). However, while generating significant revenues for current expenditure, like its imperial predecessor, the *Därg*'s T. regime failed to mobilize significant surpluses for productive reinvestment.

Three aspects of EPRDF administrative approaches to T. are noteworthy, during the transition (1991–93) and thereafter. On paper the federal constitution provides for a significant delegation of both revenue and expenditure powers to the regions. While there have been significant reforms in the modalities of both revenue collection and regional expenditure, in practice regional fiscal autonomy is less evident than initially anticipated. This partly reflects political imperatives and the acute economic imbalances between Ethiopia's disparate regions; only four of the nine regions (Addis Abäba, Oromiyaa, Amara and the Southern Regional State) generate significant economic surpluses, one of several economic weaknesses in the federal template (Eshetu Chole 1994: v). A second innovation was the introduction in 2003 of a Value Added Tax (VAT), largely replacing the sales tax. Finally there have been incremental changes to marginal tax rates and collection mechanisms. As with the introduction of VAT, tax reforms partly reflect donor policies, although the tax framework reflects the EPRDF's twin-track policy of encouraging both domestic entrepreneurs and foreign investment, while ensuring state and party-owned companies retain control of key markets.

David Styan

Trimingham, John Spencer

John Spencer T. (b. 1904, Thorne, England, d. ca. 1986), was an Evangelical missionary and a scholar in Arabic and Islamic Studies, particularly in the fields of Islamic history and culture in Africa and in Islamic mysticism (↗Islam).

T. studied Social Sciences in Birmingham, and Arabic and Persian in Oxford. He trained for the ministry of the Church of England at Wells Theological College. In 1937, he started working for the British ↗Church Missionary Society (CMS) in Egypt and Sudan and became secretary of the local branch of the CMS. The religious mission he carried out until the early 1960s saw him travelling and acting in several different areas of East and West Africa. In the academic field, he affiliated with the University of Glasgow in 1953 as lecturer and then as head of the Department of Arabic and Islamic Studies. On retirement, T. became visiting professor at the American University in Beirut; in 1970 he went to the Near East School of Theology in Beirut as representative of CMS.

The last period of T.'s life is obscure. Member of the Royal Asiatic Society, he appears in the list of its Fellows in 1985: in this same year he is reported to have lived in Worthing, Sussex. T.'s death was reported at the Annual General Meeting of the RAS held on 14 May 1987. One may thus surmise that Reverend T. passed away in 1986 or early 1987.

The list of T.'s publications is long. Most famous is his handbook on ↗Islamic brotherhoods (Trimingham 1971). His work on Christianity in pre-Islamic Arabia (1979) has also acquired wide fame. However, T. is particularly renowned for his general and comprehensive surveys on Islamic Africa which are the direct fruit of his long missionary experiences in many regions of the continent (TrIslam, Trimingham 1949; 1959; 1962; 1962b; 1968; Trimingham 1939 is a manual of colloquial Sudanese Arabic which was conceived during T.'s stay in the country). Parallel to this, T. authored a series of books in which he discusses the main problems faced by the CMS in Muslim communities in Africa and the best ways to solve them (1948; 1949b; 1950; 1955). The relationship between T.'s missionary and scholarly activity has still to be analyzed in detail (s. Tayob 2004 for a first assessment and Sharkey 2002 for a general evaluation of the activities of the CMS in Northern Sudan) but it seems clear that T.'s general approach to the study of Islam was deeply influenced by his involvement in the Evangelical mission.

T.'s central contribution to ↗Ethiopian studies is his study of Islam in Ethiopia published in 1952 (TrIslam), which remains an essential basic reference tool, brilliantly combining deep insight with satisfying exhaustiveness. Whilst recent progress in research on Islam in Ethiopia and Eritrea has clearly exposed the shortcomings of T.'s handbook, now obsolete in some respects, at the same time it recognizes the exceptional value of T.'s contribution (Hussein Ahmed 1992: 29f.; HusIslam 51–59).

Alessandro Gori

Trinity

Belief in the T. is a central doctrine which distinguishes ↗Christianity from the other monotheistic religions, ↗Judaism and ↗Islam. In the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC) belief in the T. (**ሥላሴ**, *śəllase*), i.e. in "one God who exists in three Persons and one substance, Father, Son and Holy Spirit", is the first of the five "pillars of mystery" (↗*Amməstu aᶜəmadä məśtir*).

Scriptural *testimonia*

There is a standard set of passages from the O.T. and N.T. which is apologetically and often polemically put forward to "prove" and to defend the doctrine of the "T.", including O.T.: Gen 1:3, 2:26, 3:22, 11:7 and particularly 18:2–15; Ex 3:6; Ps 26[27]:8, 44[45]:8; Is 6:3, 6:8 and 44:6; Ecc 4:12; NT: Mt 3:16–17, 17:5, 28:19; Jn 12:27-28; 2 Cor 13:13; 1 Jn 5:7-8. The "oneness" of the three Persons is seen supported by Deu 6:4, Is 44:6, Eph 4:5. These passages are also used in the ↗theology of the EOTC (cp. Weischer 1980: 30, 42–46). Severianos of Gabala (5th cent.) pieces together several texts which contain the figure three and associates them to the doctrine of the T. (cp. Weischer 1980: 32ff.). Pauline expressions such as "faith, hope and charity" (1 Cor 13:13), "three times I have prayed God" (2 Cor 12:8) are linked to the three Persons; 2 Cor 11:25 are associated with the "T." and "unity" of God (Weischer 1980: 38). As with other Christian theologians, Ethiopian church scholars (e.g., *ᶜaqqabe säᶜat* Käbte) teach that such biblical data show that it is God himself who has disclosed the mystery of the T. in the Bible and legitimizes the axiom: **ይሤለሱ፡ በአካላት፡ ወይትዋሐዱ፡ በመለኮት**, 'They are three in Persons and they are united in the Divinity' (cp. *Mäṣḥafä məᵓəllad*, p. 30).

Patristic and post-patristic teachings

In line with the Alexandrian tradition, Ethiopians emphasize the Unity between the three Persons. Religious texts make use of analogies which try to explain the mystery of the T. and of the Incarnation. They accept ↗Jacob Baradaeus's declaration: "I say, I believe and am convinced that the Father is the heart, the Son is the word and the Holy Spirit is the life" (Cornill 1876:433), which follows ↗John of Damascus, who used three terms νοῦς, λόγος, πνεῦμα, to refer to the Father, Son and Holy Spirit, respectively (PG 94: 1340D).

The EOTC draws its trinitarian language and formulations from the ↗Bible, from the Nicene Creed (↗Nicaea), from patristic literature and from Arab Christian writers. The term *śəllase* corresponds to Gr. τριάς (DillmLex 232), a word introduced by Theophilus of Antioch (late 2nd cent.) to describe the Godhead and standing for "God and His Word and His Wisdom" (*Ad Autolycum* 2:15), and to Latin *Trinitas* (DillmLex 232), a term coined by Tertullian (2nd cent., *Adversus Praxeam* 11), also responsible for the formula "three Persons, one Substance".

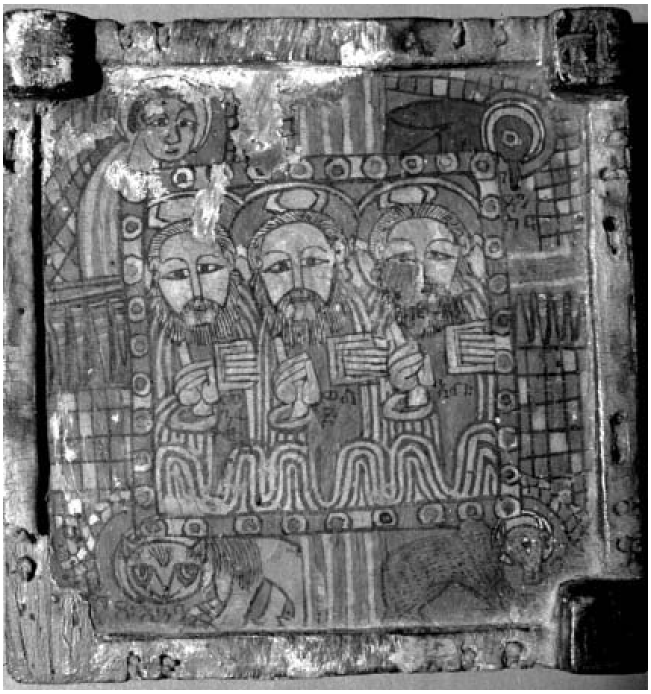
The triad "heart, word, life" (Arab. *ᶜaql*, *natq*, *ḥayat*, Haddad 1985: 123–27) was proposed by ↗Severos of Ašmunayn in his *Book of the Exposition* (*Mäṣḥafä Sawiros* or *Kəbrä haymanot*). He introduced the parallelism between the three segments or phalanges of the finger and the "unity" and "T." of the Divine Persons (ms. BritLib Orient. 773, fols. 2^{r}–15^{r}; Haddad 1985: 122). The ↗sun is a widely used metaphor, also in the EOTC theology: it is one, but in the same sun there is roundness, radiance and heat (e.g., *Mäṣḥafä qəddase* 1995/96 [hereafter MQ]: 492). Another metaphor is the written word: the scribe prepares the ink, the pen and the skin, yet there is no division between the words that he writes on the parchment and those which remain in his heart. In the same way the Word appeared in the flesh without separating himself from the unity with his Father and with the Holy Spirit. The theologians are aware that no analogy can adequately represent the Mystery. Hence, they specify that unlike the case of the heart, word and life, among the three Persons there is no one that precedes or that comes after; none of the Three is inferior or superior (MQ 486f.). There is no time in which the Father was without the Son and Holy Spirit (Confession of the 318 Nicene Fathers, s. ed. Alberigo 1996:5).

Basic terminology and *formulae*

The Father is the heart, the Son is the word of the Father and of the Holy Spirit, and the Holy Spirit is the vital energy of the Father and of the Son. They share equally: *həllawe* ('substance'), *mängəśt* ('reign'), *mäläkot* ('Divinity'), *ḥəllina* ('thought'), *fətwät* ('desire'), *śəmrät* ('will'), *kəhilot* ('power'; YaqMist I, 149). They are distinct in: *səm* ('name'), *akal* ('person'), *gäṣ/gəṣṣawe* ('face'), *raʾəy* ('appearance'), *mälkəᶜ* ('image') and *gəbr* ('activity'). There is also the term *qənum/aqanim* seen as a synonym of *səm* (*Haymanotä abäw* 1974/75 [hereafter HA]:49, ch. 13, part 1, 2–6). ᶜ*Ǝrina* ('equality') is a key word which designates the absolute equality between the Divine Persons. Divine essence (*kunätat*), God's divine character (*baḥrəy*) consists in intelligence (*ləbbənnät*), in the capacity to speak (*qalənnät*) and in vital energy (*ḥəyawənnät*).

"Immanent Trinity"

There are several formulae describing the internal (*ab intra*) life of the T. A passage attributed to Basil of Caesarea says: "Before anything else, let us believe in one God who has three Persons, Father, Son and Holy Spirit. Trine, equal, though One, Three and One while Three" (HA 116, ch. 34, part 5, 2–3). Each of the Three Persons has his own property which cannot be predicated to the other: "The Father generates and lets [the Holy Spirit] proceed; the Son is generated and the Holy Spirit proceeds [from the Father]". The liturgy (↗ *Qəddase*) proclaims the eternity of the T.: "From before the world and ever after, God is in his Trinity, God is in his Divinity, and God is in his Kingdom" (*Anaphora* of Dioscorus, MQ 448, § 3). Incarnation and Redemption are a plan of the T. as a whole, as stated in the refrain of Tuesday's ↗ *Wəddase Maryam*: "Because He came and saved us by his own accord, and with the consent of his Father and of the Holy Spirit" (cp. Fries 1892:34, 55).



Trinity, single painted wooden panel (10.8 cm x 10.5 cm), from a folding multi-panel icon, early 16th cent.; photo courtesy of the IES (inv. no. 3898)

The thought and language of the EOTC regarding the doctrine of the T., especially in local compositions such as the writings ascribed to St. ↗ Yared, are still an open field of research. The ↗ *wazema* of 7 *Ḥamle* (the Feast of the T.) reads: "We believe and we worship One God who exists before [the creation of] the world, and we believe in the Second God who, in his authority resembles the Father, and we believe in the Third God, the Holy Spirit who has authority over everything" (*Mäṣḥafä ziq* 1986/87:200). The language of this hymn does not reflect the usual formulation of the Mystery of the Holy T. The Three Divine Persons are never spoken of in terms of "first", "second" and "third". Such expressions represent an uncommon brand of Ethiopian theology and deserve more attention (theme covered in more detail in Tedros Abraha, in preparation).

"Economic/Self-revealing Trinity"

The EOTC professes that the T. rules the world, and the Divine Persons are correspondingly called *agaᶜəztä ᶜaläm* 'the Rulers of the World'. Such texts as, e.g., *Mäṣḥafä* ↗ *ziq* (1986/87:200f., "We believe in the T., we praise the T., we prostrate before the T., because they have created us from the nature of wind and fire, from the nature of water and earth […]", "I sign myself and rise in the name of the Father and of the Son and of the Holy Spirit, I take the three names and lean [on them], if I was to fall I will stand up, and if I would walk in darkness, God will enlighten me. I have trusted in God") illustrate the vision of the EOTC regarding the relationship of the T. with creation in general and with humanity in particular.

The "unity" and "T." of God is reflected in humans who are created "in the image and likeness of God" (Gen 1:26). The soul is endowed with a trinitarian structure so that it is intelligent (*läbbawit*), speaking (*näbabit*), and living (*ḥəyawit*). The EOTC admits that the T. should be considered in silence and admired (*təträmmäm wätətnäkkär*) rather than investigated and explained (*Mäṣḥafä ziq* 1986/87:202; cp. Weischer 1980:28).

The *Mälkəᶜa śəllase* (Tedros Abraha 2008) by *abba* Səbḥat Läᵓab (of ↗Ṭana Qirqos; a contemporary of *aṣe* ↗Iyasu I, he died on 9 August 1702; cp. DombrChr 233) creates a skilful synthesis between the "immanent" and the "economic" T.

Controversies concerning the doctrine

Many of the theological disputes that tormented the first six centuries of the Christian Church emerged almost 1,000 years later in Christian Ethiopia. The *Mäṣḥafä* ↗*məśṭir* is the earliest known text which deals systematically with old and new heresies. There is a treatise refuting Sabellius (YaqMist I, 1-27). A crisis around the doctrine of the T. exploded at the time of *aṣe* ↗Zärᵓa Yaᶜəqob. The *Mäṣḥafä* ↗*bərhan* mentions the doctrines of Zämikaᵓel and Aṣqu (cp. ↗Zämikaᵓelites), who taught that "the Father, the Son and the Holy Spirit were three names, one person, one hypostasis and one aspect" and that the T. does not have a physical aspect.

In some liturgical texts, e.g., the *Anaphora* of Our Lady attributed to Cyriacus of Behnesa, each Person of the T. is addressed as the sun (MQ 492, §73). This formulation would be the result of differences between Zärᵓa Yaᶜəqob and the priests of the court who wanted to describe every Person as the sun in order to respect their distinction. On the other hand there were those who chose to speak of one sun only, for fear of falling into the error of worshipping three gods (Getatchew Haile 1981:102–36).

In more recent times, controversies have erupted around the concept of *mäläkot* (Tedros Abraha 2008:333–55). Some stated that "the Father is *mäläkot*, the Son is *mäläkot* and the Holy Spirit is *mäläkot*", the implication being that there are three Divinities. This language was met with fierce opposition from those who teach that the Divinity is one. The two camps are known as supporters of *and mäläkot* ('one Divinity') and *śost mäläkot* ('three Divinities'). According to a legendary account the row was triggered by contrasting interpretations of the first strophe of the *Mälkəᶜa śəllase* composed by *abba* Səbḥat Läᵓab which reads: "Each of your faces has divinity" (BerTarik 238–42). The hotbed of the controversy was the hermitage of ↗Waldəbba where the monks were divided into two rival families: the house of *abunä* Minas which held the "one Divinity" creed and the house of Ṭaᶜəmä Krəstos associated with the "three Divinities" formula. The upholders of the "three Divinities" creed were accused of being disciples of Yoḥannəs Täᶜaqabi, i.e. John Philoponus (6th cent.), known also as Yaḥyā an-naḥawī ("the Grammarian"), or al-Askulāᵓī ("the Scholastic"; GrafLit vol. 1, 417, §117). The dispute involved other areas as well, most notably, the monasteries of ↗Däbrä Abbay, ↗Däbrä Libanos of Šäwa, and the clergy of ↗Aksum Ṣəyon. The controversial trinitarian formulas were introduced to ↗Däbrä Bizän by *abba* Kidanä Maryam Gäbre after he returned from Waldəbba (contra KWKDic 595).

On 14 April 1907, *aṣe* ↗Mənilək II wrote a letter to the people of ↗Təgray, inviting them to put aside the differences which split them into two factions: one claiming that "the Divinity is one" and the other that "Divinity is three". The letter called for reconciliation, but also dealt with the issue of the Unity and T. of God, drawing heavily from the writings of the Fathers. The Emperor concluded with a demand to obey what he wrote, adding that "those who disobeyed would be excommunicated by *abunä* ↗Matewos and that physical punishments too would have been meted out" (*Waldəbba* … 2000/01:89ff.).

There was an assembly, involving Aksum and Däbrä Abbay, at ↗Däse in November 1914, in which the Metropolitan *abunä* ↗P̣eṭros participated. The meeting was chaired by *mämhər* ↗Akalä Wäld. The spokespersons were: *nəburä əd* Gäbrä Ḥəywät for Aksum and *nəburä əd* Abraha for Däbrä Abbay. The Aksumites were sticking to the "one Divinity" position and the Däbrä Abbay formation to the "one Divinity in Three Persons" formula. The Metropolitan favoured the Aksumites, whereas Akalä Wäld sided with the Däbrä Abbay party. The argument was won by Däbrä Abbay. The division along the "one Divinity"/"three Divinities" also knew violent aspects (such as the arson of a church in 1945, s. *Waldəbba …* 2000/01: 98); it still lingers on in Waldəbba.

In the last century the T. was at the centre of a polemical argument, with many voices raised against the Jehovah Witnesses who vehemently reject the belief in the T. and are regularly labelled as "new sons of ↗Arius" (cp. Kidanä Maryam Yosef 1995).

The Mystery of the Holy Trinity in daily life

Every prayer starts with the sign of the Cross in which the T. is named. Blessings are imparted in the name of the Three divine Persons and to this purpose, the formula ኣሐዱ፡ ኣብ፡ ቅዱስ፡ ኣሐዱ፡ ወልድ፡ ቅዱስ፡ ኣሐዱ፡ ውእቱ፡ መንፈስ፡ ቅዱስ 'The one Father is holy, the one Son is holy, the one Holy Spirit is holy' is the preferred prayer. Reconciliation among persons who have had differences is made in the name of the T. Food and drinks prepared for religious celebrations are always blessed with a trinitarian formula which is recited three times: በእንተ፡ ስሙ፡ ለአብ፡ በእንተ፡ ስሙ፡ ለወልድ፡ በእንተ፡ ስሙ፡ ለመንፈስ፡ ቅዱስ, 'Through the name of the Father, through the name of the Son and through the name of the Holy Spirit'. The name of the T. is invoked when farmers start to plough, before people start butchering animals, at the beginning of meals and at the end. Male and female personal ↗names, as well as names of churches, monasteries and other places involving the T. are common (cp. ↗*Tabot*). Devotion to the T. is expressed by the works of ↗Gəʿəz literature such as the *Zena śəllase* or the ↗*Täʾammərä śəllase*. The *Säyfä śəllase* (↗Magic literature), an abridged version of *Zena śəllase*, is a widespread devotional book.

Trinity in art

The earliest extant examples of the symbolic image of the Triune God as three identical persons appear in Ethiopian icons datable to the early 16th cent., although this iconography of the Holy T. was probably introduced to the repertoire of Ethiopian art by the means of European models in the 15th cent. (ChojPaint fig. 40), a period of heightened exchange between western Europe and highland Christian Ethiopia (Heldman 1994: 139–62). Ethiopian examples include an engraved processional ↗cross in the collection of the Harn Museum, University of Florida, Gainesville (Inv. No. 2003.10.9) and icons in the collection of the ↗Institute of Ethiopian Studies (Chojnacki 2000, nos. 95, 114, 168). The three-person T. may have been included in the murals of Ethiopian ↗churches decorated during the late 15th and early 16th cent., but none are extant.

Establishing a symbolic representation that signifies the inseparability and the indivisibility of the Triune God presented a challenge. Two distinctive iconographic types of the T. were developed in western Europe. One version, the Throne of Grace (Braunfels 1954: xxxvff.), which shows God the Father holding the Crucified Christ and above whom is the dove of the Holy Spirit, an iconography that inspired little or no interest among the Eastern Churches. The second, the T. as three identical persons (ibid. xvi–xxv), was more readily received. This iconography incorporates the Byzantine portrait type of Christ Pantocrator – dark hair and cruciform halo, holding a book (Jn 1: 1; s. Schiller 1971, figs. 653, 656–-57, 659). A mural fragment from the cathedral at Faras, presently in the National Museum, Khartum (Michalowski 1967, pls. 84f.; Weitzmann 1970: 335f.) demonstrates that the iconography of the T. as three identical persons had been introduced to Nubia, although the context within which this iconography was received awaits investigation.

The reception of this symbolic iconography of the T. as three identical persons by Ethiopian patrons and painters was dependent upon the theological writings of *aṣe* ↗Zärʾa Yaʿəqob. In his *Homily in Honour of Saint John the Evangelist*, he argued that God the Father is not separated from the Son and the Holy Spirit, God the Son is not separated from the Father and the Holy Spirit, and God the Holy Spirit, Paraclete, is not separated from the Father and the Son (Getatchew Haile 1983: 158f.; Heldman 1994: 185ff.). This treatise was a primary inspiration for the pictorial programmes developed by the Emperor’s court painter ↗Fəre Ṣəyon, whose surviving works include an image of the white-haired figure of the Ancient of Days (Dan 7: 9–10, Rev 4: 6), i.e. God the Father, combined with that of Jesus Christ the Son. The portrait is surrounded by a mandorla with the Four Heavenly Creatures who hold books, thus indicating that the Four Heavenly Creatures surrounding the throne of God are not only symbols of theophany, but also are symbols of the Four ↗Evangelists, authors of the Word (Jn 1: 1; Heldman 1994: 191ff.). This portrait-type signifies the consubstantiality of the Father and the Son.

16th-cent. Ethiopian representations of the T. show three identical half-length (or knee-length) figures with cruciform halo and framed by a mandorla with the Four Heavenly Creatures. Each blesses with the right hand and with the left grasps a book, usually along the top edge (Chojnacki 2000, nos. 114, 168), as in the manner of Fəre Ṣəyon’s figure of Ancient of Days/Christ engraved upon an ebony icon (AfrZion no. 78). The hair colour of different sets of three identical figures varies; the sets of three figures either have white hair as for God the Father or dark as for Jesus Christ the Son. The striking similarity between these images of the T. and Fəre Ṣəyon’s single figure of Christ/Ancient of Days leads one to conclude that, although the prototype of three-person T. was introduced from Europe, this particular imagery is an Ethiopian innovation.

The 16th-cent. iconography of the T. as three identical persons evidently was abandoned during a century from which few works of religious art are extant. This period came to an end with the founding of the capital of ↗Gondär in the 1630s. Gondärine rulers became important patrons of art. A new iconography which demonstrates the consubstantiality of God the Father and the Son was introduced in the second half of the 17th cent. – the figure of Christ /Ancient of Days is depicted with an orb surmounted by a cross rather than a book in his left hand. This new element was inspired by a European iconographic model known as the *Salvator Mundi*, which shows Christ holding an orb surmounted by a cross. This symbolic portrait, created in northern Europe in the 15th cent., had also become very popular in Italy by early 16th cent. The new Ethiopian iconography of the consubstantiality of God the Father and the Son is found in the murals of the royal church of ↗Däbrä Sina at Lake Ṭana (Di Salvo 1999:143) and the royal church of Ǝnṭonəs at Gondär (Bosc-Tiessé – Wion 2005:65–71). Both sets of murals exemplify the First Gondärine style of painting. Located on the tambour above the west wall of the sanctuary (*↗Mäqdäs)* is the seated figure of God the Father as Ancient of Days with white hair and the cruciform halo of Christ. He holds an orb with cruciform finial, symbol of world rule. Surrounding his mandorla are the Four Heavenly Creatures, symbols of theophany, and at his sides are the Twenty-Four Priests of Heaven carrying censors.

A slightly different combination of symbolic elements appears on several icons of the same period. A double-sided diptych shows a seated figure with yellow halo, his black hair curling down upon his shoulders, much like Western versions of Christ as *Salvator Mundi*, and holding in his left hand an orb surmounted with a cross. He is paired with a bust portrait of Christ crowned with thorns (*↗Kʷərᶜatä rəᵓəsu*) on the adjoining panel (Chojnacki 2000, no. 109). The inscription beside the figure with the orb identifies him as "God, Ruler of the Universe".

A juxtaposition of two virtually identical figures appears on a diptych that was once the property of the Ǝnṭonəs church (Bosc-Tiessé – Wion 2005:39ff.). Below the pair of iconic portraits are two narrative scenes: figures mourning over the body of Christ and a scene of his burial.

A new variation of the iconography of the T. as three identical figures appears in Gondärine art in the early 18th cent. The figures are depicted with white hair as of the Ancient of Days and their yellow or orange halos have no suggestion of a cruciform design. The left hand holds a very small orb or may appear to be empty. As in all images of the T., the right hand is raised in a gesture of blessing.

The compositional layout of this image usually takes the form of a rectangle with greater width than height, and the Four Heavenly Creatures are placed at the four corners of this rectangular composition. This form of this composition is perfectly compatible with the standard placement of a portrait of God or the T. in the standard decorative programme of circular churches, i.e. upon the tambour above the west wall of the sanctuary (Bosc-Tiessé – Wion 2005:71ff., 94f., 110f.). An 18th-cent. version of the T. as three identical persons remains *in situ* upon the tambour above the west wall of the sanctuary of the church of the T. on the island of Narga at Lake Ṭana, ↗Narga Śəllase (Di Salvo 1999:135, 161, 198f.). The church, decorated with paintings in the Second Gondärine style, was founded by Queen Məntəwwab (↗Bərhan Mogäsa). Virtually identical compositions painted in the Second Gondärine style decorate manuscripts produced at Gondär for patrons of the ruling-elite class (ChojPaint fig. 63). Similar images are engraved upon processional crosses (AfrZion no. 114) and painted on icons (Chojnacki 2000, no. 232).

The renewed interest in the iconography of the T. as three identical figures and its widespread reception may have been stimulated by the patronage of *aṣe* ↗Iyasu I, just as the initial introduction of the T. to Ethiopian art was ultimately dependent upon Zärᵓa Yaᶜəqob's theological writings on the unity of the T. *Aṣe* Iyasu I's church of the T. – ↗Däbrä Bərhan Śəllase – was consecrated in February 1694 (BassÉt I, 358 [text]). The original circular church burned down and was rebuilt by the early 19th cent. (Annequin 1976:218f.), and the original scheme of decoration is unknown. Nevertheless, it is safe to assume the iconic image of the T. in the original church took the form of the T. as three identical persons with white hair and holding orbs and flanked by the Twenty-Four Priests of Heaven, painted upon the tambour above the west wall of the sanctuary. This 18th-cent. version of the T. as seen in the 19th-cent. rebuilt church of Däbrä Bərhan at Gondär remained the standard representation of the Trinity throughout the 20th cent. and indeed continues to be the standard iconography in the 21st cent.

Marilyn E. Heldman

Tripartite Treaty of 1906

On 13 December 1906 in London, Britain (↗United Kingdom), ↗France and ↗Italy signed a treaty settling their differences regarding Ethiopia (↗Treaties and conventions, s. EAE vol. 5). In principle, the three powers agreed to "maintain the integrity of Ethiopia" while protecting "their respective interests". (Preamble; cp. Hertslet, 1967: 436). The T.T. contained a pledge of neutrality and "non-intervention" (Art. III; Hertslet, 1967: 437) in the internal affairs of Ethiopia, and emphasized that the signatories must make every effort to prevent the disintegration of Ethiopia and maintain her integrity (Art. IV; ibid.).

Two major factors promoted the signing of the treaty: One was the fact that, ten years after the Battle of ↗^{c}Adwa, *aṣe* ↗Mənilək II's empire was independent and strong, reaching its peak. The Emperor was aging (he became ill in May 1906 and would lose some of his physical abilities in 1907), his presumed successor, *ras* ↗Mäk^{w}ännən Wäldä Mika^{ə}el, died in March 1906, and the danger of a chaotic process of succession and of possible disintegration worried the neighboring imperialist powers. The second factor was that Britain and France had drawn closer and, since their 1904 "entente cordiale", they made mutual efforts to reach maximal cooperation in Africa.

All three powers had recognized Ethiopian independence in their respective bilateral treaties with Mənilək in the aftermath of ^{c}Adwa. Nevertheless they had contrasting interests in Ethiopia. The French were in the process of building the Djibouti–Addis Abäba railway line (↗Railways) and were thus in a position to dominate the Ethiopian economy and future modernization. They also aspired to have the regions along the railway line recognized by the other powers as their sphere of interest; and in fact the international status of the railway was regulated by the T.T. (Art. V–IX, Hertslet, 1967: 437–38). The Italians dreamt of a railway line connecting their colonies of ↗Eritrea and ↗Somalia and running east of Addis Abäba and therefore in the French "sphere". They also hoped that their interpretation of their old agreements with Ethiopia, by which they claimed to have the whole country under their patronage, would, at least by a vague implication, be accepted by the other powers. The British sphere of interest was western Ethiopia and, principally, the Blue Nile basin (↗Abbay). As their Nile interests were guaranteed by Mənilək (in the 1902 agreement), the British were interested in maintaining the status quo in Ethiopia and ensuring its stability.

The 1906 T.T. further solidified the British-French Entente and advanced their interests in Ethiopia. In principle, the French were allowed to continue with the railway enterprise and the British would try to promote their Nile interests, uninterrupted by other Europeans. The Italians had to settle for the status of junior partner and shelve their dreams of a railway and a protectorate. The three powers, somewhat prior to the signing, in July, notified Mənilək, who responded: "We thank [the powers] for their communication, and their desire to keep and maintain the independence of our Government. But let it be understood that this arrangement in no way limits what we consider our sovereign rights" (Marcus 1975: 211). In later communications, Mənilək refuted the notion of "spheres of interest" even more strongly, sensing the only barely veiled claims of the three powers to intervene into Ethiopian affairs (cp. BZHist 111, 115f.).

The T.T. was significant in that it deepened the dialogue and coordination between the three powers involved, and prevented other powers from effective intervention. In 1916, the British, French and Italians worked together to depose *ləǧ* ↗Iyasu and to remove the threat of Turkish–German penetration. They later enabled the 1923 admittance of Ethiopia as a sovereign state to the ↗League of Nations. However, the treaty, by its very spirit, did have a paternalistic dimension that was soon to undermine Ethiopian independence. In 1925, the three powers divided Ethiopia into spheres of influence and in 1935, the British and the French betrayed Ethiopia abandoning her to ↗Mussolini who sought to avenge ᶜAdwa and claim the whole country.

Tuberculosis ↗Diseases

Tubiana, Joseph

T. (b. 22 October 1919, Algiers, d. 16 December 2006, Paris) was a French ethnologist and linguist (for ill. s. EAE vol. 3, 272).

T. was born to a family of Jewish descent. He attended a lyceum at Algiers and in 1938 he entered Algiers University to become a teacher in Classical Studies. He was mobilized during World War II. Upon demobilization in 1945 he continued his studies in Paris learning Amharic with ↗Cohen at the École nationale des Langues orientales vivantes (ENLOV, later ↗Institut National des Langues et Civilisations Orientales), Gəᶜəz with ↗Grébaut at the Institut catholique and with Cohen at the École pratique des hautes Études (EPHE), linguistics with André Martinet and Gustave Guillaume and religion with Maurice Leenhardt at the same school as well as ethnology with ↗Griaule at the Sorbonne.

In 1948 T. joined the Centre national de la Recherche scientifique (CNRS) as researcher. His first field research in Ethiopia took place from March 1949 to June 1950. His results were significant for the study of Amharic and Gəᶜəz but also for ↗Agäw, and he also collected material on the ↗Kəmant and the ↗Betä Əsraᵓel which remained among his preferred research subjects.

In 1950 he succeeded Cohen as lecturer of Amharic at ENLOV. He took the chair in January 1957 teaching Amharic and Ethiopian cultures until 1974. From 1951–60 he also directed the Department of White Africa and the Levant at the Musée de l’Homme. During this period he conducted research missions in Chad, Sudan, Somalia and Ethiopia. From 1960–85 he taught the historical ethnology of East Africa at the EPHE.

In 1974 T. returned to CNRS, for which he created the Peiresc laboratory – research centre of East Africa at Sophia-Antipolis (Antibes). The laboratory closed with T.’s retirement in 1986, T. himself remained academically active until his death.

T. organized a number of international conferences, including “Les langues couchitiques et les peuples qui les parlent” at the CNRS in 1975 and the Fifth ↗International Conference of Ethiopian Studies, whose Proceedings he edited (PICES 5a). He also edited the *Guirlande pour Abba Jérôme* (Paris 1983), *Voyages et Voyageurs* (Bruxelles 1984) and *La Révolution éthiopienne comme phénomène de société* (Paris 1990). Another major work T. contributed to ↗Ethiopian studies is his *Ethioconcord. Concordance automatique des calendriers éthiopien et grégorien* (Rotterdam 1988).

Alain Rouaud

Tucker, Archibald Norman

T. (b. 10 March 1904, Cape Town, d. 16 July 1980, London) was a major British linguist working on various languages of East Africa from the 1930s onwards. He obtained his M.A. from the University of Cape Town in 1926 and his Ph.D. from the University of London, where he was undertaking postgraduate studies in the Department of Phonetics at University College under Daniel Jones. After a period working for the Education Department of the Sudan government collecting material on various languages of that country, he was appointed in 1932 to the Department of Phonetics and Linguistics at the then School of Oriental Studies (later the ↗School of Oriental and African Studies), London. His research interests covered a wide range of East African languages, including those of the Sudan, Ethiopia, Kenya, Uganda and even South Africa, but he is perhaps best known for his work on "Nilotic" and ↗Nilo-Saharan languages. In 1951 he became Professor of East African Languages at the School of Oriental and African Studies, where he remained until his retirement in 1971.

T.'s range of linguistic interests covered a much wider area than is pertinent to Ethiopia, Eritrea and the Horn of Africa, but of note in this narrower scope are the two volumes he co-authored with Margaret Bryan, his colleague at SOAS, on the non-Bantu languages of north-east Africa (1956, 1966), reflecting an interest that T. had in language classification. Though now superseded thanks to the vastly better quality and quantity of language data, both works still remain a landmark in the history of the linguistics of the region. Also a pioneering study is his brief article (1967) in which he identified the Cushitic "block-pattern" of person markers in verbal inflection. His scholarly interests also extended to questions of the orthography of African languages, especially Bantu languages, as well as to the folklore and anthropology of many of the peoples whose languages he had worked on, most notably the Luo of Kenya. Amongst T.'s grammatical descriptions we may note works on Maasai and Luo.

David L. Appleyard

Tukrīr

In Amharic and Tǝgrǝñña the term T. (and variants; Tgn. Tuk̠rir, Tǝk̠ʷǝrir, pl. Täk̠ʷarir) is mainly used to designate persons of West- or Central-African origin living scattered in Ethiopian and Eritrean territories. T. (from Takrūr) was the name of a medieval capital of a West African kingdom by the same name known by Arab geographers. The kingdom was located on the lower Senegal River and it flourished for a short period in the 11th cent. A.D. From the 14th cent. A.D. Arab writers in the Mediterranean region usually applied the name T. in reference to the entire area of Muslim West Africa and its inhabitants.

The *nisba* Takrūrī (pl. Takārīr and Takārna) was and is still used in the Middle East and the Nile Valley to refer to Muslim West Africans (individuals and communities) in general. From the 15th cent. biographical works include persons who lived in the Middle East with the *nisba* al-Takrūrī attached to their name. West African pilgrims to ↗Mecca have also been identified as Takārīr, as well as those individuals and communities who have settled in the ↗Sudan, Eritrea and Ethiopia on their way to Mecca or upon their return from ↗pilgrimage.

Many T. of the Horn of Africa have their origins in the wider Nigerian region (sultanates of Bornu, Kanem, and other regions dominated by Fulani [i.e. ↗Fellata], and/or by ↗Hausa). Some, however, have no connections to these regions, but are also called T. by their neighbours, due to a local re-interpretation of the term as meaning people with "black skin and curly hair". Except these, all T. are Muslims. T. communities mainly exist all along the western border areas of the historical "Abyssinian" highlands, from the western Eritrean lowlands down to ↗Beni Šangul south of Wälläga, with some T. in other Ethiopian and Eritrean areas from ↗Massawa via ↗Tǝgray to ↗Käfa.

An important origin of T. migrations from western Africa into the Sudan and finally further to Ethiopia and Eritrea were the Fulani *ǧihāds* of the early 19th cent., the first one being the 1804 *ǧihād* of the Fulani *šehu* Usuman dan Fodio against the Hausa state of Gobir. He declared his *ǧihād* to be a preparation for the coming of the Mahdī; finally the Fulani could establish an Empire in 1831, owing allegiance T. *amīr* of Sokoto. These *ǧihāds* influenced the Sudanese ↗Mahdists, and in turn the Mahdī later actively sought support in the Niger-Chad region; his successor *ḫalīfa* Abdullahi was himself of T. origin (Biobaki – al-Hajj 1966: 426f., 432). Following prophecies, which foresaw the appearance of the Mahdī in the east after drought and civil war, people migrated from Hausa to the Nile valley already in 1837–42, followed by further migrations from the Sokoto Empire to the Sudan (ibid. 428f., 434). After colonization the migration of T. increased considerably, around 25,000 Fulani settling in the Blue Nile area after 1902 (ibid. 435f.).

In addition, colonies of T. pilgrims to ↗Mecca exist along the classic pilgrim routes from western Africa to Mecca, throughout the Sudan, from Darfur to al-ᶜUbayyid, in ↗Kassala and ↗Sinnār, and from there along two routes via Shendi to ↗Sawākin, with annually ca. 500 pilgrims (ibid. 431, as described by Burckhardt in 1814), or via Ethiopia to Massawa, with annually 150-200 pilgrims (ibid.). During their pilgrimage, which usually took years, T. sometimes settled permanently or for a long time along these routes in order to earn their living, especially in the Ǧazīra, ↗Qadārif and Kassala.

In the 19th cent. there was a "T. šayḫ-dom" at the western borders of Ethiopia, with ↗Mätämma as its centre, in the Sudanese province of ↗Qallabat; its dominating population consisted of T. settlers from Bornu, Darfur and Wadai, some of whom had remained here after a pilgrimage to Mecca, but many as merchants controlling the trade between the Ethiopian highlands and the inner Sudanese sultanates. This *šayḫ*-dom was at times tributary to Egypt, and to the Christian Ethiopian state. Egypt granted land to them (James 1884), on which they still cultivate dourah. In the early 19th cent. their leader originated from Bornu; later, his followers took refuge further north in the western lowlands below Wälqayt after having been defeated by a competing Furi group from Darfur, who from then on, until the late 19th cent., dominated this *šayḫ*-dom. Still today, a large part of the population of the Sudanese town Qallabat (historically part of Mätämma) are "T." (i.e. mainly Fūr). The latter were counted among the T., as Darfur was once tributary to Bornu and considered part of "*bilad* al-Takrūr" ('country of T.', according to the Fulani *sulṭān* Muḥammad Bello; Saburi Biobaku – Muhammad al-Hajj 1964:427f., 430).

Already in the early 19th cent. much of the lowlands west of Wälqayt (today called Qafta Ḥumära, s. ↗Ḥumära) were described by travellers and is depicted on 19th cent. maps as a "T." area; the T. of this region were locally known for their knowledge of traditional medicine (Parkyns 1853:350). The origin of these T. is largely undocumented. According to informants in Humära today there are Hausa (from Bornu among others), and at least a few Fellata, living in several settlements in the modern plantations around Humära. Many of them migrated there from the Sudan in the course of modern labor migration, but other might descend from Bornu groups settling there possibly before the 19th cent.

After the foundation of the colony of Eritrea, T. were also settling in its western lowlands as plantation workers (e.g., in Kunama areas and near the ↗Gaš River, of north Nigerian origin, EllLusAnt 97), and as petty merchants in Eritrean towns along trade routes into the Sudan such as ↗Kärän and ↗Täsänay, living in their own separate quarters, called Ḥilät Täkʷarir ('Quarter of the Westafricans'), and electing their own chief. Their language is called Tikarna ᶜArabəñña ('Arabic of the T.'), as they mostly use an Arabic dialect due to their Sudanese connections. However, they also use their languages of origin among each other (in Eritrea Hausa and Fulfulde; cp. EllLusAnt 95–105). Other T. settled in Eritrean towns during their pilgrimage to Mecca; some of their descendants live in the port of Massawa.

Another group of "T.", in the lowlands east of the Wälqayt highlands in Mäzäga *wäräda* (not identical with the historical ↗Mäzäga, of which this was only a strip), are the ↗Ṣällim Bet, remnants of an old indigenous Nilo-Saharan-speaking population of ↗Gumuz origin. In older terminology, seemingly before the migration of West- and Central-Africans, these were rather called "↗Šanqəlla". They were first submitted by Muslim ↗Bälaw rulers of Mäzäga, later by Christian Ethiopians. For example, the Chronicle of ↗Iyasu II and Iyoᵓas reports that *aṣe* Iyasu II went to war against the Bälaw and "Šanqəlla", during which male trophies were cut (GuiIyas).

A local tradition recorded in the 1860s north of ↗Dängolo in Təgray, connected even the grave of "a Meccan *šarīf*" (i.e. in ↗Nägaš, the site of the grave of the ↗*naǧāšī*) with T. areas. The tradition claimed that this Meccan (seemingly a reminiscence of the tradition of Nägaš as the asylum for "followers" of Muḥammad) had travelled through all of Africa, including T. areas, such as Timbuktu at the Niger River, the 19th cent. Fulani-Sultanate Sokoto and Darfur, and had died on his way back to Mecca. This tradition establishes a connection between the pilgrimage route to Mecca used by T. and the Muslim pilgrimage site of Nägaš, which can be seen as an indication that T. pilgrimage was then already prominent enough to be known in Təgray (Rohlfs 1882:67f.).

Several "T." settlers of West-African origin, mostly Hausa, but also Fellata, have migrated from the Sudan to western Ethiopia at least starting from the early 20th cent., between Wälläga and Beni Šangul (s. the articles on Hausa and Fellata). The "Fellata" of Beni Šangul, among them certainly also Hausa, have been known locally since decades as merchants and are known for their cattle.

The existence of the holy shrine of ↗Yaᵓa between Begii and ↗Asosa might also have attracted T. settlers. In the first half of the 20th cent. a Northnigerian *ḥăğğī al-faki* Aḥmad ʿUmar from Bornu, has founded this site, which is abundant of water and fruits. After his death in around 1948 he was buried here. In the 1970s the shrine with a small mosque and a garden was attracting tens of thousands of pilgrims on Islamic holidays (Hasselblatt 1973:72). *Šayḫ* Aḥmad ʿUmar had first settled in Gera in ↗Käfa *awrağğa*, where he taught at the local Qurᵓān school, then went to Minka near ↗Dambi Dolloo, travelled to Mecca and finally settled in Yaᵓa, where he possessed much land (cp. Minako Ishihara in PICES 13). Oral tradition suggests that he established an effective irrigation system there, which helped the local peasants to improve their income considerably.

Wolbert Smidt

Tukul ↗Houses

Tulluu

Däggazmač T. (ቱሉ) was the governor of ↗Damot in the late 17th–early 18th cent. He was a son-in-law of *aṣe* ↗Iyasu I and an important politician at the Gondärine court.

Though himself of Oromo descent, T. headed Iyasu's troops during the latter's campaigns against the Oromo. T.'s success as a military commander brought him Iyasu's daughter Wälättä Śəllase in marriage. His influence grew so much that in 1705 he waged a rebellion against his father-in-law. Iyasu suppressed the revolt and with the help of T.'s father the two were reconciled.

In 1706 T. sided with Iyasu's son and successor ↗Täklä Haymanot and was instrumental in Iyasu's deposition. At the beginning, his position was similar to that at Iyasu's court, and Täklä Haymanot sent T. to collect tribute in Wägära and Səmen. However, when the new Emperor refused to proclaim ↗*Qəbat* as state doctrine, T. joined his aunt-in-law, Iyasu's sister ↗Ǝleni, in a dethronement conspiracy to overthrow him. Täklä Haymanot uncovered the plotters and had both T. and his aunt imprisoned. In 1706 Täklä Haymanot exiled T. to Təgray, and had him blinded there by ↗Hab Śəllus. T. was freed in 1708 by ↗Tewoflos. The date and circumstances of his eventual death are not known.

Evgenia Sokolinskaia

Tulluu Guddoo

T.G. (ቱሉ፡ ጉዶ) is the Oromo name for the largest island of Lake ↗Zʷay that is called Däbrä Ç̣on in Zay and Däbrä Ṣəyon ('Mount Zion') in Amharic (for location s. map for Ṭəčo).

Oral traditions from T.G. (Meyer 2001) as well as a document from Aksum (SerHist 226ff.) report that the *tabot* from the Church of Ṣəyon Maryam in Aksum was safeguarded from destruction at Lake Zʷay during the reign of the mysterious Gudit (↗Ǝsato) in the 10th cent. and again during the campaigns of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī in the 16th cent. (cf. SerHist 41, 226). Henze (in PICEA 1, 31) assumes that a monastery was established at T.G. between the 12th and 14th cent. The monks ↗Anorewos and ↗Filəppos, who where exiled to Lake Zʷay in the first half of the 14th cent., are probably its founders (TadTChurch 189). The 16th-cent. *aṣe* Ləbnä Dəngəl is said to have sent manuscripts to Lake Zʷay for safekeeping in a monastery which had already been established (PankBord 141, 207).

Clear evidence about monastic life dates back to *abba* Sinoda at the beginning of the 15th cent., who was given the monastic habit at the T.G. monastery (TadTChurch 189). The Zʷay area served as a place of exile until the 16th cent. (TadTChurch 188f.; VSAe II, 656). Almeida, too, reports the existence of a monastery at Lake Zʷay (BeckHuntAlm 30, 36), which, however, seems to have been in decline at that time. The monastic life at T.G. was revitalized when Mənilək II subjugated the ↗Zay in 1893 (GSMen 202f., Keller 1918: 110f.) and ordered priests from the nearby ↗Zəqʷala mountain to serve at the monastery on T.G. (GSMen; Läykun Bərhanu 1993: 27). Between 1916 and 1919 A.M. *abba* Gäbrä Maryam, the later *abunä* ↗Ṗeṭros, served as teacher at T.G. (Märša Alläḵäññ 2004: 74). He revitalized elementary church education, i.e. teaching writing in Gəᶜəz and Amharic and the memorization of texts (Tesfaye Edetto 1988: 15). During that time the T.G. monastery was officially recognized as monastery of the coenobitic model (Ərgätäqal Ḫaylä Śəllase 1988/89: 8). The monastery served as a center of traditional education until a modern secular primary school was built on T.G. in 1972 (Tuma Nadamo 1982: vii). Although the old monastery and the church of Ṣəyon Maryam were situated on an elevated place at Wäyzäro on the eastern summit, the foundation of a residence for *abunä* ↗Luqas, Archbishop of ↗Arsi near the village of Durmäğa at the south-western bay, entailed the construction of a new church (Henze 1977: 112, Läykun Bərhanu 1993: 27). The new church, which was finished in 1993/94, was built on a small slope near the *Abunä's* residence (Läykun Bərhanu 1993: 28). The foundation of Zʷay town and a nearby theological college probably led to the decline of the monastery.

No information is available as to whether a scriptorium ever existed at T.G. (Henze in PICEA 1, 37). Gäbrä Śəllase (GSMen 97) reports that a prophecy mentioned in a book from the monastery on T.G. was the reason for Mənilək II to chose ↗Ənṭoṭṭo as his camp. Several sources report that the T.G. monastery hosts a number of manuscripts, such as a manuscript on ↗Kaleb's expedition to South Arabia (SerHist 127; Läykun Bərhanu 1993: 26), some fragmentary parchment folios of the Gospels (classified as IES no. 2475) or the *Tulluu Guddoo Book of Saints* (cf. Henze in PICEA 1, 37ff.) which most probably was microfilmed as EMML no. 7602 during an art exhibition in Addis Abäba in the 1980s (cf. Fiaccadori 1993: 150).

Ronny Meyer

Tulluu Gunǧi

T.G. (b. ca. 1800, d. 1839 or early 1840) was the second Oromo king of ↗Geeraa who ruled from 1835 until his death.

T.G.'s father Gunǧi created the nucleus of the state of Geeraa, the last Oromo state to be formed in the ↗Gibe region, during the late 1820s or early 1830s. When Gunǧi died, most likely on a battlefield in the early 1830s, he was succeeded by T.G.

T.G. is remembered in local tradition as a tall, well built man, a talented politician, warrior and administrator (Jimma Interview Programme 1974, fol. 7). His primary ambition was the expansion of the frontiers of the state of Geeraa at the expense of its neighbours. His success in a series of wars against the neighbouring states of ↗Käfa and ↗Gomma brought him broad fame throughout the whole Gibe region (MHasOr 112). However, his campaign against ↗Gumaa, successful at first, eventually led to failure.

T.G.'s half brother, Abbaa Baso, aspired himself to the throne of Geeraa, and the cunny king of Gumaa ↗Ončo Ǧilča offered his support to the rebel. When Abbaa Baso fled to Gumaa, T.G.

decided to attack Ončo, but was defeated by a much more numerous army of his adversary. T.G. was captured and put in chains. The leaders of the states of Limmu-Ǝnnarya, Ǧimma and Gomma sent their ambassadors begging Ončo to spare the life of T.G.,but Ončo had T.G. killed in a horrifying manner (CerFolk 161), subsequently beating and imprisoning the ambassadors themselves (MHasOr 113; CerFolk 161).

Mohammed Hassen Ali

Turaev, Boris Aleksandrovič

T. (b. 5 August 1868, Novogrudok [today's Respublika Belorus], d. 23 August 1920, St. Petersburg) was a renowned Russian Orientalist born to provincial gentry. T. entered the gymnasium in Vilno (Vilnius) and then the historico-philological faculty of St. Petersburg University where he studied Egyptology under the tutorship of Oscar von Lemm. After the completion of the course in 1891, he was retained at the University as a post-graduate student, and was sent for studies abroad for one year. He attended the lectures of a number of prominent scholars (Adolf Erman and Eugène Maspero on Egyptology, Eberhard Schrader on Assyriology and ↗Gəᶜəz) and worked in the museums of Berlin, Paris, London, and also in Italy, collecting the material for his magister thesis.

After his return in 1896 T. lectured on the history of the Ancient Orient and Egyptology at St. Petersburg University as assistant professor. In 1898 he was given the degree of Magister of General History for his thesis: *God Toth*: *an Attempt of a Study in the Domain of the History of Ancient Egyptian Culture* [St. Petersburg ^{2}2002].

T. published his first work in the field of ↗Ethiopian studies in 1897 (*Horologium of the Ethiopian Church*; cp. *Säᶜatat,* EAE vol. 5), and since then, apart from his Egyptological studies (his major field), he produced writings devoted to Ethiopian topics every year. Following the methods and general approach of Vasilij Ključevskij, *Old Russian Vitae of Saints as Historical Source* (1871), T. prepared a study of some Ethiopian hagiographic works (mostly Vitae [↗*Gädl*] of the major Ethiopian ↗saints) as his doctorate thesis (TurIz). It represented substantial progress in the field of Ethiopian studies, since, before T., the endeavours of European students of Ethiopian ↗hagiography had mostly been limited to the edition and translation of texts. Instead, T. undertook the investigation of Ethiopian hagiography as a whole, a work which was less recognized in the western academic tradition since it knows T. first and foremost as a publisher of hagiographic texts (his editions of Vitae of ↗Filəppos of Däbrä Libanos, ↗Samuʾel of Waldebba, ↗Aron, ↗Ewosṭatewos etc.; published in the series *Monumenta Aethiopiae hagiologica*, initiated by T., and in the ↗Corpus Scriptorum Christianorum Orientalium). In 1904 he launched a second series of publications of Gəᶜəz texts with Russian translations (*Pamjatniki efiopskoj pismennosti*, 'Monuments of Ethiopian literature', eleven fascicles, 1904–12). Feeling obliged to study the materials collected in ↗Russia, he prepared a description of the Ethiopian manuscripts in St. Petersburg (cp. Turaev 1906) and contributed to quite a number of issues of Gəᶜəz literature and Ethiopian history (cp. his numerous studies on hagiography; ↗*Täʾammərä śəllase,* ↗monastic literature [1906a]; liturgy [1891, 1901]; the problem of ↗Zärʾa Yaᶜəqob and his *Ḥatäta*; the ↗*Bəᶜəlä nägäśt*; Ethiopian ↗magic literature [1899], numismatics etc.; s. also important notes of Bolotov for BassÉt, prepared by T. for publication [1910]).

T. was the first professor after ↗Dorn to resume the university course of Gəᶜəz in ↗Russia, considering, however, the teaching of Ethiopian history and literature as his main task.

T. also became well-known for saving the ca. 6,000-item Egyptian collection of Vladimir Goleniščev; due to the efforts of T., the collection was bought by the government and remained in Russia. In April 1911 T. transported the collection to the Moscow Museum of Fine Arts. The work of accommodating and cataloguing the collection (T. was appointed its keeper) led to T. abandoning the University in 1912; he assumed the duties of the head of the Egyptian department of the Museum which he performed until his death. He did not stop his Ethiopian studies and prepared two volumes of his *History of the Ancient Orient*, for which he was awarded the gold medal of the Imperial Russian Archaeological Society. In 1913 he was elected a corresponding member of the Imperial Academy of Sciences, and in 1918 a member of the Russian Academy of Sciences.

The advent of the Communist government in 1917 was a great blow to T., who, being a devoted Orthodox Christian, had to see how the atheistic regime ruined the Church in a rough and resolute way. When the University church was closed, of which T. was a warden, he made a church in house no. 8 in the Birževaja Line near the University.

After the 1917 Revolution T. continued his scholarly activities; for the last two years of his life he actively worked at the Petrograd [the then St. Petersburg] Theological Institute. The hardships of life in post-revolutionary Russia took their toll, and, being exhausted and distressed, T. suffered both physically and psychologically. Shortly before his death, T. was ordained a deacon. He was buried at the Nikolskoe cemetery (St. Petersburg).

T.'s bibliography comprised ca. 160 main titles; quite a number of his works appeared posthumously, including his translations of Ethiopian royal chronicles (of the emperors ᶜAmdä Səyon I, Zärᵓa Yaᶜəqob, Ləbnä Dəngəl, Gälawdewos, Minas) edited by Kračkovskij in 1936; excerpts from a few Ethiopic texts in manuscript collections of St. Petersburg, in *Rassegna di studi etiopici* (1948); and, finally, an essay on Ethiopian apocryphal literature in 1999.

Sevir Chernetsov

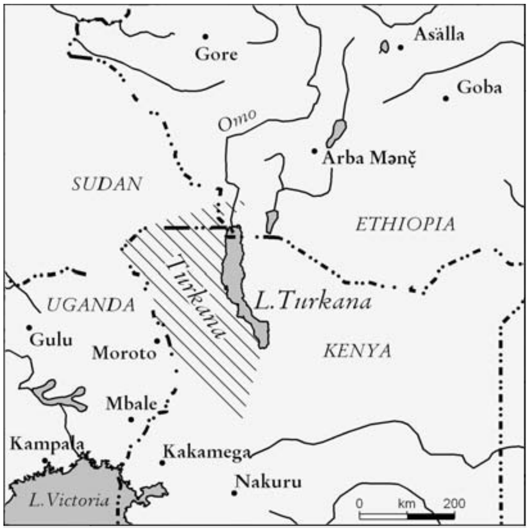
Turkana

Turkana language

T. is an Eastern ↗Nilotic (↗Nilo-Saharan) language spoken by ca. 365,000 people many of whom live west and south of Lake ↗Turkana, north-western Kenya. Around 25,000 T. live north of Lake Turkana in south-western Ethiopia (s. Gordon 2005: 119, 137). The T. people call their language *ŋá-tʊ̀rk(w)ánà´* (fem. pl.), and refer to themselves as *ŋí-tʊ̀rk(w)ánà´* (masc. pl.), *(ñ)ɛ́-tʊ́rk(w)àná-ít* (masc. sg.). They are referred to by neighbouring groups as Bume, a name also used for the neighbouring ↗Ñaŋatom people, whose language is mutually intelligible with T. Ñaŋatom and T. are part of a dialect continuum usually referred to as Teso-T., which also includes Dodoth [*Dodoṯ*], Ğie, Karimoğoŋ, Teso and Toposa. Northern T. is virtually identical to the neighbouring Toposa.

Like the other members of the Teso-T. cluster, T. has two register tones (high and low) as well as downdrift plus downstep. The consonant inventory consists of the labials *p*, *b*, *m*, *w*, the alveolars *t*, *d*, *s*, *l*, *r*, *n*, the palatals *č*, *ǧ*, *ñ*, *y*, and the velars *k*, *g*, *ŋ*.

T. has nine vowels, which can be divided into two sets based on their behaviour in terms of vowel harmony: vowels *i*, *e*, *o*, and *u*, produced with an advanced (+ATR) tongue root, and *ɪ*, *ɛ*, *a*, *ɔ*, and *ʊ*, produced with an unadvanced (-ATR) tongue root (s. Noske 2000). Within a word, a contrast occurs between short and long (i.e. double) vowels: *ǧɪk* 'completely' vs. *ǧɪɪk* 'always'. In word-final open syllables, short vowels are devoiced before pause



when carrying a simplex as against a complex (i.e. high plus floating low or low plus floating high) tone. These vowels (written here between parentheses) are realized as extra-short voiced vowels when followed by another word, a feature also found in other Teso-Turkana languages.

T., like other Eastern Nilotic languages, takes gender-sensitive prefixes as an obligatory inflectional feature of most nouns (s. the ethnonym and language name above); nominal modifiers such as demonstratives, numerals or adjectives also take gender-sensitive agreement markers. The singular gender prefixes have an initial palatal nasal in Northern T., but are vowel-initial in Southern T.: e.g., masc. sg. *ñɛ́-/ɛ́-*. Nouns expressing geographical regions often do not carry gender markers, e.g. *tʊ̀rk(w)án* 'the land of T.'. The majority of nouns is inherently feminine, which is probably also the reason why feminine gender marking is used as a default, e.g., in the numerals 'one', 'two', 'three' below.

The number-marking system is based on a tripartite division for nouns, as is characteristic of many other Nilotic languages. Thus, for nouns which tend to be used in the pl. more than in the sg., the pl. constitutes the morphologically simpler form, as in 'tooth': *(ñ)ɛ́-kɛ́lá-ɪ́*ˋ (masc. sg.), *ŋɪ*ˊ*-kɛ̀l(á)* (masc. pl.). Alternatively, as in the word for 'tongue', the sg. is more basic and the corresponding pl. is inflected with a number suffix: *(ñ)á-ŋáǧɛ́p* (fem. sg.), *ŋá-ŋàǧɛ̀p-á* (masc. pl.). The third inflectional pattern involves number suffixation for both the sg. and the pl., as in 'old woman': *(ñ)á-kɪ*ˊ*má-t* (fem. sg.), *ŋá-kɪ*ˊ*má-k* (fem. pl.).

Gender distinctions are not marked on pronominal forms, either when occurring as independent pronouns or as pronominal subject prefixes on the verb.

T. has a rich and complex verb structure, involving inflectional markers for pronominal subject and object (in 1^{st}/2^{nd} pers. sg./pl.), number (sg. vs. pl.), tense, aspect, mood, and verbal extensions expressing semantic relations such as causative, dative, frequentative, habitual, instrumental, itive (movement away from the deictic centre), ventive (movement towards the deictic centre). The marking of these various notions often involves complex, phonologically and morphologically conditioned, allomorphy. Thus, the 2^{nd} pers. sg. is expressed by *ɪ-* or *i-* (following ATR-harmony rules) in the indicative mood and a prefix *tɔ-* or *to-* (due to ATR harmony) in the narrative mood.

The neutral word order is Verb-Subject-Object: *ɛ̀-sàk-ɪ́*ˋ$_1$ *ŋésì*ˊ$_2$ *ŋá-kɪ́pɪ̀*ˊ$_3$ '(s)he$_2$ wants$_1$ water$_3$'. Postverbal subject nouns and independent pronouns are inflected for Nominative case by way of tonal inflections. Objects as well as preverbal subjects or nouns and pronouns in isolation take Absolutive case. Genitive and Instrumental case are also expressed by way of tonal inflections. Locative case is marked through a combination of case inflection and prepositions, as well as a change in the shape of nominal gender prefixes. E.g.: Absolutive *(ñ)ɛ́-kɛ́lá-ɪ̀*ˊ 'tooth' vs. Locative *lɔ́-kɛ́là-ɪ̀*ˊ 'in, at, on the tooth'.

The T. Latin orthography as used in the Bible translation and a few school primers was developed in the 1970s and is based on the system used for Swahili and other Kenyan languages.

The ten-word list is as follows: *(ñ)á-péy* 'one', *ŋá-áréy* 'two', *ŋá-úní*ˋ 'three', *(ñ)á-kɪ̀m(ɪ́)* 'fire', *ŋá-kɪ́pɪ̀*ˊ 'water', *(ñ)á-kɔ̀lɔ́ŋ* 'sun', *(ñ)ɛ́-láp* 'moon', *ŋá-ákɔ́t* 'blood', *(ñ)á-ŋáǧɛ́p* 'tongue', *(ñ)ɛ́-kɛ́lá-ɪ́*ˋ 'tooth'.

Turkana ethnography

The T. (*ŋitʊ̀rkánà*), like the ↗Ñaŋatom, belong to the Eastern Nilotes and to the Karimoǧoŋ cluster (which includes groups from southern Sudan and Ethiopia, northern Kenya and Uganda). Approximately 250,000 T. inhabit the arid and semi-arid T. district (77,000 km^2) in the north-western part of ↗Kenya; approximately 25,000 live in south-western Ethiopia, and 100,000 in the Sudan, Uganda and western Kenya. The capital of the T. district is Lodwar. According to oral tradition, the T. dispersed from north-eastern Uganda about three centuries ago. They migrated east and forced the Samburu and Pokot to move southwards, and most probably pushed the Marille (↗Ɖáasanač) to the east, though some were integrated into T. society by intermarriage. The T. District was part of the British East Africa Protectorate.

The T. are mainly pastoral nomads practising vertical and horizontal transhumance, keeping cattle, camels, sheep, goats and, for transport, donkeys. They belong to the East African "cattle complex" societies and the "bovine idiom" is still relevant. Traditionally, they live as extended families in temporary homesteads. Descent is patrilineal and the post-nuptial residence viri-patrilocal. On marriage, bridewealth is transferred in livestock.

The T. are a segmentary society comprising 28 exogamous clans; the age-set system still plays a social-political role. In addition to this, everybody belongs to an alternating generation-set of his father/grandfather.

The material culture is typical for nomads and remains traditional to this day. Women wear back-skirts and aprons made of leather, a linen cloak as well as an abundance of necklaces, bracelets and ear-rings; married women also wear a metal neck-ring. Girls' and women's hair is shaved to a centre strip and greased with a mixture of butter and red clay. Men wear a linen cloak and leather sandals; their hair is decorated with white and red clay and, during ceremonies, an ostrich feather is worn; a wooden head-rest is therefore used during rest or sleep. The men's ornaments comprise bracelets and the unique wrist-/circular knives as well as bead necklaces; people who were previously bewitched additionaly wear protective amulets. Both sexes wear wooden, aluminium or ivory lip plugs, metal ear-rings, and, on special occasions, nose and ear ornaments made from aluminium.

The T. recognize a High God (*Akűğ*) who is a demiurge but today is neither present in their lives nor is he worshipped very often. The mediators (*ŋímurok*) between God and the people also often function as diviners, dreamers, seers, medicine men and rainmakers (↗Rainmaking). A T. man (*èkile*) has to be initiated (without circumcision), be the head of a family, own a lot of livestock and be economically independent. Outsiders call the T. a fierce people.

The northern T. maintain particularly close contact to the Ɖáasanač in Ethiopia for three reasons: their social-cultural normative values are very similar, they raid them for their cattle and intermarry with them in times of peace. Ethiopia's interest in the T. region is reflected in the fact that an Ethiopian governor was resident in the north until 1921. During the resistance against "Pax Britannica", the T. exchanged ivory with the *Abaš* (Ethiopians) for Russian and Italian rifles. Mənilək II demanded an Ethiopian-Kenyan frontier, which today can be found ca. 200 km south of the official border but was not bilaterally agreed upon until June 1970. During the last five decades, the T. District has repeatedly been afflicted by severe droughts in which thousands of nomads lost their cattle and were therefore trained in Non-Governmental and Governmental Organization programmes as fishermen and field irrigation cultivators. Research projects in T. District today particularly concentrate on ecological and economic changes.

Turkana

Lake T. (formerly Lake Rudolph) is the biggest lake in ↗Kenya (for location s. map for Turkana language). With 315 km length (north-south), 56 km width and 37 m depth (maximum) the lake (375 m A.S.L.) covers 9,000 km^2 and fills one of the grabens of the East-African Rift (Guida 547). High temperatures (an average of above 25° C) and the main rainfall (300 mm) first in April and then in July lead to the spread of malaria and trypanosomiasis along its shores. Salty and abounding in fish, this lake has numerous thermal and mineral springs and is the hydrographic endorheic basin of the ↗Omo River (77,205 km^2, Atlas).

The north-eastern and eastern shores of Lake T. are dominated by Mounts Sogo and Hadu, where ↗Boorana, Rendille and Arbore drive their cattle, and to the West, by Mounts Lodapalinga and the Loriyu plateau, where ↗Turkana pastoralists and fishermen are living. These peoples have suffered from droughts and clashes over grazing land. The Kenyan government has started to protect the animals and plants of the lake region (Sibloi and the three volcanic island National Parks on the eastern shore) in order to attract tourists who are accommodated in a couple of lodges.

To the south, the Teleki volcano and Höhnel island recall the names of the first European discoverers, Teleki and his assistant, Höhnel. Count Samuel Teleki von Szek was the first European who reached the southern shore of Lake T. in 1887. He named the lake after Crown Prince Rudolph of the Austro-Hungarian Empire. Arthur Donaldson-Smith in 1895 and Vittorio ↗Bottego in 1896 explored its banks. *Däǧǧazmač* Count ↗Leontiev who had been sent by the tsar to *aṣe* Mənilək II left Ada in June 1899 and reached the lake on 20 August 1899. To the north he established Fort Sénégal – Léontieff had a Senegalese guard – and, to the South, Fort Mənilək. He was appointed governor of the Equatorial Provinces of Ethiopia and left in 1900.

The border between Ethiopia and British East Africa was moved northwards following agreements made in 1903–07. Only the northern shore (30 km) and the Omo delta belong to Ethiopia. Independent Kenya has replaced "Rudolph" by the name T. which is the name of the main ethnic group living on the lakeside.

Turkey, relations with

The origins of diplomatic relations between T. and Ethiopia lie in the establishment of diplomatic relations between the ↗Ottoman Empire and Ethiopia at the end of the reign of *aṣe* ↗Mənilək II, originally prepared by the latter through his ↗trade contacts with the Ottomans.

Originally, the German legation cared for all Ottoman subjects, for which purpose consul Lorenz ↗Jensen built up a German consulate in Harär in 1910 (↗Germany, relations with). Soon, however, the Ottoman Empire opened its own representation in Harär in 1910, appointing Austrian Francis Kaden as honorary consul (b. 1866, Vienna, d. 1929, Harär; representative of Alois Schweiger & Co., Import-Export, Vienna; in 1912–17, he served as the German honorary consul in Harär). Kaden was succeeded in 1912 by *hacı* (*ḥaǧǧī*) Necib from Istanbul as consul in Harär, Michel Ackad being the secretary of the consulate. After the demise of Necib in 1913,

↗Maẓhar *bey* was appointed consul in Harär. He moved the consulate to Addis Abäba in 1914. After the removal of *ləǧ* ↗Iyasu from power he returned to Harär, where he served until late 1919.

After the proclamation of the Republic of T., T. opened a legation in Addis Abäba in 1926 and Ahmet Münir was appointed chargé d'affaires; it was the 6th diplomatic mission opened in Addis Abäba. He served until 1931. In addition, in 1928 Emil Loeb (b. 3 January 1879, d. 5 April 1948 Addis Abäba), a German leather and hides merchant, was appointed honorary consul in Addis Abäba. In 1931 the legation was promoted to embassy (located near today's Ghion Hotel behind Mäsqäl Square). Nizamettin Ayaslı served as ambassador until he closed the embassy and left Ethiopia on 14 August 1936. On 29 March 1933 Hans Bernhard Walter Bohnenberger (b. 21 January 1901, Munich, d. 9 December 1988, Munich), a German engineer and businessman, who lived in Addis Abäba from 1927 to 1935, was appointed Turkish honorary consul in Ethiopia's capital; he remained in office until August 1935. In 1936, 20 Turkish citizens were living in Addis Abäba. In 1957, the Turkish embassy was reopened, now located in the Bole area, by ambassador Fikret Özdoğancı.

Aṣe Ḫaylä Śəllase I visited T. twice, and the Turkish President Sunay paid a state visit to Ethiopia in 1963. In 2006, Turkish Airlines opened Istanbul–Addis Abäba flights via Khartoum three times a week and in 2008 started daily direct flights.

By the first six months of 2010, Turkish investments in Ethiopia amount to more than 400 million US-$, mainly in the fields of textiles, agriculture, cables, furniture and construction materials.

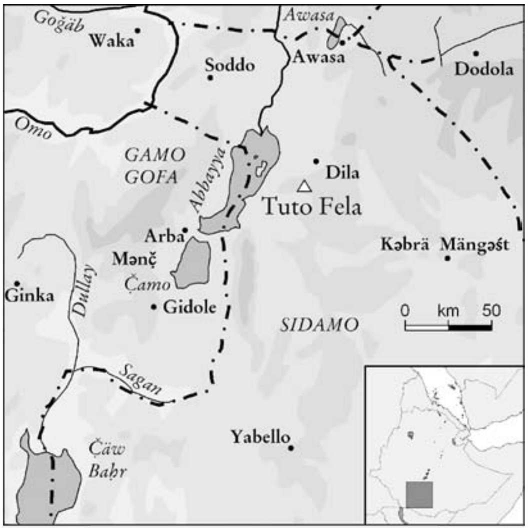
Tuto Fela

T.F. is a megalithic site (↗Megalithic cultures) in Sidaama and Gideʾo zone, east of Lake Abbaya where thousands of ↗stelae have been erected. While phallic stelae are gathered in several groups throughout the region, the anthropomorphic ones occur only in a part of the Gideʾo zone.



To the south of Wänago, the T.F. site comprises a stone barrow, 50 m long and 20 m wide, covered with anthropomorphic stelae sometimes made from a reused phallic stele. These rhyolitic stelae have a carved face with nose and eyes and are dated from the 12th–13th cents. The site was first dug by a German team directed by ↗Jensen in the 1930s (Jensen 1936) and in the 1990s by a French team under Joussaume (Joussaume 2007).

The tumulus is a cemetery of individual or double tombs made with small adjoining tumuli. Most of these tombs are marked with anthropomorphic stelae that may have been completely hidden by newer tombs. Over 300 stelae, whole or in fragments, have been identifed and another 17 were taken in 1935 to Frankfurt am Main and placed there at the Museum of Ethnography, today Museum der Weltkulturen.

Underneath the surface tumulus another cemetery was found by the French team, made of shaft tombs, dug in the ground, at the bottom of which the dead were laid on one side. The funeral shaft was closed at the surface of the ground by a stone slab, a wooden plank, or by small stones which sometimes support a phallic stele in vertical position. That kind of tomb can be dated to about the 11th cent. by carbon 14. Phallic stelae might have served to mark the tomb of some important figures.

New excavations have recently been undertaken by the same French team at the phallic stele site of Čelba-Tutitti not far from the T.F. site. It was probably composed of more than a thousand ste-

A stele from Tuto Fela; photo 1995, from Joussaume 2007: 271

lae, some up to 6 m high. Nowadays, most of the stelae lie broken in pieces on the ground. These stelae were not associated with tombs and may have belonged to a sanctuary associated with a fertility cult. They might also date to an earlier period than T.F. and belong to a culture that utilized ceramics, polished axes, and an obsidian microlithic industry. The study of the Čelba-Tutitti site has not been concluded yet.

Roger Joussaume

Tutschek, Karl

T. (b. 13 January 1815, Bayreuth; d. 6 September 1843, Bayreuth) was a jurist and autodidact orientalist, who wrote the first ↗Oromiffaa dictionary and grammar and, thus, was a pioneer of ↗Oromo studies in Europe.

In 1838, Duke Maximilian of Bavaria purchased four slaves in the Sudan and brought them to Munich. T., then teacher to Prince Louis of Bavaria, started to teach the young Africans and to document their languages. One of them, Akafeḍee Dalle from "Botchi in Hambo" (Ambo?), Liiban province (d. 17 May 1841), turned out to be a Booran Oromo and became his most important informant; the other three were Sudanese: a Fori from Darfur, a Tumale, and a 12-years old Dinka.

T. managed to learn to speak Oromiffaa from Akafeḍee (Tutschek 1844: xii). Oromiffaa was at this time almost unknown to scholars. T. then established contacts with other Oromo, who had come to Europe as freed slaves (Fleischer 1845: 145). Among them was Oču Aga from "Urgeza in Sibu", brought to him from Vienna, and who, after leaving, carried on a lively correspondence with Akafeḍee in Oromiffaa (excerpts see PankSoc 122–25). T. also documented Oromo songs recited by ↗Maḥbūba shortly before her death (1840). On the invitation of Duke Paul Wilhelm von Württemberg, T. continued his research with the freed Oromo slave Amaan Gonda from "Hibi in Goma" (baptized Karl ↗Habasch), well-versed in his culture, in Mergentheim, southern Germany, in 1841.

T. died during preparations for an expedition to Africa funded by Crown Prince Maximilian of Bavaria. His brother Lorenz, a medical doctor, edited his dictionary and grammar posthumously (1844, 1845), with the support of the African Civilisation Society in London. The grammar contains Oromo texts, esp. prayers (for other Oromo texts collected by T. s. Praetorius 1889; 1893: 303–06). Only a few years before, ↗Krapf had started publishing on Oromiffaa as well; thereafter T.'s works became an important basis for Krapf's further publications. Lorenz T.'s plan to finish his brother's historical, geographical and ethnographical treatise on the Oromo was never realized.

Other texts in African languages from T.'s papers were not published until much later (e.g., by Meinhof 1921/22). Parts of his collections, kept in the Bayerische Staatsbibliothek in Munich, still remain unpublished. T.'s transliteration of Oromiffaa influenced the modern Oromo spelling in Latin script in the 1970s (Zitelmann 1991: 270).

Wolbert Smidt

Tuulama

The T. are one of the largest branches of the ↗Oromo. According to T. traditions they have descended from “Boorana”, one of the legendary ancestors of the Oromo. Before the great Oromo population movement (ca. 1520–1620; s. ↗Oromo history, ↗Population history: migrations), they were organized into two big groups known as Bareentuu (↗Bareytuma) and ↗Boorana (s. Asafa Jalata 1993: 16).

The T. inhabit much of the area between the Abbay and the middle course of the Awaš, in the north-east as far as Wällo. There are several large sub-groups within the T.: the Abootee who live in the Salaalee (↗Sälale) area bordering on ↗Morät, the Abbičuu, a large group inhabiting the area between the River Bareessaa and Mount Ǝntoṭṭo including ↗Finfinnee, and the Aabbo who live around Mount ↗Zəqʷala (BTafA 972, 977). The Liiban T. live to the south and south-east of Zəqʷala (note that there are also Liiban in the Bareentuu branch). Subgroups within the Liiban T. include the Kutay, the Ammayyaa and the Walisoo (↗Wäliso) who occupy separate areas to the north, west and south-east of the main Liiban group (BTafA 938). Akkačuu, Timmuugaa, Lummee, Gullallee, Meettaa, Daaččii, Oborraa are also sub-groups of the T. The Oborraa live to the west of Abbičuu and to the south of Salaalee (BTafA 80; Triulzi – Tesemma Ta’a 2003/04: 298).

The Bačoo T. group is large and inhabits the area on both sides of the Awaš to the south of the Meettaa. The Gombbičuu T. live to the west of ↗Bulga, other sections of the group also live on the plateau north of Addis Abäba. The Ǧirruu group inhabits the area to the north-west of ↗Tägulät and south of Märḥabete. The Ǧiddaa T. live to the south of the Abbičuu. The Ǧillee T. live in the area to the north of Lake Zʷay (BTafA 920ff.). The Waayyuu group of the T. lives to the south-east of Däbrä Libanos and to the west of ↗Wägda.

The ↗Mäč̣č̣a and the T. shared a common ↗*gadaa* system with a common centre (↗*Č̣affee*) at Odaa Nabee (also Odaa Nabi; in today’s Aqaqi *wäräda*) until their territorial separation during the second half of the 16th cent. The Mäč̣č̣a moved further west and founded their own centre at Odaa Bisil, while Odaa Nabee remained the main seat of the T. Although the Mäč̣č̣a founded their own *gadaa* centre, they maintained good relations with the T. Throughout the first half of the 17th cent., the Mäč̣č̣a and T. migrated into territories to the north of the Abbay where they eventually settled (for details s. BeckHuntAlm, passim; BassÉt).

Odaa Nabee served as a unifying institution for the T. groups who all sent representatives to the *gadaa* assembly there, even when its influence was considerably reduced after the 18th cent. Before the Šäwan conquest and Mənilək’s prohibition of *gadaa* rule in 1885, up to 100,000 people had gathered from time to time for some *gadaa* ceremonies at Odaa Nabee (Lemmu Baissa 2004: 110; s. also BTafA 185).

Like other Oromo, however, the T. were organized in decentralized local polities. Each of the major T. groups had its own *gadaa* government, a separate *č̣affee* and elected officials. The Bačo, e.g., had their *č̣affee* at Ballo, while the Soddo met at Birbirsa ↗Ṭəya, the Ǧiddaa assembled at Foqa Awaš, and the *č̣affee* of the Galaan was near Addis Abäba (Lemmu Baissa 2004: 110).

The *č̣affees* of the T. functioned at both local and higher levels. For instance, the Foqa Awaš took responsibility for maintaining order, peace, and rendering justice among the Ǧiddaa T. At a higher level the regional or the inter-group *č̣affee* of the entire T. was constituted by the representatives of the respective local *č̣affees*. In theory, the assembly at Odaa Nabee had supreme authority and could reverse decisions passed at local level, but in practice the local *č̣affees* seem to have been virtually independent (Lemmu Baissa 2004: 111).

However, as a result of long interaction with the Amharic-speaking groups, they adopted Amhara culture and Ethiopian Orthodox Christianity. Politically, they were strongly influenced by ↗Šäwa, and there were a number of T. soldiers in the Šäwan army. The T. are one of the most "amharized Oromo" groups (Blackhurst 1980: 55; s. also Levine 2000: 145; Lemmu Baissa 2004: 110). In spite of the strong Amhara influence, they were able to maintain their language, the *gadaa* system, cultural traits as well as, partly, traditional Oromo religion. The T. are one of the most active participants of the *irrečaa* thanksgiving festival at Bišoftuu (↗Däbrä Zäyt).

The incorporation of the T. into the Šäwan kingdom was characterized by resistance and defeat. The T. were made tributary by *nəguś* ↗Sahlä Śəllase. After his death, however, they rebelled until they were subdued by *nəguś* ↗Ḫaylä Mäläkot. Again, after his death in 1855 and the imprisonment of his son Mənilək, the T. started an uprising against *aṣe* ↗Tewodros I until they were defeated by the Šäwan rulers (Kofi Darkwah 1969: 110). Internecine warfare and divisions within the T. coupled with the importation of modern weapons by Šäwan rulers paved the way for the conquest of T. by Šäwa. Taking advantage of a long conflict between the Galaan and the Abbičču, *nəguś* Śahlä Śəllase allied himself with the Abbičču, and with their support, the Galaan, Ǧidda, Wabari, Ilamu, Aga, Ǧirru, Wayyu and Salaale were subjugated (Abbas Haji 1995). The internal disruption of the T. strengthened the Šäwan kingdom which led a long series of raids and expeditions against the various T. groups. It is related that in one specific raid Šäwan forces killed ca. 4,500 people, stole about 43,000 animals and took more than 1,000 Oromo slaves. However, the resistance of the T. against the establishment of new Šäwan settlements was fierce (Asafa Jalata 1993: 48). Moreover, *aṣe* Mənilək II continued the devastating raids against the T. particularly after having brought the Wällo region under control. Thus, by the 19th cent. the T. had lost their independence and become subjects of the Šäwan kingdom.

Ṭwampa

Ṭ. (*Ṭwa-m-pa*, lit. 'mouth of home') is a Nilo-Saharan language of the ↗Koman family, closest to ↗Komo, with which it shares about 77 % basic lexicon (Bender 1983). Until recently, Ṭ. was a language of eastern Sudan at the latitude of ca. 10° N near the Ethiopian border, with the main centre being Šali town (Arab.: Šālī al-Fīl). In the 1980s, the majority of Ṭ. speakers relocated to an area near ↗Bonga in the ↗Gambela district in western Ethiopia (for location s. map for Uduk). The people number about 20,000 total and are often referred to as ↗Uduk, a term of unknown origin, disliked by the people. Thelwall (1983: 323) reported two northern dialects Bellila and Šali, which were very close, and a more divergent southern one, Belatoma.

There is no known indigenous written literature, but *Ethnologue* reports the usual partial Bible translations.

Ṭ. is notable for its multiplicity of phonemic consonants (Bender 1983: 262): labials: *p*^{h}, *p*, *b*, *p'*, *ɓ*, *m*, *w*; dentals: *t̪*^{h}, *t̪*, *d̪*, *t̪'*, *ɗ̪*; alveolars: *t*^{h}, *t*, *d*, *ṭ*, *s*, *n*, *l*, *r*; palatals: *č*^{h}, *č*, *ǧ*, *č̣*, *š*, *ñ*, *y*; velars: *k*^{h}, *k*, *g*, *q*, *ŋ*; post-velar: *h*; glottal: ᵓ. Vowels are: *i*, *u*, *e*, *o*, *a*. There is a diphtong *ai*. Stevenson (1966) reports several centralized vowels, but these are the result of under-analysis.

Implosive *ʄ* and *ɠ* are problematical. Sonorants *r* and *l* occur only after *a*. *h* is rare and non-final, whereas *w* is rare and initial only. ᵓ, *p*, *h*, *s*, *n*, *ŋ*, *ñ*, are very rare initially. Voiceless stops and implosives tend to merge. Voiceless stops and aspirates tend to merge finally. Labialized *b*^{w}, *t*^{w}, *č*^{w}, *ǧ*^{w}, *š*^{w}, *k*^{w}, *g*^{w}, *ŋ*^{w} occur initially and are not phonemic.

Thelwall reports three tone levels, but gives only one example. Two are recorded sporadically herein: high (´) and low (unmarked).

Grammar is summarized in Bender 1994. The independent pronouns of Ṭ. are: 1st pers. sg. *ahaʾ*; 2nd pers. sg. *ʾe*; 3rd pers. sg. *aɗi*; 1st pers. pl. inclusive *ana*, 1st pers. pl. exclusive *am*; 2nd pers. pl. *um*; 3rd pers. pl. *uni*. Unlike all other Koman languages, Ṭ. has no gender distinction in 3rd pers. sg. Demonstratives are near ('this/these'): *-yan* (sg.)/*-yansan* (pl.), *gwansan*; far ('that/those'): *ǧan*(*dan*) (sg.)/*gwaɗan* (pl.), *kwaɗan*; distant ('very far'): *-čʰaan*, *ǧattʰaan* (sg.)/*-gwattʰaan* (pl.). Principal interrogatives are 'what?' *ata*, *atinda* ~ *atinda*; 'who?' *aǧa* (sg.)/*iǧa* (pl.); 'where?' *man-a* ~ *man-e*; 'when?' *kakasǧa*; others not recorded. There is a sentential question-marker: preposed *aʾ-*.

Copulas include: exist ('there is') *diɗi*, (ʾ)*e*, *tana*, *tada*, *-ba* ~ *-be*; identity ('equals') *-ta*, *ʾe*, *a-* + person marker; attribution ('is' as in 'water is liquid') *-ta*, adjectival verbs, optional final suffix *-ba*; place ('be in or at') *di* (sg.)/*ko* (pl.); possession ('have') *da-* (+ *gi*). Connectives are 'and' *-a*, *ḓaali*, *daala*, negative *deelua* (?); 'or' *kom*. Negatives include: imperative negative *ḓalkul ki-*, *ñakʰan ṭe*, other verbal negative *di* (sg.)/ *qo* (*ki*) (pl.); sentential negative *š* + *yisa*, *wa* ~ *ya*; there are also negative verbs.

Verbal derivation includes verbal noun (prefixes *mmo-*, *i-*, *a-*); causative (*rak-i*, *kar*); directional 'to/away' (*-yuʾ*, -(*y*)*i*/*-kuʾ*; -(*y*)*u*).

As other Koman languages, Ṭ. has Subject-Verb-Object basic word order.

The standards ten word for Ṭ. are: 'one' *deʾ*; 'two' *sùʾ*, 'three' *kwárá*, 'fire' *óɗ*, 'water' *yiɗeʾ*, *yìʾí*, 'moon' *àppé*, 'sun' *-téndé*, 'blood' *-bás*, 'tongue' *-lèɗ*, 'tooth' *šéʾ*. All are common Koman except for three, which is unique in Ṭ.

M. Lionel Bender

U

Ubamär

The U. (local term: Woba) are a little known subgroup of the ↗Aari-speaking people (↗Omotic) in southern Ethiopia and do not figure in the population statistics. No written sources exist on the group, except a brief chapter by Haberland (VSAe I, 167–87). They are sedentary farmers and live in a medium highland zone (1,600 m to 2,000 m A.S.L.), bordered by the Sido, Argenne, ↗Šangama and Bargädda subgroups of Aari. Formerly U. was also a chiefdom.

The U. area is about 400 km^2 and is very rainy and foggy except in the stretch of lowland along the Usnu River in the west. The U. are largely subsistence cultivators using simple technology, and produce ↗*ənsät*, taro, yam, millet, ↗maize, beans, ↗*ṭef*, cabbage, wheat and cotton, and keep livestock (mostly sheep, some cattle) in the medium altitude zone. Harvest rituals are done for cereal crops, not for root crops.

Like other Aari groups, the U. had a hereditary chief (*bábi*), with a sacred character ascribed to him, and who always had to belong to the Gada clan. He could never leave U. land and had religious–ritual functions for the community, being the mediator between supernatural forces and his people. He was seen as the living embodiment of social and cosmic order and had to be unblemished in physical and mental health. He was assisted by 'priests' (*gódimi*), who carried out the rituals and sacrifices during public events and in their ceremonial places (*kaši*). The priests were active across the country. The political layer below the chief were the *gana* or *zis*: local (village) chiefs. As districts of U. Haberland mentions: Kosamer, Aidamer, Garagir, Lulamer, and Šama (VSAe I, 175).

After the imperial conquest of the South at the end of the 19th cent., Ethiopian Orthodox Christianity entered U. country, with a church built in U. town. In recent years, Evangelical Christian denominations have gained followers in U. as well.

The U. recognize several dozen patrilineal clans (*mata*), like other Aari groups, seen as descent groups within which one cannot marry. Clan members live dispersed across U. country and outside of it. Most of the clan names are found among other Aari subgroups as well. The clan of Damanna are potters and traditionally had low status, but according to Haberland (VSAe I, 177) there were no other autochthonous craftsmen castes such as tanners or blacksmiths among the U.

The picture of religious and socio-cultural life of the U. is sketchy and unclear on the basis of the few existing references, but can be assumed to be strongly similar to that of other Aari groups.

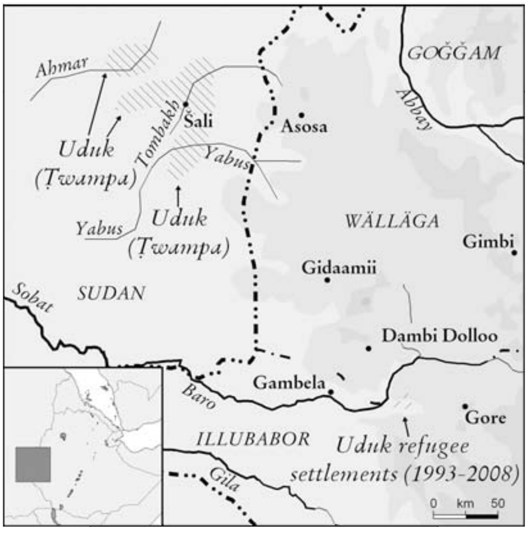
Jon G. Abbink

Uduk

U. is the most commonly used term for the people who call themselves *qwani-m-pa* ('people of the home') and speak the language they call ↗Ṭwampa. The term is widely recognized today in the scholarly literature on the ↗Sudan, in the archives of that country, and in mission circles. It has recently become well known in the context of



Uduk refugee family in Bonga; photo 2006, courtesy of Alexander Meckelburg

aid and humanitarian activities, especially since 1987, when the U. were displaced by war in the Sudan and became refugees in Ethiopia (returning home during 2006–08). A reasonable guess at the current numbers of U. speakers, including those in urban centres, might be 20–25,000.

The ethnography and history of the U. people is better documented than for any other of the ↗Koman groups, with whom they share many cultural features. Among these are a love for the open landscape of forest and hills on which they depend; a distrust of commerce, partly because of historical memories of raiding and ↗slavery; and a strongly egalitarian attitude to social and gender relations within their own communities. While all Koman groups place a high value on matrifocal family links, some combining this with variants on "sister-exchange" ↗marriage, the U. are notable for the way they uphold matrilineal theory and associated practices in a systematic way. Even in the context of displacement and life in the refugee camps, the matrilineality continues – indeed it is possible to say that people find distinct advantages in collaborating with matrilineal kin in these circumstances. The multiple displacements of the U. over recent decades not only echo historical memories which they share with neighbouring groups, but these very movements have brought them into fresh contact with some of these neighbours. Such encounters have helped stimulate a cultural revival, especially in the fields of music, song, and even dance. In the refugee scheme at ↗Bonga, upstream from ↗Gambela, for example, 'traditional' U. styles were being revived and recreated in the space that this new setting allowed, often with instruments improvised from plastic cans and other "modern" bric-a-brac (s. website below). Alongside this cultural renaissance, people came to identify themselves strongly with protestant Christianity in the refugee camps, though many still had recourse to the older ritual-medical practices when faced with problems of life and death. Far from the Ethiopian refugee settlements, other U. speakers fled northwards from their homes in the course of the Sudanese civil war, finding security in the capital city and other towns. A few Muslim families were established in the homeland some generations ago, and their numbers have no doubt increased.

In the mid-20th cent., U. speakers were to be found in a network of small hamlets scattered over three wide valleys opening out from the Ethiopian foothills: the Ahmar, Tombakh and Yabus (Yal) valleys. The largest centre was the market village of Šali (Šālī l-Fīl), where the ↗Sudan Interior Mission was established in 1938. The U. district, together with the Yabus district to its south, were then administered as part of the Upper Nile Province. However, mainly because of the extension of communications from the north which led to the growth of Kurmuk town, it was decided by the Anglo-Egyptian Condominium government in 1953 to transfer these two districts to the administration of the Blue Nile Province. Thus, all the U. villages, as well as some ↗Komo and Ganza, were transferred from the southern to the northern Sudan, just before independence in 1956. There have been lasting difficulties for the people up to the present as a result of this transfer. If the referendum for the southern Sudan in 2011 results in secession, the U. will find themselves up against not one, but two international frontiers.

Ugaas

U. (Pl.: *ugaasyo*) is a traditional title among the ↗^{c}Issa and ↗Gadabuursi in northern ↗Somalia (s. also ↗Somali). Among the ↗^{c}Issa (^{c}Iise) the U. is elected from among the Wardiiq clan (subclan Waqtiššiile, *reer* Golowwaaq). His power is mainly symbolic (the U. is described as a *rooble*, i.e. a 'rain-maker'; ↗Rainmaking). Elected by consensus, the U. is supposed to be a man with a sense of equilibrium and political wisdom. In colonial times he was in charge of the relations between lineages and external powers, such as the Ethiopian and British government. Various northern Somali clans also have an U., including the Ogadeen and Dhulbahante.

He has a quasi religious status and is responsible for the physical and spiritual wellbeing of his people. This explains why his wife, considered as the "mother of all the ^{c}Issa", cannot marry again after the U.'s death. Historical data about the ^{c}Issa are scarce. Genealogical lists (Bertin 1968; Ali Moussa Iye n.d.), are recalled along with anecdotes which are part of an "ethnic novel". Roughly speaking, on the basis of 25 years per generation, the creation of the U. lineage with a total of 16 generations (Bertin 1968) or 18 (Ali Moussa Iye n.d.) can be traced back to the 17th cent. Discordances exist between the two lists mainly due to the inclusion in Ali Moussa Iye's list of a first U. called Guuleed Ugaaḍ Maal, which looks like a nickname (*ugaaḍ*, 'game'; *maal*, 'to milk') when Bertin makes Ugaas the son of Makkahiil (lit.: 'the one who took side for Makka') as the first on the list. According to Ali Moussa Iye, the etymology of U. could be *ul-gaas*, i.e. 'the stick of the warrior's chief'. Both lists exclude 'dismissed or denied U.' (Ali Moussa Iye n.d.: 256). The genealogy lists six generations prior to the first U.: Wardiiq, Waqtiššiile, Golowwaaq, ^{c}Abdalle, Ḥasan and Makkahiil [Iye's list: Guuleed Ugaaḍ Mal], father of first U. The list of U. starts with (1) Ugaas b. Makkahiil; (2) Guuleed b. Ugaas; (3) ^{c}Aafi b. Guuleed; (4) ^{c}Abdillāhi [^{c}Abdalle] b. ^{c}Aafi; (5) ^{c}Ali b. Ḥuseen; (6) ^{c}Umar b. ^{c}Ali; (7) Guuleed b. Booḥ [Iye's list: Geelle b. Ḥooš]; (8) Rooble b. Guuleed; (9) Ḥuseen b. Rooble; (10) Faaraḥ "Guntiweyné" b. Geelle; (11) Rooble b. ^{c}Ali; (12) Rooble b. Faaraḥ; (13) ^{c}Abdi b. Rooble; (14) Guuleed b. Rooble; (15) Wa^{c}ays b. Rooble; (16) Ḥasan b. Ḥirsi.

According to Bertin (1968), the U. (nos. 1 to 6) were chosen from inside the Golowwaaq lineage, then among the *reer* Guntiweyne or the *reer* ^{c}Abdalle, sub-clans of the Wardiiq/Waqtiššiile/Golowwaaq. Oral sources comment on the dismissal of some of them due to internal rivalries.

In June 1840 or 1841, Harris (HarAeth 158) mentions three U.: (1) One, with the Gadabuursi (the most important). (2) "Ḥuseen Faaraḥ" (most probably, Faaraḥ "Guntiweyné" b. Geelle) on the coast with the ^{c}Issa *reer* Muuse (whose power encompassed the area from Ġubbat al-Ḫarāb to Kulangariit), on good terms with the ^{c}Afar Debne (whom he married a girl). (3) A third U. whose name is lost.

Rooble b. Faaraḥ "Guntiweyne" (not an alleged *ugaa*s Nūr according to other colonial sources) must be the one who came aboard the ship *Somme* (8 June 1861) when Fleuriot de Langle came to Zayla^{c} to investigate French consul Henri Lambert's assassination. This Rooble b. Faaraḥ "Guntiweyne" showed the way to Harär to the Egyptians, in 1875. He died in battle with the Gadabuursi at Weerar, 35 km north of Boorama where he was buried. Guuleed b. Rooble (no. 14 in Bertin's list; 16 in Ali Moussa Iye's list) was in power when Lagarde became the governor of ↗Obock. Buried in Kulankii Arǧa^{ɔ}a, between Mille and Harraawe, he is said to have been dismissed because there was too much rain. Another U. named Guuleed "Inǧirre", or "Ḥašišle" (covered with lice), was dismissed after 40 days, because after days of rain the cattle ate two much and died of vermin. At the time of Wa^{c}ays b. Rooble [b. ^{c}Umar b. Faaraḥ, from *reer* Guntiweyne lineage], there seems to be an interregnum during which (Poncins 1898: 438) Faaraḥ Afboyne (Afweyne) was "the chief of the ^{c}Issa". His residence was in "Ouarouf" (Waruf). The council for his election was held near "Abdi Souene" (Ḥabaš Weyn). According to *Le Djibouti* (4 January 1902) he was then 25, thus born in 1876/77. He is buried in Harär, at Aw-Zīn cemetery, near Bab Zayla^{c}, after having died in jail because he refused to pay the tax to the Ethiopians. The next U., "the French U.", elected in 1913 by the "French" ^{c}Issa groups in 1913, Ḥuseen Rooble Faaraḥ (according to Bertin 1968) is not recognized by all the ^{c}Issas.

He signed the 1917 agreement with France and died in 1942. During the imperial period until the fall of communism, the "true" U., was Ḥasan b. Ḥirsi, *reer* Booḥ (b. 1912; d. 1994), who lived in Dire Dawa. He was elected in Ḥabaqo (ca. 1933), near Haḍḍagaala. This U. supported resistance against the Italians. Many of his ᶜIssa followers joined *ras* ↗ Abbäbä Arägay's resistance contrary to other northern Somalis who were enrolled in Italian *banda* (Lamy 1959: 186).

Didier Morin

ᶜUmardīn b. Muḥammad b. Aẓharaddīn

ᶜU. (عمردين) was a *sulṭān* of the ↗ Walašmaᶜ dynasty from 1525, when he succeeded his maternal half-brother ↗ Abū Bakr b. Muḥammad b. Āzar, until ca. 1550.

In 1525 ↗ Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") killed his adversary, Abū Bakr, and replaced him with ᶜU., as a puppet *sulṭān* (BassHist I, 15f. [text] = II, 33 [tr.]). This made Aḥmad de facto ruler of ↗ Harär and gave him the opportunity to conquer Ethiopia.

ᶜU., on his part, did not relinquish power completely. In 1530, when Grañ returned from his campaign against ↗ Däwaro with much booty, he told the *sulṭān* that the booty would be enough for him and the nobility to have a life of luxury, and thus, from now on, the revenues should be distributed to the poor, the members of the prophet's family, the orphans etc., in accordance with the ↗ Qurᵓān. This was against the custom in Harär, where the *sulṭān* and his *amīrs* simply divided the revenues among themselves. When Grañ left for Zerba to settle a quarrel among the Somali there, and to gather a new army, ᶜU. and several *amīrs* and jurisconsults came together and decided to divide the revenues in the usual manner. They further decided to ban Aḥmad Grañ from returning to Harär and have him go to Mecca or somewhere in Arabia. In the night they captured Grañ's servants and soldiers, who had remained behind in Harär, and took possession of their horses and weapons. When Grañ's jurisconsult Abū Bakr b. Naṣraddīn b. Muḥammad Aršūna realized what had happened, he complained to the *sulṭān* of treason. ᶜU., however, sent him to Grañ with a letter, ordering the latter to leave the country, or else he would be killed. Grañ initially considered complying but his followers asked him to fight the *sulṭān*. When ᶜU. learned that Grañ was approaching with many followers, he asked the religious men to negotiate a peace treaty between them. They were successful in doing so, and Aḥmad Grañ entered Harär as a victor (BassHist I, 77–80 [text] = II 148–51 [tr.]).

Just after this quarrel, Grañ helped ᶜU. to get blood money from the Somali leader Ḥirābū b. *goyta* Tadrūs, who had murdered a page of the *sulṭān* (BassHist I, 80f. [text] = II 151f. [tr.]). This incident shows that Aḥmad Grañ was – at least officially – again on good terms with ᶜU. Nevertheless, Grañ left his brother Muḥammad b. Ibrāhīm in Harär with the *sulṭān*, evidently to keep an eye on him (BassHist I, 129 [text] = II 206 [tr.]).

We do not know how long ᶜU. was the nominal ruler of Harär. When *aṣe* ↗ Gälawdewos led a campaign against Barr Saᶜdaddīn (i.e. against Harär and its dependencies) in ca. 1550, he deposed a nameless *sulṭān* (ConzGal 42f. [text] = 146f. [tr.]), very probably ᶜU.

The sources do not say whether or not Gälawdewos installed a new *sulṭān*. According to the legendary *History of ↗ Nūr b. Muǧāhid,* Nūr killed a *sulṭān* when he became ruler of Harär in 1551/2 (Wendt 1935: 493 [text] = 498 [tr.]; Getatchew – Wagner 1989: 47f. [Arab. text] = 57f. [tr.], 72f. [Amh. text] = 85f. [tr.]). It seems possible that this *sulṭān* was the puppet of his Christian enemy Gälawdewos. He could be tentatively identified with Muḥammad b. Abī Bakr, the son of Abū Bakr b. Muḥammad b. Āzar, killed by Aḥmad Grañ, mentioned in the *↗ Futūḥ al-Ḥabaša* (BassHist I 5 [text] = II 8f. [tr.]). ᶜArabfaqīh does not fix Muḥammad's place in the sequence of the Walašmaᵓ dynasty, but it is possible that he should be inserted there (Wagner 1991: 383).

When ↗ Nūr b. Muǧāhid needed a new puppet *sulṭān*, he chose a son of ᶜU., ᶜAlī b. ᶜUmardīn, falling back to that line of the Walašmaᵓ dynasty, which his mentor Aḥmad Grañ had already favoured. After ᶜAlī b. ᶜUmardīn, two other sons of ᶜU., Barakāt and Ḥabīb, became *sulṭāns* of Harär. The latter died 1559 in battle against *ras* ↗ Ḥamälmal (Paulitschke 1888: 513, 515; BTafA 144f., 850f.; Cerulli 1931: 51f. [repr. CerIslam 149ff.]).

ᶜUmarī, al-

ᶜU. (العمري, full name Šihābaddīn Aḥmad b. Faḍlallāh al-ᶜUmarī; b. 1301, Damascus, d. 1349, Damascus) was a famous Arabic author and administrator in the Mamlūk chanceries in Cairo and Damascus. He was born into the Banū Faḍlallāh, a distinguished family of high-ranking officials and Šāfiᶜīte jurists, whose descent could be traced back to the second caliph ᶜUmar b. al-Ḫaṭṭāb (hence the *nisba* al-ᶜUmarī).

ᶜU. started his career assisting his father Muḥyīddīn Yaḥyā, who was head of chancery (*kātib al-sirr*) first in Damascus and, after 1329, in Cairo. When ᶜU. displeased the *sulṭān* an-Nāṣir Muḥammad, he was dismissed and eventually imprisoned. He was released in 1339 and soon appointed head of chancery in Damascus. In 1342 he was dismissed again and replaced by his brother Badraddīn Muḥammad. In his remaining years he devoted himself to writing.

ᶜU.'s two main works contain useful and interesting information about Ethiopia. In the *Taᶜrīf bil-muṣṭalaḥ aš-šarīf* (publ. in Beirut 1988 by Muḥammad Ḥusayn Šamsaddīn and in Kerak 1992 by Samīr Maḥmūd ad-Durūbī; partial French translation in UmMasGaud 31f., English translation Kerak 1992; s. also Gori 2002), a handbook for administrative chancellors and secretaries, ᶜU. devoted a short chapter to the "ruler [*ṣāḥib*] of Amḥarā, the king of kings of al-Ḥabaša" (al-ᶜUmarī 1988: 48ff.). There he offered some general data about Ethiopia and its Christian monarch: e.g., it is said that the then ruler had secretly converted to Islam but was still pretending to be a Christian to keep power in his hands. Furthermore, ᶜU. explains how the text of a letter to the *nəguś* should be opened and closed: the draft is basically meant to enable the *kātib* of the chancery in charge of foreign correspondence to insert the official titles and the extolling epithets which were considered appropriate for the king of Ethiopia so that due respect and somewhat flattering appreciation could be conveyed to the royal addressee (Gori 2002).

In the much more extensive *Masālik al-abṣār fī mamālik al-amṣār* ('Routes toward Insight into the Capital Empires'), a detailed and comprehensive encyclopaedia for the ideal officer of chancery, an entire section (*qism* 1, *nawᶜ* 2 [*ḏikr al-mamālik*], *bāb* 8–14) deals with Ethiopia. The text was translated into French by Gaudefroy-Demombynes (UmMasGaud). A recent facsimile edition reproduces the Arabic original contained in a manuscript kept in Istanbul (Topkapı sarayı, Sultan Ahmet III, 3/2898; UmMasSezg). It is made up of two parts: in the first part (UmMasGaud 1–21; UmMasSezg 16–25), ᶜU. presents detailed data on the Muslim states in Ethiopia; in the second part (UmMasGaud 21–31; UmMasSezg 25–30), ᶜU. gives some general information about the geography, politics and economy of the country as a whole.

ᶜU. collected the material for his section on Ethiopia while he was in Cairo from several informants: the learned man Ǧamāladdīn ↗ᶜAbdallāh az-Zaylaᶜī, the merchants *al-ḥāǧǧ* Faraǧ al-Fawī or al-Fūnī and *sayyid* ᶜIzzaddīn and, finally, from a written note which he was given by the Coptic patriarch Benyamin.

This long text became the basic reference on Ethiopia for later authors of the Mamlūk era who quoted it and extended it (e.g., al-↗Qalqašandī in his *Ṣubḥ al-aᶜšā* and al-↗Maqrīzī in his *Ilmām*; on this point s. also Muth 2005).

In the scholarly literature of Ethiopian studies, ᶜU. was and remains undisputedly the main irreplaceable source for shedding light on the history and culture of Islamic Ethiopia.

Umberto I

U. (b. 14 March 1844, Turin, d. 29 July 1900, Monza) was king of Italy. The son of Vittorio Emanuele II and Archduchess Maria Adelaide of Habsburg Lorena, he received an essentially military education and at 14 was made captain of the army. U. displayed strong military leadership and fought with distinction at Custoza in 1866. In 1868 U. married his cousin, Margherita who bore him only one son, Vittorio Emanuele (later ↗Vittorio Emanuele III of Italy).

U. was crowned king of Italy on 9 January 1878 and maintained strict control over the army, of which he was commander in chief, and over foreign affairs. He pushed for a strong foreign policy and for motives of national prestige strongly encouraged colonial expansion. Most of the Italian expansion in Africa took place under his reign: in 1882 the Italian government took officially control of ↗^{c}Asäb (↗Colonia di Assab) and three years later occupied ↗Massawa. With Francesco Crispi as Prime Minister (1887–91 and 1893–96) colonial expansion became even more marked: a protectorate was established over the Somali sultanates of ↗Hobyo and ↗Mağeerteen (1889) and in ↗Eritrea further expansion took place with the conquest of Asmära and ↗Kärän (1889) and the signing of the treaty of Wəč̣ale (1889; ↗Italo–Ethiopian Treaty of Friendship and Commerce).

The victory over ↗Mahdist forces in ↗Aqordat in 1893 was enthusiastically celebrated by U. and the expansionist policy of Crispi in Ethiopia was seen with favour at court. A year later ↗Kassala was occupied and further expansion targeted Təgray. These successes momentarily concealed the intimate weaknesses of Italian expansionism in the region. The news of the disaster in the battle of ↗^{c}Adwa shocked the country and widespread demonstrations took place in many towns. At first, U. contemplated abdication and the destiny of the House of Savoy itself seemed at risk, but he then opted for the sacrifice of Crispi who was induced to offer his resignation and retired from active political life. Furthermore, U. strongly opposed the plan to quit Eritrea and in the aftermath of ^{c}Adwa opposed the appointment of Romualdo Bonfadini, a renowned opponent of colonization, as Governor of Eritrea. The preference of U. went to Ferdinando ↗Martini, who was personally advised by the king not to retreat from the Eritrean highlands.

Due to his embracement of his government's authoritarian measures and conservative policies, U. became a highly unpopular figure. He suffered three attempts on his life. In the last one, he was murdered by an Italo-American anarchist.

Massimo Zaccaria

Umm Ḥabība

U.Ḥ. (أم حبيبة, full name Ramla bint Abī Sufyān b. Ḥarb; b. ca. 603, d. ca. 664/65) was one of the wives of the Prophet ↗Muḥammad who married her by proxy while she was staying in Ethiopia with the Muslim immigrants of the so-called first ↗*hiğra*.

According to some Islamic traditions, U.Ḥ. was born seven years before Muḥammad received the prophetic call (Ibn Ḥağar n.d.: 405). She was the daughter of Abū Sufyān b. Ḥarb (one of the toughest enemies of Muḥammad in ↗Mecca, head of the Banū Umayya b. ^{c}Abdaššams, powerful clan of the Prophet's ↗Qurayš tribe; s. Watt in EI^{2}) and Ṣafīya bint Abī l-^{c}Āṣ b. Umayya b. ^{c}Abdaššams (also an Umayad, thence U.Ḥ.'s *nisba* al-Umawīya).

U.Ḥ. was originally married to ^{c}Ubaydallāh b. Ǧaḥš b. Riyāb. They both embraced Islam and were among the first *hiğra* participants. In Ethiopia (or already earlier, in Mecca), U.Ḥ. gave birth to Ḥabība (thence her *kunya* U.Ḥ.). While in Ethiopia, her husband abandoned Islam and converted to Christianity. U.Ḥ. divorced her husband (who soon died of alcoholism). Just after the end of her legal "waiting period" (*^{c}idda*), a female servant of the ↗*Nağāšī* (called Abraha in Arabic sources, with final *tāʾ marbūṭa*, probably to be read Abrahat as in Ahmäd Ahmädin n.d.: 13ff.) informed her that Muḥammad wanted to marry her. U.Ḥ. was also sent a prophetic dream. The *Nağāšī* summoned ↗Ǧa^{c}far b. Abī Ṭālib and all the Muslims who were in al-Ḥabaš and celebrated the marriage in front of them (Ḫālid b. Sa^{c}īd b. al-^{c}Āṣ, s. Loucel in EI^{2}, acting as U.Ḥ.'s tutor), granting the bride 400 dinars as dowry (*ṣadāq*) on behalf of the Prophet. U.Ḥ. offered Abrahat 50 dinars from her dowry but the servant, who had also embraced Islam, refused and even returned the jewellery she had previously received from U.Ḥ. The *Nağāšī* sent U.Ḥ. back to the Prophet in Medina together with a letter and some gifts. Šarḥabīl b. Ḥasana, another member of the first *hiğra*, accompanied her in ↗Arabia. Arabic sources date U.Ḥ.'s marriage in the year 7 H. (628/29 A.D.), others affirm she was over 30 when Muḥammad married her (Ibn Sa^{c}d n.d.: 99).

The Prophet married U.Ḥ. to confirm her faith after the apostasy of her husband and thus to strengthen the Islamic consciousness of the Muslim refugees in Ethiopia, and also to open a negotiation with her father Abū Sufyān (*Sura* 60:7 is considered to refer to this marriage; s. Sayyid b. Muḥammad Ṣādiq 2001: 135).

U.Ḥ. survived Muḥammad. The assassination of caliph ^{c}Uṯmān b. ^{c}Affān in 644 resulted in a bitter enmity between her and ^{c}Ā^{ɔ}iša, another widow of the Prophet, which was only resolved when U.Ḥ., on her deathbed, called for ^{c}Ā^{ɔ}iša and prayed for her. U.Ḥ. died during the caliphate of her brother Mu^{c}āwiya b. Abī Sufyān (s. Hinds in EI^{2}).

Umma Koda

U.K. is the name under which the mother of the Muslim ↗holy man ^{c}Abd al-Qādir al-Ğīlānī, the founder of the Qādirīya ↗Islamic brotherhood is commonly known in ↗Harär and its surroundings. In the town of Harär she is also known under the nickname Ašura Innay (Gibb 1996: 335). The origins of the name U.K. are obscure. In Harär, U.K. is sometimes popularly explained as a deformation of Umma Kude ('grandmother of my liver'; *kud*, 'liver' meaning "the centre of feelings and affection"). In Arabic sources ^{c}Abdalqādir al-Ğīlānī's mother is called Umm al-Ḫayr Fāṭima bint ^{c}Abdallāh aṣ-Ṣawma^{c}ī. She is considered to be a descendent of the Prophet ↗Muḥammad through ^{c}Alī b. Abī Ṭālib's second son, Ḥusayn (she is thus, technically speaking, a *šarīfa*). Many miraculous circumstances surround the marriage of U.K. with *sayyid* Abū Ṣāliḥ Mūsā b. Ğankī Dost (father of ^{c}Abdalqādir) and the birth of his son in Nīf (province of Ğīlān, ↗Iran). The Qādirī hagiographical texts and accounts widely narrate these supernatural events with various details (s. for a list of sources Aini 1938; Braune in EI^{2}).

U.K. is reputed to be a great holy woman and as such she is directly asked for help and blessing. She is expected not to refrain from giving because as a woman she is considered to be intrinsically compassionate and generous. At the same time, as the mother of the great saint ^{c}Abdalqādir, people may seek for her help to obtain the powerful holy support of her son, presuming that ^{c}Abdalqādir was a good son and will not refuse to help those who ask in his mother's name (Gibb 1996: 114).

The fame of U.K. spread in Ethiopia together with that of her son and with the rooting of the Qādirīya brotherhood. In particular, in Harär where the Qādirīya is the most ancient and widespread *ṭarīqa*, two renowned shrines are devoted to ^{c}Abdalqādir and U.K. The more imposing one is on the way to Koromi (in the ↗Argobba region) about 18 km east of Harär, a few kilometres away from the tomb of *āw* Ṣūfī Yaḥyā. Just on the fringe of the main road, a wide holy area hosts the tomb of ^{c}Abdalqādir together with a *ḥadra* house for the congregational meetings of the brotherhood. Some hundred metres away from this a mosque and the tomb of U.K. are situated. This shrine of U.K. is frequently visited by people in distress to ask for the bestowing of the beneficial power of the holy woman: tied pieces of cloth are left in huge quantities on the gate of the tomb as a token of engagement and are untied as soon as the request is fulfilled.

Another shrine of U.K. and ^{c}Abdalqādir is in the quarter named Qurrabe Limay (Harari, lit.: 'generous in the vicinity'), outside Asma^{ɔ} ad-Dīn Bari ("Choa ber" in Foucher 1988: 279), presently behind the main bus station. It existed already in the time of Paulitschke (1888 [map]; s. also Robecchi Bricchetti 1896: 121 [map]), the legend explaining its foundation is recorded in Leslau (1965: 206f.). It is the main Qādirī centre in Harär town (Wagner 1973: 273f.). A two domed shrine hosts the tombs of ^{c}Abdalqādir and his mother.

In the compound other scattered modern tombs can be found. The *ziyāra* to Qurrabe Limay is, however, considered to be only an alternative ↗pilgrimage site for those who cannot visit the main shrine of U.K. and her son outside the town (Gibb 1996: 113).

According to the Qādirī tradition, U.K. died at an unknown date in Ǧīlān where she remained after her son left for Bagdad; at that time, she was already 76. ^{c}Abdalqādir passed away in 1166 in Bagdad where he is buried in a huge shrine. Local Muslims in the region of Harär are fully aware of these facts and they consider the tombs of U.K. and ^{c}Abdalqādir in their territory to be nothing more than a tribute of respect and veneration to the holy pair. The presence of these cenotaphs is explained in a more mystically appropriate way, by the legend that says that when ^{c}Abdalqādir died, 80 different souls came out of his body; one of them arrived in Harär to settle there (Gibb 1996: 113).

Alessandro Gori

Unction

U. (Amh: **ቅባት**, *qəbat*; Gə^{c}əz: *qəb^{ɔ}at* [*/qəb^{c}at*]) is performed in the ↗Ethiopian Orthodox (Täwaḥədo) Church to consecrate a ↗*tabot* and a new *mänbärä tabot* as well as a new paten and a new chalice (cp. ↗*Qəddase*: paraphernalia), or to anoint the newly baptized for Chrismation (↗Baptism), and, formerly, the new monarch at his ↗Coronation (while there is no U. in Ethiopia for ↗ordinations), as well as to anoint with blessed ↗oil the catechumens at Baptism, the spouses at their ↗Matrimony, the sick at the U. of the Sick. Oil is also poured into water to consecrate the "water of the Jordan", both at the feast of Christ's Baptism (↗*Ṭəmqät*) and for any baptism. The ointment used is theoretically **ሜሮን** (↗*meron* [s. EAE vol. 5]; Greek *myron*, 'Holy Chrism'), but in practice **ቅብዐ፡ ቅዱስ** (*qəb^{c}a qəddus*, i.e., olive oil blessed by the priest himself).

Unction of the Sick

The principle of anointing the sick goes back to the N.T. (cf. Ja 5:13–16) and is widespread among Oriental Christians (Taft 1991; Vorgrimler 1990); in Ethiopia, the service used for this sacrament is found in the *Mäṣḥafä* ↗*qändil.*

It is not known since when the sacrament of the U. of the Sick (called **ቀንዲል**, *qändil*, lit. '[sanctuary] lamp') was in use in Ethiopia. The delegates to the Council of ↗Florence (1441) answered negatively to the question whether they performed it; ↗Alvares did not observe it either. It is thus possible that the *Mäṣḥafä* ↗*baḥrəy* of ca. 1442, the result of *aṣe* ↗Zär^{ɔ}a Ya^{c}əqob's effort to uproot magical practices, could be the first ritual used in Ethiopia for the U. The exhortation (Chaîne 1914: 218–21, 227ff.) shows that the Emperor was aiming at solving a "canonical" problem met by the clergy when sick persons were not able to perform the "penance" required by the canons (prosternations, fasting, going for a pilgrimage, etc.; cf. *Mäṣḥafä* ↗*anqäṣä nəssəḥa*): some priests wrongly refused to hear their confession (a tradition tells that, if the penitent is absolved without accomplishing the "canonical penance", the latter is incumbent upon the priest either in this world, or in the world to come: obviously, some priests did not want to take that risk). *Aṣe* Zär^{ɔ}a Ya^{c}əqob asserted both the duty of the clergy to receive the penitent's confession, and that of the sick to confess their sins and ask for the U., since the sacrament of penance is done before the U. may be administered. Chaîne's indication that the title of the *Mäṣḥafä baḥrəy* states that this work was translated from Arabic, is a mistake (Wion in preparation). The three oldest known manuscripts of the text belong to the 15th cent., but there is a number of later copies, showing that it was in use more than it was usually believed (Suttner 1975: 379 and n. 43; Wion in preparation). However, during or just after the reign of *aṣe* ↗Gälawdewos, the *Mäṣḥafä qändil* was translated from Arabic, and has eventually prevailed, at least in theory. In fact, it seems to be extremely rare. However, the Ethiopian Orthodox Church insists that the sacrament should be performed when needed, and that confession and absolution should precede the anointing of the sick.

Ugo Zanetti

Union of Soviet Socialist Republics, relations with ↗Russia

Unionist Party

On 1 January 1947, the U.P. (also known as the Union of Eritrea and Ethiopia, **ማኅበር፡ ፍቅሪ፡ ሃገር፡ ኢትዮጵያ፡ ምስ፡ ኤርትራ፡ ሓንቲ፡ ኢትዮጵያ**, *Maḫbär fəq̱ri hagär, Ityop̣ya məs Erətra, ḥanti Ityop̣ya* , Tgn. ‘Society for the Love of the Country, Ethiopia with Eritrea, One Ethiopia’), was registered in Asmära, succeeding the ↗Maḫbär fəq̱ri hagär.

Bäyyänä Bäraḵi and ↗Tädla Bayru served as President and Secretary General, respectively. The U.P. Central Committee was based in Asmära and with regional committees located in major highland provincial towns. The U.P., which advocated unconditional union with Ethiopia, claimed to have 729,193 members in Eritrea and some 195,000 members in Ethiopia. However, western officials disputed both figures and maintained that party membership was much lower. Nevertheless, in late 1946, British administrator ↗Trevaskis reported that the U.P. had become “unchallengeable”. In 1946–47, several anti-U.P. organizations emerged, including the ↗Muslim League, ↗National Muslim Party of Massawa, New Eritrean ↗Pro-Italian Party, and the predominantly Christian Eritrean ↗Liberal Progressive Party.

Under the terms of the Italian Peace Treaty of 1947, the so-called ↗Four Power Commission (↗United Kingdom, France, the Soviet Union, and the USA) agreed to “dispose” of Eritrea by 15 September 1948. To determine the wishes of the Eritreans, these nations dispatched the so called Four Power Commission of Inquiry to Eritrea. After surveying communities throughout Eritrea from 12 November 1947 to 3 January 1948, the Commission reported that 48.8 % of the voters supported the U.P. annexation agenda. Percentages for the other parties included 30.9 % (Muslim League), 10.7 % (Pro-Italy Party), 9.3 % (Liberal Progressive Party), and 1 % (National Party). These organizations wanted Eritrea to be a ↗United Nations Trusteeship until arrangements had been made for the country’s independence. All, including the U.P., rejected suggestions that Eritrea be partitioned with Ethiopia annexing eastern Eritrea and the Anglo–Egyptian Sudan assuming control of the Western Province. The Four Power Commission failed to agree upon a disposal strategy and, on 15 September 1948, turned the Eritrean question over to the UN. Over the coming years, the U.P. engaged in violence to advance its annexation agenda. On 21–23 February 1950, for example, rioting between U.P. members and Muslims claimed some 20 lives while a “large number” of others sustained injuries. On 2 December 1950, the UN voted to federate Eritrea and Ethiopia (↗Ethiopian-Eritrean Federation).

In March 1952, the U.P. won 32 of 68 seats in the ↗Eritrean Assembly and further enhanced its control of the legislature by forming an alliance with the Muslim League of the Western Province. The U.P. gained more seats in the 1956 and 1960 elections but these victories failed to secure a majority vote for annexation. However, on 14 November 1962, the Eritrean Assembly announced that Federation was “null and void”. The following day, Ethiopia annexed Eritrea and named ↗Abiy Abbäbä as the province’s Governor General. Shortly thereafter, the U.P. collapsed as Addis Abäba bought off its officials with pensions or sinecures.

Thomas P. Ofcansky

United Kingdom, relations with

Anglo–Ethiopian relations date back, nebulously, to 1400, when King Henry IV of England, who took a keen interest in ↗Jerusalem – and in Christian Ethiopia – dispatched a letter to "the King of ↗Abyssinia, ↗Prester John". Whether it reached its destination is unknown.

Scholarly British interest in Ethiopia developed two centuries or so later. A British linguist, Brian Walton, included ↗Gəʿəz in his *Introductio ad Lectionem Linguarum Orientalium* of 1655, and the German scholar Hiob ↗Ludolf's history of Ethiopia was published in English translation and updated edition as *A New History of Ethiopia* in 1684. Later, in 1758, the British lexicographer Samuel ↗Johnson, who had translated the writings of Jeronimo ↗Lobo, placed his allegorical novel *Rasselas* in Ethiopia.

Ethiopia, the supposed "source of the ↗Nile" subsequently attracted the interest of the Scottish traveller James ↗Bruce. His classic *Travels to Discover the Source of the Nile,* of 1790 (BruNile), illustrated by an Italian draftsman, Luigi ↗Balugani, generated international awareness of the distant country described. Several important British travellers followed in the early 19th cent. – notably Henry ↗Salt, Nathaniel ↗Pearce, William ↗Coffin, Charles ↗Beke, and Mansfield ↗Parkyns in the north; William Cornwallis ↗Harris and members of his diplomatic mission, including the German artist Johann Martin ↗Bernatz (s. EAE vol. 5); Charles Johnston in Šäwa; and Richard ↗Burton in Harär.

British interest in Ethiopia manifested itself in the wake of Napoleon's occupation of Egypt when a British nobleman, Lord Valentia (George ↗Annesley), dispatched his secretary, Henry Salt, to investigate the ↗Təgray region of northern Ethiopia, i.e. the country south of Egypt. There he befriended the local ruler, *ras* Wäldä Śəllase Kəflä Iyäsus. The latter's successor, *däǧǧazmač* ↗Säbagadis Wäldu, dispatched a mission to Britain in 1827. It was composed of the aforementioned Coffin and ↗Ali Umar, a Muslim Sāho, who however remained in Egypt. Coffin eventually returned to Ethiopia, five years afterwards, with a valuable British gift of 1,850 ↗fire-arms. A decade later *nəguś* ↗Śahlä Śəllase of Šäwa also took the initiative in opening contact with Britain. He wrote to the British East India Company, in June 1840, deploring that the "arts and sciences" were not as developed in his country as in theirs, and asking for assistance in terms of "guns, cannons and other things, which are not to be got in my country".

Britain soon afterwards concluded friendship treaties with *nəguś* Śahlä Śəllase of Šäwa on 18 November 1841, and *ras* ↗Ali Alula of Bägemdər on 2 November 1849 (↗Treaties and conventions; s. EAE vol. 5). The ↗British and Foreign Bible Society was also active, publishing an Amharic New Testament in 1824, and the entire Amharic Bible in 1840. Missionary activity in Ethiopia was likewise carried out in this period by the British-based ↗Church Missionary Society and the ↗London Society for Propagating Christianity Among the Jews.

Subsequent visitors from Britain included John ↗Bell, a trader, and Walter ↗Plowden, a British consul, both of whom were closely befriended *aṣe* ↗Tewodros II. After their deaths relations between the two countries deteriorated – particularly after the British Government failed to respond to a letter which Tewodros sent to Queen Victoria in 1862, proposing an alliance.

The question of the unanswered letter, and the high-handed behaviour of Plowden's successor, Consul Douglas ↗Cameron, much displeased Tewodros (who based his judgment on reports on Cameron by his secretary ↗Samuʾel Giyorgis). Faced with widespread disaffection – and desperate for foreign military assistance – Tewodros detained Cameron and other Europeans as hostages. Long negotiations followed, during which the British dispatched a second envoy, Hormuzd ↗Rassam, and agreed to provide Tewodros with skilled artisans if he would release his captives. Such talks, however, ended in deadlock.

The British responded in 1867 by dispatching an armed expedition from India, under Sir Robert ↗Napier, which travelled right across Ethiopia to Tewodros's citadel at ↗Mäqdäla. There the Ethiopian ruler was decisively defeated, after which he released his British and other European prisoners, before committing suicide on 13 April 1868. British troops then looted his palace, and nearby church of Mädḫane ʿAläm – seizing two crowns, over 400 manuscripts, and the famous icon of the ↗*Kʷərʾatä rəʾəsu*. Mäqdäla was then burnt down by the British Royal Engineers. Tewodros's son ↗ʿAlämayyehu, befriended by

Ethiopian delegation to the coronation of King Edward VII, 1902; from Pankhurst–Gérard 1996: 49

a British officer, Captain Tristram ↗Speedy, was subsequently taken to Britain, where he was educated, but died young and was buried at Windsor Castle on Queen Victoria's orders. Another Ethiopian toddler, wrongly believed an orphan, was taken to India – and subsequently emerged as *hakim* ↗Wärqənäh, his country's first modern-trained physician – and much later Ethiopian envoy to Britain.

Anglo–Ethiopian relations in the aftermath of Tewodros' demise were cordial. The British had established friendly relations with *däggazmač* Kaśa Ḫaylu, ruler of Təgray, through whose territory they had to pass to reach Mäqdäla – and the local peasantry supplied them with provisions. Napier showed his gratitude, before leaving the country, by presenting Kaśa with a consignment of firearms which contributed to his accession as *aṣe* ↗Yoḥannəs IV in 1872. He subsequently employed an Englishman, John ↗Kirkham, to help train his army; and appointed another Englishman, Henry Samuel King in London, as Ethiopia's first honorary consul in Britain. The British Government, wishing to assist the rise of Egypt, failed to support Ethiopia, when the latter was threatened by Egyptian aggression in 1875–76 (↗Egyptian–Ethiopian War).

Relations between Britain and Ethiopia were nevertheless warm during the early 1880s' ↗Mahdist revolution in ↗Sudan, when Anglo–Egyptian forces in that territory were seriously isolated. The British dispatched a naval officer, Rear-Admiral Sir William Hewett, to seek Ethiopia's help in extricating the endangered garrisons. Yoḥannəs expressed willingness to assist, and a Tripartite Treaty between Ethiopia, Britain, and British-occupied Egypt was duly signed on 3 June 1884 (↗Hewett Treaty), ceding Bogos (↗Bilin) to Ethiopia and promising free transit to Massawa, for Ethiopian trade, including arms and ammunition. Yoḥannəs later that year dispatched a good-will embassy to Britain. Led by ↗Mərč̣a Wärqe and his nephew Yoḥannəs Mäšäša, both of partial Armenian descent, they arrived with an ↗elephant, and earned friendly publicity. Later, in accordance with the Tripartite Treaty, Yoḥannəs' commander *ras* ↗Alula Ǝngəda rescued most of the besieged garrisons, while Ethiopia officials began taking over Bogos. The situation in relation to Massawa – and indeed all Ethiopia – radically changed, however, on 3 February 1885, when the Italians – with British approval – seized the port, and soon began advancing into the Ethiopian interior. Sir Gerald Portal, a British envoy sent to Ethiopia in an attempt to reconcile the two sides, was signally unsuccessful.

Britain, a leading participant in the Scramble for Africa, and a signatory of the 1885 General Act of Berlin, which provided rules for that "scramble", was sympathetic to Italian colonial ambitions – the more so as they counter-balanced those of ↗France, Britain's principal colonial rival. The British Government recognized Italy's protectorate claim over Ethiopia in 1889, and was not pleased by *aṣe* ↗Mənilək II's victory at ↗ᶜAdwa in 1896. Recognizing its historical significance, Britain nevertheless dispatched a diplomatic mission to Mənilək in 1897. Led by Sir Rennell Rodd (↗Rodd Mission) it was sent to open diplomatic relations – and also sought to (1) define the frontiers between Ethiopia and the ↗British Somaliland Protectorate, and (2) discourage Mənilək from allying himself with the Mahdists. A friendship treaty between Britain and Ethiopia was signed on 11 May 1897, and a British Legation in Addis Abäba was established, under Captain John Harrington. Mənilək's cousin and governor of ↗Harär, *ras* ↗Mäkʷännən, travelled to England in 1902 to attend the coronation of King Edward VII. Four years later Britain collaborated with France and Italy, however, in the ↗Tripartite Treaty of 1906 which divided Ethiopia, against Mənilək's wish, into three spheres of economic interest – Britain to be dominant in the Blue Nile basin (↗Abbay).

This period witnessed the coming to Ethiopia of a number of interesting British visitors. They included Augustus ↗Wylde, a bitter critic of Britain's volte-face over Massawa in 1884–85; Percy Powell-Cotton, a big-game hunter, who founded an ethnographic museum in Kent; and several British officials attached to the ↗Bank of Abyssinia after 1905. British scholars of Ethiopian culture included Sir Ernest Wallis ↗Budge, who translated a number of Gəᶜəz works. These were financed by a British society hostess Lady Meux, who bequeathed her Ethiopian manuscripts to Mənilək – but whose will was overturned.

Political relations deteriorated after Empress ↗Ṭaytu usurped power in 1909/10, and then with the accession to power in 1910/11 by Mənilək's grandson, the Heir to the Throne *ləǧ* ↗Iyasu, and especially with the outbreak of ↗World War I. Iyasu was perceived by the British and their diplomatic representative Wilfred ↗Thesiger as too friendly with the Central Powers, i.e. the German (↗Germany), Austrian (↗Austria) and ↗Ottoman empires with the result that the principal legations of the Allied Powers supported a successful conspiracy against him, culminating in the 1916 ↗coup d'état (s. EAE vol. 2, 1081). The successor government, headed by Mənilək's daughter Empress ↗Zäwditu and *ras* Täfäri Mäkʷännən (later *aṣe* ↗Ḫaylä Śəllase I), the new Heir to the Throne, congratulated the Allies, on their victory. The positive personal relation between Täfäri and Thesiger is illustrated by the fact that the former entrusted his children to the latter for protection before leaving to the Battle of ↗Sägäle.

Täfäri Mäkʷännen, responsible for Ethiopia's foreign relations, obtained his country's entry into the newly established ↗League of Nations in 1923. He was supported in this by Italy, but opposed by the British, who criticized continued ↗slavery in Ethiopia. In the following year he visited Britain and several other European countries, taking with him some important nobles, who were thus introduced to modern technology. In London and elsewhere he appealed – unsuccessfully – for Ethiopia's access to the sea, but the British agreed to give him one of Tewodros's two crowns looted at Mäqdäla. Difficulties with Britain and Italy came to the fore in 1926 when their respective governments sought to pressurize Ethiopia into accepting partition into spheres of economic interest reminiscent of those conceived in the Tripartite Treaty of 1906. Täfäri used the League of Nations machinery to frustrate this essentially colonialist manoeuvre.

Despite this rebuff relations were normalized; and *aṣe* Ḫaylä Śəllase I's coronation in 1930 was attended, on behalf of Britain, by Prince Henry, Duke of Gloucester, son of King George V, as well as by the aspiring novelist Evelyn ↗Waugh.

Events thereafter were largely overshadowed by the expansionist ambitions of ↗Mussolini. British members of the Ethiopian – British Somaliland boundary commission were present at ↗Wälwäl, on the Ethiopian side of the ↗Italian Somaliland frontier, in December 1934 at the time of the "incident" which Mussolini used as a pretext for war – but they withdrew "to avoid an international incident". As war came closer the British and French governments concluded, as stated in the Maffey Report, a British inter-ministerial report issued on 18 June 1935, that they would have nothing to lose from an Italian occupation of Ethiopia. They therefore decided on a policy of "neutrality", and to deny weapons to either side – though Fascist Italy, the aggressor, had a developed armament industry, while Ethiopia imported all her fire-arms from abroad.

After the opening of hostilities, on 3 October 1935, Britain, as one of the leading members of the League of Nations, was largely responsible for framing League policy. This involved condemning Italy as the aggressor but imposing only mild and ineffective economic sanctions. Early in December the Foreign Secretary, Sir Samuel Hoare, and the French premier, Pierre Laval, agreed to a "compromise plan" which would have given the Italians all the territory they had thus far occupied (↗Hoare-Laval-Plan). The League later abandoned sanctions, on 4 July 1936, and the U.K. seeking a rapprochement with Italy, in April 1938 recognized the "conquest" of Ethiopia, now merged into the greater colonial territory known as ↗Africa Orientale Italiana.

After travelling to Geneva, Ḫaylä Śəllase went into exile to the U.K. and established himself at Bath; there he formed an exile government, which actively tried to acquire international support. One of the leaders of the women's suffrage, Sylvia ↗Pankhurst, became actively involved in public campaigns in favour of Ethiopia. She founded the newspaper ↗*New Times and Ethiopia News* to give support to Ḫaylä Śəllase. Also other British writers engaged themselves in favour of Ethiopia (e.g., the "Princess ↗Asfa Yilma"), but at first without achieving much attention from the official side.

The situation changed for the U.K. when on 10 June 1940 Mussolini declared war on Britain and France (↗World War II) and occupied British Somaliland in the middle of August. The British, fearing for their position in the Middle East and their sea-route to the East, decided on expelling Italy from East Africa. They made immediate contact with the Ethiopian Patriots (↗Resistance) – and on 23 June they flew Ḫaylä Śəllase to ↗Sudan. Lieutenant-Colonel Daniel ↗Sandford, a British officer with much experience of Ethiopia (where he had resided from 1923 to 1936), was flown into Goǧǧam on 12 August 1941 to investigate the situation – and was joined by another officer, Major (later Major-General) Orde ↗Wingate, on 4 November.

The British campaign for the liberation (↗War of Liberation) of Ethiopia, which owed much to the Ethiopian Patriots, began towards the end of January 1941 with separate attacks on Italian East Africa. These were (1) from Sudan into Eritrea and ↗Təgray, led by General William Platt; (2) from Sudan into Goǧǧam, led by Ḫaylä Śəllase and Wingate; and (3) from Kenya into Italian Somaliland, by General Alan ↗Cunningham. The latter army entered Addis Abäba on 6 April, after which the Emperor entered it triomphally on 5 May. The last Italian soldiers in East Africa surrendered at Gondär on 27 November. Africa Orientale Italiana was dissolved and the pre-war administrative structures largely re-installed (e.g., Təgray and Eritrea were again separated); Italian Eritrea was put under the ↗British Military Administration and administrated as "Occupied Enemy's Territory" by Britain with a four-power mandate until 1952.

Post-war Anglo–Ethiopian relations were complicated, in part because the British had no consistent approach towards the newly liberated country, and different leaders and officials favoured differing policies. The Ethiopian government, for their part, had understandable suspicions of British hegemony, as British colonial or British-administered territories surrounded Ethiopia. De facto the Ethiopian state structures remained under control by the British who set up a ↗British Military Administration of Ethiopia (s. EAE vol. 5). Foreign Secretary Anthony ↗Eden told the House of Commons on 4 February 1941 that his Government would "welcome the re-appearance of an independent Ethiopian State", and recognized the Emperor's claim to the throne. Brigadier Maurice Lush, the British Representative in Ethiopia, on the other hand declared, on 11 May, that the monarch could not appoint officials until a peace treaty with Italy had been effected (legally considering Ethiopia still part of the "Occupied Enemy's Territory"), while Sir Philip Mitchell, the Chief British Political Officer, Middle East, declared that Ḫaylä Śəllase should abide by British advice in "all important matters", including the levying of ↗taxes and expenditure of revenue. Other British officials proposed the partition of Ethiopia, with the annexation of parts of Təgray to British-controlled Eritrea and Ogaden to British Somaliland, Ogaden still being fully under British control. Ḫaylä Śəllase, disturbed by such proposals, and by the absence of any document defining British authority, telegraphed Prime Minister Winston Churchill to demand a formal agreement.

The first post-war Anglo–Ethiopian Treaty, the drafting of which was bitterly contested, was signed on 31 January 1942, i.e. over nine months after the Italian surrender in Addis Abäba. The document provided official British recognition of Ethiopia's independence, but curtailed this by insisting that its Emperor should appoint exclusively British advisors, a British commissioner of police, and British judges etc. An Anglo–Ethiopian military convention, signed the same day, specified that British forces could remain in the ↗Ogaden and in a Reserved Area adjacent to British Somaliland. The British were likewise given control of the radio, telegraph, and railway installations; were permitted to move around the country at will, and were exempt from Ethiopian jurisdiction. In return for these substantial concessions the treaty granted Ethiopia a three or four year annual subsidy of one and a half million pounds Sterling in the first year, declining to half a million in the third year, and a quarter of a million if the treaty ran that far (which it did not). The development of the state administration in Ethiopia, including the juridicial system, was highly marked by British presence. The subsequent restoration of Ḫaylä Śəllase's rule over all of Ethiopia and occasionally met some local resistance; in Təgray this resistance culminated in the ↗*Wäyyanä* movement, which was was brought to an end in 1943 by bombing by the British Air Force.

The second Anglo–Ethiopian Treaty was signed on 19 December 1944. It abandoned British insistence on the appointment of British advisors, and other elements of British extra-territoriality embodied in the earlier agreement. Pressed by the British however to accept the latter's continued occupation of Ogaden, the Ethiopian side included an article stating that they agreed to this "as an Ally" and "without prejudice" to the area's "underlying [Ethiopian] sovereignty". This article was significant in that it recognized Ethiopia's status as an ally, limited the Ogaden agreement to the war period – and reserved Ethiopia's right to possible oil and mineral deposits. At the end of World War II Ethiopia declared war against Germany, a formal act which underlined Ethiopia's status as an ally to Britain.

The British Ogaden policy was clarified in the Spring of 1946 when Foreign Minister Ernest Bevin proposed the province's union with British Somaliland and former Italian Somalia to form a Greater Somalia. This idea was immediately rejected by Ḫaylä Śəllase, denounced as "imperialist" by the Soviet Union's Vyacheslav Molotov – and was soon abandoned. British troops accordingly withdrew from most of Ogaden in 1948, and from the remainder of Ethiopia in 1954–55.

In Eritrea, the British administration, on historical and linguistic grounds, strongly favoured the idea of partition of Eritrea: western Eritrea was to be ceded to British-run Sudan and highland (Christian) Eritrea united with Təgray (as part of Ethiopia). The British–Italian ↗Bevin-Sforza-Plan of 1949 which suggested the disposal of former Italian colonies endorsed this idea, but was rejected by the ↗United Nations (UN) General Assembly. It also suggested an Italian trusteeship for Italian Somaliland, which was finally accepted, linked with the objective to prepare it for independence. The fate of British-administrated Eritrea, however, remained less clear for a long period, the Great Powers having contradicting views; finally, the United Nations agreed to prepare Eritrea for a federation with Ethiopia in collaboration with a UN High Commissioner for Eritrea (↗Anze Matienzo; ↗Ethiopian–Eritrean Federation). Britain established modern state structures in Eritrea, including political parties, trade unions, a reformed judicial system etc.

Britain played a significant role in post-war Ethiopia – symbolized by the establishment of an Addis Abäba branch of the British Council as early as 1942, as well as by Ḫaylä Śəllase's state visit to Buckingham Palace in 1954, and Queen Elizabeth's to Ethiopia's in 1965. Prominent U.K. citizens in Ethiopia included General A.F. Cottam, head of the British Military Mission to Ethiopia, Brigadier Banks, sometime head of the Ethiopian ↗police, and Sir Charles Mathew of the Ethiopian Supreme Court. British involvement – because of the role of English as the principal language of instruction – was particularly evident in education. ↗Addis Ababa University's medical faculty was established by a British dean, Frank Howarth, and other British staff included its University Librarian, Rita Pankhurst; the University Press editor, Innes Marshall; the Associate Dean of Science, Jim Marshall; and the ↗Institute of Ethiopian Studies director, Richard Pankhurst. One of Addis Abäba's finest government secondary schools, called after General Wingate, was staffed by the British Council, while the city's principal private school was founded by Christine ↗Sandford, wife of the above-mentioned Daniel Sandford. The Ethiopian Ministry of Education's chief adviser was an Englishman, Geoffrey Last; and Shakespeare was widely performed, as well as Amharic translations by ↗Ṣäggaye Gäbrä Mädḫən of *Hamlet* and *Othello* while the best Addis Abäba hospital, prior to the ↗Revolution, was the British-staffed Tsahai (Ṣäḥay) Hospital, founded largely with funds raised by Sylvia Pankhurst in the U.K. (↗Hospitals).

British scholars of Ethiopia multiplied in this period, with Margery Perham, of Oxford, writing one of the earliest studies of Ethiopian government (PerGov), Edward Ullendorff (subsequently the first Professor of Ethiopian Studies at London University) and Charles ↗Beckingham, convening the first ↗International Conference of Ethiopian Studies held outside Italy, and Neville Chittick heading archaeological research at ↗Aksum. Many of their students went to Ethiopia, and carried out research at the Institute of Ethiopian Studies.

Many Ethiopians were sent for study in Britain. Foremost among them were two sometime Prime Ministers, ↗Ǝndalkaččäw Mäkʷännən and Mikaᵓel Ǝmməru, artist Afäwärq Täkle, poet ↗Mängəśtu Lämma, surgeon-cum-politician ↗Aśrat Wäldäyäs and Däbbäbä Habtä Yoḥannəs, founder of Ethiopia's first private bank.

Britain, which imported Ethiopian ↗coffee and hides and skins, was a leading supplier to Ethiopia of vehicles, pharmaceuticals, irrigation equipment, industrial machinery, and textiles. A substantial U.K. investment in Ethiopia was the ↗cotton plantation of the Mitchell Cotts company in the lower ↗Awaš valley. During the 1980's ↗famine U.K. public and private assistance was particularly significant.

The current government has established close working relations with the U.K. Trade between the two countries is steadily expanding; British economic assistance for Ethiopia is increasingly important; and the country continues to host many British Non-Government Organizations.

Richard Pankhurst

British colonialism in the Horn of Africa

The modern political development of the entire ↗Horn of Africa is closely linked with the history of British colonialism. British colonial engagement in the region, however, differed much according to the respective region and time. There were mainly two tendencies: open colonization (e.g., ↗British Somaliland) or a policy of indirect influence, based on colonial interests (in Ethiopia itself). Also a mixture between both tendencies existed, in the form of temporary, quasi-colonial expansion or domination (e.g. the de-facto-protectorate over ↗Gambella in the early 20th cent.; ↗Massawa Governorate as part of the Anglo–Egyptian Sudan, in 1882–85; the British Four-Power-Mandate over Eritrea in 1941–52). These tendencies, however, had to compete also with non-colonial British interests and policies, which at times prevailed (cp. Anthony ↗Eden; s. also the anti-colonial activities of Sylvia ↗Pankhurst). Thus, indirectly or directly British colonial policies encompassed the whole Horn of Africa, strongly shaping the whole region, e.g., through the creation of international boundaries, influencing modern economic, political, legal and military structures (including the creation of modern government institutions, of ↗currencies, modern educational structures, industries etc.), internal and external political and military alliances, decisively changing local balances of power.

Major British colonial engagement in the region started with the annexation of Aden in Yemen, as a protectorate under the Indian government (the "Aden Settlement"), in 1838/39. But already before, the southern ↗Red Sea was a sphere of British-Indian interest, in order to protect the shipping route to and from India. The first treaty was signed on 6 February 1827 with representatives of the Somali clan ↗Habar Awal relating to the usage of the port of ↗Berbera at the Somali coast, more than a decade later followed by a treaty with the sultan of ↗Tağūra on 19 August 1840 and the governor of ↗Zaylaᶜ on 3 September of the same year (Fontrier 2003: 238). Around the same period, Great Britain established a vice-consulate in Ottoman Massawa (↗Habeş), for getting first-hand information and establishing links to the adjacent Ethiopian highlands, in view of its importance as a trading post on the Indian route. In Somali territories and neighbouring regions in today's southern Ethiopia, British involvement in the region led to the widespread use of the British-Indian rupee currency, valid in the Aden Protectorate and later taken over by the administrations of British and ↗Italian Somaliland.

In the same period Britain started to take action against local slave trade (↗Slavery), which was of special importance for the public opinion to justify British presence in the region; locally it was understood as expansionist measures directed against competing local merchants. The

1867–68 intervention led by ↗Napier against *aṣe* ↗Tewodros II of Ethiopia was an important indirect colonial undertaking – not aimed at the occupation of any territory, but meant as a mighty demonstration of power to the non-European world and any potentially rebellious colonial subjects (Matthies 2010: 168f.). In the second half of the 19th cent. the massive British naval presence in the Red Sea also helped to establish a virtual weapons embargo against the Ethiopian rulers, making Ethiopian attacks against Egyptian, later Anglo–Egyptian, British and Italian territories difficult.

When Great Britain made Egypt its protectorate in 1882, this new status also encompassed all territories which were claimed by Egypt or/and effectively controlled by it; i.e. in the Horn of Africa: Massawa, the emirate of ↗Harär and Tağūra and ↗Zaylaᶜ (s. the handbook War Office 1884). The then Egyptian ↗Massawa Governorate got an Anglophone governor, Mason Bey, and was shortly put under the governorship of the British Admiral Hewett. The ↗Hewett Treaty (1884), signed by Egypt, Great Britain as the tutoring power, and Ethiopia, provided for free access to Massawa "under British protection" for Ethiopian nationals, and the cession of border territories (↗Kärän with its surroundings and forts in the ↗Barka region) to Ethiopia, as a reward for Ethiopia's military intervention against the anti-colonial Muslim Mahdiyya state at the northern borders of Massawa Governorate and Ethiopia (↗Mahdists). Great Britain, however, allowed her ally Italy to take over Massawa in February 1885, following an analysis (among others by the high Anglo–Egyptian official ↗Gordon) that any power taking it would engage in an interest conflict with Ethiopia, ultimately leading to war. The occupation of the area by Italy assured that Great Britain would not need to risk a conflict with Ethiopia, but also that their communication route to India through the Red Sea would not be challenged by competing colonial powers such as France, or by Ethiopia itself. In an agreement of 1887 Great Britain recognized the Italian possessions along the whole southern Red Sea coast up to the French possession of Obock (s. Spencer 1984: 28–30). In the 1890s the Italians were instrumental in the fight against the Mahdists, who were defeated in 1893 at the second Battle of ↗ᶜAq̱ordät (after the First Battle of ᶜAq̱ordät in June 1890), followed by the 1894 occupation of ↗Kassala by the Italians, which was transferred to the British towards the end of 1897. An Anglo–Egyptian–Italian treaty defined the Sudanese border on 25 June 1895 (d'Avray 1996: 262); later border treaties with British involvement led to further territorial transfers, the ↗Kunama (before claimed by the Anglo–Egyptian Sudan, on weak historical grounds) becoming Italian subjects in 1902, in exchange against the Ḥomran region (s. ↗Boundaries; ↗Treaties [s. EAE vol. 5]). The close Italo–British collaboration also made treaties regulating the water use of the River ↗Gaš possible, important for British ↗cotton plantations.

Also Egyptian Harär was an object of British colonial activities. In early 1884 the British resident of Aden, Major Hunter, visited Harär, where he hoisted the British flag and decided to establish the son of the former *ᶜamir* as governor; in November the Egyptian administrator Radwan *pasha* returned, assisted by British representatives and Indian soldiers and policemen (Fontrier 2003: 219). Soon thereafter Harär was given back its independence, in May 1885 (after the last troops had left it in March), but some of its dependencies got under permanent or temporary British control. For example British-Indian troops occupied ↗Ǧildessa, the former Egyptian fort north-east of Harär on the trade route to Zaylaᶜ, in 1885. However, the troops of the *ᶜamir* of Harär temporarily captured them in 1886 (Wagner 2003: 64). A rebellion by the local ↗ᶜIssa against Harär soon led to the liberation of the British garrison, but following the occupation of Harär and surrounding territories by *nəguś* ↗Mənilək in 1887, the British retreated and afterwards claimed only the hinterlands of Zaylaᶜ and Berbera, effectively taking them over in 1884 as part of the Anglo–Egyptian possessions (Fontrier 2003: 217), and the entire northern Somali coast. This led to the foundation of British Somaliland (British protectorate in 1887), under the authority of British Aden. Harär itself – after its occupation by Mənilək – was the subject of several colonial agreements. An exchange of notes between France and Great Britain of February 1888 stipulated that neither of these powers would annex Harär nor allow other powers to take possession of it (the same notes also defined the boundaries between the French and the British Somali possessions; Schwarz 1937: 9). The Harär Agreement was the basis for later French protests against Britain's acceptation of Italy's claims of protection over entire Ethiopia in 1894 (s. below), and later against her permission to use Zayla^{c} for the transport of Italian soldiers to Ethiopia in 1895/96 (Schwarz 1937:22).

In the late 19th cent. British international colonial politics aimed at the consolidation of their territories and colonial spheres of interest. In relation with Germany, for example, the Zanzibar Treaty of 1 July 1890 assured that Germany would not claim any territories north of the Kilimanjaro, with the effect that the territories purchased in 1885/1886 by the private Deutsch-Ostafrikanische Gesellschaft ('German-Eastafrican Society') at the Somali Benadir coast were not set under German protection (Schwarz 1937:17, 24), but instead were ceased to Britain by Zanzibar and then went under Italian domination, Britain's ally in the Horn of Africa.

The British–Italian protocols of 24 March 1891, 15 April 1891 and 5 May 1894 defined each other's spheres of interest in the Horn (ibid. 15, 18, 20f.; Buonomo 1894), the first one defining those in the south (Juba), the second those further north (up to Ras Kasar), and the last in the Gulf of Aden regions (i.e. the hinterlands of Berbera and Zayla^{c}; the former British border post Ǧildessa was supposed to fall into Italian hands, but stay open for international traffic). Their most important outcome was the British recognition of Italy's claim of protectorate over Ethiopia (based on the 1889 ↗Italo–Ethiopian Treaty of Friendship and Commerce); in return smaller territories in western and southern Ethiopia were left to British influence. The latter protocol also regulated a protection of the ↗Nile waters for the first time, a future great concern of British colonial activities in the region. Italy assured not to erect dams at the ↗Atbara which may reduce the Nile waters.

These protocols violated the sovereignty of Ethiopia, which was expressed in ↗Mənilək's protest note to the European powers of 10 April 1891. However, this note did not stop the British policy of extending their spheres of influence especially in the Ethiopian border regions and in relation to Italy's interests. Even if after the Battle of ↗^{c}Adwa of 1896 the British established a legation in Addis Abäba, thus recognizing Ethiopia's independence, the ↗Tripartite Treaty of 1906 concluded between Great Britain, France and Italy, reaffirmed the validity of the previous British–Italian protocols and gave Britain free hand to pursue her Nile interests (Schwarz 1937:21).

In the south, the Ethiopian–Kenyan border was created by a border treaty in 1902, then by the establishment of a British border administration starting from 1905 (↗Kenya). This was led until 1909 by the Greek migrant Zaphiro (↗Zaphiropoulos), who was accepted also by Mənilək, as he had resided in Ethiopia for several years. This successfully stopped Ethiopian raids and tribute collections at times reaching Wajir in today's Kenya, and sometimes even Kabarnet. Employing several Ethiopians and ↗Boorana and other local border people, he demarcated the 800 km boundary and founded ↗Moyale town as a border post (some kilometres inside Ethiopian territory, thus moving the British–Ethiopian border considerably further north; Abdullahi Shongollo 2010). After him other British agents (or "consuls") continued to maintain British interests in the Boorana region (Smidt in preparation).

After Mənilək fell ill and the government was taken over by *ləǧ* ↗Iyasu, the British legation under Wilfred ↗Thesiger tried to extend its capacity of operation, e.g. by building their own telegraph (↗Telecommunication) lines without any prior consultation of the Ethiopian government, thus breaking the Ethiopian state monopoly (for Ethiopian protests s. Smidt 2009). The final downfall of the government of *ləǧ* Iyasu was directly linked with British colonial interests, as his closeness to the axis powers ↗Germany and Turkey (↗Ottoman Empire) in ↗World War I had started to constitute a serious problem for the stability of British colonial possessions surrounding Ethiopia. For example, the government of *ləǧ* Iyasu had deployed a German weapons engineer to the Somali anti-colonial leader *mullā sayyid* ↗Muḥammad ^{c}Abdallāh Ḥasan, and prepared to support anti-colonial activities in the Sudan.

Supposedly Lawrence "of Arabia" was involved as a secret agent in Ethiopia in the fore-math of the ↗coup d'état of 1916 (s. EAE vol. 2, 1081–82; Berhanou Abebe 2001:323; Greenfield 1965:138), and earlier research has shown a direct involvement of the British Legation in the funding and encouragement of *ras* Täfäri (later *aṣe* ↗Ḫaylä Śəllase I) to take a lead in the overthrow of *ləǧ* Iyasu, through the services of the Legation's messenger Hovhannes ↗Semerjibashian (Bairu Tafla 1985). In British Somalia, the colonial regime managed only in 1920 to crush the resistance of Muḥammad ^{c}Abdallāh Ḥasan and his "dervishs", who had managed to form his own theocratic state within the colony. This was followed by a consolidation of British authority (in 1934 the

Ethio–British Somaliland border was delimited by an Ethio–British Commission; Clifford 1936).

In Ethiopia, the following years were marked by the official recognition of the Ḫaylä Śəllase government, culminating in the participation of highest-ranking British personalities at his coronation.

However, British colonial interests were not given up and only partially modified. Shortly after World War I a press campaign in Great Britain started in which the "necessity" that Ethiopia had to fully integrated into the British sphere of influence was discussed, so that border raiding into British territories would be stopped and its rich resources be used. Following an initiative by the Foreign Office, the "Abyssinian Corporation" was founded, with the former Governor General of Nigeria, Sir Frederic Lugard, as its vice-president. He was suggested to become an advisor to the ruler of Ethiopia – in fact controller – to realize the reforms (Schwarz 1937: 42). The idea of a British Protectorate under the leadership of Lugard was, however, abandoned in 1919 (Vestal 2002: 44).

The slavery question was also used in this context: following a demand by Great Britain, the ↗League of Nations decided in September 1922 to carry out an enquiry in Ethiopia (ibid.). When Ethiopia became a candidate for admission at the League in 1923, this was used as an argument in the discussions against her admission, but France, worried about the British initiatives, prevailed in the discussions and Ethiopia was admitted. However, Great Britain and its contracting partners held on to the validity of their agreements of 1891, 1894 and 1906 (Schwarz 1937: 49).

To assure her influence, Great Britain had established several consulates especially in western Ethiopia starting from the early 20th cent. A British consulate was active in ↗Gondär, whose main task was to survey Ethiopian internal affairs in this traditional sphere of British influence in the "hinterland" of the Blue Nile (↗Abbay), and to make sure that the British supposed rights on the Nile waters could not be infringed by any greater dam project (among them an eminent Ethiopianist such as ↗Armbruster, but usually they were rather colonial officers without particular links to Ethiopia).

The trade post Gambella, with its port connected to the Nile via the ↗Baro, was subject of a series of British–Ethiopian agreements (starting from 1904, when the British first established their trade post at Itang at the Baro), making Gambella town a de facto exclave of the British Sudan, under British administration (first a British Customs Inspector, starting from 1919 a District Commissioner). The Sudanese currency was valid in Gambella, and by its infrastructure – and also through ethnic connections – it was better linked to the British Sudan than to Ethiopia. To assure the trade route into Ethiopia, in 1917 additionally a British consulate was established in the nearby Oromo-dominated highlands at ↗Gore.

British colonial politics in the Somali region still focused on strengthening the entente with Italy. As a compensation for Italy entering into World War I on the side of Great Britain and the allies, the Somali-inhabited British Jubaland ("Giuba") – belonging to British East-Africa – was ceded in 1924 to Italy, becoming part of Italian Somaliland. This was followed in 1925 by the Italo–British Agreement on the Lake Ṭana, Great Britain recognizing the Italian sphere of influence in western Ethiopia, in return Italy recognizing Britain's interest in steady supply of water from the Ṭana and Blue Nile to the Sudan and Egypt (Schwarz 1937: 50ff.). However, this agreement was signed without any prior consultation of the Ethiopian government, who protested at the League of Nations, with the effect, that the agreement was legally suspended. Politically it was a sign for tacit British support for ↗Mussolini's plans of expansion into Ethiopia. At the beginning of the Italo–Ethiopian conflict in 1934/35 a secret British report, leaked to Mussolini, made clear that Britain had only interests in the Ṭana and Blue Nile region and on grazing lands south of British Somaliland, with the effect that there were no major British objections against an Italian conquest of Ethiopia (Spencer 1984: 32–35).

The sympathy towards Italian fascism in parts of the British leadership is the background of the plans and secret agreements on the cession of Ethiopian territories to Italy at the beginning of the ↗Italian–Ethiopian War of 1935–36 (↗Hoare-Laval-Plan; cp. ↗Ras Dumērá). Within the League of Nations, Britain's policy towards Italy contributed to the ineffectiveness of measures against Italy. In the meantime, British local presence led to a remarkable colonial episode in western Ethiopia: In 1936 Oromo chiefs – supported by intellectuals and politicians of Oromo background from the Ethiopian court itself – founded a "↗Western Galla Confederation" (this being its English denomination). They invited the British – via the British administration of Gambella and the British consul at Gore, captain Esme Erskine – to establish a protectorate over them, in the face of Italian aggression and occupation (MockWar 163f.). Erskine was dreaming of a British protectorate over southwestern Ethiopia, which – economically – already was under strong British influence, but his government did not endorse his ideas (cp. Collins 1983). Provisionally, the Ethiopian government established itself in Gore under *bitwäddäd* ↗Wäldä Ṣadəq Goššu, supported by Erskine (MockWar 164), until the advance of Italian forces made its position impossible. The British consulate in Gore was closed in September 1936, but the British consul in Gambella, Major Jack Maurice, stayed (the Italians accepted local British presence, but starting from mid-1937 tried to monopolize the trade, until by end 1939 Gambella town had been reduced to a mere Italian transit station for import and export – until given up by Maurice in June 1940; Collins 1983).

Italian occupation of Ethiopia and the formation of ↗Africa Orientale Italiana (A.O.I.) was followed by British recognition (16 April 1938; Pankhurst 1996: 35). In the light of previous agreements, Italy assured the respect of specific British colonial interests; for example, in 1938 an agreement was signed with Italy (with ↗Cerulli acting as the deputy governor of A.O.I.) to provide the British Somalis (Isaaq) access to their Haud pastures (Markakis 1989). British recognition of A.O.I. was only reversed in June 1940 when Italy joined World War II on the side of Germany (Vestal 2002: 45). Until then *aṣe* Ḫaylä Śəllase I had led his exile government in the British provincial town of Bath, being tolerated, but not supported by the British government. From then onwards he was to play a decisive role in the quick war against Italy in North-east Africa, even if the British government did not immediately fully commit itself to a future recognition of Ethiopia as a sovereign state. This changed in February 1941 (s. the main article above), even if "outside […] guidance" was still needed in Ethiopia according to Eden (Pankhurst 1996: 36f.).

British Somaliland, occupied by Italy in August 1940, was freed by Punjabi troops returning from Aden in March 1941 during the East African Campaign. Africa Orientale Italiana itself was taken over by the British forces after the March 1941 Battle of ↗Kärän, it was first treated as "Occupied Enemy's Territory", under commander-in-chief of the Middle East Command General ↗Wavell of Keren and Eritrea. When after a few weeks, in May, *aṣe* Ḫaylä Śəllase was reinstalled on his throne, Ethiopia was formally reinstated into its old borders (even if not by fact, as several territories stayed under exclusive British control, such as the whole ↗Ogaden). Eritrea was put under the ↗British Military Administration (BMA) of Eritrea, as part of the "Occupied Enemy's Territory Administration" (OETA) until the 1947 peace treaty with Italy. The British military set up separate BMAs for Italian Somaliland and Ethiopia (↗British Military Administration of Ethiopia, s. EAE vol. 5).

Ethiopia became a military protectorate under the British War Office, with Sir Philipp Mitchell being the chief political officer Middle East and his deputy Lush being responsible for Ethiopia, who controlled all administrative and political acts of the Emperor. In April 1941 the Chief of the British Imperial General Staff had declared that the "British control over all aspects of Ethiopian affairs must be complete […] as long as the military situation demands. There can be no question of the establishment of an Abyssinian administration" (Pankhurst 1996: 39). This special status of Ethiopia was defined through a treaty in 1942 (the Anglo–Ethiopian Agreement and Military Convention of 31 January 1942; Spencer 1984: 97ff.; for details s. the main article above).

The British personnel employed in Ethiopia in all spheres of civil and political life was strongly linked, especially at the beginning, with the British colonial empire and usually hardly accepted the sovereignty of the Ethiopian ruler. However, as from the beginning British individuals with strong personal links to Ethiopia played an increasingly important role in Ethiopia's administration (e.g., John ↗Spencer as the Emperors advisor; the army officers Orde ↗Wingate and Brigadier Maurice Lush and the ↗Sandford family), they strengthened an anti-colonial tendency in the BMA of Ethiopia with the effect that Ethiopia was subsequently recognized as an independent country in 1944 (Rennell of Rodd 1948).

The British alliance with the Emperor also led to a strong military support of the Emperor's politics of centralization, especially when he faced armed resistance by great parts of the Təgrayan peasantry and local lords in 1943, against his policy of destruction of their traditional rights and autonomy (↗Wäyyanä). In October the British RAF heavily bombarded Mäq̱älä, Ḥənṭalo and other areas controlled by the rebels (Aregawi Berhe 2004: 572).

Ethiopia was by then strongly integrated into the wider colonial networks of British East Africa. Until the mid-1940s its dominating ↗currency was the Shilling of the East African Currency Board (issued in Nairobi in 1941, with Hindi and Arabic denominations).

A number of British administrators and military had previous carriers in the Sudanese, Kenyan and Indian colonies. The especially strong colonial interests of the British at the Somali coast, linked with the idea of a unification of all ethnic Somali in one country, led to the long-lasting special status of the Ogaden under British administration (and, after subsequent retreat from parts of this territory, then of the Haud and Reserved Area). The last Somali territory within the international borders of Ethiopia was given up by the British only in 1955, in a period, when Ḥaylä Śəllase had reached the peak of his power and proved to be a reliable ally of the west.

In Eritrea, British domination lasted from 1941 until 1952 and had long-lasting effects. For example, in the framework of British colonial and war interests, numerous industrial and port facilities of Eritrea (considered enemy's property) were dismantled and transferred to the British colony of India (which also happened in Ethiopia itself; Pankhurst 1996). Britain further strengthened the colonial system of indirect rule already established by Italians (e.g., furthering the already started codification of customary laws in the form of ↗Law Books, such as the one of ↗Akkälä Guzay), and, in view of a future independence or autonomy, founded civilian and political institutions, such as trade unions and political parties (cp. also the typically colonial endeavour of a ↗Tigrinnya Language Council, which tried to centralize and control the development of the local language, initiated by the colonial officer Edward Ullendorff). British administrators over longer time cherished the idea of partition of Eritrea, ceding its lowlands, economically and historically strongly linked with the northern Sudanese populations, to the British Sudan, and its highlands to Christian Ethiopia (furthering Təgrayan–Təgrəñña nationalism; cp. ↗Longrigg). However, Ethiopia, was finally given de-facto free hand over Eritrea, with which it was federated in 1952 (fully annexing it as Ethiopian territory in 1962; ↗Ethiopian–Eritrean Federation). British colonial inference into Ethiopia's affairs stopped in the 1950s with the retreat of the last British troops from Somali territories adjacent to British Somaliland in 1955. In the subsequent years British Somaliland attained some internal autonomy, in 1957 getting its first legislative council, and on 26 June 1960 attaining her independence under Prime Minister Muḥammad *ḥaǧi* Ibrahim ʿEgal (unified with Italian Somaliland only a few days later, to form the state ↗Somalia).

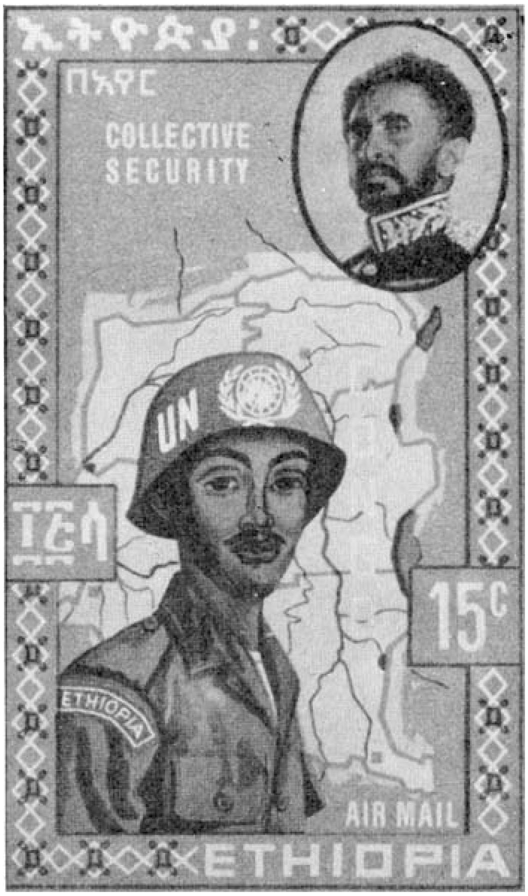
Wolbert Smidt

United Nations

The U.N. was founded in 1945 in the wake of the failed ↗League of Nations (1919–46). With the full support of the ↗United States, Ethiopia, represented by Prime Minister ↗Mäkʷännǝn Ǝndalkaččäw, was one of the 51 nations attending the San Francisco negotiations that created the U.N. from 26 April through 14 June 1945. The new U.N. Charter was ratified on 24 October 1945, the date the U.N. formally became operational. Ethiopia ratified the U.N. Charter and officially became an "Original Member" of the U.N. on 13 November 1945.

Since becoming a member, Ethiopia has contributed in many ways to the fulfillment of the objectives of the U.N. It took its place in the General Assembly and has also played a significant role in the Economic and Social Council. The U.N. Economic Commission for Africa was established in 1958 in ↗Addis Abäba, which was also the home of the ↗Organisation of African Unity.

In 1949, the U.N. assumed the task of determining the future status of the former Italian colonies of ↗Eritrea (↗United Nations Commissions for Eritrea) and ↗Somalia. In 1950 the U.N. called for negotiations between Italy and Ethiopia to delimit the boundaries of a prospective Somalian state. The negotiations were inconclusive and other factors were more significant in establishing of the new nation, the Somali Republic, in 1960.



Stamp commemorating Ethiopia's engagement during the "Organisation des Nations Unies au Congo" (ONUC); from *EthObs* 4, 1962: 240

In 1950, a contingent of Ethiopian troops known as the Qaññäw Battalion joined the armed forces of other members of the U.N. under the Unified Command in Korea. The Battalion fought in 253 battles in which not one of the Ethiopian troops was captured. Before the war ended in 1953, three Ethiopian battalions, totaling 5,000 men, had rotated in Korea, where they fought with distinction.

From 1960 to 1963, some 5,000 ↗Imperial Bodyguard personnel and a part of an ↗air force squadron served with the largest U.N. peacekeeping force that sought to support the central authorities in the newly independent Congo against secessionist and other threats. On 20 November 1963 Ethiopia withdrew its armed forces from the Congo in the face of a threat of a build-up of the Somali military. Later, in 1967, Ethiopia again assisted the U.N. by sending four air force F-86 fighter-bombers to Zaire to help dislodge a concentration of European mercenaries fighting there on behalf of secessionists in Katanga Province.

In 1954 *aṣe* ↗Ḫaylä Śəllase I paid his first visit to the U.N. headquarters in New York and, in 1963, was the first African leader to address the U.N. as one of the world's elder statesmen. Ḫaylä Śəllase was the only head of state to have addressed both the League of Nations and the U.N.

Ethiopia directly benefited from cooperative activities with U.N. organizations, especially the World Health Organization (WHO), U.N. Emergency Children's Relief Fund (UNICEF), the International Civil Aviation Organization and the Food and Agricultural Organization. Under a WHO agreement Ethiopians were sent abroad for education as physicians, nurses and other health specialists. The Gondär College of Public Health was established by U.N. agencies (UNICEF and WHO) and the United States Operations Mission in Ethiopia and became operational in October 1954. UNICEF provided technical and financial assistance to eliminate sources of health problems – especially acute and endemic ↗diseases that debilitated large segments of the population (cp ↗Famines). Under agreements with the U.N., technicians trained Ethiopians in the fields of telecommunications, forestry, soil analysis, veterinary service, agriculture and civil aviation. The Wälamo Agricultural Development Unit, financed by the World Bank, helped ease land congestion through its settlement scheme. In 1972 the U.N. Development Program conducted preliminary explorations in the Great Rift Valley and detected what appeared to be one of the world's largest potential sources of geothermal power.

Dedicated to international cooperation and principles of collective security, the cornerstones of Ethiopian foreign policy, the U.N. remains central to the survival and advancement of the idea, strongly endorsed by Ethiopia, that states exist as part of a universal international society.

United Nations Commission for Eritrea

As the ↗World War II Allied Powers (United States, Soviet Union, United Kingdom and France) proved unable to come to an agreement concerning the future status of Eritrea (cp. ↗Four Power Commission), the question was submitted to the international forum of the ↗United Nations (UN) in 1948.

A Commission – composed of delegations from Burma, Guatemala, Norway, Pakistan and South Africa – was created with the triple task of acquainting itself "more fully [with] the wishes and the best means of promoting the welfare of the inhabitants of Eritrea", as well as with "the interests of peace and security in East Africa", and taking into account Ethiopia's rights and claims. Starting in January 1950, this fact-finding Commission of Enquiry held 45 private and 40 public meetings at Lake Success; political parties, organizations and religious leaders were consulted, as well as the administrative authorities and representatives of the interested States (Ethiopia, ↗Egypt, the ↗United Kingdom as administering authority, ↗Italy and ↗France). Eritrea was passing through a period of political turmoil and the UN Commission's hearings – some 70 public and private meetings with party representatives and community leaders - and investigations were not able to shed much light on the Eritreans' political consciousness. Both the uneven system of enquiry and the clash of personalities among the delegates hampered the work of the Commission that toured Eritrea from 24 February to 5 April 1950.

The Economic Sub-Commission's report stated that Eritrea was economically unviable. Due to this, as well as to the socially fragmented pattern of the country, the high illiteracy rate, and the political divisions, the delegations from Burma, Norway, and South Africa declared Eritrea not ready for self-government and called for a closer association with Ethiopia; the South Africa and Burma members recommended the federation of Eritrea with Ethiopia, while the Norwegian delegate opted for annexation by Ethiopia. On the contrary, the Guatemala and Pakistan delegations dismissed the Economic Sub-Commission's report and, arguing that the majority of Eritreans declared themselves pro-independence, suggested a UN ten-year trusteeship to pave the way for Eritrea's future independence. After lengthy and difficult discussions in December 1950 the UN General Assembly adopted a resolution whereby Eritrea was officially federated with Ethiopia and became an autonomous unit under the sovereignty of the Ethiopian Crown (↗Imperial Federal Council); the administering power had to accept a UN presence during the transitional period, which was to leave the country no later than 15 September 1952.

United Printers

U.P. Plc. (**የተባበሩት፡ አሳታሚዎች፡ ኃላፊነቱ፡ የተመሰነ፡ የግል፡ ማኅበር**, *yätäbabbärut asattamiwočč, ḫalafinnätu yätämässänä yägəl maḫbär*, 'Private Association of the associated leading printers') is an Ethiopian printing company which was established in Addis Abäba in 1966 by five school friends born in the late 1930s from Italian fathers and Ethiopian or Eritrean mothers, i.e. Giovanni Honorati, Giuseppe Grimaldi, Renato Muciano, Giustino T. Vianelli and Carlo Ferraresi. Since 1966 it has been located in Däğğazmač Ğootee Street, Arada district.

They started working with one Heidelberg 46 offset printing machine, with mobile characters, paper cutting and stitching machines, furniture, etc. In 1974, when the ↗Revolution broke out, U.P. had already acquired four additional Heidelberg 46, two Heidelberg Cylinders, and three Heidelberg Offset machines. During the *Därg* regime U.P. almost stopped operating because all companies, except very small ones, were nationalized by the government. Over the years three shareholders left, but in 1994 a new one joined the Company. After the overthrow of the regime in 1991, it took several years for U.P. to restart and reorganize itself. U.P. has now Heidelberg large and medium size four and two colour machines, digital paper cutting and bookbinding machines, etc. They were the first in the private sector to introduce four-colour-printing and Dainippon-Screen Computer-to-Plate making machines, thus eliminating the film processing system. They were also the first to set-up a modern graphic design department.

Besides the dynamic private sector, U.P. is now serving various ↗United Nations organizations, embassies, governmental, inter-governmental and non-governmental organizations, insurance companies, banks, etc. At present, the two shareholders are Giovanni Honorati as the Managing Director and Adele Roveglia Honorati as the Manager in charge of Administration and Finance. Their daughter, who had graduated in International Relations and Diplomacy and studied for one year pre-press and printing in Germany, is in charge of the technical part of the Company.

A number of works relevant for ↗Ethiopian studies were published by U.P.

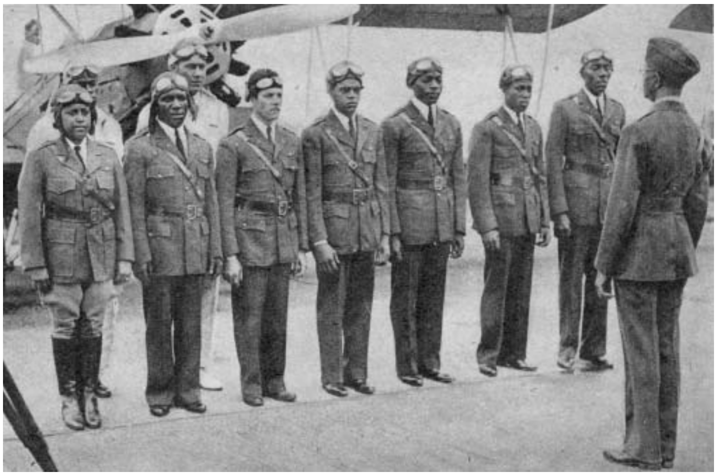
United States of America, relations with

Official contact between Ethiopia and the U.S. began in 1903 when Robert ↗Skinner, the U.S. consul general in Marseilles, was commissioned by President Theodore Roosevelt to lead a mission to the court of *aṣe* ↗Mənilək II. Mənilək and Skinner signed a commercial treaty between their governments, and trade and commerce were to continue to be the focus of diplomacy between the two nations until the mid-1930s.

Initially there was no permanent American representation in Addis Abäba. The first resident American consul general arrived in Addis Abäba at the end of 1906. Great Britain (↗United Kingdom of Great Britain and Northern Ireland) frequently handled U.S. affairs in Ethiopia, and as a result, diplomatic representatives of the U.S. paid only periodic visits to Ethiopia until the 1920s.



Afro-American volunteers for the Ethiopian airforce preparing for war, 1935; from Rikli 1935:75

In 1919 the first official delegation of Ethiopians, led by *däǧǧazmač* ↗Nadäw Abba Wällo, visited Washington, D.C., and met with President Woodrow Wilson. The U.S. Department of State paid minimal attention to Ethiopia until 1928, when in response to *ras* Täfäri Mäkʷännən's correspondence with Presidents Warren Harding and Calvin Coolidge requesting a resident mission, the U.S. State Department sent its consul from the embassy in Aden to Addis Abäba as minister resident. A large American delegation headed by H. Murray Jacoby, the personal representative of President Herbert Hoover, with the rank of special ambassador, attended the 1930 coronation of *ras* Täfäri as ↗Ḫaylä Śəllase I. In 1934 the Ethiopian Research Council was established at Howard University in Washington, D.C., by Ralph Bunche and other distinguished academics.

Before and during the ↗Italian war 1935–36, the U.S. took a neutral stance on the grounds of "non-interference in European conflicts" and because the matter had been given to the ↗League of Nations. In the summer of 1935, 20,000 African Americans demonstrated in New York in support of the Ethiopian cause, Ḫaylä Śəllase, however, was denied an entry visa to the U.S. so that he could not take his case directly to the American public. Shortly after Italian forces occupied Addis Abäba in 1936, the U.S., which did not recognize Rome's annexation of Ethiopia, shut down its legation. The U.S. also became an important focus of ↗resistance to the Italian invasion, with such organizations as the Ethiopian World Federation and the ↗*Voice of Ethiopia* started by ↗Mälaku Amanuᵓel Bäyyan. Following the liberation of Ethiopia and America's declaration of war on the Axis powers in 1941 (↗World War II, ↗War of Liberation), the two nations became allies.

The U.S. sent military assistance under a Lend Lease agreement and Emperor Ḫaylä Śəllase sought additional American aid to replace British influence in his country. In 1943 the U.S. opened a new legation along Ǝnṭoṭṭo Road and Ethiopia sent its first resident minister to Washington. In 1949, diplomatic relations were raised to the ambassadorial level. In 1945 President Franklin Roosevelt met with Ḫaylä Śəllase in Egypt. The Emperor sought American support for Ethiopian access to the Red Sea and the return of ↗Eritrea – aspirations which eventually were realized with help from the U.S. The U.S. Air Force subsequently flew an Ethiopian delegation to San Francisco to attend the founding conference of the ↗United Nations in 1945.

In the immediate post-World War II era, diplomatic relationships were shaped by the developing Cold War. Containment of the Soviet Union (↗Russia, relations with) and its allies became America's primary foreign policy after 1947. During the Korean conflict in 1950–53, Ethiopia sent an armed battalion, baptized ↗Qaññäw battalion. In 1951, the U.S. and Ethiopia signed a treaty of amity and economic relations and a Point Four technical assistance agreement the following year.

The most significant American private sector undertaking in Ethiopia was the establishment and managing of ↗Ethiopian Airlines by Transcontinental and Western Airlines (TWA) starting in 1945 and continuing through the mid-1970s. Later, also with American aid, Ethiopia became the first country in sub-Saharan Africa to have supersonic jet fighters.

In the 1950s U.S. diplomacy focused on acquiring military access and communications facilities in Ethiopia, keeping communist influence out of the country, and maintaining a government that reflected pro-Western positions in international and regional arenas. Ethiopia wanted American assistance in expanding and modernizing its military, help with modernization of the economy, and political support for the incorporation of Eritrea, control over the ↗Ogaden, and U.S. aid should there be any threats to its sovereignty.

In 1953 Ethiopia and the U.S. signed an agreement granting the U.S. access for 25 years to Qaññäw station. Under another treaty the U.S. agreed to annually supply Ethiopia with $5 million of military assistance and to provide training for three army divisions.

In 1954, Emperor Ḫaylä Śəllase made the first of his seven state visits to Washington. During these visits the Emperor would attempt to encourage more largesse on the part of the Americans by improving relations with the Eastern bloc and non-aligned nations (↗Non-Aligned movement). The U.S. frequently responded with increased assistance across the board, including support for the Ethiopian ↗air force.

In the mid-1950s food shortages (↗Famines) in Ethiopia were met with a significant food aid partnership between the two governments that continues to the present. During the ↗Coup d'état 1960 (s. EAE vol. 2, 1081–82), the U.S. facilitated the Emperor's return to Ethiopia, but U.S. policy thereafter focused on the need for reform and modernization. Also in 1960, the U.S. and Ethiopia signed a secret executive agreement to equip and train the 40,000 man Ethiopian army, and the U.S. reaffirmed its opposition to any activities threatening Ethiopia's territorial integrity.

The U.S. provided multi-million dollar economic assistance through the Point Four program and its successor organizations, the International Cooperation Agency and USAID, which emphasized increased agricultural production, the training of Ethiopians, and improving the health care system. American aid also played a significant role in the development of Ethiopian higher ↗education, especially Haile Selassie I University (↗Addis Ababa University) and ↗Alämayya Agricultural College. Additional aid came from the American Export-Import Bank, which granted credits for expanding airfields and facilities. In the military sphere, the U.S. maintained a large Military Assistance Advisory Group, a mapping mission and U.S. Navy medical research stations.

In 1962, the first group of ↗Peace Corps Volunteers came to Ethiopia. In 1963 following the creation of the ↗Organisation of African Unity (OAU) in Addis Abäba, Ethiopia became even more important to U.S. diplomacy. The U.S. hoped Ḫaylä Śəllase would serve as a moderating influence within the OAU and in contacts with African leaders. In October 1963, the Emperor visited President John F. Kennedy in Washington.

Fighting between Ethiopia and Somalia in 1964 had Cold War implications with the U.S. supporting Ethiopia and the Soviet Union aiding Somalia. By that time, the war in Vietnam was putting strains on U.S. military commitments elsewhere, and Washington informed the Ethiopian government that it should not anticipate long-term American military assistance.

In 1967 Ḫaylä Śəllase met with President Lyndon B. Johnson in Washington to press his demand for increased funding of military arms and training needs for the next five years to combat the increasing Soviet presence in the region and armed dissidents in Ethiopia. The U.S. could not make a five year commitment for military assistance, but it continued to maintain a high level of economic assistance.

The Emperor again traveled to Washington in 1969 to request President Richard Nixon to provide more military assistance, a position unacceptable to the U.S. The Emperor returned to Washington in 1970 to attend a White House celebration of the 25th anniversary of the United Nations and to continue pressing the U.S. for more aid. The outbreak of hostilities on the Ethiopian–Somali border in 1972 was the stimulus for the Emperor's final visit to Washington in May of 1973 requesting, unsuccesfully though, more military assistance. In August 1973, the U.S. immersed in the Vietnam war, announced plans to withdraw from Qaññäw station by the end of the 1974 fiscal year.

From the 1950s until the end of Ḫaylä Śəllase's reign, Ethiopia received about 80 percent of all U.S. military aid for Africa and one-fifth of American economic assistance. This financial support probably had extended the longevity of the Emperor's rule.

During the *Därg* (↗Provisional Military Administrative Council), the bilateral relationship cooled down. In July 1980, the U.S. Ambassador to Ethiopia was recalled at the request of the Ethiopian Government, and the U.S. Embassy in Ethiopia and the Ethiopian Embassy in the U.S. were headed by Chargés d'Affaires. With the downfall of the *Därg*, U.S.-Ethiopian relations improved. Legislative restrictions on assistance to Ethiopia other than humanitarian assistance were lifted. Diplomatic relations were upgraded to the ambassadorial level in 1992. Between 1991 and 2003, total U.S. Government assistance, including food aid, was US-$2.3 billion. In 2008, the U.S. Government provided US-$455 million in assistance and donated more than US-$ 550 million in food assistance to help the government cope with a severe drought.

Urbanization

Urbanization in Ethiopia

U. is the expansion of urban centres and life into rural areas. As a sociological concept it connects processes of ↗migration, industrialization and population growth. Ethiopia is one of the nations with the lowest urban population rate (16 %) in Africa. According to the criteria of the Central Statistical Authority of Ethiopia a town has a minimum of 2,000 inhabitants in concentrated settlement who live from non-rural activities (Bezunesh Tamru 2006:310).

As in the whole continent, the urban upsurge has been strong but tardy: in the 1950s urban population made up 5 % of the total population and 9 % in 1970. This recent growth has affected local and middle towns and regional capitals but it has especially given an advantage to the macrocephaleous national capital. Established in 1887, ↗Addis Abäba has now ca. three million inhabitants; its population has increased more than three times since the 1970 census and has doubled since the 1984 census. With 270,328 inhabitants, ↗Dərre Dawa is the second most populous city in Ethiopia.

A few historical towns, such as ↗Aksum, ↗Gondär and ↗Harär stagnated till the present urban upsurge. Apart from these three mentioned cities, rather clusters of ↗houses than towns were concentrated close to temporary military camps (↗*kätäma*) where emperors sheltered as "political nomads" (Rouaud) around sanctuaries and markets, erecting "wandering capitals" (Horvarth 1969). Since ca. 1855 a few cities have arisen either on the regional or the national scale: ↗Mäq̣älä in Təgray, ↗Däse in Wällo, ↗Däbrä Marqos (Monkorär) in Goǧǧam and ↗Ankobär in Šäwa, close to ↗Aləyyu Amba market (Gascon 2006).

The U. process in Ethiopia was hampered by the lack of agricultural surplus for the provision of food for city dwellers (Alula Abaté 1985). When ↗Mənilək II decided to settle his capital, to conquer the South, and to build the ↗railway, he gave a main impetus to urban growth. In the annexed provinces strongholds connected by "royal" ↗roads were constructed to shelter garrisons, markets and ↗*gəbbi*. In this way ↗Ǧirän, as the capital of the kingdom of ↗Ǧimma Abba Ǧiffaar grew, along with ↗Hirmaata, as its market.

Along the railway to Dərre Dawa, where the railway workshops were established and the production of the Harär region was traded, water places gave rise to small stations which were animated by the train service (Awaš station, ↗Adaama, ↗Afdäm, Erer).

During the Italian occupation (1936–41; ↗Africa Orientale Italiana) the population of towns increased vigorously because Italian civil servants, soldiers and traders arrived in numbers thanks to the completion of a road network with Addis Abäba as its centre (Guida; MesfGeogr). Colonial style buildings, in imitation of Eritrean towns (↗Asmära, ↗Däqämḥare, ↗Kärän) gave Addis Abäba, ↗Gondär, Däse, Harär and numerous middle-sized towns (↗Ambo, ↗Wäliso) an indisputable urban landscape (Gascon 1989).

After the liberation, along the roads mushrooming urban centres arose, attracting shop-keepers, civil servants and, with some reservation, poorer farmers (Bjerén 1985). In this way an urban network has been formed; it is strongly centralized, dominated by the capital and shaped by the road network. During the *Därg* period (↗Provisional Military Administrative Council) the capital gained importance despite the fact that the government banned rural out-migration. Towns also sheltered refugees from conflicts and famine.

The *Därg*-administration was too short, though to promote the capitals of the new regions.

The proclamation of the Federal Democratic Republic of Ethiopia in 1994 has induced the partition of the national territory into nine state-regions along with three federal towns endowed with a very large degree of autonomy (↗Administrative division). Neither the Eritrean secession nor the ethno-federal division have affected urban networks. Urban axes start along the railway to Dərre Dawa and Harär to the east, and along the roads to the Rift Valley and Sidamo in the south, to Wällägga and Ǧimma to the south-west, to Goǧǧam and Gondär to the north-west, and then to Däse (Wällo), to Mäq̣älä (Təgray) and Eritrea to the north. Even today towns are distributed within two circles: one day by car from Addis Abäba 300–500 km, the historical and regional capitals (Däse, Mäq̣älä, Gondär, Harär, Ǧimma) are found and are now above 100,000 inhabitants. Half a day (100–200 km) from Addis Abäba middle-sized towns (Ambo, Wäliso, Däbrä Bərhan) with up to 50,000 inhabitants are situated; they form a kind of urban belt around the capital and are attracted by its dynamism. Addis Abäba forms with Aqaqi, Qalliti, ↗Däbrä Zäyt, Moǧǧo and Adaama, a conurbation which very soon will reach 4 million inhabitants where people work in the service sector and the industry.

Thousands of migrants are now living in towns in spontaneous and precarious districts in search of employment and means of existence. In Addis Abäba, today, water streams and the air are seriously polluted and waste collection and water treatment are largely insufficient.

Population growth of the towns above 100,000 inhabitants in 2004 (MesfGeogr; CSO 1975, 1984; CSA, 1998, 2004):

	2004	1998*	1984*	1970*	1938
Mäq̣älä	161,738	96,938	61,583	27,895	12,000
Gondär	186,077	112,249	68,952	35,331	14,000
Däse	161,554	97,314	68,848	45,731	36,000
Baḥər Dar	159,793	96,140	54,800	22,192	500
Ǧimma	151,697	88,667	60,992	41,848	15,000
Däbrä Zäyt	125,128	73,372	51,143	27,627	1,500
Nazret	218,110	127,847	79,254	39,359	1,500
Awasa	119,623	69,169	36,169	?	?
Harär	118,000	76,378	62,320	45,033	45,000
Dərre Dawa	270,328	164,851	99,109	60,925	20,000
Addis Abäba	2,887,000	2,112,737	1,412,575	795,900	90,000

* dates of censuses

However, the rapid growth of towns which have been promoted as zone or region capitals (↗Awasa, ↗Arba Mənč̣, ↗Baḥər Dar, ↗Naqamtee, ↗Soddo, ↗Ǧiǧiga) has to be mentioned: they have been endowed with administrative equipment, schools, universities and shops. Because of its industry Dərre Dawa, a federal city since 1998, has outmatched Harär, a religious city which has become federal, too. Coffee plantations have given an impetus to the southern and south-western towns (Ǧimma, Awasa, Šašämänne, Naqamtee), as ↗*č̣at* cultivation for the expansion of Harär and Ǧiǧiga.

As a research topic in ↗Ethiopian Studies, U. had been long neglected. Since the 1980's, however, a considerable number of under-graduate and graduate theses from ↗Addis Ababa University have been devoted to this field of study (Getahun Benti 2007: 11; Crummey 1990: 109 n. 28).

Alain Gascon

Urbanization in Addis Abäba

↗Addis Abäba is a unique example of an African capital not characterized by the architectural influence of European colonial powers. It is the outcome of the design and efforts of ↗Mənilək II. Initially, Addis Abäba had the features of a military camp, the heart being the ↗*gəbbi*. In the years following its foundation the Emperor gathered all major institutional structures around him and ordered the cabinet of ministers to be built there. Seven main roads departed from it, dividing the urban territory into districts with different characters and functions.

The commercial district – known as Arada – developed later following the political and military crystallization of Mənilək's power. An urban land market was officially introduced in 1907 and landowners began receiving formally registered titles.

Between 1886 and 1889, the town occupied a large portion of territory, progressively filled by overlapping areas of infill construction, often erasing the urban fabric as well as pre-existing buildings. This gave the town 'the appearance of a gigantic camp', which, largely, it still has today (Gleichen 1898: 157).

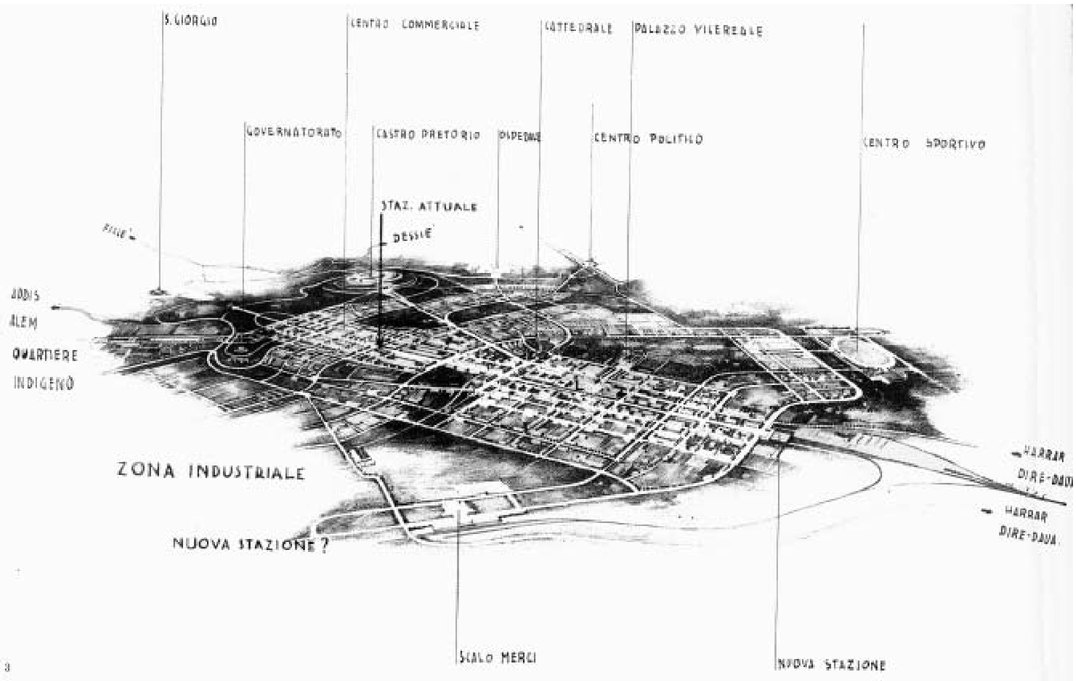
In addition to the first urban units formed by the Emperor's offices and the commercial area, the *rases*' residential buildings, surrounded by their respective *gəbbi* were the starting-point for the development of the urban fabric. Mənilək had granted land to the noblemen of his court for residential purposes (Gleichen 1898: 157) or, as claimed by malicious observers, in order to control his most powerful *rases*.

The establishment of ሰፈር *säfär* (i.e. 'camp, base', here areas individually allotted to lords) continued to represent the model according to which the different city zones were subdivided and named. In addition, the *säfär* were districts inhabited by people sharing the same profession or ethnic origin. The first popular districts were those around the *gəbbi*, which were reserved for the large number of workers employed at the governmental palaces and for the services connected with them.

Mənilək also allowed foreign legations to be established in the town giving the newborn empire international recognition. He favoured the arrival of foreign skilled manpower and traders. The buildings from this first stage reflect the presence of a large variety of foreign influences in a town that was largely cosmopolitan. In addition to the various Ethiopian peoples, Armenian, European, Indian and Indo-Muslim influences concurred to form an architectural syncretic complexity. The character and development pattern of Addis Abäba had already crystallized when Mənilək died in 1913, and, without many alterations, remained until the Italian invasion. The main traits of early Addis Abäba can be summarized as follows:

1. A "polycentric" structure made by a number of autonomous unities – the *säfär* allotted to noblemen – whose model of production and exchange reflects the countryside model, but constitutes a urban context.
2. A large territory, with great distances between the *säfär* and populated areas of low density in between.
3. A circular and elliptical shape of the buildings, gradually changing into quadrangular shape due to foreign influences. Progressively, traditional building materials – straw, stone and mainly the mixture of mud, dung and straw known in Amharic as ጭቃ (*čəqa)* – were substituted by modern materials such as bricks, cement and corrugated iron.
4. The presence of the *gəbbi* as an administrative and political core from which all roads departed.
5. The presence of a commercial heart at Arada, directly connected with the *gəbbi*.

During the first 20 years of the 1900s numerous public buildings such as the Bank of Abyssinia, the *ətege* Ṭaytu Hotel (cp. ↗Hotels), the Post Office, the ↗Mənilək II Secondary School, ↗hospitals and churches were built (cp. ↗Gännätä Ṣəge Giyorgis). Other relevant constructions were the British, Italian, French and Russian foreign legations, the first masonry buildings in the Emperor's *gəbbi* and beautiful residences belonging to high-rank personalities such as *näggadras* ↗Ḫaylä Giyorgis Wäldä Mikaᵓel, *afä nəguś* ↗Näsibu and *abunä* ↗Mattewos. The construction of the railroad (↗Railways) station, known as "La Gare", prolonged the commercial exchanges toward the southern urban areas, since then dominated by the great *gəbbi* of *ras* ↗Bərru Wäldä Gäbrəᵓel (currently Addis Ababa Museum). All the above-mentioned buildings are still extant (Batistoni – Chiari 2004).



Plan for Addis Abäba as suggested by Ignazio Guidi and Cesare Valle, approved by the viceroy Graziani, 1938; from Gresleri 1992: 38

The process of transferring the administrative functions outside the *gəbbi* started before the Italian occupation. Major governmental buildings were relocated along the city's northern axis between the *gəbbi* and ↗ Ǝnṭoṭṭo. The Arada area consolidated its character as a commercial centre and a residential area for rich traders, while the north-eastern part of the town continued to host foreign legations in broad wooded compounds.

The Italian military occupation of Addis Abäba engendered great colonial interest in the urban planning of the capital. In 1936 different master plans were presented, among them those by the Italian architects Gio Ponti, Giuseppe Vaccaro and Enrico del Debbio and by the French architect Le Corbusier. In 1938, the final master plan chosen was the project of Ignazio Guidi and Cesare Valle. The plan took into account functionalist aspects, but also the fascist regime's racist ideology, with the division between a "European city" (to the sides and the south of the former Churchill Road) and a "native city", around the current Merkato (↗ Addis Kätäma) area. Subsequently modified and officially approved in January 1939, the plan was only partially implemented due to the outbreak of World War II.

After the liberation, *aṣe* ↗ Ḫaylä Śəllase invited the renowned British architect Patrick ↗ Abercrombie to draft an Addis Abäba Master Plan. The plan was approved in 1954 but was never fully implemented. It opened the way, however, for the arrival of other town planners and foreign companies that from the mid-1950s onwards modernized the infrastructure and facilities of the capital (cf. *EthObs* 4, 5, 1960). After the 1960s the southern part in the direction of ↗ Däbrä Zäyt was promoted as the industrial area while the south eastern side, where the new international airport was built, was allotted for residential purposes.

Since the 2000s, the process of densification and vertical growth has increased dramatically, transforming the urban landscape and raising a conflict between modernization on one side and conservation of the historical patrimony and respect of the traditional way of life on the other. The town has thus responded to the need for modern architecture for business and trading centres, high demographic growth, and the need for low cost housing inside the town, and rapid development of the tertiary sector.

Milena Batistoni – Gian Paolo Chiari

Urbanization in Eritrea

Archaeological evidence shows that the existence of organised human settlements in pre-colonial Eritrea and surrounding regions dates back to the 8th cent. B.C. However, due to warfare, ecological and geopolitical factors, this network of settlements experienced decline and discontinuity, starting from the 7th cent. until the advent of colonialism and modern U.

Modern U. in Eritrea was initiated after the establishment of the Colonia ↗Eritrea (↗Colonialism) in 1890 and was determined by the establishment of planned settlements and the construction of vehicular infrastructure (↗Roads) effectively connecting the coastal areas with the highlands and the western lowlands.

Town planning started with the first partial plan for ↗Asmära in 1902, followed by plans for ↗Kärän, ↗Aq̱ordät, ↗ᶜAddi Q̱äyyəḥ and ↗Mändäfära (ᶜAddi Wägri) in 1903–04. In 1908, with the subdivision of the colony into eight regions and the establishment of new regional administrative seats, various plans were drafted for Kärän, ↗Massawa, ↗Näfasit, Aq̱ordät, Mändäfära, ᶜAddi Q̱äyyəḥ and Sägänäyti between 1914 and 1918. Additional plans were prepared in 1922 for Massawa after a major earthquake, and for Agordat in 1929 with the arrival of the ↗railway. Between 1908 and 1916 various plans were prepared for Asmära, all of which were based on racial segregation resulting in land expropriation and destitution of Eritrean inhabitants.

U. in Eritrea initiated a process of transition to modernity and was marked by a deep societal transformation. Nevertheless, with limited capital investment, urban development remained modest until the early 1930s, as confirmed also by demographic indicators of 1929 showing population figures for towns like Aq̱ordät, Mändäfära, ᶜAddi Q̱äyyəḥ and Kärän ranging between 3,000 to a maximum of 5,000. Massawa's population in the same year was about 12,000 (Zagnoni 1993: 163), while Asmära's primacy was already evident with a total of over 23,000 residents in 1931 (Barrera 2008: 14).

In the 1930s Asmära became the base for Mussolini's invasion of Ethiopia (↗Italian war 1935–36). With huge capital investment and the influx of over 50,000 soldiers and civilians, the city experienced a rapid transformation through a process of simultaneous housing and infrastructure works on an unprecedented scale. Development in this period was guided mainly by Vittorio Cafiero's plan of 1938, continuing the established patterns of racial segregation.

The principal legacy of this period is the dichotomy between a city centre containing a unique ensemble of modernist buildings, high-quality residences, elegant cinemas and other amenities, and the extreme deprivation and unplanned character of the indigenous areas beyond the city's formal boundaries.

From 1941 to 1952, during the ↗British Military Administration, urban growth in Eritrea came to a standstill, followed by years of sporadic development during the period of Ethiopian occupation from 1962 to 1991. In Asmära, there was minor expansion in the May Tämänay and May Čəḥot areas. The period of war from 1974 to 1991 and the nationalization policies by the *Därg* (↗Provisional Military Administrative Council) that affected property and land resulted in congestion and the deterioration of buildings and infrastructure as well as major destruction in towns such as ↗Naq̱fa and Massawa.

Bird's-eye view of urban Asmära, 1960s; from the collection of the IES (A2-918)

After independence, the situation of Eritrea's towns faced various challenges, including reconstruction of war damaged buildings, the rehabilitation of a deteriorated infrastructure, the need to accommodate future growth and, particularly in Asmära, the issue of the conservation of its unique architectural heritage.

Properties previously nationalized by the *Därg* were returned to legitimate owners. A Land Law (Proclamation 58/94) declared all land to be the property of the state, while Proclamation 86/1996 divided the country into six regions or *zobas* (↗Administrative division); Legal Notice 31/1997 established Procedures for the Allocation and Administration of Land while Proclamation 95/1997 established the Cadastre Office. Where title registration had been voluntary during Italian colonialism and nonexistent under the *Därg*, it became mandatory after independence.

The resulting new institutional and legal framework enabled municipal authorities to define new areas for urban growth. In a relatively brief period major urban plans were prepared for all secondary towns, which have since been significantly expanding. Contemporary urban indicators show that in 2008, Eritrea's urban population growth stands at 5.3 %, with Asmära retaining its primacy as it contains over 50 % of the country's urban population.

13 neighbouring villages have been absorbed into Asmära's metropolitan administration since independence. In the absence of a plan covering these new areas, new low-density sites were developed on the basis of local partial plans. By 2005, Asmära had sprawled, causing it to double in size since 1991. Only since then has a strategic plan been prepared in an attempt to comprehensively and systematically address urban development issues.

Since 1997 measures have been taken to protect Asmära's unique ↗architecture, including the cataloguing of approximately 400 significant buildings within a Historic Perimeter, which has been proposed and accepted for registration into UNESCO's Tentative List, in preparation for a formal application onto the World Heritage List.

Gabriel Tzeggai

Urbino, Giusto da

U. (birth name Jacopo Curtopassi; b. 30 August 1814, Matraia, Lucca, d. 22 November, 1856, Khartoum) was an Italian missionary and scholar. In 1831 he joined the ↗Capuchins and in 1845 moved to Rome, where he studied the Arabic and French languages. Shortly after the ↗Sacra Congregatio de Propaganda Fide chose him to accompany Guglielmo ↗Massaja on his mission to Ethiopia. He lived for a few months in ʿAgamä and then settled in Bägemdər. He was determined to remain in the northern highlands and to deepen his profound knowledge of traditional "Abyssinian" culture, also refusing Massaja's call to join the mission to the Galla (↗Oromo; MasMis^2 vol. 2, 103) as well as elevation to the rank of bishop. In May 1855, he was expelled by *abunä* ↗Sälama III and died in Khartoum whilst trying to reach Cairo.

During his stay in Ethiopia U. acquired a remarkable competence in ↗Amharic, ↗Oromiffa and especially in ↗Gəʿəz, and worked extensively on Ethiopic lexicography and grammar. His remarkable handwritten Latin- and French-Gəʿəz dictionaries (*Propositio grammaticae Linguae Aethiopicae scripta in Aethiopia*, and *Dictionnaire Éthiopique – français – amharique*, only the preface) and grammar, both compiled in 1850–54, are at present bound in one ms. in Rome (Biblioteca Nazionale Vittorio Emanuele, ms. Orientale 134, fols. 1–147; the ms. belonged to ↗Sapeto's mss. collection, cp. ZanBibl 86, no. 164, § 2). Still in Rome, a Gəʿəz–Latin dictionary compiled by U. in 1849 is preserved in the Biblioteca della Società Geografica Italiana (cp. ZanBibl 90, no. 167, § 8). Ms. Paris BN d'Abbadie 217, also perused by Antoine d'↗Abbadie for the compilation of his *Vocabulaire de la langue amhariñña*, contains a third handwritten dictionary probably depending upon ms. Or. 134 of Rome (the dictionaries in mss. Or. 134 and d'Abbadie were published by Schneider 1952). Remarkable notes on Gəʿəz poetry and prosody from another grammar in ms. BN d'Abbadie 216 have been published by CRAbb 236–46 (cp. also Grébaut 1934b, 1935).

In 1852 U. translated the French treatise by abbot François Bourgade *Les soirées de Carthage ou dialogues entre un prêtre catholique, un muphti et un cadi* (Paris 1847) into Gəʿəz (**ተዋቅሶ፡ በሃይማኖት**, *Täwaqəso bähaymanot*, 'Disputation on the faith', unpublished ms. VatLib Aethiop. 165), and subsequently into Amharic as *Mäṣḥafä täkahədo bähaymanot*, 'Book of disputation on the faith' (in Ethiopia also known as *Zämufti*, '[Book] of the mufti', ed. and tr. by Mittwoch 1934 on the basis of a manuscript then owned by *aläqa* ↗Tayyä Gäbrä Maryam). Moreover, the ↗Biblioteca Apostolica Vaticana preserves a manuscript that belonged to U. (Borg. Aethiop. 8, 19th cent.).

U. is especially associated with the discussion concerning the authorship of the rationalistic treatises of Zärʾa Yaʿəqob and his disciple Wäldä Ḫəywät, the ↗*Ḥatäta Zärʾa Yaʿəqob* (cp. Littmann 1904, 1907, 1916). ↗Conti Rossini (1920) and ↗Mittwoch (1933, 1934) put forward arguments, based on philology, linguistics and contents, and were able to identify U. as the real author of these treatises (a hypothesis on which also ↗Turaev and ↗Littmann, first editors of the treatises, agreed, cp. Mittwoch 1934: 3, n. 1). Conti Rossini argued that U. could be the real author on the basis of solid evidence: 1) the name *Yaʿəqob* would hint at U.'s baptismal name; 2) a reference by *abba* ↗Täklä Haymanot (cp. Conti Rossini 1916: 497) attributing to U. a treatise called *Wärqe*, i.e. an alternative title of the *Ḥatäta* (or of its purported author Zärʾa Yaʿəqob, cp. Mittwoch 1934: 2, n. 4, but also Ricci 1964: 241); 3) the numerous parallelisms between the *Ḥatäta* and *Les Soirées de Carthage*, a work that U. knew well having translated it into Gəʿəz and Amharic; 4) moreover, additional evidence was provided by Mittwoch (1934: 6), who remarked the exact correspondence of the birthday of U. and Zärʾa Yaʿəqob himself. On the contrary, ↗Kračkowskij (1924), Sumner (1976) and above all Ethiopian scholars (cp. Ricci 1964) have argued for an Ethiopian origin of the work.

Ute Pietruschka – Alessandro Bausi

Urreta, Luis de

U. (fl. late 16th-early 17th cent.) was a Spanish Dominican writer. Little is known about his early life, although his family name seems to indicate Basque origins. He became an important figure in the background of the Jesuit mission to Ethiopia (↗Jesuits).

U. appears first in Valencia, where towards the last decades of the 16th cent. he met an Ethiopian named "João Baltasar" from ↗Fäṭägar. The two had long dialogues through which U. came to know of stories purporting a Dominican presence in Ethiopia (cp. ↗Dominicans). Inspired by these meetings, he produced two, largely fictitious, accounts of the history of the Dominican order in Ethiopia. Baltasar, who towards the end of the 1570s was in Italy, was also the main informant in an unpublished "Relatione" on Ethiopia written by the Venetian patrician Pietro Duodo (Venice, Archivio di Stato, Archivio privato Gradenigo, Rio Marin, b. 124, fasc. 1; other copies in: Milan, Biblioteca Ambrosiana, r. 101 [16th cent.], cc. 139–176; Vatican Library, Vat. Urb. Lat. 837 [a. 1613], cc. 4–148v; Venice, Biblioteca Marciana, cc. 1–43, cod. It vi 23v 332 = 6158; s. Fiaccadori 2009: 47f.).

Before the century was over, U. also participated in a polemic with the Jesuits by harshly criticicizing Juan de Mariana's masterwork, the *Historiae de rebus Hispaniae* (Mariana 1964: 124). This occurred in a moment of strong rivalry between the Jesuit and Dominican orders (cf. Cereceda 1945: 369–417).

U.'s treatises were published in Valencia in 1610 and 1611, and enjoyed the support of important figures, such as the local archbishop Juan de Ribera (s. Urreta 1611: fol. 2). They were largely fictitious descriptions of the geography, history and religion of the Christian land. There, U. also went back to mediaeval traditions on Dominican contacts with Ethiopia and provided a sympathetic and benevolent picture of Ethiopian Christianity (e.g., Urreta 1610: 421ff.). According to U. the Ethiopians were true Catholic Christians and had always defended the decrees of the Council of ↗Chalcedon (Urreta 1610: 424), opposing herewith what the Jesuits and the Holy See were maintaining that time. U.'s treatises might have reached Rome and Ethiopia around 1615 and henceforth, in order to restrain the negative effects on public opinion, the Jesuits began to produce counter-narratives. The most important of these were Nicolão ↗Godinho's *De Abassinorum rebus* and Pedro ↗Páez's *História da Ethiópia* (cf. BecRASO II, 3f., 6–11).

Andreu Martínez d'Alòs-Moner

Uspenskij, Porfirij

U. (lay name Konstantin Aleksandrovič U.; b. 1804, Kostroma, d. 19 April 1885, Moscow) was a Russian ecclesiastic, Orientalist and prolific writer.

U. attended Kostroma Theological Seminary and then St. Petersburg Theological Academy. After graduation, he took monastic vows and received the monastic name Porfirij.

After he had been appointed head of the Russian Embassy church in Vienna, U. made his first voyage for scholarly purposes along the coast of Dalmatia. In 1848 he was dispatched to the Near East (esp. Palestine, Syria) to investigate the needs of local Orthodox Churches. In 1851–53 U. was the head of the Russian Orthodox Mission in ↗Jerusalem, where he made close acquaintance with Ethiopian monks. In 1858 U.

was dispatched to the Near East again to continue his investigation of the religious situation; in his memoirs (1894–1902) he called himself "spy of the Orient". He returned to ↗Russia in 1861, bringing a rich collection of old books and manuscripts in Greek, Syriac, Arabic, Ethiopic, Georgian and other Oriental languages. He donated the Syriac and Ethiopic ↗manuscripts to the Imperial Public Library (today National Library) in St. Petersburg (s. Kokovtsov 1885, 1889).

In 1865 U. was ordained Bishop of Chigirin and made vicar of the Kiev diocese. There, he penned a number of articles devoted to the history and culture of the Christian orient and Ethiopian ↗Christianity, still the object of his constant interest, publishing them in the *Trudy Kievskoj duhovnoj akademii* ('Transactions of the Kiev Theological Academy').

U. always wanted to visit Ethiopia, but his responsibilities and the political situation in Ethiopia prevented him from doing so. In the context of Russia's victories over the Ottoman Empire in the first half of the 19th-cent. (and despite a setback in the Crimean war 1853–56), U. developed a vision of the unification of Oriental non-Chalcedon churches under the leadership of the Russian Orthodox Church. Also he cherished a dream of a religious alliance between the Russian and Ethiopian Orthodox Churches, and of a political union between the respective states. He promoted these ideas in his numerous writings.

U.'s book *Christian Orient. Abyssinia. Ecclesiastical and Political State of Abyssinia since Antiquity to the Present* (1866) was appreciated in Russia not so much in ecclesiastical as in military circles. In the same year U. published two other works in the *Transactions*: *The Russian Participation in Abyssinia's Destiny,* and *Successes and Failures of German Missionaries in Interior Africa*, and in 1869 his important work devoted to Ethiopian liturgy.

In 1878 U. was appointed a member of the Synodal Office in Moscow. There he conceived and co-founded (1882) the Imperial Orthodox Palestinian Society, the work to which he devoted most of his time; he no longer dealt with Ethiopian topics. Neither the Russian government nor the official Church considered U.'s ideas concerning Ethiopia realistic; however, his activities did influence the development of Russian-Ethiopian relations, and increased Russian interest in Ethiopia during the 1880s–90s.

In 1869 U. was awarded a Doctorate Degree in Greek philosophy from Moscow University. He was also a member of the Historical Society of Odessa and an honorary member of Novorossijsk University.

Sevir Chernetsov

ᶜUṯmān b. Abī Bakr Diqna

ᶜU. (Arab.: عثمان بن ابى بكر دقنة, also ᶜUṯmān Dinqa; b. ca. 1840, Sawakin, d. 1926) was a descendent of a 16th-cent. Kurdish Ottoman soldier and a local Beǧa woman. His family had long been engaged in ↗Red Sea trade. Exposed by the British as a slaver (↗Slavery), he was arrested in 1877 and spent time in an Egyptian prison. His resentment led him to follow the call of the ↗Mahdists whose ranks he joined in 1883.

Appointed as an ↗*amīr* and commander of the Red Sea area, ᶜU. led the Mahdīya forces in their conflict with the Egyptians and the British and scored some victories between 1883 and 1885. His successes contributed to the Mahdīya's momentum and strengthened the siege of the Egyptian garrisons in eastern Sudan, which was the background to the ↗Hewett Treaty and the ensuing Ethiopian-Mahdist conflict. Once *aṣe* Yoḥannəs IV undertook to save the besieged Egyptians, ᶜU.'s relevance to Ethiopia's history became more direct. His main concern was capturing ↗Kassala, the headquarters of the ↗Islamic brotherhood of the Mirġanīya, which spread Islam among the tribes of the Kassala–Massawa area. From his centre near ↗Sawākin, he sent envoys to spread Mahdist messianic militancy among tribes like the ↗Ḥabab and ↗ᶜAd Təmaryam, which had also already come under the indirect government of *ras* ↗Alula Ǝngəda in the ↗Märäb Məllaš.

As Alula was tasked by Yoḥannəs to save the Egyptians in Kassala, in mid-1885 a conflict began between Alula and ᶜU. The Mahdist *amir* reached the Kassala area more quickly and his men captured the town in June. Alula was more successful in building his power around ↗Kärän and asserting his authority over the disputed local ethnic groups. Though the *ḫalīfa* instructed ᶜU. to "leave the Ethiopians alone" and return to fight the British in Sawākin area, his letter came too late. On 22 September 1885, the armies of Alula and ᶜU. clashed at ↗Kufit, midway between Kärän and Kassala. The Mahdist force was defeated, sustained over five thousand casualties, and ᶜU. barely escaped. Alula, worried about simultaneous Italian encroachment from Massawa, had to return eastward and ᶜU. was able to rebuild his force in Kassala. However, he lost his influence over the Muslims of the Kärän–Massawa area, who soon came under the Italians, the real victors of Kufit. Alula's attempt in November–December 1886 to march on Kassala and capture it from ᶜU. failed, and the frustrated *Ras* destroyed many ↗Nara and ↗Kunama tribesmen before returning to ambush the Italians in ↗Dogᶜali. ᶜU. remained an *amīr* of the Mahdīya but, after Kufit, lost much of his prestige. Following the British conquest of the Mahdist state, he fled back to the Red Sea hills where he was captured in 1900. He died in prison.

ᶜU.'s clashes with the British drew much attention in Europe of the time and his first biography was published in the year he died. His significance in Ethiopian–Eritrean history lay mostly in the fact that he failed in asserting Mahdist influence among western Eritrea's Muslims, who in the long run remained oriented toward Kassala, and as a Mirġanīya centre of popular Islam were connected to Egypt.

ᶜUṯmān b. Badlāy

ᶜU. (عثمان بن بدلاى, r. 1567–69) was an Ethiopian slave of ↗Nūr b. Muǧāhid who during his service attained a high rank, which enabled him to take power in ↗Harär after Nūr's death. His rule however, did not follow the strict Islamic way of his master. He allowed alcoholic beverages and other forbidden things. He did not use revenues for the purposes intended, and appropriated for himself the money (1,500 pieces, corresponding to 75 pieces of pure gold) which Nūr b. Muǧāhid had deposited with the *qāḍī* Ǧamāladdīn for the orphans.

The religious party in Harär, which had supported ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ) and Nūr b. Muǧāhid, could not tolerate ᶜU.'s conduct. An opposition formed itself under the leadership of ᶜU.'s treasurer (*qufl gota*) *garād* ↗Ǧibrīl, a brother-in-law of Nūr b. Muǧāhid. The opposition grew stronger when ᶜU. concluded a peace treaty with the pagan Oromo, an event which had never happened before. The treaty allowed the Oromo to hold market in the Harari territory on condition that they paid tax and bought their clothes from Harär. Another provision of the treaty stated that the Harari should send back every Oromo who came over to the Muslim side.

When ᶜU. appointed Ǧibrīl to inspect the Oromo market in 1569, the latter took his chance. Instead of returning to Harär, on 17 April Ǧibrīl went to ↗Awsa and launched anti-ᶜU. propaganda. The situation escalated when ᶜU., in keeping with the treaty, forbade Ǧibrīl to grant asylum to an Oromo woman who had converted to Islam.

ᶜU. sent the *sīm garād* Bäläw Muḥammad against Ǧibrīl, while ᶜU. himself turned against Awsa. Owing to the support of the whole Muslim population, the rebels defeated Bäläw's army on 21 May 1569.

According to the *Storia dei re* published by Cerulli (1931), Ǧibrīl died in battle, and the leadership was taken over by ↗Ṭalḥa b. ᶜAbbās, who subsequently defeated *gärad* Muḥammad Hargāy, whom ᶜU. had left in Harär to protect the town. When on 16 June 1569 Ṭalḥa was proclaimed ruler of Harär, ᶜU. gave up fighting.

According to the extremely legendary *History of Nūr b. Muǧāhid* (Getatchew Haile – Wagner 1989), Ǧibrīl did not die in battle. After his victory, ᶜU. resigned, and Ǧibrīl (not Ṭalḥa) became the ruler of Harär, later killing ᶜU. and Bäläw Muḥammad.

ᶜU.'s descendants came back to rule in 1571 with his son ↗Naṣīr b. ᶜUṯmān b. Badlāy and his grandson, ↗Muḥammad b. Naṣīr b. ᶜUṯmān.

Ewald Wagner

ᶜUṯmān b. Sulaymān

ᶜU. (Arab. عثمان بن سليمان, b. 1475–90, d. 25 November 1531) was a great lord from the ruling ↗Walašmaᶜ dynasty of ↗ᶜAdal who during his lifetime out of practical considerations twice changed his religio-politicial alliance.

Initially, after falling into Christian captivity during the rule of *sulṭān* ↗Muḥammad b. Aẓharaddīn (1488–1518; BassHist 34 [text]), probably late in that period, ᶜU. converted to Christianity. In his new Christian sphere he eventually rose to the position of governor of ↗Ifat and by the late 1520s had even become one of the regional lords most trusted and relied upon by *aṣe* ↗Ləbnä Dəngəl.

However, as the ↗*ǧihād* launched against the Christian Kingdom by ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ) in 1529 initially went from success to success, ᶜU., like quite a few others, gradually came to regard the Christian cause as a lost one. Thus in mid-1531, he returned to the Muslim side and faith, bringing with him a valuable body of troops loyal to him personally. Grañ received the high-born returnee with all honours. Nonetheless ᶜU. subsequently felt it necessary to demonstrate the sincerity of his religious and political reconversion through vigorous participation in the *ǧihād*. He thus took part in the first, spontaneous Muslim assault on ↗Amba Gəšän in November 1531. The Christian side however succeeded in repelling this attack and in the process killed many *muǧāhidūn*, with ᶜU. figuring prominently among them. He thus met his death only about three months after his return to the Muslim side.

ᶜU. in the ↗*Futūḥ al-Ḥabaša* is regularly referred to with the title of اورعي/*ʾwrᶜy*, conventionally vocalized as *awraᶜī* (e.g. TrIslam). This vocalization however, even if perhaps likely, is ultimately only conjectural. The *Futūḥ*'s explanation of *ʾwrᶜy* as the male counterpart to female بعتيه/*bᶜtyh* (BassHist 163 [text]), the title worn by ↗Bati Dəl Wämbära, shows that it designated a rank of considerable distinction in the ᶜAdalite sphere. That it was held by ᶜU. comes as little surprise though given that the *Futūḥ*, at one instance only (BassHist 45 [text]), gives his name in full as ᶜU. b. Muḥammad b. Badlāy b. Saᶜdaddīn. ᶜU. was thus a direct descendant of the famous ᶜAdalite *sulṭān* ↗Saᶜdaddīn Abū al-Barakāt Muḥammad. ᶜU.'s grandfather Muḥammad had still been the ruling *sulṭān* (1445–71). His father Sulaymān however did not hold this office anymore, but had to cede it to his two brothers Ibrāhīm (1471–72) and Šamsaddīn (1472–87; BassHist xvii [text] = table IV, and Wagner 1991: 386).

On several occasions the ↗*Futūḥ* also designates ᶜU. as ᶜUṯmān b. Dār ᶜAlī (BassHist 34, 43, 150 [text]). Initially enigmatic Dār ᶜAlī (Arab. 'The house of ᶜAlī') of this appellation is probably best understood not as a by-name of ᶜU.'s father Sulaymān, since this would be semantically problematic, but as the result of an erroneous interpretation of an underlying ↗ᶜAfar term *Adᶜáli*, the name of an important ᶜAfar tribe in ᶜAdal (MorDicAfar 31, 35). The ᶜAfar ethnonym *Adᶜáli* was, however, likely understood by the *Futūḥ*'s author along Təgray linguistic lines as (ᶜ)*Ad ᶜAli*, 'The house/tribe of ᶜAlī', and he translated accordingly. Yet Arabic "ᶜUṯmān b. Dār ᶜAlī' makes little sense. The original phrase of which is a reflex likely only meant to say "ᶜUṯmān from the (ᶜAfar) Adᶜáli tribe'.

Michael Kleiner

ᶜUṯmān Ṣāliḥ Sabī

ᶜU. (also Sabbe; Arab.: عثمان صالح سبي; Tgn.: **ዑስማን፡ ሳሊሕ፡ ሳበ**; b. 1934, Ḥərgigo, Sämhar, d. 4 April 1987, Cairo) was an Eritrean educator, writer, and politician. From the early 1960s till his death he was one of the most influential leaders of the Eritrean liberation movement.

ᶜU. was the fifth child of a family allegedly of ↗Sāho origin, which had intermarried with local families after having settled in Ḥərgigo. ᶜU.'s father was an ↗*askari* in the Italian forces and later worked as a sailor and trader. ᶜU. first attended a Qurʾānic School but in 1944 changed to Ḥərgigo Charity School, and continued his secular education at the Mädḫane ᶜAläm School in Addis Abäba. In 1954 he joined Ḥərgigo School as a teacher and one year later became its director. In 1956 he acquired the General Certificate of Education from the University of London and in 1959 a B.A. in History and Political Science.

ᶜU. was an ardent nationalist who supported Eritrean independence and joined the ↗Muslim League. ᶜU. strongly opposed the introduction of the Ethiopian school curriculum with Amharic replacing Arabic as medium of instruction. He created the clandestine group *al-urwā al-wuṯqa* ('the firm bond'), allegedly for the betterment of Eritrean and Ethiopian Muslims but in reality for raising funds to send students for education in Arabic to ↗Egypt. The first group went in May 1958, among them Muḥammad ᶜAlī ᶜUmaro, one of the later founders of the ↗Eritrean People's Liberation Front (EPLF).

In 1959 ᶜU. decided to travel abroad to raise funds for his association but also to contact other Eritrean nationalists. Towards the beginning of 1960 he met ↗Idrīs Muḥammad Ādam, chairman of the ↗Eritrean Liberation Front (ELF) in Jeddah, who persuaded him to join. ᶜU., who strongly identified with the Muslim community of Sämhar, brought many fellow Sämharites into the ELF which was until then dominated by ↗Təgre from western and northern Eritrea and by Sāho.

From Jeddah, Idrīs and ᶜU. travelled in October 1960 to ↗Somalia. The Somalian government allowed them to open an office under the name Eritrean-Somali Friendship Society and provided them with diplomatic passports. ᶜU. ran the office in Somalia for one year but frequently travelled around with Idrīs to make the Eritrean case internationally known and to solicit support. In June 1962 a High Council composed of Idrīs (Chairman), Idrīs ᶜUtmān Gälawdewos (Military) and ᶜU. (Foreign Relations) replaced the ineffective Executive Committee of the ELF. With conservative Arab governments ᶜU. stressed the Arab-Muslim identity of Eritrea and the Eritrean Revolution, with Arab progressive governments, the Palestine Liberation Organization, Cuba and ↗China he underlined its anti-imperialist aspect. What his opponents derided as "commercial diplomacy" firmly established the international presence of the ELF, secured professional military training for hundreds of Eritrean fighters, including in China, and solicited huge amounts of financial aid, arms and military equipment.

With the growth of the ELF its unity was threatened by mounting ethnic and regional rivalries over positions and supplies as well as conflicts between conservative nationalists and younger Bāᶜṯists and Communists over ideological orientation and military strategy. ᶜU. and some of his followers split from the ELF and established in November 1969 in Amman a General Secretariat of the ELF. ᶜU. then helped Christian and Muslim dissidents from the ELF to form in 1970 in Sudoḥa ᶜEla the Eritrean Liberation Front-People's Liberation Forces (ELF-PLF), while in the Highlands a dissident group of mostly Christian fighters led by Isayas Afäwärqi called ELF-PLF II took shape. Dissidents from Western Eritrea, many of them Bāᶜṯist-oriented, formed a third group, the Eritrean Liberation Forces popularly called Obel.

When in early 1972 the ELF initiated a war of annihilation against the dissidents, ᶜU. used the difficult situation to force the three groups to sign in February 1972 in Beirut an agreement to co-operate and to operate abroad as the ELF-PLF with ᶜU. running his former General Secretariat as its Foreign Office.

Gradually Marxist forces within the three factions took power and marginalized the more conservative elements and finally united them in 1974 into the Eritrean People's Liberation Front (EPLF), which operated within Eritrea totally independent from ᶜU.'s Foreign Office.

By 1975 ᶜU. had realized that his strategy to contain the ascendancy of the Marxists in the ELF and EPLF had failed. He attempted to merge the ELF and ELF-PLF in the hope that this would regain him a dominant influence in the Eritrean liberation struggle and contain the Marxists of both ELF and ELF-PLF/EPLF. The EPLF rejected the merger agreement and separated in March 1976 from the ELF-PLF Foreign Office and ᶜU.'s remaining supporters within the EPLF left the Eritrean field.

In March 1977 ᶜU. formally re-established the ELF-PLF as the third liberation front, depending on funds from conservative Arab countries against the Marxist tendencies. The EPLF, which at its first Congress held in early 1977 changed into the Eritrean Peoples Liberation Front (EPLF), categorically refused to recognize the ELF-PLF and portrayed ᶜU. as an arch-reactionary and enemy of the Eritrean Revolution. The ELF maintained an uneasy relationship with the ELF-PLF and allowed it in late 1977 to control parts of western Eritrea including ↗Aqordät but in a Civil War in October 1978 drove it out of Eritrea into Sudan. In 1979, the Baathist elements in the ELF-PLF split and established the ELF-PLF-Revolutionary Committee (ELF-PLF-RC).

In December 1982 ᶜU. signed a unity agreement with the conservative nationalists of the "ELF-ᶜAbdalla Idrīs" and the ELF-PLF-RC to establish an "ELF–United Organisation" (ELF–UO) but it took till January 1985 to officially establish it with ᶜU. as Chairman. However, due to the persisting personal, regional, tribal and ideological differences within the ELF–UO, ᶜU. utterly failed to establish full control over it, and by autumn 1986 it had split again into four organizations. Only shortly afterwards he died in hospital in Cairo undergoing a routine operation.

ᶜU. wrote many articles and several books on ↗Eritrea and the ↗Revolution and by the early 1970s he was "the face" of the Eritrean liberation struggle abroad and even detractors jokingly referred to him as "Mr. Eritrea". At the same time he was a highly controversial figure, accused by Eritrean radicals of being power-hungry and opportunistic, an arch-reactionary and enemy of the Eritrean Revolution. In the national historiography of the victorious EPLF ruling Eritrea since May 1991 ᶜU. is barely mentioned. It was only after the emergence of a wider opposition to EPLF-rule after 2001 that the Eritrean ↗diaspora began to rediscover the nationalist ᶜU. However, a balanced in-depth assessment of his outstanding contribution to the Eritrean liberation struggle has yet to be made.

V

Varghese, Paul

V. (b. 9 August 1922, Tripunithura, Kerala, d. 24 November 1996, Delhi; as a metropolitan: Paulos[e] Mar Gregorios) was an Indian teacher in Ethiopia and advisor to ↗Ḫaylä Śəllase I; he was later metropolitan of Delhi Diocese of the Malankara Orthodox Church of ↗India.

In 1947, V. became a school teacher in Addis Abäba (until 1950). During an Amharic theatre play he directed, he attracted the attention of Ḫaylä Śəllase, who reportedly was impressed by his Amharic. V. was then appointed teacher of Amharic by the Emperor and authored an Amharic grammar.

After this first stay in Ethiopia, V. went to America, receiving his B.A. from Goshen College in Indiana and two Masters from Princeton and Yale, followed by studies in Oxford and Münster, finally writing a Ph.D. thesis on Mar Gregorios of Nyssa at Serampore University, Calcutta. V. worked as a lecturer in India and became active in the Christian Student Movement.

During his 1956 state visit to India, Ḫaylä Śəllase requested the Nehru government and the Orthodox Church to send V. back to Ethiopia as his private secretary and advisor. The Emperor found in him an integer and well-versed personality with no personal interest in politics. Because of this neutrality, V. was involved in a number of delicate court matters, as his autobiography (1997) relates. V. helped in developing the educational system in Ethiopia, served as a liaison officer for relations with India and lectured at the newly founded ↗Addis Ababa University. V. administered the Ḫaylä Śəllase Charity Fund and held shares in several business companies privately owned by the Emperor.

In 1959 V. returned to India and accepted the priesthood in 1961. However, after the 1960 ↗coup d'état (s. EAE vol. 2, 1081–82) he returned again shortly at the request of the Emperor as his advisor, preparing measures of democratisation – not, however, followed by the Emperor. V. also acted as the Emperor's envoy to ↗Jamaica, with the aim of convincing Rastafarian rebels to give up their rebellion. V. repeatedly travelled to Ethiopia (e.g., in 1971 for the World Council of Churches). Ḫaylä Śəllase donated important sums to Delhi Diocese in 1966. In 1975 V. was the last foreign visitor of the captive Emperor.

V. quickly rose in the Indian church hierarchy, was delegated to Geneva, and, in 1975, was elevated to the status of bishop with the name Paulos Gregorios; a year later he took over the Delhi Diocese as its metropolitan. He also assumed important scholarly posts in Kottayam, Kerala, and Delhi and authored numerous books, which earned him recognition as a leading theologian of Orthodox Christianity.

Varthema, Ludovico de

V. (b. ca. 1470, Bologna, d. 1517) was an Italian traveller and writer. Whilst there is scant information on his early life, details from his travel account would imply that he had been brought up to the profession of arms (Varthema 1865: xxiif.). When he began his travels, he was a married man with several children.

Moved by a desire to become acquainted with foreign countries, V. set sail from Venice in 1502. In 1503, he arrived in Alexandria, Egypt. He went then to Damascus, from where he made the pilgrimage to ↗Mecca and Medina as one of the ↗Mamlūk escort of a *ḥağğ* caravan, being thus one of the first Westerners to visit the Muslim holy sites. Thereafter, V. embarked at Jeddah with the view of reaching India. In Aden, however, he was arrested and imprisoned under the charge of being a Christian spy. Once he gained his liberty, he travelled through south-west ↗Arabia, ↗Zaylaᶜ, ↗Berbera and towards early 1504 reached the Indian port of ↗Diu.

During the next two years V. travelled extensively in Persia, the Indian Peninsula and south-eastern Asia, mostly aboard merchant ships. Ca. 1506, he joined the Portuguese (↗Portugal) and worked in their army and as factor in Cochin. For his role at the battle of Ponnani (1507), he was knighted by the viceroy Dom Francisco de Almeida. In 1507, he left for Europe, where he began writing a narrative about his experiences in the east.

V.'s work was first published in Italian in 1510 with the support of Pope Julius II. From the outset, it enjoyed great popularity, and a number of other Italian editions ensued (eight from 1517 to 1589). The work was almost inmediately translated into Latin (by Archangelus Madrignanus, 1511), German (1515), Spanish (1520), French (1556), Dutch (1563) and English (1577) (cf. Varthema 1865: iii–xvi). V. provided there information on the situation of the ↗Red Sea during the last years of the crumbling Mamlūk state and prior to the period of Portuguese incursions. In the few pages he dedicated to the ↗Horn of Africa, he included details on the slave trade (↗slavery) running through Zaylaᶜ and on the port (in his narrative also an "island") of Berbera (Varthema 1928: 157–60). Although the truthfulness of some of his travels has recently been questioned (cf. Rubiés 2000: 126–30), V. was one of the first travellers to provide reliable information on the Orient – bordering on the realm of the less and less fabulous ↗Prester John – when demand for it was indeed growing in Europe (cp. Francisco ↗Alvares; Damião de ↗Góis).

Andreu Martínez d'Alòs-Moner

Vatican and Holy See, relations with

Middle ages to 18th century

The first contacts between the Holy See and Ethiopia may have occurred during early mediaeval pilgrimages of Ethiopians to the Holy Land and ↗Jerusalem, although there is no recorded evidence (CerPal vol. 1, 7). The first documented contacts were through epistolary exchanges. In 1177 Alexander III (1159–81) sent a letter to the "king of the Indies" (cp. ↗Prester John), by which term the Ethiopian emperor was meant (Raineri 2005: 13). Later letters that can be mentioned are those of Nicholas IV (1288–92), dated 1289 (Raineri 2005: 18), John XXII (1316–34), dated 1329 (CerPal vol. 1, 207; Raineri 2005: 20) and Eugene IV (1431–47), dated 1439 (Raineri 2005: 22). Furthermore, missionaries from the mendicant orders (↗Dominicans and ↗Franciscans) may have approached Ethiopian rulers and mediated in the policy of the Holy See to incorporate the Eastern Churches (Richard 1998: 57ff., 114, 145; Lefevre 1945: 362ff.).

In 1404, three Ethiopian envoys of *aṣe* ↗Dawit II reached Rome, where they were received by cardinal Antonio Caetani. The scope of Dawit II's envoys might have been to establish diplomatic relations with the papal state (Lefevre 1988). In 1441, Niqodimos, superior of the Ethiopians living in Jerusalem, wrote to Eugene IV (Raineri 2005: 24), after which an intense correspondence ensued. Missives were mainly concerned with the liberation of the Holy Land from the infidel (e.g. Callistus III to ↗Zärʾa Yaᶜəqob, of 1456; Raineri 2005: 35) and the complete communion of the Ethiopian with the Roman Church. As a consequence of these contacts, an Ethiopian delegation from Jerusalem went to the Council of ↗Florence.

Throughout the 16th cent. Roman popes gave full support to ↗Portugal's diplomatic activities in Ethiopia and also made tentative attempts to reach through diplomacy the Ethiopian rulers themselves. In the 1510s, the Medici pope Leo X (1513–21) sent the Florentine Andrea ↗Corsali as his envoy to meet *aṣe* ↗Ləbnä Dəngəl (Raineri 2005: 45). On 29 January 1533, the Portuguese Francisco ↗Alvares guided an embassy of ↗Ləbnä Dəngəl to ↗Clement VII (1523–34) to Bologna and delivered to the pope presents and letters from the Ethiopian ruler (Raineri 2005: 57–77). Later, Paul III (1534–49) formally opened in Rome the Ethiopian hospice of ↗Santo Stefano dei Mori and hosted such Ethiopian visitors as ↗Täsfa Ṣəyon. This opened a period of intense contact, which gained momentum with the ↗Jesuit mission (Raineri 2005: 87–203). It was under the influence of the Jesuit missionaries that the cult of the Roman icon known as the Virgin of ↗Santa Maria Maggiore or of St. Luke spread throughout the country.

In 1627, Pope Urban VIII sent a bull with the concession of the Jubilee indulgences for the Christians of Ethiopia (Raineri 2005: 192). Since 1622, with the ↗Sacra Congregatio de Propaganda Fide, the Holy See had a body which concentrated on its foreign missionary policy. The new organization initially did not interfere with the ongoing Jesuit mission, but when this was terminated it strove to change the proselytizing strategy towards Ethiopia. More modest in its missionary scope, it also tried to be more respectful towards local oriental rites and liturgies (cp. de Vries 1967: 134).

With the accession to the throne of *aṣe* ↗Fasilädäs, Roman-Ethiopian relations cooled but did not end. Noteworthy is *aṣe* ↗Iyasu I's Arabic letter to Clement XI (1700–21), dated 1702, in which he informed the latter that he had received the brief and gifts sent him by Innocent XII (1691–1700; Raineri 2005: 210ff.; s. also BecRASO XIV, 308). During this period, Rome also became a home for the Ethiopian Catholic diaspora, represented by such figures as *abba* ↗Gorgoryos and Ṣägga Krəstos. An important event was in the late-18th cent., the appointment by Pope Pius VI (1775–99) of ↗Ṭobiya Giyorgis Gäbrä Ǝgziabəḥer as titular bishop of ↗Adulis and Apostolic Vicar of Ethiopia.

19th century to the present

In the mid-19th cent., with the resumption of missionary activities by the ↗Lazarists and ↗Capuchins, communication between the V. and Ethiopia resumed. In 1841, *däǧǧazmač* ↗Wəbe Ḫaylä Maryam wrote a letter to Gregory XVI (1831–46) and in 1850 *ras* ↗Ali Alula wrote to Pius IX (1846–78), to whom the Pontiff himself replied with a letter written in Gəʿəz (Raineri 2005: 245ff.). The pope was ambivalent about the oriental churches: assertive on the superiority of the Latin rite but also inclined towards a greater tolerance towards the oriental liturgies (cf. de Vries 1967: 147ff.). In 1862, Pius IX created a section "pro negotiis ritus Orientalis" within the Propaganda Fide, which later became the ↗Sacra Congregatio pro Ecclesiis Orientalibus.

In 1858, ↗Nəguśe Wäldä Mikaʾel sent a missive to Pius IX in which he recalled having always protected the Catholic bishop Giustino De ↗Jacobis and his aides and asked the Pontiff to intercede for his envoy to be introduced to Napoleon III. He also promised to adhere to the Catholic faith as soon as his power was consolidated. In his reply (1859), the pope invited Nəguśe to receive his teachings and offered him a picture of the Immaculate Virgin (Raineri 2005: 266–75).

In 1875 and 1877, Mənilək (*aṣe* ↗Mənilək II) sent two friendly letters with gifts to Pius IX (Raineri 2005: 275–79). Among the presents, there were a cross, some bowls, objects made of bull's horn and finely chiselled and two parchments, which are today kept in the ↗Biblioteca Apostolica Vaticana (Vat. Aeth. 72, *Salterio*, and Vat. Aeth. 73, *Arganonä Dəngəl*).

In 1878, Leo XIII (1878–1903) resumed the correspondence of his predecessor with Mənilək as part of his policy to reach the Oriental churches. The pope, as he made clear in such texts as *Orientalium dignitas* (30 November 1894), was a fervent opponent of the Latinization in the lands of the Oriental churches, a practice followed by most contemporary Catholic missionaries (cf. de Vries 1967: 161ff.).

As a consequence of the battle of ↗ʿAdwa, the Vatican also dispatched a proper mission to mediate for the liberation of the Italians captured during the conflict. On 11 May 1896, the pope, through Monsignor Cyrille Macaire (1867–1921), sent to ↗Mənilək II a letter asking for the restitution of the prisoners to their families (Raineri 2005: 280–88). On 1 October, Mənilək replied to the pontiff that, because of the attitude of the Italian government, he was forced to defer to better times his testimony of affection and regard to His Holiness.

During the first decades of the Colonia ↗Eritrea relations between the V. and Ethiopian authorities were cordial. In 1906, Pope Pius X (1903–14) asked Mənilək II to intervene in favour of Ethiopian Catholics of the Harär region who had been imprisoned and had their goods confiscated (cf. Prouty 1986: 297). In 1929, in exchange for the visit paid to the Holy See by *ras* Täfäri Mäkʷännən (↗Ḫaylä Śəllase I), the V. sent to Ethiopia Mgr. Eugène ↗Tisserant and Mgr. Francesco Marchetti-Selvaggiani. The same year ↗Kidanä Maryam Kaśa was ordained bishop for the Catholics of the Ethiopic rite, thereby being the basis of a Catholic indigenous hierarchy; the initiative also encountered strong opposition from within the fascist government (cf. Giovagnoli 1991: 121f.). In parallel, institutes such as the ↗Missionari della Consolata praised in their publications Ḫaylä Śəllase's efforts of modernization and his fight against ↗slavery (Ceci 2003: 618f.). Relations between the V. and the young Emperor were also strenghtened thanks to the work of such figures as André de ↗Jarosseau. In 1937 Giovanni Maria Castellani was sent as first apostolic envoy to Ethiopia.

With the rise of ↗Africa Orientale Italiana the Italian Church took a more interventionist stand. Catholic leaders thought Italian inmigration would expand their influence in Ethiopia and help hinder the progress of ↗Islam and ↗Protestantism (Sbacchi 1997: 104). In addition, fascist leaders such as Emilio de ↗Bono pressed Italian missionary groups to step up proselytism and to take charge of ↗education activities in Eritrea and Ethiopia (Ceci 2003: 619ff.). Consequently, Italian Catholic publicity and Catholic agents openly supported Italy's war machine during the ↗Italian war 1935–36. On the contrary, the V., which since 1929 had constituted a formal state under Pius XI (1922–39), remained aloof both from the fascist regime and its colonial enterprise – including so-called "religious colonialism". The V. sought chiefly to promote the formation of a local Catholic Church and not to interfere in political affairs (cf. Giovagnoli 1991: 122ff.).

During the early stages of the Italian occupation of Ethiopia, Mgr. Luigi Santa, a Consolata missionary with vast experience in the country, served as Apostolic Prefect in Addis Abäba. In this period, the Secretariat of State mediated, without success, before the Italian government trying to revoke Mussolini's order that all non-Italian missionaries leave the country.

With the liberation, it took a few years until diplomatic relations between Ḫaylä Śəllase I's government and the V. could be re-established. From 1946 to 1956, the Jesuit Teodoro Monnens served as special envoy in Ethiopia and in 1957 Mgr. Giuseppe McGeough was appointed first apostolic internuncio. He was replaced in 1960 by Giuseppe Mojoli. In 1969 the Catholic legation became an apostolic nunciature, with Mojoli serving as nuncio in Addis Abäba and *fitawrari* Kidanä Ḫaylä Maryam as first Ethiopian ambassador to the Holy See.

In 1951 two separate exarchates of the Ethiopic rite were created, one in Eritrea and another in Ethiopia. In 1961, an ecclesiastic province was instituted, with Addis Abäba as metropolitan archbishopric and two dioceses in ↗Asmära and ↗Addigrat. The apostolic vicariates of Asmära, Ǧimma and Harär and the apostolic prefectures of ↗Hossaʿəna and Nägälle kept their status. ʿAśratä Maryam Yəmməru was consecrated the new archbishop of Addis Abäba (cf. Mojoli 1973: 79ff.).

The causes proposed for beatification of Catholic priests who were killed or died in Ethiopia have experienced different fates. Causes for the Jesuits that were killed (s. ↗Martyrdom) during the anti-Catholic persecutions in the first decades of *aṣe* ↗Fasilädäs's rule (cp. Luís ↗Cardeira, Apolinar de ↗Almeida) were opened in the early 20th cent. but have hitherto not been successful. On the contrary, causes for more contemporary figures were favourably received. On 31 October 1926, Pius XI beatified *abba* ↗Gäbrä Mikaʾel. On 25 June 1939, Mgr. Giustino De ↗Jacobis was beatified by Pius XII (1939–58) and, on 26 October 1975, was canonized as a saint by Pope Paul VI (1963–78). On 21 November 1988, John Paul II (1978–2005) beatified three Franciscan missionaries stoned to death in a religious persecution in 1716: Liberato Weiss, Samuele Marzorati and Michele Pio di Zerbo. On 20 October 2002, John Paul II also beatified Liduina Meneguzzi (1901–41), a nun of the Sisters of St. Francis de Sales and missionary in ↗Dərre Dawa.

Velat, Bernard

V. (b. 6 November 1903, Paris, d. 12 December 1968, Paris) was a scholar in Ethiopian literature and liturgy. He was ordained priest in 1927 and occupied various offices of ministry in parish and chaplaincy. He had a profound knowledge of French literature and a perfect command of Italian. He followed the Gəᶜəz courses given by Sylvain ↗Grébaut at the École des Langues Orientales Anciennes (ELOA) of the Institut Catholique de Paris and those by Marcel ↗Cohen at the École Pratique des Hautes Etudes (Section IV, philological and historical sciences), then during ↗World War II, those by Marcel ↗Griaule, who had replaced Cohen at the Ecole Pratique.

After the war, V. continued to follow the teachings of Marcel Cohen after he regained his chair. In 1952, V. replaced Grébaut at ELOA and, in 1953, he joined the Centre National de la Recherche Scientifique. A scholar with an independent character and a warm attitude to his pupils, V. had a vast knowledge of Ethiopian literature. He was a pioneer in the study of Ethiopian liturgy, especially the monastic office, to which he devoted the last years of his life.

Vigoni, Giuseppe (Pippo)

V. (b. 9 July 1846, Sesto San Giovanni [Milan], d. 15 February 1914, Milan) was an Italian traveller, explorer, geographer and public administrator. His father, Ignazio, was a nobleman of strong pro-Risorgimento stance; his mother, Luigia Vitali, also from the Lombard aristocracy, was the widow of the famous engineer Giulio Mylius. V. graduated in engineering at Bologna in 1869. From 1892 to 1899, he was the mayor of Milan, and from 1900, a member of the Italian Senate. He also presided, for a long time, over the Società di Esplorazione commerciale in Africa (founded in 1879 by Manfredo Camperio), to the revival of which he greatly contributed. V. was a staunch supporter of Italian ↗Colonialism.

V. travelled to Syria, Palestine and Egypt (where he witnessed the inauguration of the Suez Canal) with the archaeologist Alfonso Garovaglio (1869), and then through South and North America (1872–73), Greece, Tunisia, Tripolitania and Turkey (1885); he visited Russia, Armenia and Persia, whence he travelled to Mesopotamia, India, Himalaya and Ceylon (1886). His main interest, however, was Africa, owing to the possible influence of the stories told by Eduard ↗Rüppel, a frequent guest of V.’s parents, when he was a child.

In 1878–79, after a brief interval as an alpinist, V. followed the expedition led by Pellegrino ↗Matteucci to Ethiopia and visited Asmära, Kärän, ᶜAdwa, Aksum, Gondär, Lake Ṭana and Goǧǧam. His African travel journal (1881) focuses on local fauna, flora, customs and traditions, but also gives information on V.’s encounters with prominent personalities and provides accurate descriptions of places and monuments (e.g., ↗Ǝnda Maryam in Asmära, ↗Däbrä Bərhan Śəllase in ᶜAdwa, ↗Däbrä Ṣ́ähay Śəllase at Gondär). It also details the archaeological and ethnographical materials V. acquired, and, in some cases, their origins. The publication includes a facsimile of a patent in Amharic issued for him by *aṣe* ↗Yoḥannəs IV.

Giuseppe Vigoni, photo ca. 1875, Villa Vigoni (Loveno di Menaggio, Como), ASVV, Alb. 3; courtesy of Giovanni Meda Riquier

The Ethiopian experience taught V. to consider the country as a complex and living reality, and definitely made him an untiring propagandist for Italian expansion in Africa. His adventures – the imprisonment and death threats by *ras* ↗Arᵓaya Śəllase Dəmṣu of Dämbəya, the meeting with *aṣe* Yoḥannəs at Däbrä Tabor – were of secondary importance compared to the political aspect.

The rich ethnographic collection, originally of ca. 850 items, gathered by V. during his journeys – mainly in Ethiopia – was bequeathed by his widow Catulla Mylius and their son Ignazio to the city of Milan in 1935. The same year V.'s posthumous book of travels appeared, edited by Ignazio for the ↗Società Geografica Italiana. In 1940, part of his collection was moved to Naples, on the occasion of the first "Mostra Triennale delle Terre d'Oltremare". Due to the war and the allies' occupation of the exhibition site, most of the pieces taken to Naples were not returned to Milan in 1947. Only a few items are now in possession of the Museo d'arti applicate at the Castello sforzesco; some pieces (including a bronze processional ↗cross from Asmära) are preserved in the Villa Vigoni at Loveno di Menaggio (Como). Once the family residence, this imposing estate with wide neoclassical gardens is today the seat of an Italian–German study centre, in the archives of which V.'s papers and photographs are kept.

Fabio Betti

Virgin, Eric

V. (b. 18 May 1876, Skövde, Sweden, d. 12 May 1950, Sjögunnarsbo, Sweden) was a military officer. In 1908 he served in the Swedish army as lieutenant and between 1931 and 1933 he was the commander of the young Swedish air force. At the death of ↗Kolmodin and upon recommendation of Knut Hanner, Swedish honorary consul in Ethiopia and a confident of *aṣe* ↗Ḫaylä Śəllase I, Major General V. was appointed adviser for the Ethiopian Ministry of Foreign Affairs.

V. arrived in Ethiopia in May 1934. Together with the Swiss Jacques Auberson, in the Ministry of Justice, and the American Everett A. Colson, in that of Finance, he composed what was then known "the Trinity of Advisers". The three strove to get support for Ethiopia from great powers through the ↗League of Nations. V. was also crucial for the establishment of the Gännät cadet school (later ↗Holäta Military Academy). He convinced the Emperor to recruit the staff for the planned Cadet school from ↗Sweden instead of from the Belgian Military Mission and at his initiative the first five Swedish military officers arrived in Ethiopia (Halldin 1977: 131ff.).

V.'s work, however, was not always successful, allegedly due to lack of discretion and to tense relations with certain officials such as ↗Wäldä Giyorgis Wäldä Yoḥannəs. His demeanor also displeased his superiors in Ethiopia, Hanner and Captain Viking Tamm, who tried to terminate his contract before expiration. V., who had suffered of heart problems before and during his Ethiopian stay, finally abandoned his mission in September 1935 to receive medical treatment in Sweden, just a few days before the Italians attacked Ethiopia (ibid. 133f.). At his return to Sweden V. wrote a book on his Ethiopian experience (Virgin 1936). The book sheds light on some poorly-understood aspects of the life of Ḫaylä Śəllase.

Bernhard Lindahl

Vitalien, Paul Gaston Joseph

V. (b. 20 February 1866, Le Moule, Guadeloupe, d. 15 November 1938, Paris) was a French doctor and agent. In 1897 he defended his thesis in medicine at the University of Paris. After having worked for a period in Burgundy, on 23 February 1899 he left for ↗Djibouti as doctor of the ↗Compagnie Impériale des Chemins de Fer Ethiopiens (↗Railways).

In 1900, V. took part in the construction of the hospital of Djibouti (today Peltier hospital) and in 1901 in that of the French hospital in ↗Addis Abäba. He also participated in a mission on behalf of the Ministry for the Colonies to study the medical and climatological conditions of the area. In 1902, V. became the personal doctor of *ras* ↗Mäkʷännən Wäldä Mikaʾel in Harär.

In 1904, Mäkʷännən sent V. to treat *aṣe* ↗Mənilək II. Thereafter, the doctor became much respected at court, where he also treated *ras* ↗Wäle Bəṭul. Most importantly, V. became France's semi-official agent at the court; France supplemented his salary from Mənilək and the doctor kept the French legation duly informed about the intrigues at the ↗*gəbbi* (Prouty 1986: 283f., 292f., 304f.). V. was also involved in the project to build a railway between Djibouti and Addis Abäba. He first replaced Léon ↗Chefneux as Mənilək II's representative on the railway board and then became holder of the concession of the railway; the concession, known as "Vitalien", consisted of 18 articles and an endorsement and established the new company (Compagnie Franco-Éthiopienne) on firmer grounds than the previous concession held by Alfred ↗Ilg (Loepfe 1974: 149ff.). Since during the succession crisis V. took the part of *ətege* ↗Ṭaytu Bəṭul, he had to leave Ethiopia in 1911.

In 1912, V. tried to pursue without success a political carreer in his native Guadeloupe under the

Socialist Party. From 1915 to 1919, during World War I, he was director of the "Foyer colonial des combattants". He was particularly interested in the fate of black prisoners and contributed to the improvement of orthopaedic protheses. Between 1920 and 1930, he worked as a doctor in Paris. He is buried in the Père Lachaise cemetery.

In 1919, V. wrote a pamphlet for the socialist journal *l'Effort* where he provides an overview on the history and fauna of Ethiopia as well as insights into the army of ↗Mənilək and the situation in 1916 (Vitalien 1919).

Lukian Prijac

Viterbo, Carlo Alberto

V. (b. 1889, Florence, d. 1974, Rome) was an Italian Jewish lawyer, journalist and linguist.

V. was sent to visit the ↗Betä Ǝsraʾel in Ethiopia by the Union of Italian Israelite communities in 1936–37 following the proclamation of the Italian Empire (↗Africa Orientale Italiana). He arrived in Addis Abäba at the beginning of August 1936 via Djibouti. He spent a few months with ↗Täʾammərat Amanuʾel in Addis Abäba. From November 1936 to February 1937 the two travelled around Betä Ǝsraʾel villages. V. brought numerous notes, charts and photographs back to Italy with the aim of writing a study of the group, but his internment as a Jew and Zionist in 1940 prevented him from finishing his project. The material V. gathered remained largely unpublished, with the exception of a few articles. His journal was published in 1993.

Thanks to his liberal Jewish background V. could appreciate significant aspects of Betä Ǝsraʾel life, even when these differed considerably from the practices and customs of European Jews. V. dealt with the problem of the transformation of Betä Ǝsraʾel culture after the changes introduced by ↗Faitlovitch, fearing that Betä Ǝsraʾel would be uprooted and destroyed as a group. One of his main concerns was the Betä Ǝsraʾel school in Addis Abäba, which he wanted to move to Gondär, to bring the students closer to their families. V. also thought that European Jews should not teach the Ethiopians their ways, but help in preserving their own life and traditions. Täʾammərat Amanuʾel remained in correspondence with V. for the rest of his life and represented V.'s more liberal view in his discussions with Faitlovitch about the best education to offer to the young Betä Ǝsraʾel.

Vittorio Emanuele III

V.E. di Savoia-Carignano (Vittorio Emanuele Ferdinando Maria Gennaro; b. 11 November 1869, Naples, d. 28 December 1947, Alexandria, Egypt) was king of ↗Italy (1900–46), emperor of Ethiopia (1936–41) and king of Albania (1939–43). The son of King Umberto I, he entered the army and was appointed as commander of the Florence and later of the Naples Army Corps.

Crowned in August 1900, V.E. performed his own duties respecting the constitution until the establishment of the Fascist regime. During the first decade of the century, dominated by the personality of Giovanni Giolitti, a liberal, V.E. did not object to the social reforms that contributed to the modernization of the country. He also sponsored the conquest of Libya in 1911–12. At the outset of ↗World War I, he strongly supported the intervention; at stake was the completion of national unity as well as the gaining of some colonial advantages in Africa. He acquired an enormous popularity spending his time on the war fronts and sharing the life of the soldiers in the trenches.

In 1922, V.E. bequeathed a painting by Carlo Maratta to the cathedral of ↗Asmära on the occasion of the latter's consecration. In 1932, together with his minister Emilio De ↗Bono, he toured the Colonia ↗Eritrea, attending the inauguration of the Aq̣ordät–Bišа railroad (MockWar 27). He visited then the memorial of the Italian victims of the ↗ᶜAdwa battle at Dahro Conat (Del Boca 1979: 168f.). In 1934 he toured Somalia

The most controversial stage of V.E.'s reign was due to his passivity on the night that preceded the so called "march on Rome" organized by the Fascist movement that led to the appointment of Benito ↗Mussolini as prime minister (28 October 1922). According to some sources, V.E. refused to enforce martial law, but other authors maintain that the prime minister, Luigi Facta, did not actually submit the bill for his signature. In Italy, the praxis was that the sovereign had to abide by the Government's decisions.

Under the Fascist regime, the prerogatives of the king were only nominal. Mussolini held power in both political and military affairs. V.E. endorsed the suppression of press freedom and the racial legislation introduced in 1938–39 and approved the entrance of Italy into ↗World War II on the side of the Axis Powers.

Vittorio Emmanuele III "Imperatore d'Etiopia"; from the collection of Wolfgang Hahn

V.E. knew the underway projects of Musso-lini to invade Ethiopia but deceived the Ethiopians ensuring them that Italy did not intend to aggress the Empire. His sole concern was not to undermine the defence of the Alps border of Italy deploying too many troops in Africa (Mack Smith 1990: 351; Del Boca 1979: 230). The King encouraged Mussolini at the very moment of the attack (D'Aroma 1957: 235) and ↗Badoglio himself acknowledged the King's firm support (Badoglio 1936: 217). After the ↗Italian war 1935–36, Mussolini rewarded the King's complicity by granting him the title of emperor of Ethiopia. V.E. praised the Duce as a "military genius" who had won the greatest colonial war of history to "the prestige, life and greatness of the Fascist motherland" (Rumi 1974: 69).

V.E., who never visited Ethiopia, was not favourable to the appointment of his cousin Amedeo di ↗Savoia as governor general of the ↗Africa Orientale Italiana (MockWar 186; Sbacchi 1980: 51f.).

Following a vote against Mussolini by the Great Council of Fascism on 25 July 1943, V.E. felt authorized to dismiss him, and charged Marshall Pietro ↗Badoglio to form a new government. A few weeks later, Badoglio concluded an armistice with the allies. V.E.'s final error was to flee Rome. The King and the monarchy did not survive the tragedy of the war and Italy's defeat. He officially abdicated in favour of his son Umberto II on the eve of the referendum that established the Republic (1946), and died in exile in Egypt as a guest of King Farouk.

Giampaolo Calchi Novati

Voice of Ethiopia

V. was a weekly newspaper. It commenced publication in New York on 27 January 1937 and it was founded by ↗Mälaku Amanuʾel Bäyyan. The first editor of the paper was Gilbert Balfour Bovell, Mälaku's student at Howard University. After a few months, he was replaced by Mälaku himself and his wife Dorothy Bäyyan served as business manager. It was published by the Voice of Ethiopia, Inc.

The paper served as the official organ of the Ethiopian World Federation established on 25 August 1937. The paper's logo was "A Paper for the vast Universal Black Commonwealth and Friends of Ethiopia". In an editorial from 3 February 1940, Bäyyan stated that the reason for publishing the V. was to disseminate news released by the Ethiopian government. Moreover, the V. also served as an organ of black people in the ↗United States and other nations, covering news from the Black Commonwealth (Bermuda, St. Thomas, St. Croix, Jamaica, British Guiana, Trinidad, Barbados, India and even London).

News on the ↗Italian war 1935–36 and the ↗Resistance to Italian colonialism were prominently treated. Second in importance was the condition of black people in the United States. The newspaper employed a strategic approach to highlight the bravery of Ethiopian patriots in order to agitate black people in the United States to fight for their civil rights. ↗Ḫaylä Śəllase I's speech before the ↗League of Nations was also distributed for sale via the paper. The V. was additionally used as an instrument to raise funds by announcing the formation of the Ethiopia Aid Fund for the cause of Ethiopian patriots and to furnish material support for Ethiopian refugees in Kenya. It also publicized books written about Ethiopia and black people in general, such as one by Mälaku himself.

As the war between Ethiopia and Italy approached its final stages, the V. intensified propaganda work on the plight of the black people. When Ethiopia regained its independence, the newspaper continued to provide information on Ethiopia on grounds that the country did not yet have "its own independent means of communication" (*Voice of Ethiopia*, 16 August 1941, 2). The paper published interesting information about other African countries such as Liberia and Nigeria. Its treatment of the black world with brief news continued until it abruptly ceased publication on 6 September 1941, allegedly due to a lack of funds.

The V. may have been the predecessor of the newspaper later established in Addis Abäba with the same Amh. title **የኢትዮጵያ ፡ ድምጽ** (*Yäʾityop̣ya dəmṣ*). Popularly known as *Dəmṣ*, it initially appeared as a bilingual paper and later continued to publish in Amharic only.

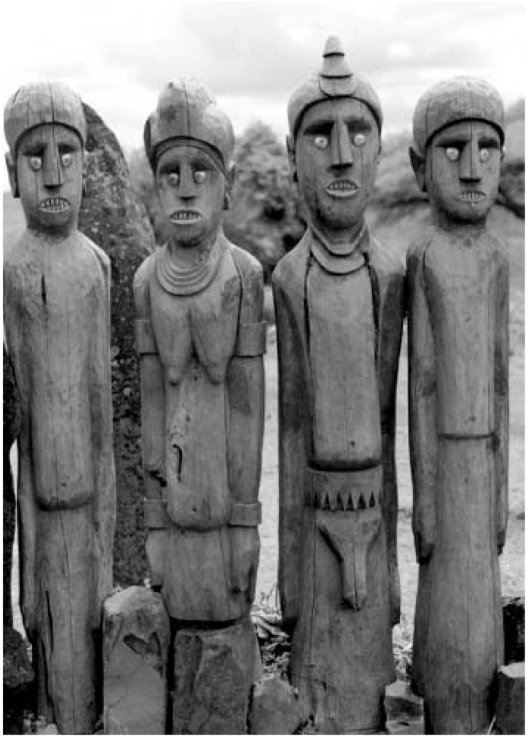
Fentahun Tiruneh

W

Waakaa

The term W. is attributed to wooden anthropomorphic memorial sculptures in ↗Konso (s. article also for ill.) which are generally erected for outstanding people after their death. They have first been mentioned by Darragon (1898), then by many other scholars visiting Konso, mainly Jensen (1936), Haberland (1963 [=VSAe II]), Cowen (1978) and by Amborn (2002); for a new thorough s. Poissonnier (2007).

Best known are the groups of W. erected for men who have killed at least one big game animal (today ↗lion or ↗leopard) or an enemy. Additionally, they must have had legal offspring. These groups of W. consist of at least three figures: in the middle the honored defunct, on his right his wife and on his left the slain enemy. If he had killed an animal, its sculpture is placed in front of the group on the ground. On one side a smaller stone stela is placed. In some areas of Konso, groups of stone stelae or slates are erected in the same manner and said to have preceded the making of wooden sculptures (↗Stelae).



Recently carved wooden funeral sculptures from Debana (Paleeta), Konso; photo 1999, courtesy of Marie Hernandez

W. are erected for every deceased clan-chief as well as for his wife. They may also be erected for extraordinary personalities. In the regions of Tuuro and Paˀayti, they are erected for every deceased adult who had lived in a marriage with legal offspring. These sculptures stand alone or in pairs.

W. made for clan chiefs and killers are carved in the wood of juniper, a ↗tree of the sacred forests of the clan chiefs. They are always painted with red ochre and decorated with a creeper plant on the day of erection. All sculptures are erected during the ceremony held at the end of the period of mourning and may stand directly on the grave of the defunct, along a pathway or road or on a communal place. The choice depends on the practices of the region and the status of the defunct. Depending on the wealth of the family ordering this work, the carving may take up to several weeks, and workers claim to be in contact with the defunct, demanding food and drink in behalf of him. Being quite highly priced on the international art market, many sculptures become objects to theft.

Waaqa

W. (Orom.: 'sky'; respectfully referred to as *Ulfin*, 'Honoured', or *Aabaa*, 'Highest') is the name of the Supreme Being in ↗Oromiffaa. Originally, it was the denomination of the celestial deity of Oromo traditional ↗religion.

He formed a divine couple together with the female deity of the 'earth', Lafa or Dače (for this duality cp. also EAE vol. 2, 605). Variants of the name W. serve as a designation of a divinity related to the sky in many folk-religions in Ethiopia, e.g., Waɣa in ↗Konso, Waaʾa in ↗Hadiyya, ↗Waq in ↗Gurage and Wak in the pre-Islamic ʿAfar religion (cp. EAE vol. 2, 179). Today, the name W. or *Waaqaayoo* (a more abstract variant) is used for the Christian god as well.

According to myth in an early "golden age" of peace and morality W. and Lafa were close to each other and W. used to visit Man in human form. W. is thought to be the creator, the source of all life and the guarantor of the social order (↗*Aadaa*; ↗*Safuu*). He is the origin of the forces of the *ayyaana* ↗spirits in which the spiritual quality of certain individuals, clans, places, animals and things is personified. W. is represented by the sky and, particularly, the 'black/blue sky' (Orom.: *waaqaa guračča*), i.e. the heavy clouds that bring the rain which makes life on earth possible. Thus, the preferred colour of the sacrificial animals dedicated to him, or slaughtered to invoke precipitation, is black.

People refer to W. in formulas of everyday life, such as "if it is W.'s will" or "for Heavens's sake" etc. Both deities, W. and Lafa may be addressed in individual or collective prayers and rituals, such as ↗*ḍibaayyuu*, ↗*bunna qallaa* and animal ↗sacrifices. The most important ritual specialists related to W. are the ↗*qaalluu* and the ↗*abbaa muuda*.

The outsider's perception of the belief in W. has been influenced by the missionary interests of Catholic and Protestant scholars. The Catholic ethnographer-theologian Wilhelm Schmidt (1940) tried to substantiate his concept of "original monotheism", by identifying Oromo religion as an example for a once pure form of monotheism which evolved independently from external influences. However, Haberland showed that even before the ↗conversion of most Oromo to Christianity or Islam, the old Oromo religion with its divine dualism, typical for the autochthonous religions of eastern Africa, came under strong influence of monotheistic religion. As a consequence, Lafa's role was weakened in favour of W.'s status. In the form of the female spirit Ayyoo (also ↗*Ateetee*), which among the Šäwa-Oromo was syncretized with Maraam (s. ↗Mary) and among the Arsi was related to Faṭima, the role of the female counterpart of W. continued to play a central part in rituals of Oromo women (VSAe II, 510f., 513, 548f., 555, 563ff.).

Dirk Bustorf

Waata

The term W. is used to refer to hunter-gatherers or specialized occupational groups (especially potters [↗Pottery]) who live among pastoralists or agriculturists, mostly among ↗Oromo. They are more or less associated with, or an integral part of, the respective societies. W. are known by different names (the ↗Amhara, e.g., know a similar group as ↗Wäyṭo). There is no precise census data on the total population of W.; Aneesa Kassam estimates their number considerably below 20,000 (Aneesa Kassam – Ali Balla Bashuna 2004: 197).

W. live in parts of southern, central and western Ethiopia, along the Tana and Galana rivers and in the Taru Desert in eastern Kenya, on the Kenyan coast, in Isiolo and Marsabit districts in northern Kenya, as well as on the shores of Lake Ṭana. They may also extend into Tanzania. W. have always interacted with neighbouring agricultural and pastoral groups and sometimes speak, in addition to the languages of their neighbours, a dialect of Oromo. In early travel literature, all hunter-gatherers, together with the W., were lumped together under the generic term "Dorobo", derived from the Maasai Il-Torobo.

The W. as a group can hardly be captured by classical anthropological concepts like "ethnic group", "social caste/class," etc. The W. regard themselves as a distinctive social entity. In Kenya, a W. movement for political representation has appeared on the scene since the 1990s, which is striving for fostering W. identity and social cohesion, as well as reclaiming their indigenous rights (↗Ethnicity).

Early anthropological theories on hunter-gatherers in East Africa, including the W., were dominated by the concept of race. W. were conceived as a residual Palaeolithic hunting population with special physical characteristics. According to these theories, hunter-gatherers like the W. were long time ago dispersed, marginalized and superseded by (agro-)pastoral invaders, who, in the case of Ethiopia, were identified with the "Semites" or the "Cushites"; besides, the W. were seen as one of the pre-Cushitic substrata of indigenous craftsmen in the South (cf. CerFolk 212). In the 1970s and 1980s, the racist "remnants theory" was replaced by the concept of ecological niche which has become dominant since then. Groups like W. are no longer considered as the Palaeolithic inhabitants of the region, but rather as "broken tribes" exploiting an alternative ecological niche. Van Zwanenberg (1976), for instance, considered hunting and (agro-)pastoralism as two modes of subsistence within a single mode of production. For East Africa it is historically well documented that impoverished pastoralists turned to hunting or joined bands of hunter-gatherers (and vice versa). This neither necessarily excludes the autonomy of hunter-gatherer societies nor does it mean that a temporary change of subsistence by itself implies a change of "ethnic" identity. Both groups can be rather perceived as two social entities the mutual relationship of which is described in terms of "symbiosis" (Aneesa Kassam 1986) or "complementarity" (Bassi 1997: 169).

Within the savannahs of the region, the introduction and diffusion of firearms during the European (Kenya) and North-Ethiopian colonization led to a dramatic decline of wild game, which forced the W. to give up (supplementary) hunting and become pure pastoralists, horticulturalists, or potters; in Kenya, this process was promoted by reinforcement of wildlife laws and the a hunting ban in 1977. Concerning the densely populated regions with agrarian intensification in Southern Ethiopia, the existence of specialised hunting groups is most unlikely even for pre-colonial times; hunters do appear in historizing myths of those groups but serve therein as symbolic antipode in the process of civilisation (cf. Amborn 1990: 180, 311). In ↗Käfa, at the end of the 19th cent. the ruler ↗Gaki Šeročo entrusted the craftsmen, which were called *manna* or W., with the extinction of predators (Bieber 1920: 330), which may indicate that, under certain conditions, craftsmen acted as hunters – and not that crafts were attributed to hunters. In other words, the connection between craftsmen and hunters is rather a mythological or symbolical one, as was already assumed by Jensen (VSAe I, 13).

In the past, W. provided *gabaro* or *boorana* (s. ↗Boorana) with certain types of wild game meat and wild plant food in times of need, ↗honey as well as clay-pots in exchange for pastoral products, an economic reciprocity which has been declining; nowadays, W. make their living from making charcoal, supplying building poles to urban dwellers, serving as watchmen, etc.

Aneesa Kassam (1986; 2004) assumes that the persistence of groups labelled as hunter-gatherers amongst pastoralists can only be explained in symbolical terms: W. serve as figurative yardstick by which pastoralist (or agricultural) groups measure and affirm their values. On the one hand, W. are considered as "contaminated" by their "hunting activities" and ingestion of wild animal meat; on the other hand, W., through their liminal existence on the fringes of society, are endowed with special ritual and magic powers, which allow them to control the untamed forces of the wild, i.e. "nature", for the benefit of society, i.e. "culture". Due to their intermediate cosmological position, W. play an indispensable role in *boorana* and *gabaro* life-cycle ceremonies (birth, death, circumcision, marriage and ↗*gadaa* transition rites). According to tradition, the W. found one of the *boorana* ↗*qaallu* in the wild. Furthermore, they may be entrusted with bringing up the first-born sons of members of the Boorana *raba* class.

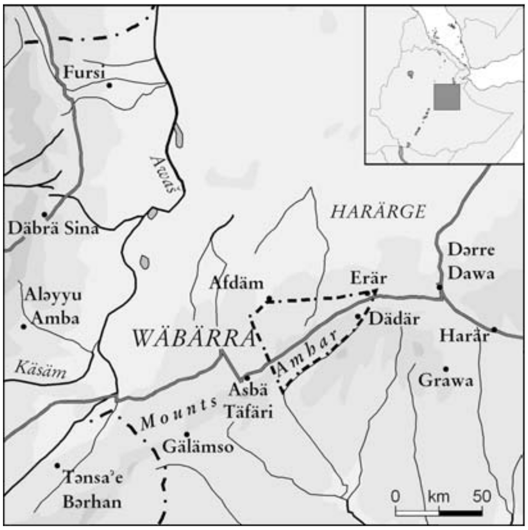
Alexander Kellner

Wäbärra

W. (**ወበራ**) was an *awrağğa* of the ↗Harär region from 1942 to 1987 and then of the East Harär region from 1987 to 1991. Its capital was Dädär, now capital of the Dädär *wäräda*, of East Harär zone, Oromiyaa. The area of this former *awrağğa* was 3,900 km² and covered the plateaus and slopes of Mount Amhar.

For the last 30 years the Qottu Oromo of the area, who grew cereals (sorghum) and coffee on terraces, have started to produce more and more ↗*čat* and export it via the Harär–Asbä Täfäri road.



In the 1970 census the *awrağğa* had 128,700 inhabitants (density: 33 inhabitants per km²) while in the 1984 census, it had 453,600 inhabitants (density: 116 inhabitants per km²). The Dädär *awrağğa* (545 km²) which only extends in the highlands in 2004 had 245,000 inhabitants (density: 450 inhabitants per km²). The population of Dädär was 6,758 in the 1994 census and 11,544 inhabitants in 2004. The other towns in W. area range between 5,000 and 2,000 inhabitants.

Alain Gascon

Wäbe ↗Ginnir

Wabi Šäbälle

The W.Š. (**ዋቢ፡ ሸበሌ**, Somali sp.: Wabi Shabeelle, 'leopard river') is one of the major rivers of the Horn of Africa. The total length of its course is about 2,000 km; 1,340 km in Ethiopia and 660 km in Somalia. The W. Š. basin, which is limited by the mountainous arch of the south-eastern highlands, extends over 205,407 km² (EMAtlas) in eastern Ethiopia (Oromiyaa and Somali *kəlləl*) and in central Somalia (Hiraan and Benaadir).

The W.Š. springs up north from Mount Garumba (2,680 m A.S.L.) near the border triangle of Sidaama, Arsi and Bale zones. The first 100 km it runs towards the north-east through the ↗Gädäb depression (a former lake ca. 2,400–2,300 m A.S.L.). After the Mälka Wäkana falls (140 m and then 70 m high) and several rapids, it carves a grand canyon. It flows down (from 1,200 m on 120 km) and is joined by the tributaries Rämis and Galeti which come from Mount Amhar. North from Mälka Məlki (584 m A.S.L.), the W.Š. valley becomes wider and turns to the south-east. At the confluence of the Erär River and, later, of the Daketa River, which both spring up from the Harär mountains, the W.Š. runs southwards. Just before Ǝmi (365 m A.S.L.) it bends towards the south-west and the Indian Ocean.

The W.Š. River runs meandering in a wide valley between Gode (265 m A.S.L.), ↗Qällaffo (where, during floods, it is joined by the Fafän River from the Harär region) and Mustahil (195 m A.S.L.) and then enters Somalia at Ferfer/Feerfeer. The river course runs southwards after Beled Weyne (172 m A.S.L.) up to Balᶜad (106 m A.S.L.) where it bends towards the south-west. A high sand bar produced by a coastal current prevents the river to reach the Indian Ocean. Then, after Afgooye (80 m A.S.L.) the river runs parallel to the coast for more than 400 km loosing a considerable amount of water to ox-bow lakes, salted pools, marshes and irrigated schemes. During exceptional floods it flows up to Kamsuuma (14 m A.S.L.) into the Juba (s. ↗Ganaalee) mouth, extends up to the lenght of 2,488 km (Guida 463).

The W. discharge (3,16 billion m³ per annum) depends on the *kərämt* rainy season in the highlands. Upstream in Dodola its water level increases from April to September while in Gode downstream it starts to rise up from May onward and reaches its maximum in August and September. The W.Š. regularly floods its lower valley downstream from Qällaffo.

The upper valley of the W.Š. is deeply carved in scarcely populated plateaus where ↗Arsi Oromo are engaged in rain fed cereal cultivation. South of Qällaffo the ↗Raḥanween and Digil Somali used to practice irrigated agriculture (cereals, pulses, oil seeds; ↗Irrigation) on the river loam. Southwards in the Benaadir and the Lower Juba regions the Bantu-speaking Waboni and Wagoša cleared the riverine forests and live on fishing and hunting.

During the 1960s, in spite of the threat of tropical water ↗diseases, the Ethiopian government launched the W.Š. Valley Irrigation Programme (based in Gode) following the example of the Awash Valley Authority. Somalia who claimed ↗Ogaden protested against the settlement of sedentary farmers originating from Ethiopia. It supported the Western Somalia Liberation Front guerrilla movement which particularly attacked the French hydrologists of the Office de recherche scientifique et technique d'Outre-Mer. The 1977–78 Ethiopian–Somalian war provoked the destruction of the plantation. In 1989 the Ethiopian government inaugurated in the Arsi region the Mälka Wakäna Power Plant (630 GWH, 2nd in Ethiopia) which was built by a Czekoslovakian firm. The town of Gode (71,399 inhabitants; CSA 2006), whose plantations have expanded in the valley, has started again to grow.

Already in the 1920s the Italian colonizers in Somalia in order to launch their large irrigation schemes in the W.Š. valley had seized the irrigated fields of the Bantu-speaking riverine people and by force made them wage workers on their large commercial farms. The two pioneer projects were, probably inspired by the model of the Sudanese Gazirah, north from Mogadishu, the more than 4,000 ha Villaggio Duca degli Abruzzi (today's Jowhar) farm (Guida 602; Palma 1999: 36f., 126f.) and west from the capital the 477 ha Azienda Agraria Sperimentale de Merca-Genale (Merka-Golweyn) farm (Guida 576f.). When ↗Mussolini in the 1930s forced his programme of *autarchia* new irrigated schemes were implemented to supply Italy with agricultural tropical products (banana, cotton, citrus) sometimes manufactured in Somalia (textile factory in Balᶜad). During the rule of the Amministrazione Fiduciara Italiana della Somalia between 1950 and 1960 and until Siyaad Barre's nationalization of foreign farms and factories, Italy was the main outlet of the Somalian production, particularly banana. Arab investments and markets have never replaced the former colonialist administration in this.

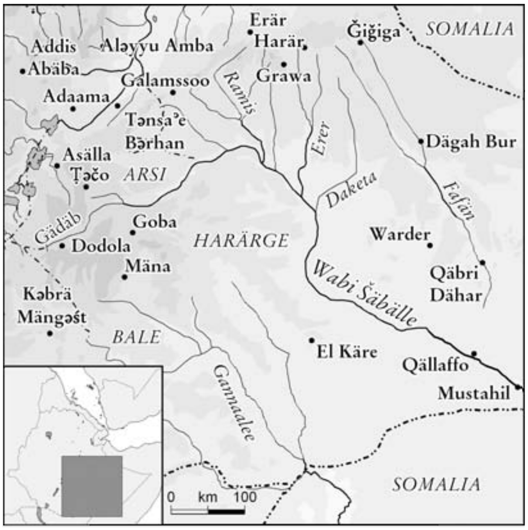
In 1975, 2005 and especially in August 2006, in th lower W.Š. valley violent floods destroyed harvests, irrigation systems and 190 villages; many people died and 23,000 people were displaced (UNICEF). In spite of such floods and the destructions and troubles of the various military conflicts in the region satellite pictures show that irrigated schemes have still expanded in the W.Š. lower valley either in Ethiopia (Qällaffo-Gode) or in Soma-



lia, in the provinces of Hiraan (Jowhar-Balᶜad) and Benaadir (between Afgooye, Merka and Baraawe) and even towards the lower Juba valley.

Wädaǧǧo Gobäna

Däǧǧazmač W.G. (**ወዳጆ፡ ጎበና**; horse name Abba Tämtəm; d. 1905, Addis Abäba) was the son of *ras* ↗Gobäna Dač̣i, one of the most renowned generals of ↗Mənilək II. Despite W.G.'s noble descent and intermarriage into the royal family, information about his life is scarce.

W.G. was married to Mənilək's daughter *wäyzäro* ↗Šäwarägga (s. EAE vol. 5), future mother of *ləǧ* ↗Iyasu. In 1885 Šäwarägga bore W.G. a son, Wäsän Sägäd Wädaǧǧo. Mənilək saw his successor in Wäsän Sägäd, and had him raised at the court as if heir to the throne. W.G. opposed the court education of his son and this dispute over child custody led to the divorce of W.G. and Šäwarägga. As a punishment W.G. was imprisoned for 15 days but was later released (Rosenfeld 1976: 157). Wäsän Sägäd suffered from dwarfism and died of tuberculosis in 1908. W.G. later married Mädämdämiya, the daughter of the renowned *däǧǧazmač* ↗Gärmame Wäldä Ḫawaryat (Fusella 1987:31, 45).

Little is known about W.G.'s political or military career. He seems to have followed in his father's footsteps, but never achieved the military renown of the latter. He administered ↗Wällägga as his father's representative, after the latter had revoked the autonomy of the ruler of ↗Naqamtee Kumsaa Moroda (↗Gäbrä Ǝgziʾabəḥer Moroda; Triulzi 2002: 55).

During the 1890s he was "governor of ↗Gurage" (BTafA 980). This was after the death of his father, who had subdued various ethnic groups in southern Ethiopia, incorporating their lands into the realm of Mənilək II. W.G. went on campaign against the Šäšoogoo (↗Hadiyya) whom his father had left as semi-autonomous vassals (BrHad 276). From 1891 to 1894 W.G. was the second governor of Hadiyya. He built his ↗*kätäma* in the Leemo area. By 1892 the whole region between "Gurage and Wolayta, Omo und Bilate", under the command of W.G. (BrHad 277), came under strict rule of Mənilək's government.

W.G.'s life found an inglorious end. He was involved in a plot with *ras* ↗Bäzzabbəh Täklä Haymanot against *ras bitwäddäd* ↗Mängäša Atikäm, which aroused Mənilək's anger. Apparently W.G. also murdered his second wife around this time and fled into the countryside. Mənilək, as well as Gärmame's family, wanted to punish W.G.. He was captured, imprisoned and executed in 1905 (Märsəᶜe Ḫazän Wäldä Qirqos 2006/07: 29).

Wadla

W. (**ዋድላ**) is a historical district in ↗Amhara to the south of Lasta and to the west of Angot. It also borders on Bägemdər, Dälänta and Dawənt. It is separated by the River Gəta from Bägemdər and from Dälänta (for location s. map for Waša Mikaᵓel).

Tradition associates W. with the last Zagʷe (13th cent.) ruler ↗Yətbaräk as the place of his murder. W. is mentioned in the sources from the 14th cent. onwards and was therefore under the influence of Christian Ethiopian rulers since at least *aṣe* ↗Amdä Ṣəyon I. It has been recognized as a province since the end of the 15th cent.

↗Ləbnä Dəngəl had one of his victories against ↗Aḥmad b. Ibrāhīm al-Ġāzī at W. in 1535. In 1566 ↗Śärṣ́ä Dəngəl's men captured the rebel ↗Fasil Gärram in W. During his campaign to Lasta in 1624–25, ↗Susənyos camped at Gärägära, on the border between W. and ↗Mäqet. During her 1844 campaign in W. against *däǧǧazmač* Kaśa (the future *aṣe* ↗Tewodros II), ↗Wärqitu burnt down a church in Gärägära, which had emerged as the administrative centre for the governors of Lasta and Amhara. *Ras* ↗Ali escaped to W. several times.

When ↗Mənilək II heard of the death of *aṣe* ↗Yoḥannəs IV in 1889, he went to W. where *ras* Mikaᵓel of Wällo, *ras* Wäldä Śəllase of Təgray, *ras* Mäšäša Wärqe, *wag šum* Bərru Gäbrä Mädḫən and *nəguś* Täklä Haymanot of Goǧǧam submitted to him.

In the imperial administrative division, W. was paired with Dälanta in the W.-Dälanta *awraǧǧa*.

Waᶜəla Šobᶜattä ᶜAnsäba Zämat Taḥtay

The W. (**ዋዕላ፡ ሾብዓተ፡ ዓንሰባ፡ ዘማት፡ ታሕታይ**, Tgn. 'The Code of the Šäwᶜattä ᶜAnsäba "lower Zämat"') is the law book of the ↗Šäwᶜattä ᶜAnsäba, deriving from the traditional ↗customary law of this confederacy.

The W. as we know it was first written down on 6 *Taḫśaś* 1900 A.M. [15 December 1907], in ᶜAwdi Bərhanu, the seat of the assembly of the Zämat *taḥtay* ('lower Zämat'), i.e. the Šäwᶜattä ᶜAnsäba proper, and published in 1918 (repr. in Zärᵓa-Yaᶜəqob Ǝsṭifanos – Wäldä Maryam Abraham – Gärima Gäbrämäsqäl 1990: 433–56; tr. Conti Rossini 1940: 350–66; s. also Kemmink 1991: 56ff.). Further amendments followed in the years 1911–40 (cp. the version copied in the 1940s, ed. and tr. by Yaqob Beyene 2002, 2003). The W. was the second Eritrean customary law to be translated into a European language (Italian), after the code of the ↗Loggo Sarda (s. Conti Rossini 1940: 348; ↗Law: Traditional law books).

Codified quite recently, the W. may be characteristic of a passage from a more traditional "oral" law system, like that of the Təgre, to a "written" codified system, frequently found among the highland Təgrəñña speakers of Eritrea (Conti Rossini 1940: 349).

The law of 1907 consists of 75 articles. Articles 1 to 21 deal with matrimonial regulations, articles 22 to 23 with divorce. The largest part of the law, articles 34 to 75, with some exceptions due to the irregular structure, deals with compensation. The latter has to be paid in various situations where harm is caused to individuals or the community, such as verbal offences, thefts, bodily injury, damage caused by animals, etc. Some of the articles refer to Orthodox Church law (cp. ↗Law: Canon law), e.g., article 45 says that when a woman who has born an illegitimate child passes away, she shall have no absolution from the priest and there will be no memorial service for her. In some cases, compensation has to be paid to the Church, e.g., article 70 foresees that those who did not help with the funeral preparations for someone who had died had to pay a compensation to the Church. The size of compensation is most frequently expressed in *färgi*, a term signifying the price of a cow (initially a measurement unit for cotton, a piece of ca. 21 m x 30 cm; s. Yaqob Beyene 2002: 109 and n. 4). Thus, the compensation for a slap was set at 15 *färgi* (art. 34), the church compensation for non-participation at the funeral at 2 *färgi* (art. 70). The payment, however, was to be performed in the corresponding monetary value (in 1907 one *färgi* valued two Maria Theresa dollars; Yaqob Beyene 2002: 109).

The revised version of 1940s (ed. Yaqob Beyene 2002, 2003) contains 110 articles; the original 75 articles are included, but many of them with (usually dated) amendments. All additions and amendments had been necessarily approved by the assembly of the elders of the seven groups at ᶜAwdi Bərhanu. The rate of *färgi* for that period is stated at five Maria Theresa dollars.

The general legal principles are similar to those of the neighbouring Təgrəñña groups (cp. Conti Rossini 1916, passim), with differences in the concrete measures taken: e.g., a woman who gave birth to an illegitimate child was to be flogged 50 times, and a fine of 40 Maria Theresa dollars had to be paid by the baby's father to her legitimate husband (art. 45; cp. Muluberhan Hagos 2006: 55). When a woman was divorced, she had, however, the right to a half of the couple's property; and women could inherit property on an equal basis (Gaim Kibreab 1995: 5).

The W. resulted in a split among the Zämat (including Šäwᶜattä ᶜAnsäba or Zämat *taḫtay,* 'lower Zämat', and Dämbäzan or Zämat *laᶜəlay*, 'upper Zämat'). It abolished the customary ↗marriage law of *məknəyat* (also known as *dämoz*), a marriage contract for a limited time by which the wife received compensation for fulfilling her domestic and matrimonial duties (Bianchini 1898: 9f.), and replaced it by the *bərki*, a binding form of marriage which implies a pact between the two lineages involved, including reciprocal rights of inheritance (art. 2 in 1907 and in 1940s; cp. also art. 109:3 in the version of 1940s; Kemmink 1991: 56; Yaqob Beyene 2002: 86 n. 2). This change was only accepted by the Zämat *taḫtay*, whereas the Zämat *laᶜəlay* kept the earlier tradition.

Abdulkader Saleh Mohammed – Nicole Hirt

Wäfla

W. (**ወፍላ**) is a district in northern ↗Wällo. In the imperial administrative division, it was a *wäräda* in ↗Wag *awrağğa*. Its main city is ↗Koräm; other, minor, towns include Märäwa and Zatta. It is bordered by ↗Rayya Azäbo (cp. ↗Azaboo) in the east, Rayya Qobo in the south, ↗May Č̣äw in the north, and ↗Säqoṭa *wäräda* in the west (for location s. map for Wag).

Geographically, W. is a predominantly highland region, with a lowland area esp. around Lake ↗Ḫašəngä. The only lake in the region, it has no river flowing into or going out of it. The rivers Gäräb Qola and Šayna flow through W. The highest peaks are Wänbärät and Ayhud Amba. There is moderate rainfall between February and April.

W. lies on the ancient ↗salt trade route, from Təgray via Ḫašəngä in the north, and continuing south-west to Märäwa, Dəldi and Lasta and thence to ↗Yäğğu, and further to Šäwa.

W. is inhabited by the ↗Agäw (in Märäwa, Ṭäṭära and Zatta) and ↗Təgrəñña speakers (in the highland areas). The Märäwa branch of the ↗Oromo expanded and settled as far as Lake Ḫašəngä and eastern lowland regions of Təgray to the east of W. The people in the Lake Ḫašəngä region bordering the Rayya Oromo are largely Muslims whereas the rest of the population of W. are predominantly Christian.

It was in W., at Zatta, that in 1539 the army of ↗Ləbnä Dəngəl was defeated by *imām* ↗Aḥmad Ibrāhīm al-Ġāzī ("Grañ"), and ↗Minas was taken prisoner. Lake Ḫašəngä, and the mountainous regions of Wänbärät and Ayhud Amba, were also places of engagement between the Muslim and the Portuguese forces. At that time, the regions of Wag and W. were included in the province of ↗Bägemdər.

In 1868 the ↗Napier expedition passed through the region of W. on its way to ↗Mäqdäla.

Following the defeat of the Ethiopian army at May Č̣äw on 31 March 1936, the Italian airplanes bombed the retreating Ethiopian soldiers on the shores of Lake Ḫašəngä with mustard gas.

After the overthrow of the *Därg*, W. was placed under the administrative unit of Southern Təgray with its centre at May Č̣äw. This ended the traditional and historical relations of W. with Wag.

Wudu Tafete Kassu

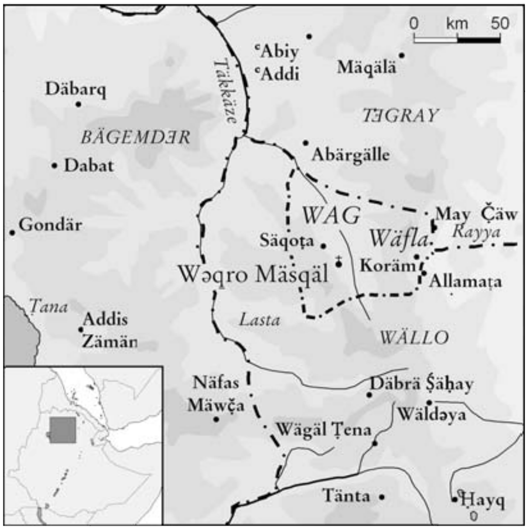
Wag

W. (**ዋግ**) is a historical region between ↗Təgray and ↗Lasta, where the River ↗Täkkäze rises (BeckHuntAlvar 200f.; cp. TadTChurch 26 n. 1). Today it forms Wag Ḫəmra zone of Amhara *kəlləl.* The main city is ↗Säqoṭa. In 2002, the population of Wag Ḫəmra was estimated at ca. 330,000 inhabitants. The traditional subdistricts (*wäräda*) are Säqoṭa (ca. 153,000 inhabitants), Daḫna (ca. 120,000) and ↗Zəqʷala (ca. 57,000).

It is important to clarify relationship between W. and other similar toponyms appearing in the sources. For Conti Rossini (1894: 434) W. and ↗Wäǧ are the same, but he distinguishes them from Wage (Wäge). Marrassini, who provides an extensive list of references (MarrAmdS 218f.), remarks that W. is a district in Təgray, and should not be confused with Wäge or Wäǧ, a district near Lake ↗Zʷay. The same distinction had also been made by Taddesse Tamrat (TadTChurch s. index for "Wag", "Wäj").

According to ↗Cosmas Indicopleustes (ed. Wolska-Conus 1970: 51), the Aksumite King ↗Kaleb ordered the governor of ↗Agäw to protect the caravan routes which led from the sea shore to the gold-mines of "Sasou", identified by some scholars with the region of ↗Fazoġli in modern Sudan (but s. Fiaccadori 1992: 96f.). If the information is reliable, the caravan routes led from ↗Aksum to W., crossed the Täkkäze and proceeded to ↗Dämbəya and the north-western shore of Lake ↗Ṭana. The region of W. and Lasta, the centre of Agäw resistance against Aksum, was to be the cradle of the ↗Zagʷe dynasty.

The Agäw of W. and Lasta are said to have largely been Christianized and their chiefs integrated with the Christian court by the beginning of the 13th cent. (TadTChurch 54f.). It is, however, also hypothesized that the first Zagʷe kings may still have been non-Christian (van Donzel 1998).



In the 14th cent., W. was the birth-place of ↗Gäbrä Iyäsus, the well-known disciple of ↗Ewosṭatewos (Conti Rossini 1938). In 1539, Zatta in W. was the site of the decisive battle between ↗Aḥmad b. Ibrāhīm al-Ġāzī and *aṣe* ↗Ləbnä Dəngəl. The latter was defeated, his son ↗Minas captured, and W. and Lasta fell in the hands of Grañ. After the restoration of Christian monarchy, the central control over W. and Lasta weakened, which necessitated military campaigns against the local governors by *aṣe* Minas in 1563 (Pereira 1888: 34, 51) and *aṣe* ↗Śärṣä Dəngəl in 1578 (CRHist 58). During the period of *aṣe* ↗Susənyos, W. and Lasta remained strongholds of Orthodox Christianity and resisted conversion to ↗Catholicism (cp. BassÉt 124; Pankhurst in PICES 7, 214–20). W. and Lasta remained largerly independent throughout the reigns of Gondärine rulers until ↗Iyasu II who defeated *wag šum* ↗Näʾakkʷəto Läʾab, achieving an integration of the region into the Gondärine state. The conflict temporarily reemerged during the reign of *aṣe* ↗Iyoʾas, when *wag šum* ↗Gigar paid tribute to ↗Yämaryam Barya instead of *ras* ↗Mikaʾel Śəhul (BruNile IV, 50, GuiIyas 214, 239). However, on Mikaʾel's military intervention Gigar reconfirmed his allegiance and later supported the former's ambitions (BruNile IV, 50f. 64, 105).

Ever since the decline of the Zagʷe, the traditional rules of W., who bore the hereditary title ↗*wag šum*, saw themselves as descendants of the Zagʷe kings. In the second half of the 19th cent. one of the *wag šums* acceded to the imperial throne as *aṣe* ↗Täklä Giyorgis II.

W. was brought under the centralized imperial control by *aṣe* ↗Tewodros II in 1858.

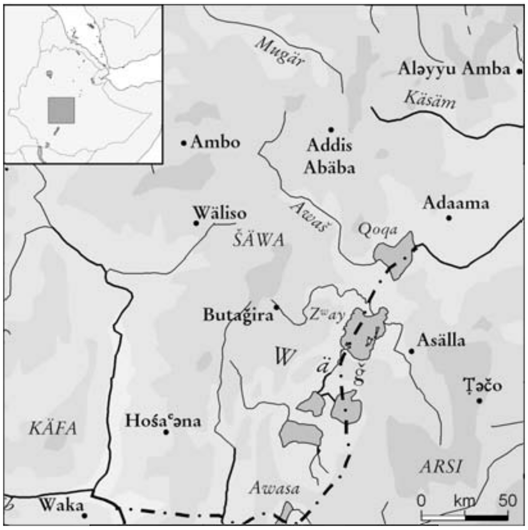
Wäǧ

W. (**ወጅ** or Wäǧ mədər, also Wäge, s. MarrAmdS 219) is a historical region in ↗Šäwa south of the River ↗Mugär which flows into the Nile west of ↗Däbrä Libanos of Šäwa. It was one of the seven *gʷədäm* (*gʷədəm*), the districts in Šäwa which contributed troops to ↗Yəkunno Amlak's army for his campaign against the last ↗Zagʷe (Conti Rossini 1922: 285–96; Perruchon 1896: 358; TadTChurch 67, 119 n. 2). It is also the native region of *abunä* ↗Märḥa Krəstos, the 15th-cent. 9th abbot of Däbrä Libanos.



Other districts along the upper course of the River ↗Awaš and the southern tributaries of the ↗Abbay were Narīt (Inarīt [?], i.e. ↗Ǝnnarya, TadTChurch 177 n. 11), ↗Ǝndägäbtän and Wäräb (s. BassHist 245 n. 1; MarrAmdS index), all eventually Christianized (cp. Turaiev 1908: 198).

In this region one should also locate the district of Särka (↗Šarḫa, cp. UmMasGaud 102; cp. TadTChurch 140 n. 1), whose governor Yosef had made common cause with ↗Däwaro (MarrAmdS 186f., 214). Almost all Ethiopian sources quoted in MarAmdS (214) place Särka in ↗Goǧǧam. The Särka which is connected with W. and Gurage is to be found on the western borders of Däwaro and north-east of Hadiyya (PerChron 36).

The history of W. is closely connected to its neighbour on the east, ↗Fäṭägar. *Aṣe* ↗ᶜAmdä Ṣəyon I is reported to have defeated the "Zebdar" of W. and appointed a governor with the title *mäsfən*. During the time of *aṣe* ↗Zärᵓa Yaᶜəqob, the governor of W. bore the title ↗*hegano*, a possible indication that the district was Islamic by that time.

Aṣe ↗Bäᵓədä Maryam campaigned against ↗ᶜAdal from W. and the ↗Gurage area (PerrZarY 157ff.). The governor's title during his reign was ↗*qaṭ*, another Muslim title. By the time of ↗Alvares's visit, the region was predominantly Christian as ↗*Ṭəmqät* was widely celebrated (BeckHuntAlvar 432).

In 1577 *aṣe* ↗Śärṣä Dəngəl, on his way to attack Muḥammad, *sulṭān* of ᶜAdal, passed through W. and Sarkä (CRHist 49 [text]). Shortly afterwards, the region is reported to have been occupied by the ↗Oromo. By the time Almeida drew his map, the toponym W. as a name of a region was an anachronism.

Wag šum

W.š. (Amh. **ዋግ፡ ሹም**, lit. 'the governor [↗*šum*] of Wag'; Gəᶜəz ***ሠዩመ፡ ዋግ***) was the title that the traditional rulers of ↗Wag (and from the 18th cent. on also of ↗Lasta) assumed after the decline of the ↗Zagʷe dynasty, from which they traced their descent, and the accession to power of the ↗Solomonic dynasty" in 1270. These local rulers also developed a strong tradition of direct descent from the Israelite King Solomon, as a counterclaim to the traditions of the Solomonic dynasty, with the aim of acquiring a high degree of legitimacy and dignity within the post-Zagʷe state structures.

The term "*wag śəyyum*" is first mentioned in the records of Emperor ↗ᶜAmdä Ṣəyon's campaigns in the 14th cent., when troops of the W.š. fought against the Nədḥan (KrAmdS 11 [text] = 15 [tr.]; MarAmdS 68f.). A note in an early 14th cent. gospel manuscript in Betä Libanos, ↗Lalibäla, gives reference to a daugther of a "*śəyyum* of Wag", Nəṣḥat Maryam, who could be the wife of the last Zagʷe king, ↗Näᵓakkʷəto Läᵓab (cp. Derat 2009: 69).

The W.š. were accorded privileges at the Solomonic royal court that were greater than those of other court officials. According to a tradition preserved by Bruce (BruNile I, 533f.) *abunä* ↗Täklä Häymanot played an important role in the rise to power of *aṣe* ↗Yəkunno Amlak, an agreement was concluded between Näᵓakkʷəto Läᵓab, and the founder of the Solomonic dynasty, Yəkunno Amlak, which assured the regional governorship of Wag and certain prerogatives to the descendants of the former. The W.š. were allowed to possess a silver ↗*nägarit*, which they could beat at the gates of the imperial palace on their visits to the court; in addition, they did not have to prostrate themselves in front of the Emperor; they were allowed to wash their hands in the golden basin which the emperor himself used; they did not have to pay ↗tributes nor suffer any impositions; they were to sit on a silver chair next to the king, and symbolically received the royal garments worn by a new king on the day of his ↗coronation (Beke 1844: 55f.).

According to another tradition, the privilege of washing in the Emperor's golden basin was awarded, along with a governorship over a vast area, to W.š. Yonatan (fl. 1540s), for his active participation in the wars against *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī (cp. Bərhanä Mäsqäl Dästa 1958/59: 117f.). This, as well as the marriage relations established between the W.š. and the Solomonic rulers, further increased the power of the regional governors of Wag.

The privileges continued also in the post-↗*Zämänä mäsafənt* Ethiopia, as the following recorded facts confirm: W.š. ↗Täfäri Wäsän washed his hands in the golden basin used by *aṣe* ↗Yoḥannəs IV during his coronation ceremony in 1872; in 1894 W.š. ↗Bərru Gäbrä Mädḫən entered the palace of *aṣe* ↗Mənilək II beating his *nägarit*, and was allowed to wash his hands in the king's golden basin during the court banquet; W.š. ↗Käbbädä Täfäri rode on a mule beating his *nägarit* when arriving at the court of Empress ↗Zäwditu in 1917, and in 1930 he received the coronation garments of Emperor ↗Ḫaylä Śəllase I (cp. McCann 1987: 96).

The political status of the region and its governors as a whole remained stable over centuries, during which the W.š. maintained their autonomy. It was only in the first half of the 17th cent. that we see the first signs of conflict between the court and the W.š. First with the appointment of Məhərka, son of Tewodros, as W.š. by *aṣe* ↗Iyasu II, was the region of Lasta included under the regional control of the W.š.

The W.š. have always considered themselves as principal protectors of Orthodox Christianity. Thus, when in the 17th cent. *aṣe* ↗Susənyos embraced ↗Catholicism, W.š. ↗Rətuᵓa Amlak joined the anti-Catholic rebellion under *abeto* ↗Mälkəᵓä Krəstos; he died in battle in June 1632 (FotiCr 114; PerChron 332f. [text] = 258 [tr.]). During the religious controversies of the 17th - 18th cent. (↗Christology), the W.š. were staunch supporters of the ↗*Täwaḥədo* doctrine.

The military elite of the region assumed new importance as kingmakers in the earlier stages of the *Zämänä mäsafənt* until they were later overshadowed by the ↗Yäǧǧu Oromo lords. The latter, however, still drew on the traditional W.š. power, establishing marriage relations with the local elites of Lasta. *Ras* ↗Aligaz, in fact, even symbolically assumed the title of the W.š. The power briefly returned to the W.š. in the second half of the 19th cent. when one of the W.š. ascended the imperial throne as *aṣe* ↗Täklä Giyorgis II. Later, a younger line of the family of Täklä Giyorgis acquired a central position at Ḫaylä Śəllase I's court, among them ↗ᶜAśratä Kaśa, who received the newly created princely title of ↗*ləᶜul ras*.

Since the beginning of the 19th cent. Lasta and Wag were separate administrative units and only

Wag remained under the control of the W.š., until the ↗Revolution of 1974 abolished such traditional and regional offices.

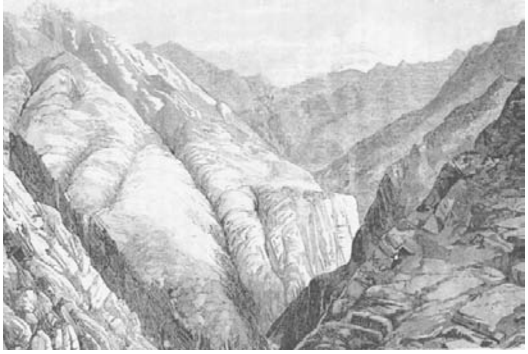
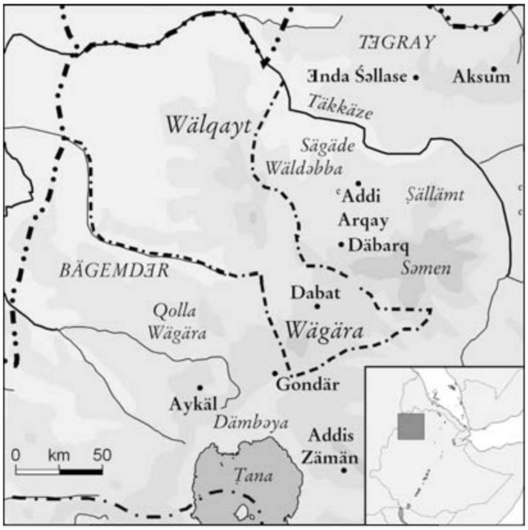
Wägära

W. (**ወገራ**) is a district north of Lake Ṭana and south-west of ↗Səmen. A plateau averaging 3,000 m A.S.L., it stretches from Lämalmo on the edge of the ↗Täkkäze escarpment in the north to the hills overlooking ↗Dämbəya in the south. The immediately adjacent lowlands to the west are known as Qolla W.

W.’s aboriginal inhabitants were ↗Agäw of the ↗Kayla branch. By the 14th cent., some Agäw groups had adopted Hebraic religious practices and were known to the Christian Amhara and Təgray as ↗*Ayhud*. Under *aṣe* ↗ᶜAmdä Ṣəyon and his successors, the Christian kingdom began to incorporate *Ayhud* groups east and north of Ṭana and to proselytize among them. In W. some Agäw and *Ayhud* submitted and converted, but others refused, resulting in unrest during the 14th cent. In the early 15th cent., *aṣe* Yəsḥaq defeated yet another *Ayhud* rebellion under their leader, ↗Gedewon, and imposed Christianity and tribute payment. Those who refused to convert were deprived of their hereditary lands, many becoming landless tenants or artisans and craftsmen known eventually as Fälaša or ↗Betä Ǝsraʾel. Others fled to neighbouring lands, such as ↗Qʷara, ↗Sägäde, Səmen, and ↗Wälqayt. W. was thus integrated into the Christian kingdom, its population becoming Christian and Amhara, with Betä Ǝsraʾel groups dispersed throughout.



The Wägära mountains; drawing from Bianchi 1884: 16



In the extreme southwest, the ↗Kəmant, another Agäw group that had adopted Hebraic beliefs, submitted peacefully before Christian expansion. They retained ownership of their land and preserved their cultural and religious institutions into the 20th cent.

W. was one of the provinces in which ↗Ləbnä Dəngəl sought refuge during the Muslim wars from 1527 to 1543 and in which a Christian army suffered defeat in the mid-1530s. A Fälaša rebellion in 1555–56 was doubtless related to unrest in Səmen. ↗Minas and ↗Śärṣä Dəngəl used W. as a staging ground for repeated campaigns against the Fälaša of Səmen, who in 1585 raided and pillaged in W. In 1589 Śärṣä Dəngəl established a permanent camp at Aybä in the far south-east, where he built a castle and the church of ↗Kidanä Məḥrät. Dissension and rebellion in W. and Səmen persisted into the reign of ↗Susənyos. In the 1620s the Portuguese ↗Jesuits proselytized in W.; in 1630 they claimed there were 100,000 Catholics in W. and Dämbəya.

Since at least the second millennium A.D., the ↗trade route that runs from the southern ↗Red Sea to Ṭana has traversed W. from Lämalmo to Dämbəya. At the southern end of the W. highland, the route divided into southern and western branches. To protect and levy tolls on the caravan trade at this confluence of routes was one of the reasons that *aṣe* ↗Fasilädäs placed his camp at Gondär on the edge of the W. plateau overlooking Dämbəya and Ṭana in 1636–37. During the 17th and 18th cent., W. was a granary for Gondär. From 1936 to 1938, the Italians converted the caravan trails between Gondär and ᶜAddi Arqay into the all-weather road that traverses W. today.

Under the mid-20th cent. imperial administration, W. was an *awrağğa* within the Bägemdər–Səmen Province composed of six *wärädas* – ↗Dabat, Sägäde, Sätit Humära, W., and Wälqayt.

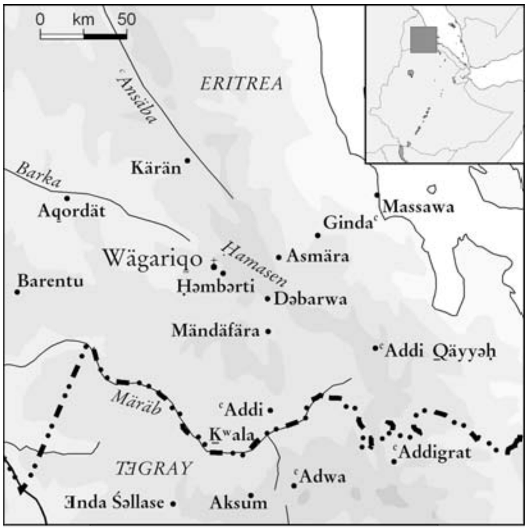
LaVerle B. Berry

Wägariq̱o

W. (**ወጋሪቆ**, also Mägäriqo), also known as Ǝnda Abunä Täklä Haymanot, is a monastery 1 km off the village of Liban, not far from Ḥəmbərti, in historical ↗Säraye, today Ḥamasen, Eritrea. The name W. is possibly of ↗Agäw origin (Conti Rossini 1916: 80; 1912: 615 n. 1); the local tradition connects the origin of the people of



(Zagʷa) Libän with the migrants from ↗Lasta (KolTrad II, A 31; Conti Rossini 1942: 189).

Ǝnda Abunä Täklä Haymanot was reportedly founded by *abunä* Täklä Haymanot "Gärgära" (whose name it bears, unlike Bausi – Lusini 1992: 25) from Märätta Qäyaḥti (in the late 14th cent.?) and supported particularly by the 17th-cent. lord (↗*baḥər nägaš* under *aṣe* ↗Fasilädäs) Yoḥannəs Ḥakkay of Säraye (BerTarik 151f.; Conti Rossini 1942: 194f., 209).

The circular ↗church building seen today was constructed in the 1960s. The walls of the *mäqdäs* are covered with recent wall paintings containing references to the council of ↗Nicaea and the Arian heresy.

Ǝnda Abunä Täklä Haymanot has a ↗nunnery; the area of the monastery is divided into the space accessible to nuns, and a larger space, subdivided by low walls, inhabited by monks. All dwellings are of traditional *hədmo* type (↗Houses). Today the community is in decline and counts only ca. five monks. The library preserves ca. 134 manuscripts (Bausi – Lusini 1992: 25f.).

Wägayyähu Nəgatu

W.N. (**ወጋየሁ፡ ንጋቱ**, b. June 1944, Addis Abäba, d. December 1989) was a popular Ethiopian ↗theatre actor. He was the only child of *ato* Nəgatu Bəzunäh and Amsale Bäyyänä. He first attended the Swedish Evangelical Mission (↗Evangeliska Fosterlands Stiftelsen) School and completed his secondary education at the Täfäri Mäkʷännən School.

W.N. was known for his humour and comic portrayal of film characters. In 1963 he joined the Haile Sellassie I University's Creative Arts and Theatre Programme (↗Addis Ababa University) and studied for two years the art of the theatre plays and stage production. He first displayed his talents in plays such as *Romeo and Juliet*, Samuel Becket's *Waiting for Godot* and ↗Mängəśtu Lämma's *The Marriage of Unequals* and *Snatch and Run, or Marriage by Abduction*.

In 1967, W.N. went to Budapest with a grant to study theatre for two years, culminating in a well-received performance of Hungarian plays at the Madac Theatre in Budapest. Back home in 1970 he became Programme Director of the Creative Arts and Theatre Centre. From 1974 to his death W.N. was to have yet another distinguished career as an actor and teacher at the National Theatre.

A majority of the total of 30 plays W.N. performed in during his life were staged in these later years. In 1979 he married Amsale Gännät Yəmär, an employee of the Press Ministry, with whom he had three children.

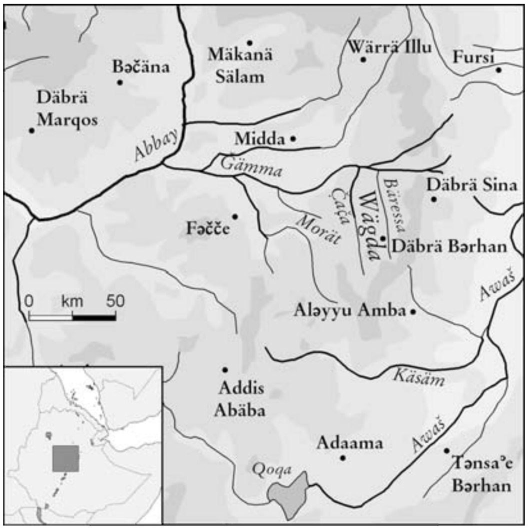
Girma Fisseha

Wägda

W. (**ወግዳ**) is a historical district west of ↗Däbrä Bərhan in northern ↗Šäwa, more specifically between the rivers Č̣äč̣a and Bäressa. The area is a narrow stretch of land, ca. 35 km long but only about 5 km broad, taking the shape of a long mountain ridge where the top of the ridge is of the same altitude as the tableland of ↗Morät to the south, while the rivers are some 800 metres below. The deep river valleys historically provided good protection against invaders.

In the 14th cent. W. is mentioned in the Chronicle of ↗ʿAmdä Ṣəyon as one of the Ethiopian countries governed by a ↗*mäkʷännən* or *mäsfən* (↗*Nəguś*; ↗Aristocracy). For the 15th cent. it is attested in the Life of ↗Täklä Haymanot. During the 16th cent. W. was attacked by the armies of ↗Aḥmad b. Ibrāhīm al-Ġāzī, but Christian communities survived there, and the district is mentioned supplying a contingent to the army of *aṣe* ↗Susənyos. The two chiefs of W., Baro and Həryaqos, were among the chiefs to receive *aṣe* ↗Iyasu I on his visit to Šäwa in the late 17th cent. W. remained a rather independent principality, often at war with the ↗Oromo inhabiting the plains around Däbrä Bərhan, against whom they built protective walls.



W. was incorporated into the rapidly expanding principality of Šäwä in the late 18th cent. (for details s. ↗Tägulät). Thereafter, W. regularly appeared as a minor administrative division within Šäwa, and it survived as an administrative unit until the end of the imperial regime. In 1974 it was a *məkəttəl wäräda* within the *wäräda* of Wäräna. In more general descriptions, W. is often treated as part of its larger northern neighbour, Tägulät. Due to the difficult terrain, W. remained quite isolated until the construction of the road by a Norwegian Redd Barna project in the late 1980s.

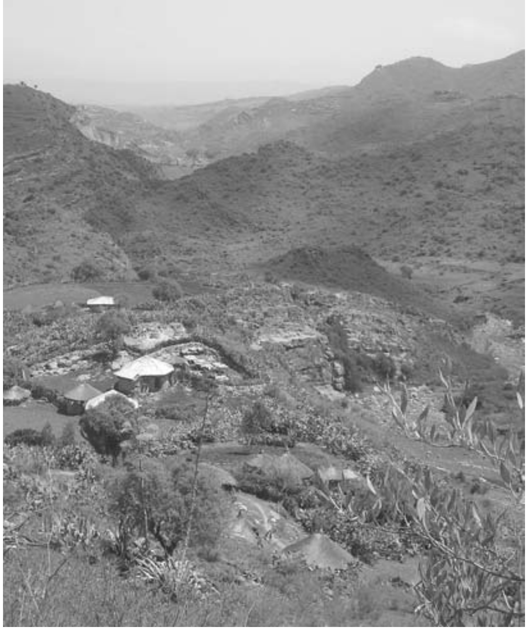
Wäǧǧärat

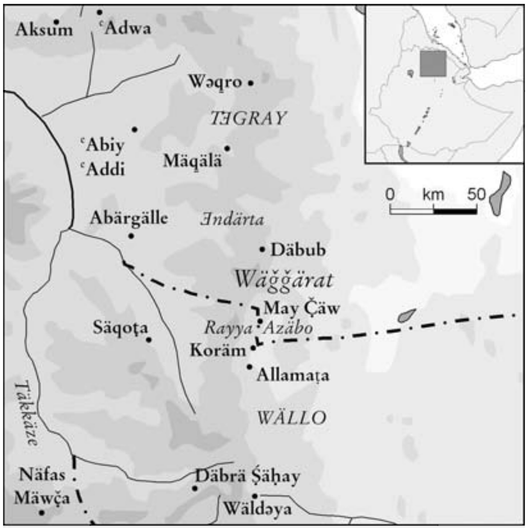
W. (**ወጀራት**, also Wäǧǧərat, Waẓẓärat) is a district in ↗Təgray to the north of ↗May Ç̣äw and to the south of ↗Ǝndärta. In the imperial administrative division, it formed part of the ↗Ǝndärta *awraǧǧa* as W. *wäräda* (main town Däbub). Today W. belongs to the Ḥənṭalo-Wäǧǧärat *wäräda* of the Southern Zone of Təgray. It is a highland area with an elevation ranging from 1,500 to 2,500 m A.S.L.

W. is inhabited by ↗Təgrəñña speakers who speak a dialect similar to that of ↗Rayya ᶜAzäbo and engage in mixed farming. The predominantly Orthodox Christian population numbered over 30,000 in 1994; it is currently estimated at about 50,000.

According to local oral tradition, the first settlers in W. arrived from the east of the ↗ᶜAfar plain in search of pasture and founded the villages of Ḥadale, Sänale, Gʷänqʷa and Gänti. Between the 10th and 14th cent. migrants from Ǝndärta, Ǝnda Mäk̠onni (↗Ǝnda Mäkʷännən), Bora, Säläwa, ↗Säqoṭa, ↗Gayənt, ↗Sayənt and ↗ᶜAddi Q̠äyyəḥ came to settle in the region, some merging with the previous population, some establishing new villages (formerly, a local legend recounted that the W. are descendants of the 16th cent. Portuguese, SalTrav 274). In ca. 1320 ↗ᶜAmdä Ṣəyon I is said to have camped in W., where he established the town of Däbub (therefore known also as Baḥri Ḥaṣ́äy, 'Sea of the emperor') and numerous churches. Some of his followers remained in the region as permanent settlers. During the 16th cent., W. is reported to have been overrun by ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ").



Settlement pattern in the Wäǧǧärat mountains; photo 2004, courtesy of Wolbert Smidt



More reliable references concerning W. appear in sources starting from ca. 17th cent. During the reign of *aṣe* ↗Susənyos, W. was governed by *abetohun* Wäldä Krəstos. The ↗Oromo tried to conquer W., but the inhabitants successfully defended their territory. Under *aṣe* Yoḥannəs I, in 1675, the W. people joined a rebellion lead by *ras* ↗Fares and *däǧǧazmač* ↗Zämaryam (s. EAE vol. 5) which was defeated by *abeto* ↗Dəlbä Iyäsus. When Fares quarreled with Zämaryam one year later, the W., led by their governor Ḫalibä Wängel, sided with the former, but were defeated several times by Zämaryam and suffered heavy losses.

During the ↗*Zämänä mäsafənt*, W. was granted a large degree of autonomy by *ras* ↗Wäldä Śəllase of Təgray, who had found refuge in the region while escaping from *ras* ↗Mikaʾel Səḥul in the 1770s. This autonomy decreased only under *aṣe* ↗Ḫaylä Śəllase I, and the ↗Wäyyane rebellion in May 1943 was in part triggered by W. in protest at the political imposition of the imperial government. In spite of the victory, the autonomous administration was eventually abolished completely, with only a very few traditional institutions continuing to function.

The traditional administrative organization of the W. people is believed to go back to the time of ᶜAmdä Ṣəyon. The inhabitants were grouped in 20 villages (*amba*, or *ᶜaddi*), each divided into several sub-units (known as *goṭ*, i.e. 'hamlet'). The entire *Ǝsra Amba* (or *Ǝsra ᶜAddi*, '20 villages') was administratively divided into two zones on the two sides of the Wäynat, each consisting of ten villages and referred to as *fägᶜi gäräb* ('half of the river').

In W., an elaborate system of social organization has developed, with *qänčị* ('equality', in the sense of access to power) being its central principle. Decisions were taken by an assembly (*dämär*), either at village level (*amba dämär*) or at regional level (*dämär wäǧǧärat* or *dämär əsra ᶜaddi*). The traditional venue for the latter was Gəra Gäräbo, a locality on the Wäynat River, in the vicinity of ᶜAddi Q̱äyyəḥ. Representatives of the 20 villages attended such *dämär*, presided over by a chairman elected for the particular occasion.

In addition, several other institutions functioned as traditional mechanisms of conflict resolution: the Church, the Elders, particularly the *abo gäräb* ('father of the river'), and the women's organization, *däbarte*. These mechanisms survive until today and function effectively, e.g., in the cases of murder or cross-border conflicts with the neighbouring ᶜAfar. In particular, *abo gäräb* plays an important role.

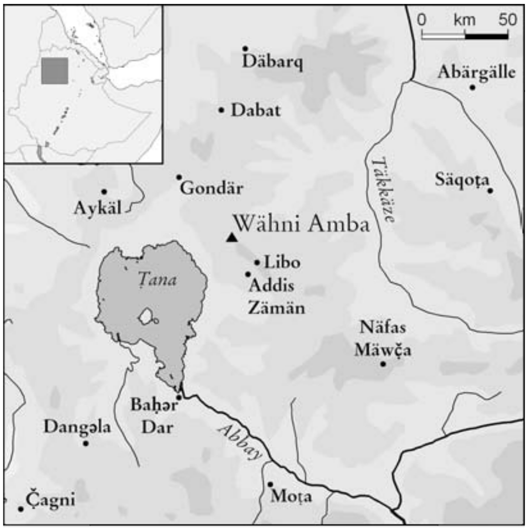
Wähni Amba

W.A. (**ወህኒ፡ አምባ**, from Amh. *wähni*, 'prison', and ↗*amba*, 'flat-topped mountain') was a mountain-top prison for royal princes during the ↗Gondärine kingdom of the 17th–18th cent. Located about 40 km south-east of Gondär in the district of ↗Libo, sub-district of Kämkäm, in present-day North Gondär Region, it should not be confused with another prison for commoners bearing the same name in ↗Č̣əlga. In geologic terms, W.A. is a volcanic "plug", the core of igneous rock that remains after the softer surrounding rock of an extinct volcano has eroded away. Estimated at ca. 550 m high on its steepest side, it is a sheer-sided "pinnacle of rock … its top was not flat … but curved and mottled like a round and shaggy head" (Toy 1961: 225). In the late 1990s, its rounded summit was perhaps one or two hectares in area (ibid.; Pakenham 1999: 173).

These physical features plus proximity to Gondär made W.A. an ideal site for detaining the male members of the ↗Solomonic dynasty. Sons of the current reigning monarch remained free so long as their father was alive, but upon his death, all were relegated to W.A. to join their relatives except for the favoured one destined for the throne.

The practice of imprisoning the sons and brothers of previous rulers originated with the reestablishment of the ↗Solomonic dynasty in ↗Šäwa in the late 13th cent. It was intended to prevent rival princes from challenging the throne, thereby contributing to political and dynastic stability. Šäwan princes were consigned to ↗Amba Gəšän; W.A. was Amba Gəšän's successor.

W.A. was in use from the reign of ↗Fasilädäs to that of ↗Täklä Giyorgis I. Initially, Fasilädäs confined his brothers on islands in Lake ↗Ṭana before instituting a formal royal prison. W.A. appears to have come into use in the later years of his reign. In 1647–48, Fasilädäs exiled his brother ↗Gälawdewos to an island in Ṭana (DonHaySirat 189), meaning that at that time



W.A. was not yet in use. One variant of the "short chronicle" says that the prison of W.A. began with these events of 1647–48, but the accuracy of this account has been questioned (Guidi 1922: 94). It seems likely that the prison of W.A. was established at some point between the later 1640s and the late 1660s. The first mention of it in the annals occurs in 1667-68, when Fasilädäs banished his rebellious son, Dawit, to W.A.

To prepare W.A. for its occupants, a path was carved out and a stairway constructed up the sheer face of one side. Guardhouses were built at the top, midway, and bottom. On the summit, tiny cubicles that apparently served as living quarters, a church, and other structures were constructed in stone, remnants of which remain today (Toy 1961: 228–32; Pakenham 1999: 173). The gatekeeper was the *azzaž* of W.A., who controlled all access, together with a detachment of guards. He prevented princes from escaping, admitted visitors, and supervised delivery of grain, meat, and clothing supplied by surrounding districts under the royal court's direction. For the princes, life offered little diversion aside from traditional ↗education at the hands of clerics. Escapes were rare. A notable one occurred in 1716 when ca. 50 princes, including the future emperor ↗Bäkaffa, fled W.A., fearing that if *aṣe* ↗Yosṭos's son succeeded his father, they might be killed. On occasion, rebellious nobles overcame the garrison and brought down a prince as their candidate for the throne, the very situation that the mountain prison was intended to prevent. ↗Iyasu I was notable for sympathizing with the plight of his imprisoned kinsmen, visiting and hosting banquets for them at the foot of W.A. At other times, the royal court was indifferent or neglectful.

Aside from clerics and soldiers, females were admitted and became concubines, so that children and even families were reported to live on W.A. E.g., ↗Täklä Haymanot II and Täklä Giyorgis were both born there to ↗Yoḥannəs II, who spent almost his entire life on W.A. before his brief reign in 1769. ↗Tewoflos, ↗Dawit III and Bäkaffa were among the princes who lived on W.A. before answering the summons to the throne.

The limitations of the royal prison became evident in the dynastic chaos of the last quarter of the 18th cent., when unscrupulous nobles enthroned and deposed emperors at will. The last prince brought from W.A. to be crowned was ↗Ḥəzqəyas. In 1789 all princes were released and W.A. was abandoned, apparently at the behest of *ras* ↗Aligaz, the most powerful noble of the time.

LaVerle B. Berry

Wajnberg, Isaak

W. (b. 1878, d. 1941) was a philologist and linguist, the first to contribute to ↗Ethiopian studies in Poland.

Little is known about his life. In 1917, W. completed his Ph.D. dissertation under Franz ↗Praetorius at the University of Breslau on the hagiography of ↗Yafqərännä Ǝgziʾ (an extended version was published in 1936). He continued working on philological themes, delivering a translation of the Ethiopic version of the ↗*Testamentum Domini in Galilea* into German for the edition prepared by Carl Schmidt (1919). Later, W.

shifted his attention to Ethio-Semitic linguistics, particularly Amharic and Təgrəñña morphology (1932, 1935ab, 1936a, 1937abc).

Katarzyna Hryćko – Evgenia Sokolinskaia

Walälləññ Mäkʷännən

W.M. (**ዋለልኝ፡ መኰንን**; b. ca. 1940, Däse, d. 8 December 1972) was a student leader in the 1960s–70s, and activist for the recognition of Ethiopian nationalities.

He was the son of an Amhara merchant (possibly of Oromo descent). W.M. was active in the opposition University ↗Student movement in Addis Abäba in the late 1960s and early 1970s, expressing himself in poetry, in argumentative articles as well as in public speeches. He was associated with the "Crocs", short for "Crocodile", students who studied Marxist revolutionary literature. He contributed to the bilingual student newspaper *Struggle* (**ትግል**, *Təgəl*) and wrote illegal pamphlets.

In 1968, a fashion show was held in Ras Mäkʷännən Hall, in which female University students took part. W.M. attacked this event by writing on the undignified use of University property, on the question of ownership of the University, on foreign interference and cultural imperialism. In April 1969 W.M. was, together with five other students, sentenced to five years' imprisonment for abusing constitutional authority and for stirring up acts of violence and disturbances. They were released thanks to the persistence of student boycotts.

In November 1969 W.M. wrote a politically highly sensitive article: *On the Question of Nationalities in Ethiopia*. This article argued that Ethiopia was not yet a nation, but a collection of Amhara-ruled, oppressed nationalities – adopting the quintessence from Frantz Fanon: "to be an Ethiopian, you will have to wear an Amhara mask". He called for the building of a genuine democratic national state in which no nation dominates another nation be it economically or culturally. The article caused instant furor, the government media insisting that it was tantamount to an instigation for the break up of the Ethiopian state.

After the events following the murder of the student union president ↗Ṭəlahun Gəzaw, at the end of December 1969, W.M. was imprisoned for about 15 months. On 8 December 1972 seven University students engaged in a desperate act of protest against the regime by attempting to hijack an Ethiopian airliner bound for Europe. Security inspectors on board killed six of the hijackers, among them W.M.

Wälamo

The district or *awrağğa* of W. was an administrative unit in the ↗Sidamo Province from 1942 (formally since 1946) to 1974, and populated largely by the ↗Wälaytta people. In 1966 W. *awrağğa* had a population of ca. 600,000 people. A decade later it was 900,000 (CSO 1966, cit. in Dessalegn Rahmato 2007: 7). The W. roughly covered the territory of the former ↗Wälaytta kingdom that was incorporated into the Ethiopian empire in 1894 (for location s. map for Soddo town). W. *awrağğa* consisted of seven *wärädas*. The origin of the name "W." is unclear and controversial, and since the Ethiopian revolution (1974) seen as condescending. It was used as a denigrating appellation of the Wälaytta people. However, the term was probably a mere territorial one, and is mentioned in earlier Ethiopian historical sources, first in the famous 14th-cent. soldiers' song honouring *aṣe* ↗Yəsḥaq (Guidi 1889) and secondly in the *Futūḥ al-Ḥabaša* when describing the defeat of ↗Aḥmad b. Ibrāhīm al-Ġāzī's forces at the hand of the local people in the 1530s.

W. *awrağğa* was an agricultural area, with significant social inequality and little or no industry except traditional crafts and small markets, notably in the capital Soddo, which was founded as a ↗*kätäma* in 1895 by northern settlers and administrators and became the seat of the imperial government. Prior to 1957, the former king ↗Ṭona's grandson *fitawrari* Dästa Fəśśəḥa was the W. governor, the only one of Wälaytta descent. In 1957–60 ↗Gärmame Nəway, one of the instigators of the ↗coup d'état 1960 (s. EAE vol. 2, 1081–82), was in charge. W.'s last governor was *däğğazmač* Wäldä Sämayat Gäbräwäld (1962–74), still remembered with nostalgia by the older generation as a man deeply devoted to developing the area. In 1974 W. *awrağğa* was abolished.

In the 1960s, the capital Soddo was one of the more developed towns in southern Ethiopia as compared with ↗Awasa or other places (Wudneh Almaz 1984). From the mid-1970s the town declined due to lack of government investment, the break up of the local political-economic elite in the "revolutionary" turmoil, and the development of Arba Mənč̣ and especially Awasa. The role of Soddo as a service centre disappeared in the 1980s due to the closure in 1984 of the relatively successful, World Bank-funded, agricultural projects of the "Wollaita [initially "Wolamo"] Agricultural Development Unit" and the sabotage of private business by the Mängəśtu Ḫaylä Maryam regime. The town's population, however, increased exponentially due to the ongoing rural crisis.

In the 1980s and 1990s the new Wälaytta *awrağğa* was part of the North Omo region and no longer a separate unit. Its status and wealth declined steeply and have not recovered since. In the new Wälaytta zone since 2000, incorporating what was known as W., some economic growth has been observed, but unemployment is high, facilities and services are underdeveloped and industrial or crafts development has lagged behind.

Wäläne

Wäläne language

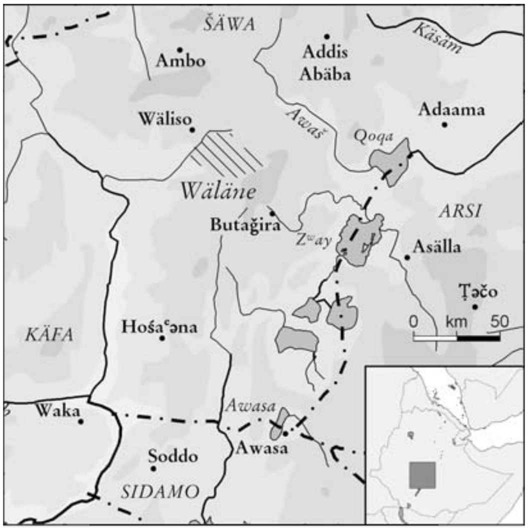
W. (also Wolane, Walani, Olanē) is an East ↗Gurage language spoken by ca. 70,000 people in the north of the Gurage Zone. Despite the high degree of mutual intelligibility between ↗Səlṭi and W., the socio-linguistic situation demands that they be treated as two distinct languages (Meyer 2006: 17ff.).

In contrast to Səlṭi and ↗Zay, W. does not have vowel length as a phonemic feature. The vowels are *i*, *ē*, *ä*, *ā*, *ō*, *u* and *ə*. The consonantal phonemes are: labials *b*, *f*, *m*, *w*; alveolars *t*, *d*, *ṭ*, *s*, *z*, *č*, *ğ*, *č̣*, *n*, *r*, *l*; palatals *š*, *ž*, *ñ*, *y*; velars *k*, *g*, *q*; glottals *h*, *hʷ*; glottal stop ʾ. Labialized non-coronals and palatalized velars are marginal. The velar ejective *q* is debuccalized to ʾ in all non-geminated, postvocalic positions: *qätälä* 'he killed' vs. *yə-ʾätl-ān* 'he kills'.

Accusative marking (by *-nä*) is restricted to proper names, personal pronouns and the interrogative pronoun *mā* 'who': *šāmil-nä wodätti* 'She loved Shamil'. W. nominals are transnumeral but may indicate plurality by the suffix *-(č)čä* (e.g., 'bird' *wumf* > *wumfə-ččä*), by the pattern -C*ā*C*ō* (e.g., 'dog' *bučō* > *bučāčō*) or by a combination of the two ('child' *č̣əlō* > *č̣əlālčä*). A few countable nouns have a suppletive plural. The definite article is *-y* for masc. and inanimate (*bučō-y* 'the dog'), and *-tē* for fem. (*lām-tē* 'the cow') nouns. The free demonstrative pronouns *ʾənnä* and *ʾannä* for proximal and distal deixis change into the bound forms *-i-* or *-ā-* when preceded by a prefix: *b-**i**-bbi* 'at this place' vs. *b-**ā**-bbi* 'at that place'.

The personal pronouns are: 1st pers. sg. *ʾihe/yihe*, 1st pers. pl. *ʾiññä* , 2nd pers. masc. sg. *ʾatä*, 2nd pers. fem. sg. *ʾašä*, 2nd pers. pl. *ʾatum*, 3rd pers. masc. sg. *ʾuhä*, 3nd pers. fem. sg. *ʾəšä*, 3nd pers. pl. *ʾuhun*.

The majority of verbs are tri- or biradical. The verb is inflected for person, number and gender. The aspect-mood system is based on three distinct templates, for perfective (PV), imperfective and jussive. Several conjugation types are distinguished (cf. Leslau 1994). Type A is unmarked.



Type B is characterized by a vowel *ē* after the first radical in the indicative mood and *i* in the jussive/imperative: *fēläˀä* 'he whistled' and *yəfēlqān* 'he whistles' but *yäfilq* 'let him whistle'. Further verb types are characterized by distinct vowels after the first radical: *ā* (*bāläˀä* 'become old', type C), *ō*/*u* (*ṭōˀäsä* 'he begged' but *yäṭuˀəs* 'let him beg', type D) and *u* (*dufälē* 'it is blunt', type F). Medio-passive, direct and indirect causative are derived by the prefixes *tä-*, *ˀa-* and *ˀat-* plus ablaut, resp.: *tä-bälä* 'it is/was eaten', *ˀa-bälä* 'he fed' and *ˀat-bēlä* 'he ordered/facilitated to eat'. Other derivations are marked by reduplication of radicals and/or the insertion of the vowel *ā*.

Negation (NEG) is expressed by *ˀa(l)-*: *ˀal-bälä* (NEG-eat:PV:3sg.masc.) 'he did not eat'. W. possesses a special set of subject markers for negated finite imperfective verbs: *yə-bäl när* 'I used to eat' vs. *ˀəllə-bbäl* 'I do not eat'.

Converbs are marked by the suffix *-āni* or *-ä*, which are attached to the inflected affirmative verbs: *bäl-āni* 'after he ate'; *bəlšä təfäğ-ä* 'after she has finished her work'.

The affixes *b*(*ä*)- (locative, detrimental and instrumental; marker of the protasis), *l*(*ä*)- (beneficiary, addressee; marker of purpose clauses), *t*(*ä*)- (allative and comitative; marker of temporal subordinated clauses), *yä-* (genitive) and *-kō* (similative; complementizer) indicate syntactic relations: *bä-mäkinä* 'in a car, with a car' or *bä-mäṭä* 'if he comes', etc.

Subject-Object-Verb is the most frequent constituent order. Present tense copular clauses are marked by the morpheme *-n*. The copular morpheme (COP) precedes possessive suffixes (POSS) or the definite article: *wāšt-ə*n*-t-kä* (sister-COP-3sg.fem.-POSS:3sg.masc.) 'She is his sister'.

The elementary wordlist is: 'one' *ˀadd*, 'two' *hōyt*, 'three' *šēšt*, 'fire' *ğirä*, 'water' *mäy*, 'sun' *ˀayr*, 'moon' *wäri*, 'blood' *däm*, 'tongue' *ˀarämät*, 'tooth' *ˀəsən* (cf. Leslau 1979).

W. is not a written language; it is only recorded in linguistic descriptions (cf. Meyer 2006: 20).

Wäläne ethnography

The W. (also Wäläne-Gädäbano) are the northernmost East-↗Gurage-speaking group. Their territory is roughly defined by the Gong River in the north-east and the Kärib River in the south. It is historically divided into a northern part, (Kokir-)Gädäbano, and a southern part, W. proper. Neighbouring groups of the W. are the Oromo in the north, the Kəstane (↗Soddo) and ↗Mäsqan in the east, the ↗Qabeena in the west and the ↗Ǝža and ↗Muḫər in the south. The W. population was estimated to have been ca. 70,000 at the end of 20th cent. (Meyer 2006: 17, n. 7).

The most part of the W. area belongs to the ↗*däga* agro-ecological zone. The population lives on mixed agriculture in which ↗*ənsät* combined with cattle breeding plays a central role. An important cash-crop is ↗*čat*. Many W. migrated to Addis Abäba and other southern Ethiopian towns where they are mainly active in trade. Major centres within W. country are the towns of Mähal Amba (Gädäbano), Ğimma and Zäbidar.

The great majority of W. are Muslim, their Islamic identity being deeply grounded in history. The oral traditions of the W. claim that their ancestors belong to a group of "Arabs" that migrated into the region in the wake of the wars of ↗Aḥmad b. Ibrāhīm al-Ġāzī and ↗Nūr b. Muǧāhid in the 16th-cent. via ↗Harär, Šərka (probably ↗Šarḫa) and ↗Gädäb (Arsi/Bale). Among other indicators, this major narrative as well as genealogical lists, reveal the strong historical link of the W. to the ↗Hadiyya (in the wider sense) and especially the Səlṭe (↗Səlṭi) with whom they share some of their main ancestors (e.g., *sayyid* Käbir Hamid, *ḥağği* Aliye, *šayḫ* Bärkälle, ↗Sidi Mäḥammäd and *sayyid* Naṣrallāh [↗ᶜAbdannāṣir] etc.). After the Muslim migrants reached the area they associated with the autochthonous population (called *Ge*). Tradition labels the W. as *Asrahoyt Wäläne* ('twelve W.') according to the alleged number of major descent groups (the real number of groups being much higher).

In the 19th cent. W. became an important centre of Islamic revitalism which strongly influenced and supported the *ǧihād* of ↗Hasän Ǝnǧamo against Mənilək's conquest. Important *ᶜulamāᵓ* of that time were, e.g., *šayḫ* Muhammäd Yasin, *šayḫ* Zayin and *šayḫ* Wällee from Wällo, *ḥaǧǧi* Sərağ, and *šayḫ* Abdäl Aziz Usman (the first "W. *šayḫ*") who founded the Islamic centre of Ṭərone.

After the defeat of Hasän Ǝnǧamo (1889) W. country was under ↗*näfṭañña* occupation and became part of (Č̣äbo-)Gurage province. The district of Kokir-Gädäbano came under the administration of Tole (Soddo/Aymälläl) while W. proper joined *Säbat Bet* Gurage (W.-Muhər, later Ǝža-W.). When in the 1990s the Səlṭe claimed a distinct ethnicity and rejected further administration by the Gurage zone, some similar voices were to be heard among the W. However, the result of the political process was that the *wärädas* of Kokir-Gädäbano and Ǝža-W. remained under the administration of Gurage and the W. preserved their *Säbat Bet* ethno-political identity.

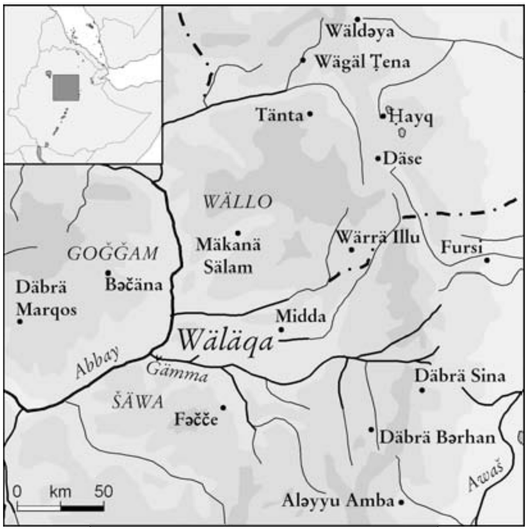
Wäläqa

W. (**ወለቃ**) is a historical region in the ancient region of ↗Amhara, which owes its name to the homonymous river, a tributary of the ↗Abbay. W. is separated from Šäwa by the River ↗Ǧämma and from Goǧǧam by the Abbay. In modern times, W. was renamed after its inhabitants, the Oromo group of Č̣aqata.

W. first appears in the sources in the 15th cent. According to the Acts of ↗Giyorgis of Sägla, the saint's mother was a descendant of the governors (*śəyyuman*) of W. (Colin 1987: 4). It is therefore possible that Sägla and W. are synonymous or at least overlapping toponyms. The governor of W. bore the title of *nägaśi* or *nägaš* (cp. ↗*Nəguś*) as attested in a document written during the reign of *aṣe* ↗Zärᵓa Yaᶜəqob (BritLib Orient. 481, fol. 154, s. Kropp in VarAeth 136) and in later sources (e.g., CRHist 95 specifies that the *nägaš* of W. was not allowed to have a ↗*nägarit*).

Different ↗genealogies of the "house of W." exist (cp. EMML no. 3253, fol. 155v–156; Kropp 1989, pl. 14). The most detailed is the one included in the genealogies of *ətege* ↗Wäld Säᵓala, who came from W. (ms. Qoma H2–IV–701, s. Wion 2003: 185–202).

During the 16th cent., this ancient Christian region was threatened by the migration of the Oromo, as it lay on the way to Goǧǧam for populations coming from Bale and the ↗Awaš. This road was taken by the Wäränteša in 1588, but *aṣe* ↗Śärṣ̌ä Dəngəl succeeded in driving them back across the Abbay to W. (CRHist 134f.). In ca. 1585, as a child ↗Susənyos was captured by the Borän (↗Boorana), during the *luba* of Birmaǧǧ; he grew up in W. and Amonat, becoming familiar with peoples and places there (PerChron 4; BTafA 179, 187). After the death of Śärṣ̌ä Dəngəl and during the decade of his rebellion, Susənyos



chose W. as his retreat (PerChron 9f.; BTafA 189). He was, therefore, constantly at war with the governor of W. ↗Bəᶜəlä Krəstos (PerChron 12f., 24; BTafA 191), until in 1602 they negotiated, with the participation of *ras* ↗Atnatewos, the legitimacy of Susənyos's control over territories in eastern Goǧǧam and Šäwa, including W. (PerChron 31–34, 45; BTafA 245ff.). A few years later, in 1611–12, Susənyos helped the Oromo Wäränteša to resist the growing power of the ↗Tuulama; he gave them lands in Amonat and Ǧämma. However, the Wäränteša were still fighting for W. (PerChron 109f.).

From then on, W. lost its importance, and was no more contested by the Christian power, as for the following three centuries it belonged to the Oromo.

At the end of the 19th cent., after the council of ↗Boru Meda, the discovery of ancient churches symbolized the Christian reconquest of the region. The church of ↗Däbrä Qozät was thus reopened by *aṣe* ↗Mənilək II in 1895–96 (Derat 2001: 246f.).

Wäläqa

The village of W. (**ወለቃ**) is situated on the northwestern edge of ↗Gondär, 4 km from the centre of the town. It became known as a so-called typical "Fälaša" village on the historic tourist route. It was established as a ↗Betä Ǝsraᵓel village in the early 20th cent. and populated by weavers, farmers, carpenters and masons, who had been employed by *ras* ↗Gugsa Wäle, governor of ↗Bägemdər province, to build his residence at ↗Däbrä Tabor. The head of the community was *bäǧərond* Barkoləññ. Betä Ǝsraᵓel tradition attributes the migration of Betä Ǝsraᵓel craftsmen to W. during the interim period, under the rule of *ras* ↗Wäldä Giyorgis, governor of Bägemdər. Until the 1930s, Betä Ǝsraᵓel men were taken from W. as seasonal migrants to work as masons and craftsmen decorating and repairing churches, stately homes and palaces in Gondär as well as in Səmen, Dämbəya, Wägära, Wälqayt and Təgray.

In its heyday during the 1960s, over 200 Betä Ǝsraᵓel resided in the village. In the centre stood the synagogue, similar to other *tukul*-like houses, but with the Star of David above the entrance, and divided into prayer sections inside. A menstrual hut (↗Menstruation) was separated from the other houses of the village by stones encircling it. Separated from the village by a river was the W. cemetery. Some of the women worked as potters; the men worked as weavers, blacksmiths and other craftsmen. When Western tourists and ↗Peace Corps volunteers began to visit W., they encouraged the women to start selling "Fälaša pottery". The ↗pottery was modeled on scenes of everyday life, and Täkay Elias, a woman living in the village, invented the idea of figurines with "Jewish" motifs, such as the Star of David, King ↗Solomon and the Queen of Sheba (↗Makədda), or *qesočč* ('priests'). During the 1970's, with the co-operation of Uri ben Baruch, the High Priest of W., the British branch of the Organisation Rehabilitation Training provided technical education to the villagers and introduced a kiln and a potters' wheel. During the regime of Mängəśtu Ḫaylä Maryam, the Ethiopian Tourist Organisation helped form a pottery co-operative. Betä Ǝsraᵓel women, side by side with women who had converted to Christianity, and "Fälaša *barya*" ('Fälaša slaves') sold the figurines to tourists.

Ceramic figurines offered in Wäläqa; photo 1988, courtesy of the author

In 1984, many Betä Ǝsraʾel went by foot from W. to the ↗Sudan, where they were airlifted out of the refugee camps to ↗Israel in "Operation Moses". In 1991, prior to "Operation Solomon", the village was emptied out. The Betä Ǝsraʾel were replaced by local ↗Qəmant, who continue to sell "Fälaša pottery" to tourists. Today, Israeli Ethiopian Jews, who visit Ethiopia, have started erecting gravestones in the cemetery.

Shalva Weil

Walašma

W. (Eth. **ዋላሽማ**; Arab. Walasmaᶜ; also Wasmaᶜ, Ǧabara) was a Muslim dynasty of Ethiopian origin in eastern ↗Šäwa (PerrZarY 112) which reigned in ↗Ifat from the 13th to the 16th cent. According to the so-called ↗Harär chronicle (Cerulli 1931), the dynasty was founded by ᶜUmar b. Dunyāḥūz al-Walasmī (d. 1275), who is said to be a descendant of the Somali Muslim saint *aw* Barḫadla, perhaps to be identified with ↗Barḫadle Yūsuf al-Akwān (Cerulli 1931: 40, 67). The beginning of the dynasty thus coincided with that of the ↗Solomonic dynasty.

Al-↗Maqrīzī reports (MaqIlmam 9) that the W. claimed an Arab ancestry from the Ḥiǧāz (↗Arabia). According to the *Kitāb al-ᶜIbar* by ↗Ibn Ḫaldūn, who derived most of his material from ↗Ibn Saᶜīd al-Maġribī, the forbears of the ᶜAdalite *sulṭān* ↗Ḥaqqaddīn (I) b. Muḥammad b. ᶜAlī b. Wasmaᶜ (d. 1328; b. ᶜUmar Walasmaᶜ) had embraced ↗Islam (ed. 1867/68: 199). This implies that the W. had first been non-Muslims, and of native Ethiopian origin. According to al-Maqrīzī (MaqIlmam 9), ᶜUmar b. Dunyāḥūz was appointed governor (↗*Gärad*) of the town of Awfāt (Arab. for Ifat) by the Ethiopian emperor. But when he recognized the authority of the king of ↗Damot, his territory was conquered by the Ethiopians. In 1277 ᶜUmar's successor ᶜAlī b. Wali Asmaᶜ began to attack the then weakened ↗Maḫzūmī dynasty in eastern ↗Šäwa, and in 1285 he deposed the last *sulṭān* of this dynasty (Cerulli 1941). During the 13th cent., Ibn Ḫaldūn (ed. 1867/68: 199) remarks that the W. sometimes recognized the authority of the Ethiopian emperor, at other moments they rejected it.

When learning that the Mamlūk *sulṭān* an-Nāṣir Muḥammad b. Qālawūn (d. 1341) had begun a new persecution against the Copts in Egypt, and that *aṣe* ↗ᶜAmdä Ṣəyon's mission to Egypt of 1321 was not taken seriously by an-Nāṣir, ᶜAlī's grandson ↗Ḥaqqaddīn b. Dalḥūy b. Manṣūr took it as a pretext to change his irregular incursions against Ethiopia into an offensive war and killed the Emperor's envoy. In 1328 ᶜAmdä Ṣəyon overwhelmed Ifat, took Ḥaqqaddīn prisoner and annexed both Ifat and ↗Fäṭägar as vassal states under the governorship of Ḥaqqaddīn's brother ↗Ṣabraddīn b. Dalḥūy b. Manṣūr. The latter, however, persuaded the Muslim sultanates of ↗Hadiyya and ↗Däwaro, as well as the ↗Agäw of ↗Wägara, ↗Dämbəya and ↗Bägemdər to join him in attacking ↗Amhara country. But before being able to rally, they were all defeated. Ṣabraddīn was deposed and his brother ↗Ǧamāladdīn [I] b. Dalḥūy b. Manṣūr was appointed as ruler of Ifat and the three other Muslim states, whose independence thus came to an end. It probably was Ǧamaladdīn I who, between 1332 and 1335 (cp. TrIslam 72), sent a Muslim delegation to Egypt to request *sulṭān* al-Nāṣir Muḥammad to intervene with the Ethiopians on behalf of the Muslims in Ethiopia. The Coptic Patriarch sent a letter to the Emperor, but without success. Ibn Faḍlallāh al-↗ᶜUmarī (UmMasGaud 2f., 14–19) describes the position of the tributary Muslim states vis-à-vis the Ethiopian kings. When Ǧamāladdīn joined the Muslim alliance of ↗Mora (PerrAmdS 44, 346–70), he was captured and killed by the Emperor, who destroyed the town of Ifat.

The internal strife among the W. after the death of Ǧamāladdīn ended with the accession to the throne of ↗Ḥaqqaddīn II b. Aḥmad Ḥarb Arᶜad in 1376. He declared himself independent from the Ethiopian emperor, but was defeated and killed in 1386. His son and successor ↗Saᶜdaddīn [II] Abū l-Barakāt resumed the hostilities and gained some initial successes, but the expedition sent by *aṣe* ↗Dawit II forced him to take refuge in ↗Zaylaᶜ, where he was besieged and killed either in 1415, during the reign of *aṣe* ↗Yəsḥaq, or still during that of *aṣe* Dawit (TrIslam 74, n. 4). This *sulṭān*'s martyrdom in the ↗*ǧihād* lives on in the other name for ᶜAdal: *Barr Saᶜdaddīn* ('Land of Saᶜdaddīn').

The occupation of Zaylaᶜ during the reign of *aṣe* Yəsḥaq put an end to the Sultanate of Ifat, which was permanently occupied by the Ethiopian king and is no more heard of (MaqIlmam 11–14; BassÉt 239 n. 93; BassHist 306, n. 1). The ten sons of Saᶜdaddīn took refuge with al-Malik an-

Nāṣir Aḥmad b. Ismāᶜīl I (r. 1400–24), the Rasūlid ruler of the ↗Yemen. After a short while the W. returned to Africa, assumed the title of *sulṭān* of ↗ᶜAdal and took their residence in ↗Dakar. From that time onwards ᶜAdal became the protagonist of the Muslim struggle against the Christian kingdom (TrIslam 74, n. 6, 7). The first W. prince of ᶜAdal, which was perhaps a district of the former Ifat, was Saᶜdaddīn's son Ṣabraddīn, who resumed the hostilities against *aṣe* Yəsḥaq. However, Ṣabraddīn was defeated after some initial successes and died in 1422. The same happened to his brothers and successors Manṣūr (d. 1424*)* and Ǧamāladdīn II (d. 1433). Saᶜdaddīn's son ↗Aḥmad Badlāy, whose genealogy is given by Ibn Taġrībirdī (Popper 1957–60, vol. 6, vii, 4; cp. PerrZar 88*)*, invaded Däwaro, but was defeated and killed during the reign of *aṣe* ↗Zärᵓa Yaᶜəqob. Badlāy's son Muḥammad (r. 1445–71) concluded a truce with *aṣe* ↗Bäᵓədä Maryam, but the influence of the *amīrs,* fanatical Somali and ↗ᶜAfar, who wanted *ǧihād* against the Christians, grew and the power of the W. *sulṭān* diminished accordingly.

The first of these *amīrs* to exercise influence was ↗Lada ᶜUṯmān, governor (*gärad*) of Zaylaᶜ. After an initial success, which culminated in the sack of Dakar in 1471, two Ethiopian armies were defeated by the *amīrs* who gained control over ᶜAdal. Under *sulṭān* ↗Muḥammad b. Aẓharaddīn, Maḥfūẓ, the *amīr* of Harär, rose in power. Recovering from a defeat by *aṣe* ↗Naᶜod, he became the *de facto* ruler of ᶜAdal. In 1516 *sulṭān* Muḥammad, who at first had followed a peaceful policy with *ətege* ↗Admäs Mogäsa, a converted Muslim, led a regular invasion against Fäṭägar. He was defeated by *aṣe* ↗Ləbnä Dəngəl and Maḥfūẓ was slain. After the murder of *sulṭān* Muḥammad in 1518, order was restored by the zealot *gärad* Abūñ b. Adaš, but in 1525 he was surprised and killed at Zaylaᶜ by *sulṭān* ↗Abū Bakr b. Muḥammad b. Āzar, who in 1520 had transferred his headquarters from Dakar to Harär. It was during *sulṭān* Abū Bakr's reign that ↗Aḥmad b. Ibrāhīm al-Ġāzī, the future *imām* and conqueror of Ethiopia, married ↗Bati Dəl Wämbära, daughter of ↗Maḥfūẓ of Zaylaᶜ, and built up his power. For some time he shared the government with Abū Bakr, but ultimately killed him and replaced him with his brother ᶜUmardīn, a mere puppet sultan. In 1553 ᶜUmardīn was succeeded by his son ᶜAlī. When the latter died in 1555, he was succeeded by his brother Barakāt b. Umardīn, who helped ↗Nūr b. Muǧāhid, the new *amīr* in Harär, to organize the army. Upon the advance of an Ethiopian force, he had to abandon Harär, and was killed shortly afterwards. With him the W. disappeared.

Wälasma

W. (**ወላስማ**) was a traditional title of chiefs in the ↗Yəfat ↗Argobba area of northern ↗Šäwa. The ↗Walašma dynasty ruled the Muslim sultanate of ↗Ifat from the 13th to the 15th cent. in constant conflict with the Christian empire. In the late 15th cent., Ifat was defeated and *aṣe* ↗Bäᵓədä Maryam appointed a governor with the title of W. In the wars of the 16th cent., north-eastern Šäwa became a battleground, and central power collapsed. After the wars of ↗Aḥmad b. Ibrāhim al-Ġāzī, many of the Muslim communities were apparently overrun by ↗Oromo pastoralists, and the "W. of Yəfat" preferred to ally himself with the Christian Amhara.

The W. played a key role in the early military success of the Šäwan dynasty. During his visit to Šäwa, *aṣe* ↗Iyasu I initiated a pact between ↗Nägaśi Krəstos Wärädä Qal of Mänz and the W. of Yəfat against the Oromo (BTafA 499). The W. also took a prominent place in the political alliances behind the next two Šäwan rulers. According to Aṣmä Giyorgis, when ↗Səbəstyanos as the first Šäwan ruler took the title of ↗*märəd azmač*, he issued the proclamation to this effect after consulting with the W. (ibid. 507). Co-operation continued under *märəd azmač* ↗Abbəyye, and the

W. was given the lower regions of the newly conquered area towards the ↗Käsäm River. Thereafter the W. disappears from the various Šäwan chronicles, perhaps because expansion was now concentrated in other parts of the chiefdom and Yəfat became just one of many districts, or perhaps because the W. came into conflict with and was defeated by *märəd azmač* Abbəyye, as claimed by Stitz (USCES, 191). In any case, the W. kept much of his power and received considerable attention from the many European visitors to Šäwa around 1840. *Wälasma* Mäḥammäd was then the principal governor of the Yəfat area and certainly high in royal favour. He was entrusted with the customs of the important trade route, and his residence at Gončo served as a principal state prison.

By this time, however, and perhaps earlier, there were also numerous other W. with hereditary claims in various parts of Yəfat. It is not clear whether the "W. of Yəfat" had a superior position, or whether he gained prominence in the sources and the history of Šäwa simply because he happened to be a somewhat important chief close to the area of Šäwan expansion. What is certain, however, is that by the 1840s, the various W. held their position by the discretion of the king, and even *wälasma* Mäḥammäd could be demoted and had to wait on the king to regain his position. Under ↗Mənilək II the key positions of the Yəfat area were given to Christian Amhara governors closely associated with the court, and the W. were reduced to local notables.

Svein Ege

Wälättä Ǝsraᵓel

W.Ǝ. (**ወለተ፡ እስራኤል**; fl. second half of the 18th cent.) was one of three daughters of *ətege* Məntəwwab (↗Bərhan Mogäsa) and *grazmač* Iyasu (GuiIyas 10 [text]). She was named after her paternal grandmother, a daughter of ↗Iyasu I. Her sisters were ↗Aster Iyasu and ↗Alṭaš Iyasu.

A prominent member of the Gondärine aristocracy, W.Ǝ. held lands of the Gondär churches ↗Däbrä Ṣäḥay Qʷəsqʷam and Qaha Iyäsus, as well as of ↗Narga Śəllase (CrumLand 106f.). She was married at least twice: to *däǧǧamač* Yosedeq with whom she had a son, ↗Ḫaylu, and to *däǧǧazmač* (later *ras bitwäddäd*) ↗Goššu with whom she had two children, Hirutä Iyäsus and Sahlu (GuiIyas 12 [text]).

Her marriage to Yosedeq, governor of ↗Goǧǧam during 1752–59, involved her in the affairs of that province with which she remained associated. Early in 1765 she was appointed ruler of Goǧǧam (GuiIyas 203 [text]). In 1768/69 and again in 1770 she is noted in the chronicles as taking part in military campaigns (ibid. 236 [text]; BlunChr 12 [text]).

During much of the visit of ↗Bruce to Ethiopia, W.Ǝ. was in Goǧǧam and remains a shadowy figure in his account, in comparison to her sister, Aster, and her mother, Məntəwwab, for whom Bruce provides vivid portraits. W.Ǝ. is mostly mentioned in connection with her vendetta against *ras* ↗Mikaᵓel Səhul of Təgray (BruNile vol. 2, 612f. and vol. 3, 398f.).

She founded the church of ↗Moṭa Giyorgis and endowed it after the fashion of her mother's most famous foundation, Däbrä Ṣäḥay Qʷəsqʷam (mf. Ill/IES, 89.VIII.28–30). She also supported the church of Muga Däbrä Iyäsus in Goǧǧam (mf. Ill/IES, 89.III.33). Her son Ḫaylu Yosedeq, later governor of Goǧǧam in his own right, confirmed her endowment of Moṭa Giyorgis. Various sources note her gifts to Gondär churches (GuiIyas 97 [text]; mss. BritLib Orient. 604, fol. 137r; Orient. 776, fol. 4v).

Wälättä Iyäsus

W.I. (**ወለተ፡ ኢየሱስ**; b. 30 January 1850, Gondär, d. 15 August 1932, Addis Abäba), also known under her European name Katharina Hall née Howsepian, was the mother of a large family, many of whose members were involved in Ethiopian affairs. She herself was at times an influential lady-in-waiting at the Ethiopian court in the early 20th cent.

She was the daughter of Eduard ↗Zander, the German artist and illustrator for Georg ↗Schimper,

Wälättä Iyäsus in Palestine shortly after arriving from Ethiopia, ca. 1868/69; from the collection of Jochen Bertsch

and Zander's first Ethiopian wife, *wäyzaro* Ǝsäte Wärq, a lady-in-waiting at the court in ↗Gondär. W.I.'s later use of "Howsepian" as a maiden name perhaps indicates that she spent part of her childhood with an Ethio–Armenian family, even if her family papers show that she was Zander's daughter. At the age of 14, on 17 May 1863, she married Moritz ↗Hall, and joined him at the ↗Gafat colony of the ↗St. Chrischona brethren artisan missionaries. W.I., her husband, and her infant son Jakob Gottlieb (b. 1866, Mäqdäla, d. 1919, Addis Abäba), were among those held captive by *aṣe* ↗Tewodros II and were liberated from captivity at ↗Mäqdäla by Lord ↗Napier's British forces in 1868, at which time W.I.'s daughter Magdalena "Theodora" (1868–1945) was born.

W.I. and Moritz Hall and their children left Ethiopia with the British-Indian army of intervention in mid-1868 and settled in Jaffa's "German Colony", where her husband worked for the Protestant mission; they came under the protection of the German Consulate, and eleven more children were born to them. Accompanied by her son Jakob, W.I. returned to Ethiopia without her husband around 1902, following an Ethiopian mission to Palestine (↗Ottoman Empire). They were joined in 1906 by W.I.'s son, Friedrich Salomon (1879–1964), who also entered into Ethiopian service. W.I. became a lady-in-waiting, in charge of the royal pages at the court of the *aṣe* ↗Mənilək II. A very close confidante of the *ətege* Ṭaytu, W.I. was viewed as exerting considerable (if not undue) influence at the court. Ṭaytu persuaded W.I. to have her son-in-law, the Wurttembergian noble Baron Platon von Ustinov, buy property in ↗Jerusalem for the Ethiopian community there. During ↗World War I, W.I. returned to Jaffa and petitioned the German Consulate there to grant her and her children full German citizenship because her sons David and Joseph were serving in the German army.

Soon after the war, W.I. again returned to Ethiopia, where she was joined by another son, David ↗Hall, who became an important advisor to the Ethiopian court and served as a member of diplomatic missions. W.I. convinced ↗Zäwditu to buy the property in Jerusalem owned by her daughter Magdalena, by then the widow of Baron Platon von Ustinov, thus ensuring an Ethiopian presence in Jerusalem. W.I.'s daughters Christina (1874–1964), Augusta (1884–1936), and Vera (1886–1983) also came to Ethiopia and, as tutors to the members of the royal family, especially the children of ↗Ḫaylä Śəllase I, continued their mother's close relationship with the court. W.I. is buried in Addis Abäba.

Wälättä P̣eṭros

W.P̣. (ወለተ፡ ጴጥሮስ; b. 1594, d. 1644) was one of the most prominent female religious figures in 17th-cent. Ethiopia. She is known mainly for her resistance to ↗Catholicism and is venerated as a saint by the ↗Ethiopian Orthodox (Täwaḥədo) Church.

The principal source on her life is the ↗hagiography written down in 1673–74 by a monk from Afär Färäs, a community W.P̣. had founded. This staunchly anti-Catholic and pro-monophysite text merits special attention, for it constitutes a contemporaneous antithesis to the testimonies of the ↗Jesuits.

According to the *gädl*, W.Ṗ.'s parents, Baḥər Sägäd and Krəstos ᶜƎbäya, were members of the nobility in Däwaro and Fäṭägar. The source provides an extremely innovative account of W.Ṗ.'s childhood, especially as far as the vivid description of her father's affectionate support is concerned (Papi 1943: 88). At a tender age, she was betrothed to Mälkəᵓa Krəstos, a high-ranking official of *aṣe* ↗Susənyos. Although the hagiography reports that her husband was quite fond of her, W.Ṗ. was attracted to the ideal of monastic life – an inclination that may have been reinforced by the loss of three infant sons. She ultimately joined a group of monks on the shores of Lake Ṭana. However, W.Ṗ. subsequently returned to her husband, thanks in part to the mediation of *abba* Fätlä Śəllase (Conti Rossini 1912: 13–17 [text] = Ricci 1970: 12–16 [tr.]).

When Susənyos embraced Roman Catholicism and the open conflict arose between the Catholics and the Ethiopian Orthodox Täwaḥədo Church, W.Ṗ. vigorously backed the local clergy. The fact that her husband had fought on Susənyos's side when *abunä* ↗Səmᶜon was killed by imperial soldiers in May 1617 was the final straw which ended their marriage. Soon after, she left him for good and formed a small aristocratic circle of nuns on Lake Ṭana with the likes of ↗Ǝḫ̮ətä Krəstos and Wälättä Ṗawlos (the daughter of *ras* ↗Atnatewos).

When Susənyos proclaimed Catholicism the official religion (1624), it became too dangerous for W.Ṗ.'s circle to remain in close proximity to the Emperor's camp. The group headed north to Aksum, where she urged the inhabitants to reject the newfangled faith. W.Ṗ. was then taken to Susənyos, who sought to convert her to the empire's official creed. When she refused to succumb to the pressure (Conti Rossini 1912: 30 = Ricci 1970: 29), the Emperor ordered W.Ṗ. to desist from preaching against Catholicism and placed the noblewoman under the custody of her kin. However, she immediately fled to ↗Zäge, where the aristocratic circle was revived. W.Ṗ. then moved on to ↗Waldəbba – already the site of fierce anti-Catholic resistance – where she continued to entreat her fellow Ethiopians "not to accept the impure religion of the Europeans" (Conti Rossini 1912: 43 = Ricci 1970: 42). As a result, many people in Məṣəl refused communion, which led ↗Səᶜəlä Krəstos to threaten W.Ṗ. with forced conversion (Conti Rossini 1912: 59f. = Ricci 1970: 57f.).

The alleged grave of Wälättä Ṗeṭros on the island of Rema, Lake Ṭana; photo 2006, courtesy of Michael Gervers

When ↗Fasilädäs ascended the throne in 1632 and rejected Catholicism, he honoured the champion of Ethiopian Orthodoxy and promoted her religious activism. W.Ṗ. continued to pursue an itinerant lifestyle, moving about the country and attracting numerous disciples along the way.

The example set by W.Ṗ. constitutes an unprecedented paradigm of female religious leadership. W.Ṗ. was the first Ethiopian to try and systematically organize the monastic life of nuns. More specifically, she advocated running monasteries for women along the same lines as those for men. She founded several monastic settlements – Zäge, Dämboza, Afär Färäs and Zäbol – and managed to turn them into self-supporting communities (Böll in HirKrSaints 37f.). Moreover, her personal wealth enabled her to maintain populous convents and erect a church on the island of ↗Rema. Her vast influence notwithstanding, as a woman W.Ṗ. required the support and approval of her spiritual fathers, namely ecclesiastic leaders such as the *abun* and monks (Conti Rossini 1912: 70f. = Ricci 1970: 70).

W.Ṗ died at the age of 50, having appointed Ǝḫ̮ətä Krəstos as her successor.

Leonardo Cohen

Wälättä Qirqos

W.Q. (**ወለተ፡ ቂርቆስ**) was a 17th–18th-cent. noblewoman.

She was a spouse of *ras* ↗Ḥəzqəyas (fl. 1696–1711). It is not certain whether she was the mother of his two sons mentioned in the "short chronicles" (BassÉt 76 [text], 191 [tr.]).

Besides serving as *däğğazmač* to *aṣe* ↗Iyasu I and *ras* of ↗Bägemdər to *aṣe* ↗Tewoflos, Ḥəzqəyas co-operated with *abeto* ↗Nägaśi Krəstos of ↗Šäwa and had thus close contacts with several ruling elites. He was exiled by *aṣe* ↗Yosṭos in 1711, but it is not known whether W.Q. was exiled, too, even if it is possible that she had been involved in the political, or at least religious, affairs of her husband.

A miniature in an illuminated manuscript of the ↗*Täʾammərä Maryam* (BN d'Abbadie 114, fol. 87v) shows a female figure praying in front of the image of St. ↗Mary, identified by an inscription as "queen [*nəgəśt*] W.Q.". Annequin (1972:198) ascribed the ↗painting style to the first Gondärine school (1630–1730) and identified W.Q.'s husband with *aṣe* ↗Ḥəzqəyas, thus dating the image to 1689–94, the five years of his rule. Chojnacki (ChojPaint 297), however, maintains that the original inscription bore the name of another queen, which was later erased and replaced by that of W.Q. W.Q. and Ḥəzqəyas are also named as a couple in another copy of the *Täʾammərä Maryam,* from ↗Čəlga. Most probably there is a connection to a third manuscript of the *Täʾammərä Maryam*, with a miniature showing Mary adored by ↗Wälättä Giyorgis and ↗Wälättä Əsraʾel ("Gondär XV", Jäger 1960: 370; Bosc-Tiessé – Wion 1998: 231).

Illustrations in this *Täʾammərä Maryam* may be taken as a historical source (Six 1999) and interpreted in the light of the contemporary theological disputes between the Unctionists (↗*Qəbat*) and Unionists (↗*Täwaḥədo*). Ḥəzqəyas was a known supporter of the latter, and was even removed from his office due to rumours dispersed by the Unctionists (Bartnicki – Mantel-Niećko 1978: 194). It is possible that, when the *Täwaḥədo* teaching was reinstalled as the true doctrine, W.Q. was honoured by having her name inscribed in the miniature.

Wälaytta

Wälaytta language

W., or "Wolaitta" [Wolaytta], is spoken in southwest Ethiopia (Southern Nations, Nationalities and Peoples' Region) by about 1.5 million people. It belongs to the North ↗Ometo group of the ↗Omotic language family. The neighbouring languages are ↗Kullo, ↗Gamo, ↗Ṭimbaaro, ↗Kambaata, ↗Sidaama.

The consonant segments of W. are: stops (*p*), *b*, *t*, *d*, *ṭ*, *k*, *g*, *q*, *ʾ*; affricates *č*, *ğ*, *č̣*; implosives *ɓ*, *ɗ*; fricatives (*ɸ*), *s*, *z*, *š*, (*ž*), *h*; nasals *m*, *n*; liquids *l*, *r* and glides *w*, *y*. The segments *p* and *ɸ* are free variants in word-initial and intervocalic positions. *ɸ* does not occur as a geminate or as a member of a consonant cluster; in these cases only *p* is used. The alveolar implosive occurs only as geminate and in word medial positions: e.g., *šóɗɗe* 'frog'. The labial implosive knows no such restriction: *ɓánqa* 'very sour', *šoɓɓá* 'armpit', *qáɓe* 'trap'. Lamberti and Sottile (1997) mention only the labial ejective and no implosive. Some speakers pronounce initial and non-geminate implosives as ejective, e.g., *palqa* instead of *ɓalqa* 'split!' but this is most probably due to the influence of Amharic. Lamberti and Sottile (1997) also include "preglottalized phonemes" in their inventory but this is a result of an incorrect analysis/perception of consonant clusters in which the glottal stop features as C2. *ž* is used only in ideophonic words. Gemination is contrastive: *máta* 'near' vs. *mátta* 'bee'. W. has five vowels (*i*, *e*, *a*, *o*, *u*); vowel-length is phonemic: *mára* 'calf' vs. *maára* 'row'. Syllable types are: CV, CVV, CVC, and CVVC (where C = consonant, V = vowel) as in: *tá* 'I', *ʾéé* 'yes', *mal.dó* 'sorghum', and *keet.tá* 'house' resp. Clusters and geminates consist only of two members and occur only word-medially. High and low tone-accent distinction is made, e.g., *góda* 'lord, chief', *godá* 'wall' (high marked with (´); low unmarked). With few exceptions, such as *ha* 'this', *ta* 'my', there are no words with low tones only. Word-final vowels with low tone accent are often devoiced but, unlike the claim in Lamberti and Sottile (1997:47), these do not have phonemic status.

Basic nouns and adjectives end in *e, o* or *a*. Examples: *gáde* 'land', *géne* 'naughty/ mischievous', *ˀoóso* 'work', *zoˀó* 'red', *ˀimattá* 'a guest', *méla* 'dry'. The case system consists of three basic cases (nominative [Nom.], accusative [Acc.] and genitive [Gen.]). Case, gender and definiteness are designated cumulatively, e.g., 'the guest' *ˀimatt-íya* (fem.Nom.) and *ˀimatt-íyo* (fem.Acc.) vs. *ˀimatt-áy* (masc.Nom.) and *ˀimatt-áa* (masc.Acc.). Indefinite nouns are marked for Nom. by *-í*; Acc. is unmarked in indefinite nouns (i.e. in the Acc. the citation form of nouns is used if they are indefinite). Singular is unmarked. Plural is marked by suffixing *-t-* before case markers (only masculine case endings are used in plural): 'the guests' *ˀimatta-t-í* (Nom.), *ˀimatta-t-á* (Acc.). The genitive case for definite feminine and plural nouns is *-ee* and *-u* resp. In the masculine singular, the genitive coincides with the accusative. Examples: *ˀimattá* 'a guest', *ˀimattáa* 'the guest (masc.Acc)', *ˀimatt-ée naˀa* 'the (fem.) guest's son', *ˀimatt-áa naˀa* 'the (masc.) guest's son', *ˀimattá-t-ú naˀa* 'the guests' son'. A noun already marked with the genitive or accusative case can attach additional morphemes for such semantic cases as instrumental (*-ra*), ablative (*-ppe*), dative (*yo/-ssi*), etc.: *ˀimatt-ée-ppe* 'from the (fem.) guest', *ˀimatt-áa-ppe* 'from the (masc.) guest'; *ˀimattá-t-ú-ppe* 'from the guests'.

Possessive, nominative and accusative forms constitute the basic pronoun paradigms of W.

Person	Possessive	Nominative	Accusative
1st sg.	*ta*	*táání/tá*	*táná*
2nd sg.	*ne*	*néénі́/né*	*néná*
3rd fem. sg.	*ˀi*	*ˀá*	*ˀó*
3rd masc. sg.	*ˀa*	*ˀí*	*ˀá*
1st pl.	*nu*	*núúní/nú*	*núná*
2nd pl.	*ˀinte*	*ˀínté*	*ˀíntena*
3rd pl.	*ˀeta*	*ˀetí*	*ˀetá*

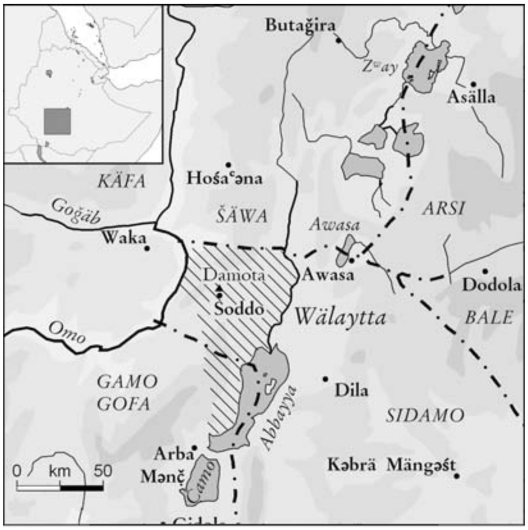
W. has a decimal numeral system. When numerals under 'five' modify a noun, the final vowel of the numeral is replaced by a linking vowel (*i* for *ˀissó* 'one', *u* for the rest of the numerals): *ˀoiddá* 'four', but *ˀoddú naa-t-a* 'four children'. In contrast, the numerals from 'six' to 'nine' lose their final vowel as modifiers: *laáppuna* 'seven' but *laáppun naa-t-a* 'seven children'. Those above 'nine' are similar to the lower numerals: *támma* 'ten' but *támmu naa-t-a* 'ten children'. The quantified noun may occur as singular or plural.

The verb is marked for tense (present, past and future [FUT]), negation, mood (declarative, interrogative and imperative/optative) and optionally for aspect. In the future tense the verb does not inflect for subject, e.g., *demm-aná* (find-FUT) expresses '(I/you/he/she/we/you[pl.]/they) will find'. The past and present tense markers merge with subject agreement, tense, polarity and/or mood markers. The imperative/optative paradigm has no first person form.

Person	Affirmative, declarative		Imperative/ optative
	past	present	
	'to fall'	'to fall'	'to find'
1st sg.	*kúnd-aási*	*kúnd-aísi*	–
2nd sg.	*kúnd-ádasa*	*kúnd-aása*	*demm-á*
3rd fem. sg.	*kúnd-iísi*	*kúnd-eési*	*demm-ó*
3rd masc. sg.	*kúnd-aásu*	*kúnd-aúsu*	*demm-ú*
1st pl.	*kúnd-ída*	*kúnd-oósi*	–
2nd pl.	*kúnd-ídeta*	*kúnd-eéta*	*demm-ité*
3rd pl.	*kúnd-ídosona*	*kúnd-oósona*	*demm-óna*

Person	Negative, declarative	
	past	present/future
	'to see'	'to see'
1st sg.	*beˀ-á-beíkke*	*beˀ-íkke*
2nd sg.	*beˀ-á-baákká*	*beˀ-ákka*
3rd fem. sg.	*beˀ-í-beénná*	*beˀ-énna*
3rd masc. sg.	*beˀ-á-beíkkú*	*beˀ-úkku*
1st pl.	*beˀ-í-boókko*	*beˀ-ókko*
2nd pl.	*beˀ-í-beékkétá*	*beˀ-ékketa*
3rd pl.	*beˀ-í-boókkóná*	*beˀ-ókkona*

Question words are derived from two bases: *ˀa-* and *ˀo*(*o*)- by adding gender and case markers: *ˀa-í* 'what', *ˀa-i-gé* 'which (masc.Nom.)', *ˀa-i-nná* 'which (fem.Nom.)', *ˀa-í-ssi* 'why', *ˀa-udé* 'when', *ˀá-wa* 'where (to)', *ˀá-wa-n* 'where (at)', *ˀoó-ni* 'who', *ˀoó-ssi* 'for whom'. Likewise demonstratives have two basic forms: *ha* (proximal) and *he/ hi* (distal), used in this form as modifiers, e.g., *ha naˀay* 'this boy'. Demonstratives may be nominalized (by *-gé* (masc.Nom) or *-ga* (masc.Acc) and *-nná* (fem.Nom) or *-nnó* (fem.Acc) and distinguish gender and case; in this case they may occur with or without the noun they modify: *ha-gé naˀay* 'this boy (Nom)' or *ha-gé* 'this one (masc. Nom)', *ha-nná* 'this one (fem. Nom)', *he-gá* 'that one (masc.Acc)', *hi-nnó* 'that one (fem.)'.



Manner adverbs are mainly derived by suffixing locative, instrumental or ablative suffixes *-n*(*i*), *-ra* and *-ppe* resp., to nominals, e.g., *ˀakeéka-ni* ‘carefully’ < *ˀakeéka* ‘attention’; *ˀissí-ppe* ‘together’ < *ˀissó* ‘one’.

Nominal derivational suffixes include: *-ta* and *-tétta* (abstract noun), e.g., *laggé-ta* ‘friendship’ < *lágge* ‘friend’, *zoˀó-tétta* ‘redness’ < *zoˀó* ‘red’; the agentive nominalizer *-anča*: *gošš-ánča* ‘farmer’ < *goššá* ‘farm’; the adjectivalizer *-aáma*, e.g., *wolq-aáma* ‘powerful’ < *wolqá* ‘power’. Verb root extensions include causative *-is*(*s*)- (*šoč̣-iss-iísi* ‘he has some one hit’); passive *-ett-* (*šoč̣-étt-iísi* ‘he was hit’) and intensive/distributive *-erett-* (*šoč̣-erett-iísi* ‘he hit repeatedly/several people’).

Demonstratives, numerals, adjectives and relative clauses generally precede the head noun; adverbial and clausal complements precede the verb. Modifiers do not show agreement, e.g., *guútta* ‘small’ and *guútta naˀa* ‘a small child (masc./fem.)’, *guútta naˀíya* ‘the small girl’, *guútta naˀáy* ‘the small boy”. Still, when substantivized, adjectives may be marked for case, gender and definiteness: *guútta-y* ‘the little one (masc.)’ vs. *guútta-íya* ‘the little one (fem.)’.

The basic word order in clauses is Subject-Object-Verb:

heezzú	*kaiso-t-í*	*ˀissí*	*miizz-íyo*	*wuúqq-ídosona*
three	thief-PL-NOM	one	cow-FEM:ACC	steal-3PL:PAST:DCL

‘Three thieves stole a cow’

The standard ten-word list for W. is: *ˀissó* ‘one’, *naaˀˀá* ‘two’, *heezzá* ‘three’, *tamá* ‘fire’, *haattá* ‘water’, *ˀawá* ‘sun’, *ˀagína* ‘moon/month’, *suútta* ‘blood’, *ˀinṭársa* ‘tongue’, *ˀaččá* ‘tooth’.

Wälaytta ethnography

The W. are a people in southern Ethiopia with a population of some 1.5 million people (CSA 2008:77; in 1994 the CSA [1998:66] gave their number as 1,269,216). They are the largest Omotic-speaking group in Ethiopia (of the Ometo sub-group), playing an important role in the Southern Ethiopian Region since 1991, having their own administrative zone since 2000. They are heirs to a powerful kingdom that existed until 1894, and which serves as a nostalgic reference point of past glory. Today W. has a very weak and vulnerable agrarian economy, no industries, little growth, and high population pressure. Densities in some W. rural areas reach up to 750 people per km² (Wolaita Zone 2005). Urbanization is low. The administrative capital is ↗Soddo town; with ca. 76,500 inhabitants (CSA 2008:78).

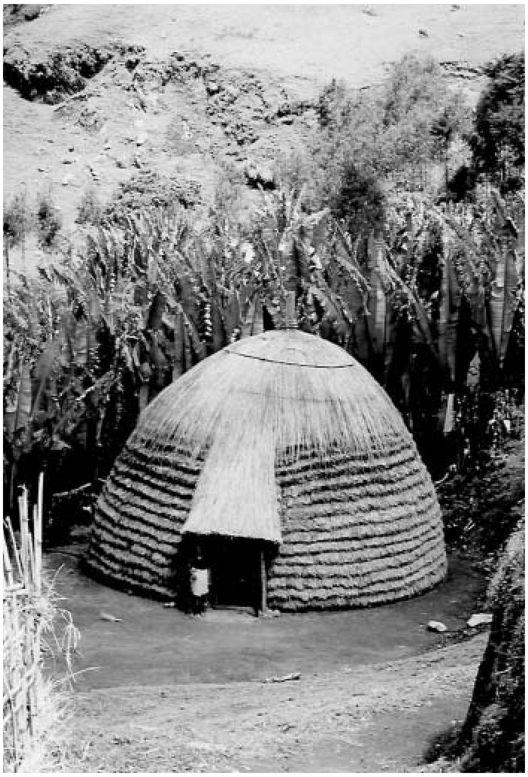
W.’s population is of diverse backgrounds, but a strong W. identity was developed over time, despite significant differences between its various social strata. This is reflected in divergent oral traditions on W. history and society. In the course of the emergence of the historical W. state, groups from neighbouring people, such as ↗Hadiyya, ↗Libido, ↗Arsi, Borodda, Kuča and ↗Dawro, were incorporated and an amalgam culture emerged.

The term “W.” has diverse folk-etymologies, the two dominant being ‘coming together of many’, and the second referring to a W. word for the Ethiopian fig tree (Amh.: *šola*), metaphor of a large, encompassing roof for all people. The term "Wälamo", used in imperial times for the W. district (there was a ↗Wälamo *awrağğa*) is resented as condescending, although its meaning is not clear and it was already known in the 14th cent. (For the history of W. s. also ↗Wälaytta kingdom and ↗Wälaytta-Malla dynasty).

W. society is traditionally composed of more than a hundred patrilineal clans, with diverse origins. While ideas of clan descent diminished in importance, there is a latent distinction between higher and lower clans, referring to ideas of first birth and origins, indigenous status, occupational specialization, and relation to the former kingship. The high-ranking clans are those of the former royals and nobles, followed by those of the free farmers known as *goqa*, with the craftsmen (*hilánča*) and former slaves (*ayle*) at the lower rung of the social ladder. The craftsmen were the largely endogamous castes of tanners, blacksmiths, and potters, many of whom still live in separate quarters or villages (Berhanu Bibiso 2003), although the boundaries with others are fading due to social and economic changes (education, trade, migration). The former high clans are no longer recognized as they were before and have merged with the general population.

The W. economy is agrarian, with ↗*ənsät* and its products, ↗maize, beans, ↗*ṭef*, taro, yam and cereals like wheat, and barley as the main crops. W. also keep livestock. ↗Coffee, butter, sweet potatoes, etc. are sold in the markets. Another major export product is ↗eucalyptus wood, a tree that has replaced virtually all indigenous species.

W. oral tradition contains rich historical and family narratives, and stories about the kings and the deeds of important persons. The oral traditions, as, e.g., recorded by Haberland in the 1950s, are, however, very diverse and do not give "one story" of W. history but many. The *gereesa* is the most important form of recital of these narratives. Dominant themes are valour in battle, deeds of the ancestors, hunting feats and other notable achievements deemed heroic. W. women after reaching a certain age and having proven their social and economic valour were honoured with a ritual called *gimo*, now no longer performed. While oral traditions of the recent past reveal a fierce pride in W. history and culture, these traditions are declining and find little resonance among the youth, which seems preoccupied with survival, educational achievement and the desire to leave the area.



Wälaytta house in the Lašo area; photo December 2003, courtesy of the author

Various religious denominations are present in W. Ethiopian Orthodox Christianity being the first denomination of a world religion to have established in the area. There are various old churches dating from the 17th cent., e.g., in Ofa. Catholicism was brought by European missionaries in the early 20th cent. There are some Muslims; mainly in the towns. A fast growing denomination is the Pentecostal-Protestant movement, which may now be the dominant faith. This Evangelical Christianity was brought to W. by foreigners in the late 1920s (cf. Balisky 1997). Its growth has led to tensions within W. society (e.g. generational), and has created religious antagonism and exclusion of non-believers.

W. have characteristic songs and dances, performed at weddings and other ceremonial events. They are also regularly performed by national dance and theatre companies in Ethiopia. Various W. singers have recorded traditional cultural songs and stories and released them on cassettes and DVDs. The growing Pentecostal faith is inimical to such traditional W. cultural expressions.

In 1999–2000 W. passed through a major crisis due to government plans to enforce one language for the four ethno-linguistic groups Wälaytta, ↗Gamo, ↗Gofa and Dawro ("Wogagoda") for educational and political purposes. A violent revolt in the W. town of ↗Soddo led to people being killed by police, dozens of W. teachers dismissed and exiled, and mediating W. elders arrested. The battle, W. people said, was for the maintenance and assertion of "W. identity". In 2000 the plans were cancelled and W. became a separate Zone.

Contemporary W. is in deep economic distress, with land scarcity and great population pressure (ca. 3–3,5 % annual growth) contributing to serious economic stagnation and social problems, and enduring poverty, leading to generational tensions, e.g. between fathers and their sons, who demand land which is not available. Furthermore the absence of alternatives to agriculture and small-scale trade excabates the problems of the W. zone. The region is quite vulnerable to weather fluctuations, and almost every year food aid is needed for thousands of people. There is serious environmental decline, and a drying out of the land is noticeable. Next to significant seasonal labour migration (to plantations in central Ethiopia), permanent out-migration to towns in the south (↗Awasa, ↗Šašämäne) and to ↗Addis Abäba is growing. While a new university is being developed in Soddo, the overall socio-economic picture of W. is problematic.

Jon G. Abbink

Wälaytta kingdom

The W. state in southern-central Ethiopia emerged in the 13th cent. and existed until 1894, when it was destroyed and incorporated into imperial Ethiopia. It was an early example of state formation in the Omotic-speaking area, which knew small-scale divine chiefdoms (s. ↗Kingship, divine), but not kingship with an elaborate hierarchical government structure. A likely cause of the emergence of the W. hereditary kingship in what was presumably an assembly society with local chiefs and sacrificers, found in various ↗Gamo societies until today, was perhaps the control of the ↗iron ↗trade. Iron, found in the south-western Kindo area, the cradle of the W. state, was important from an early date and was made into weapons and tools, and a means of exchange (*márčua,* thin iron bars functioning as money). Whoever controlled its production and trade was powerful, could control the weapons and expand his hold over people.

W. had two dynasties (hereditary lines of kings): the ↗Wälaytta-Malla, founders of the kingdom, and the "Tәgre" (since ca. 1710). There was probably a gradual take-over of the kingdom by the second dynasty, although in oral traditions this is telescoped into the actions of a few individuals. In addition, oral traditions in W. differ markedly as to names, events and stories about the development of the kingdom, whereby the versions of leading families, former royal clans (Wälaytta-Malla and Tәgre) as well as of commoners and former craftsmen castes diverge at crucial points.

The Wälaytta-Malla state had the king at its apex, with a designated heir (the *bušaše*) and then four advisers (or *oydu ginda*). It also had 'war leaders' (*gadawa*) and officers called *zakara guda*, who were responsible for the work on the royal agricultural estates (Altaye Alaro 1982: 5). The king always ruled with an elite from the leading (*goqa*, 'free') clans and was in part dependent on them. Thus his power was not unconditional, even if he was (as were the kings from the Tәgre clan) an absolute ruler with power over life and death, and treated with ritual awe and a host of behavioural taboos.

In the Ethiopian Middle Ages the W. state, with several hundred thousand inhabitants and a relatively wealthy economy, was well-known to the Ethiopian Solomonic emperors, and contacts through trade and religious and political emissaries probably existed, including the occasional settlement of monks or priests, as reflected in the ↗Täklä Haymanot legend. The 15th-cent. soldiers' song in honour of *aṣe* ↗Yəsḥaq contains a phrase about the "Wälamo" kingdom (Guidi 1889: 55, verse 57), suggesting that this name was originally not denigrating and certainly does not date from the *aṣe* Mənilək's time.

The W. state expanded significantly under the Təgre dynasty since ca. 1710. The Wälaytta-Malla kings had to face the emergence of a group of northern migrants, ancestors of the Təgre royal line. They were led by one Mihala (ca. 1580–1600), who allegedly originated from ↗Tämben. While the individuals first mentioned in this line appear in many oral traditions and may have held positions of authority, the first officially recognized Təgre dynasty king of W. was probably ↗Kote.

The most notable expansion of the W. state occurred under King Sanna (r. 1762-90), who fought the ↗Libido, the ↗Hadiyya and the ↗Dawro and included areas beyond Mount Damota in his realm. He was the most important conqueror king of the W. and decisively shaped the W. state. His royal compound was in Lašo, where he was also buried. His son Ogato continued the expansion to the north-east. The Təgre kings' *sacrum* was symbolized in certain regalia, such as the crown and the golden index-finger ring.

Under the Təgre dynasty the "divine" element in the kingship was reinforced: elect status, supernaturally legitimized authority, powerful personal spirit. This occurred especially under King Amado (1822–48), who was designated as *Ṭossa kawa* (i.e. 'God's king') according to certain oral traditions (Chiatti 1984: 321), not because of his feats in battle but because of his beneficial, wise and strong rule. Nevertheless, the W. kings were never sure of the loyalty of the powerful clans and their subjects.

The Təgre kings developed an elaborate court system based on that of the Wälaytta-Malla system, consolidating a hierarchical state structure, with four advisers (*guda*) below the king, and a head of defence (*močona*), and a council of twelve *balmola* ('councillors'), who had a great say in choosing/confirming the successor king and who were also involved in general policy matters. There was a court system and a police force, and several other offices. The *balmola* acted as a curb on power abuse by the king, and indeed W. kings were often pressurized into making concessions (a case in point was the forced abdication of the tyrannical King Damote, in ca. 1852–53).

All these kings continued warfare against neighbouring groups. It appeared that, apart from attaining valour in the feats of war being a desired cultural ideal, the need to gain additional territory was also necessary for the king to confirm his rule and maintain his hold over the people, especially the leading clans. The engine for state expansion and royal authority was thus territorial conquest. In this same process, the various political and displaced 'ethnic' groups of different backgrounds could be assimilated into the state as well. The 19th cent. was a time of glory for W., especially under the kings Amado (ca. 1822–48) and Gobe (1853–89). The latter was undisputedly the greatest king, who brought warfare to a close, reputedly ruled just and wise, and led the country to economic prosperity. The agricultural wealth and strategic southern position of W. led to Mənilək coveting it for political and economic reasons (including control of the ivory trade through W.), and as King ↗Ṭona refused to acknowledge the Emperor's sovereignty, this led to the disastrous war in 1894, which demolished the W. state structure and brought steep economic decline and an identity crisis to the society.

Jon G. Abbink

Wälaytta-Malla dynasty

As one of the few ↗Omotic-speaking (Ometo) societies in southern Ethiopia, the ↗Wälaytta people developed a kingdom at a relatively early stage, probably in the 13th cent. The first line of kings or "dynasty" was that of the W.-M., originally a clan (meaning the 'real', 'full' or 'original Wälaytta'). These kings replaced the formerly dominant Aruǧe people, who had no kingship. Under the W. dynasty a new state emerged, with royal councillors and an executive branch (for the organization of work and implementation of justice) next to the kings. The state expanded to the north and east, largely by military means, and incorporated or displaced various pre-existing groups. Conquest was thus essential to the emergence of the kingship. The W.-M. subsequently developed a form of "divine ↗kingship", with the omnipotent king having supernaturally ordained powers and control over rain, fertility and over the socio-cosmic order in general (Chiatti 1984: 341f.) His descent and position were legitimized in myths of origin. But the authority of the kings was never unquestioned: internal disputes and revolts are frequently mentioned in the oral narratives and, despite his claims, the king's authority was often disputed.

The original base of the W. was the area around the now uninhabited Kindo-Didaye hill in the south-west, which still contains a sacrificial cave allegedly used by the W.-M. Most royal compounds of the W. dynasty were here, although the last W.-M. king (Lače) lived in Wuluše, to the east.

One oral tradition indicates that the first king (*káwo*) of the W.-M. dynasty was Bitto, and that he was followed by eleven others until the "Tǝgre" dynasty took over. Other traditions mention only six kings. The most famous W. king is reputedly "Motolome" (↗Motälämi), a name any Wälaytta person knows, and who acquired fame by being mentioned in the Acts of St. ↗Täklä Haymanot as the king of the south (Damot) who kidnapped the saint's mother and who was later converted by the saint.

Oral traditions differ as to the names and sequence of the W.-M. kings. Haberland (fieldnotes 1955) has six names: 1. Sazze/Satte, 2. Motolome, 3. Awse, 4. Bure, 5. Oče, 6. Lača. Another source (Wanna 2001: 100) gives eight names: 1. Anse, 2. Bure, 3. Saddo, 4. Motole/Motolome, 5 Tulme, 6. Mate, 7. Oče and 8. Lače. Abbink (fieldnotes) has six as well: 1. Sadde, 2. Moddole (Motolome), 3. Samora, 4. Sanna, 5. Oče and 6. Lače. One list (cited in Altaye 1982: 10) had twelve names: 1. Bitto, 2. Sägäd, 3. Sanna, 4. Woddo, 5. Naqsa, 6. Dočiso, 7. Sassa (or Sadde), 8. Motolome, 9. Urunbo, 10. Abose, 11. Birane, and 12. Agize. The historical truth of the "correct" list or even of the existence of the persons mentioned, including Motolome, can no longer be recovered, especially in view of the often divergent oral traditions. Nor have new written sources on the subject become available.

As to the religion of the W. dynasty, it is likely that they followed the traditional Wälaytta religion, despite the legend of Motolome being converted by St. Täklä Haymanot in the 1280s. The W. kings are known to have fought the incursions of the imperial Christian troops. But Orthodox Christianity was present well before the conquest of Wälaytta by *aṣe* Mǝnilǝk's forces in 1894, and was probably brought by the ancestors of the Tǝgre royal dynasty after ca. 1600.

Around 1600 the W. dynasty declined due to constant fighting with neighbouring groups (notably Hadiyya, cf. HabKön 259), to a loss of control over vassal countries, and to dissatisfaction among the people because of *corvée* labour for the war efforts and royal estates. Thus a new elite, allegedly of northern migrant origin, emerged, probably as senior advisors or deputies of the W. kings. Eventually, in the early 18th cent., this elite yielded the "Tǝgre dynasty", with ↗Koté as its first installed king. Nevertheless, the W. clan, often still seen as "owners" of the land, remained important in certain land rituals.

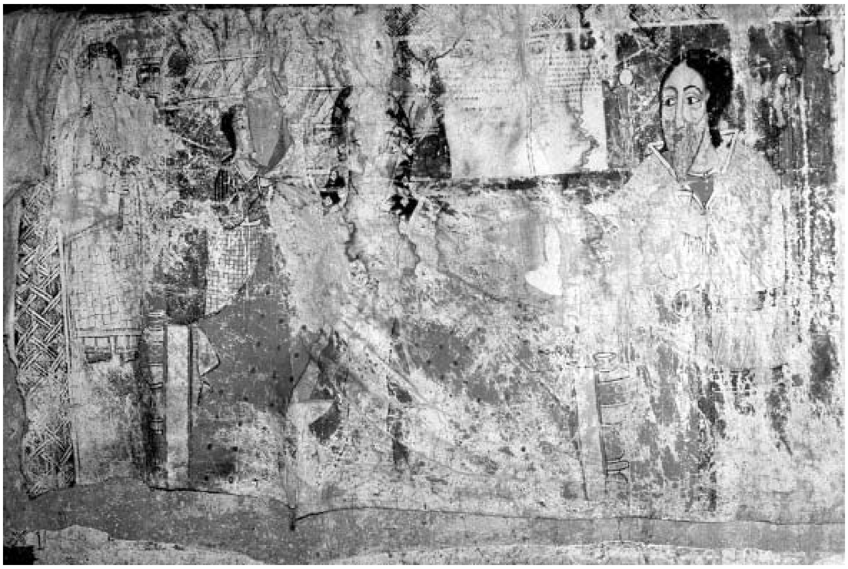
Wäld Śä^{c}ala

Ǝtege W.Ś. (**ወልድ፡ ሠዓላ**, crown name **ሥልጣን፡ ሞገሳ**, Śǝlṭan Mogäsa, b. Däfäsa, Amhara, fl. 1600–28, d. 1661 [?]) was the most important of the wives of *aṣe* ↗Susǝnyos. Oral tradition makes her a member of an influential clan from ↗Wäläqa, her father being a certain *Wälaqa nägaš* Abrako (Wion 2003: 184ff). She would have married Susǝnyos in ca. 1601 (cp., however, with Wion 2003: 183; on W.Ś.'s name and titles cf. Tekle-tsadik Mekouria 1956: 169f.).

W.Ś. was, initially, one of the main opponents of the Jesuit missionaries at the court (cp. ↗Jesuits).



A portrait of the queen Wäld Śäᶜala with Arsanyos, her spiritual father, on the murals of Qoma Fasilädäs; photo 1997/99, courtesy of Anaïs Wion

With the unfolding of the mission, however, she adopted an ambiguous attitude. She was cordial to the Europeans whilst also prompt to defend those who were victims of her husband's arbitrary decisions in favour of ↗Catholicism. In 1627, a Jesuit annual letter described W.S. as possessing a strong character and being very distant to the Jesuits (Almeida to Vitelleschi 1627, 422v; cp. also BecRASO IV, 7). The same document, however, said that thanks to the persuasion of some missionaries she took a more favourable stand towards them (Almeida to Vitelleschi 1627, 422v). During the Christmas of 1628, for instance, she visited and admired the nativity scene that the Jesuits had set at ↗Gännätä Iyäsus (BecRASO XII, 383f.). In 1629, she interceded, though to no avail, with her husband to stop the execution of Adäro, sister of the rebel ↗Täklä Giyorgis (BecRASO VII, 30). It is not clear, however, what role she had during the crisis of 1632 when Orthodoxy was reinstated.

W.Ś. outlived her husband by many years. Her role during the period of expulsion of the Jesuit missionaries and during the reign of her son *aṣe* ↗Fasilädäs remains unclear. Besides Fasilädäs, she was the mother of at least another three of the many sons of Susənyos, Marqos, ↗Gälawdewos and ↗Mäläkotawit.

According to oral tradition and to written sources W.Ś. founded the monastery of ↗Qoma Fasilädäs. In the early 1620s, she founded a church at Qoma and endowed it with lands. Some time later, after an agreement between W.Ś. and her son, the monastery was renamed after St. Fasilädäs (Wion in *PICES* 14 and Ead. 2003: 21, 94, 96, 108, 117, 125ff.). She also contributed donations to the construction of ↗Aksum Ṣəyon (Wion 2003: 134 n. 287). Her remains are reportedly preserved at the monastery of her foundation.

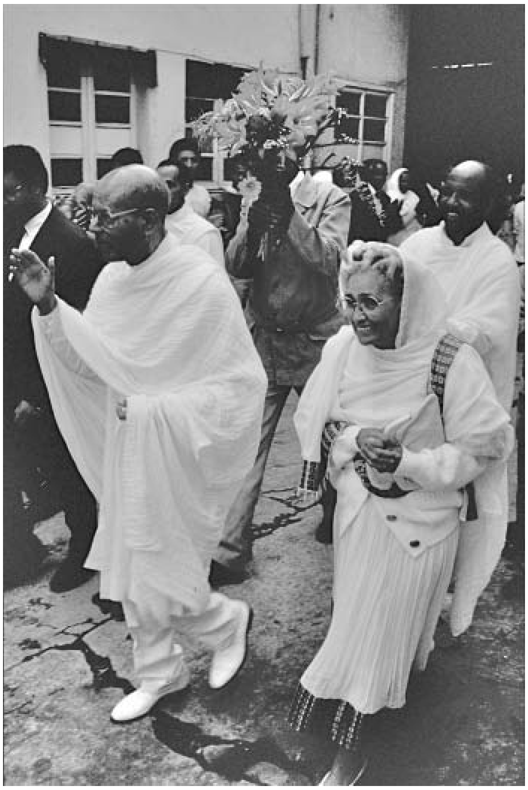
Andreu Martínez d'Alòs-Moner

Wäldä Ab Wäldä Maryam

W.A. (**ወልደ፡ አብ፡ ወልደ፡ ማርያም**; b. 27 April 1905, ᶜAddi Zarna, Säraye, d. 15 May 1995, Asmära), widely regarded as the father of modern ↗Eritrea, was a prominent political activist. Both of his parents came from ↗Təgray. W.A. was educated at Swedish Evangelical Mission schools where he later also served as a teacher and director (↗Evangeliska Fosterlands Stiftelsen).

In 1942, the British authorities, who had taken over the administration of Eritrea (↗British



Wäldä Ab Wäldä Maryam in April 1993 on the way to the polling station on the occasion of Eritrea's independence, Asmära; photo courtesy of Tom Dassel

Military Administration), enlisted W.A. as editor of the ↗Tǝgrǝñña-language weekly newspaper, *Nay Erǝtra Sämunawi Gazeṭa* (↗Eritrean Weekly News). The newspaper became an important forum in shaping the debate over the future of Eritrea and W.A.'s own involvement and prominence grew substantially. He was one of the founders of the ↗Maḫbär Fǝqri Hagär, which after some policy changes became the forerunner of the ↗Unionist Party. W.A., like some other founding figures of the Maḫbär, was reluctant to commit himself to an unconditional union with Ethiopia and seemed to favour the British position that initially proposed some form of British trusteeship over "Greater Eritrea" (Tǝgray–Tǝgrǝñña) under the nominal sovereignty of the Ethiopian Emperor. W.A. was also keenly aware of the growing disenchantment of Eritrean Muslims with the prospect of union with Ethiopia.

In an attempt to close the growing Christian-Muslim rift regarding the future of Eritrea, W.A. took the initiative of calling a meeting at Bet Giyorgis in November 1946. His proposal for a "conditional" union with Ethiopia was roundly condemned by a majority of the Christian leaders, and the last meeting ended in recrimination when the ardent unionist ↗Tädla Bayru pointed out W.A.'s Tǝgrayan origin and questioned his right to meddle in Eritrean affairs. When officially organized parties began activities in 1947, W.A. first aligned with the ↗Liberal Progressive Party led by *ras* ↗Täsämma Asbärom, but soon withdrew and founded his own organization, the Association of Eritrean Intellectuals. Both of these parties had very few followers among Eritrean Christians, nor did they make a clear cut call for independence. The Liberal Progressive Party claimed that Tǝgray and Eritrea were inseparable and that they were opposed only to Šäwan hegemony, and not to Ethiopia. W.A. continued to raise the possibility of some form of union with Ethiopia. In a letter to Emperor ↗Ḫaylä Śǝllase I, he declared in 1947 that he had never been opposed to union with Ethiopia and that he called for a conditional union only to appease Muslim Eritreans who were averse to total union.

W.A.'s plea for "conditional" union fell on deaf ears both among Eritrean Christians and Ethiopian officials who regarded him as a puppet of the British authorities. Exacerbated by the increasing attack from the unionists, W.A. joined the Eritrean ↗Independence Bloc that was led by ↗Ibrāhīm Sulṭān. W.A.'s position became even more precarious after the establishment of the ↗Ethiopian–Eritrean Federation. He continued to decry the erosion of Eritrean autonomy. Numerous attempts were made on his life, some of which seem to have been organized by officials of the imperial Ethiopian government. His nemesis, Tädla Bayru who was elected chief executive of Eritrea, hounded him into exile in 1953. W.A. was given asylum in Egypt where Nasser's government allowed him to make Tǝgrǝñña Radio broadcasts into Eritrea for some time. Although he played some role in the founding of the ↗Eritrean Liberation Movement in 1958, W.A. remained alienated from Eritrean politics in the diaspora which was dominated by the originally more Muslim oriented ↗Eritrean Liberation Front (ELF). His association with ↗Uṯmān Ṣāliḥ Sabbi of the ELF/PLF was purely nominal.

In 1987 W.A. came out of political oblivion when he was invited to Saḥǝl to address the Second Congress of the ↗Eritrean Peoples' Liberation Front (EPLF). He returned to ↗Asmära after the EPLF's victory in 1991. In addition to his involvement in Eritrean politics, W.A. is credited with popularizing Təgrəñña writings.

Shumet Sishagne

Wäldä Ewosṭatewos

Däǧǧazmač W.E. (**ወልደ፡ ኤዎስጣቴዎስ**, also known as **ወረኛ** Wäräñña; d. 24 January 1763, Damot; GuiIyas 207) was an influential 18th-cent. noble. Probably a native of ↗Damot (cf. Perret in PICES 8, vol. 2, 132), he allegedly became ↗*šum* of that province in 1730 replacing *däǧǧazmač* Kombe, whom locals had forced to be dismissed on the grounds that he was not a local (GuiIyas 46f. [tr.]). W.E. was a relative of *ətege* Məntəwwab (↗Bərhan Mogäsa) and a close friend of *aṣe* ↗Iyasu II (cp. GuiIyas 181 [tr.]). His name also appears in the church lists of ↗Narga Śəllase (Bosc-Tiessé 2001:536f.).

Between September and December 1730, following the accession of Iyasu II, W.E. quickly rose to higher positions in the military, from *šalaqa* to *fitawrari* and finally to *däǧǧazmač* of Damot (GuiIyas 31, 37, 46f. [tr.]). In December 1732, he went to the Guta country and made the inhabitants pay as tribute 2,000 oxen to the Emperor and his consort and 500 oxen to himself (GuiIyas 53f. [tr.]). During the same month he went to fight in Goǧǧam against the rebel ↗Tänśe Mammo, whom he captured and took to Gondär towards the end of 1733 (GuiIyas 86f. [tr.]; Guidi 1926:414).

Soon after, W.E. was recalled to Gondär where he defeated a group of rebels who wanted to proclaim one Ḥəzqəyas "Wäräñña" Emperor (GuiIyas 54ff. [tr.]). At this point, W.E. would have counted under his command a large army composed of ↗Mäč̣č̣a, ↗Ǧawe, Damot, Däräbe, ↗Yəlmana and Dänsa (GuiIyas 77ff. [tr.]). W.E. and some of his men were immediately rewarded for their loyalty to the Emperor: *asallafi* Näčo, his relative, was appointed *fitawrari* (GuiIyas 81 [tr.]) on 8 January 1733 and on 7 February 1733 W.E. and *azzaž* Giyorgis were each robed in a honorary *kappa*–cloak and received an *anbar* ('bracelet'), a belt and a golden dagger (Guidi 1926:408).

In September/October 1737, W.E., together with other *śəyyumanä wäsän* ('chiefs of the frontiers') – *däǧǧazmač* Adäru (Goǧǧam) and *däǧǧazmač* Ayo (Bägemdər) – payed a visit to Iyasu II, then convalescent in Gondär (GuiIyas 91 [tr.]). In January 1739 he captured and took to Gondär a certain rebel named Bäkaffa who claimed to belong to *aṣe* ↗Yaᶜəqob's lineage. Sentenced to death, the rebel was eventually pardoned (GuiIyas 91, 93 [tr.]). Towards the end of 1746, W.E. participated with the Emperor in a campaign in Wag (GuiIyas 139ff. [tr.]). In 1750, he also received the governorship of Goǧǧam (GuiIyas 137, 162f. [tr.]). In 1755, he was still *śəyyumä wäsän* together with ↗Mikaᵓel Səḥul (GuiIyas 174 [tr.]).

At the end of 1755 or beginning of 1756, W.E. was accompanied by *balambaras* ↗Ǝšäte of Qʷara in a campaign against a certain "Nana Gergis". The decisive battle took place at Kilti, on the banks of the River ↗Täkkäze, the side of W.E. emerging victorious. However, on this occasion W.E. seems to have played a double game, probably with the aim of protecting his own interests and alliances. He thus refused to hand over the rebel Kidanä Wäld Mammo to Ǝšäte (GuiIyas 187–90 [tr.]) and in October 1756 he even became reconciled with Nana Gergis (GuiIyas 193 [tr.]). These events might perhaps explain the use in the royal chronicle of the nickname "Wäräñña" (Amh. for 'rebel') to designate W.E.

Wäldä Gäbrəᵓel

Ras W.G. (**ወልደ፡ ገብርኤል**, fl. 1791–79, d. 1799) was a noble from ↗Lasta. The son of Fasil of Damot, he and his brother *ras* ↗ᶜAśrat jointly represented the Lasta group who contended for the domination of the court of ↗Gondär as kingmakers during the early period of the ↗*Zämänä mäsafənt*. In 1791/92, the two brothers defeated *ras* ↗Aligaz of ↗Yäǧǧu and forced him to go back to his region. After these encounters, W.G. was seen fighting at Flakit, in 1795, and in the spring of 1797 in the area of Näfas Mäwç̣a (Crummey 1975: 7).

Reportedly, towards 1795 W.G. deposed ↗Täklä Giyorgis and placed on the throne ↗Bäᵓədä Maryam II who named W.G. *ras bitwäddäd*. His rise in power, however, was not well accepted by his brother who abandoned him and went over to W.G.'s rival *ras* ↗Ḫaylu Yosedeq. When ↗Märəd Ḫaylu came to power, a dispute over the ownership of the lands of ↗Maḫdärä Maryam arose between the latter and W.G. When the dispute was not resolved, on 15 July 1799, the two leaders fought each other at Wägära. On the side of W.G. were *däǧǧazmač* ↗Gugsa Märsa and *fitawrari* Alula, whilst their opponents included *ras* ↗Gäbre Täsfa of Səmen, *däǧǧazmač* ↗Ḫaylä Mikaᵓel Ǝšäte and ᶜAśrat. W.G. and his rival Märəd died in the battle (Crummey 1975: 7; Tekle-Tsadik Mekouria in PICES 8). The outcome, however, was to favour the supporters of W.G., the Yäǧǧu Oromo chiefs, who thereafter returned to dominate the court of Gondär as king-makers until they were removed from power in 1853.

Wäldä Gäbrəᵓel

Däǧǧazmač W.G. (**ወልደ፡ ገብርኤል**, horse name Abba Sayṭan; b. ca. 1837, d. after 1894) was an important officer of Mənilək (future *aṣe* ↗Mənilək II) in his early years.

W.G. lived in Gondär during the time of ↗Tewodros II. He was possibly one of the officials who helped the future Emperor escape from the prison of Mäqdäla in 1865. He thence became a trusted confident and councillor of Mənilək and was given the title of *däǧǧazmač* along with the governorship of Wäsil and Bäräk̠ät at the eastern escarpment of Šäwa.

For Mənilək, W.G. brought under control the ↗Ittuu Oromo and in 1885 expanded his governorate as far as ↗Č̣ärč̣är. In 1885 W.G. also assigned Alfred ↗Ilg to build a bridge over the Awaš. W.G. founded two *kätämas*, Gälämso and Boroma, to the west and to the east of Č̣ärč̣är, respectively.

W.G. had territorial conflicts with *ras* ↗Darge Śahlä Śəllase which had to be resolved by Mənilək. In late 1886, after the demise of the ↗Porro expedition and the removal of the Egyptian garrison from ↗Harär, Mənilək saw his chance to conquer ↗Harärge and assigned W.G. to the task. W.G., who had army composed of soldiers from Arsi, Č̣ärč̣är and Ittuu, mobilized a Gondär regiment with such officers as *fitawrari* Kolase of Ifat and occupied a territory north-west of ↗Harär, where he established a camp at Hirna. His army was, however, defeated in a surprise attack by a Harari force under an Ottoman general of *amīr* ↗ᶜAbdullāhi b. Muḥammad. Taken aback by unfamiliar pyrotechnic effects, W.G.'s soldiers deserted the battlefield. On 6 January 1887 W.G. was involved in the battle of ↗Č̣ellenqo, this time victorious.

W.G. was called, along with *däǧǧazmač* ↗Ləᶜul Sägäd, to Mənilək's camp at ↗Däse in 1890. The two were ordered combat the rebellious *däǧǧazmač* ᶜAbbay. W.G. went out victorious. He subsequently settled at his newly established camp of Tänqʷe Bäläl.

In 1894, W.G. with his family was living in Ginnir, where he was visited by the American traveller Donaldson Smith, who provided a description of W.G.'s household and estimated his age at 57 (1897: 76ff.).

Wäldä Gäbrəᵓel

Däǧǧazmač W.G. (**ወልደ፡ ገብርኤል**; fl. late 19th–early 20th cent.) was an important court official of *aṣe* ↗Mənilək II, *ləǧ* ↗Iyasu and *əṭege* ↗Zäwditu. He started his career as a soldier of Mənilək, but was soon distinguished for his potential and appointed *däǧ* ↗*aggafari*, later being elevated to ↗*ligäba*. He had this title ca. 1887 when Mənilək entrusted him with supervising the reconstruction of the church of Mädḫane ᶜAläm at Aqaqi.

Under *ləǧ* Iyasu W.G. was dismissed from his position as *ligäba* but given the title of *däǧǧazmač*. In July 1910, for *ras* ↗Täsämma Nadäw, he fought alongside *däǧǧazmač* ↗Ləᶜul Sägäd against *ras* ↗Wale, who eventually submitted. W.G. was subsequently appointed governor of ↗Kämbata instead of Ləᶜul Sägäd.

Under Zäwditu, W.G. had diplomatic career and was appointed a Minister at the ↗*Gəbbi*. In 1911 he was sent as the head of a delegation to Brussels and Paris.

During the ↗coup d'état 1916, W.G. fought alongside Gäbrä Śəllase in the decisive battle of ↗Sägäle.

In 1918–20 W.G., with the title of ↗*fitawrari*, governed the province of ↗Bale. He was very old but still alive in 1922.

Wäldä Giyorgis

Ras W.G. (**ወልደ፡ ጊዮርጊስ**, d. 1664) was the grandson of *qes ḥaṣe* Baḥrəy and the brother of *abeto* Akalä Krəstos. In 1636/37 he was appointed *ras* by *aṣe* ↗Fasilädäs (s. ms. Ṭānāsee 136 = Dāgā Esṭifānos 25, fols. 115v–118). W.G. is well known for his military campaigns during the 1650s against the Oromo ↗Tuulama, Wako, Moz and Gonga.

W.G. died together with his sons in 1664, possibly in disgrace, and was replaced by another military chief, *ras* Lawis. W.G. is often remembered through his descendants: he married a daughter of *aṣe* Fasilädäs, Əskəndərawit, by whom he had at least two sons, *abeto* Qoste and *abeto* Mikaᵓel. The latter was the father of Maryamawit, mother of *aṣe* ↗Bäkaffa.

Wäldä Giyorgis

W.G. *ras* "of Agaṣ" (**ወልደ፡ ጊዮርጊስ**; d. ca. 1710) was a prominent figure at the court of *aṣe* ↗Iyasu I of ↗Gondär.

In 1696 W.G. was involved in a conspiracy against Iyasu, this plot was discovered and W.G. had to flee. He sought shelter in the house of *wag šum* ↗Arᵓayo, but was later forgiven. W.G. was appointed *azmač* of ↗Bägemdər by Iyasu on 28 February 1702. The following year he responded to the command of Iyasu that he join the king at the ↗Abbay for an expedition to the ↗Gibe, and, in the course of the expedition, he made carnage among the ↗Gonga (GuiIohan 219, 255 [text], 233, 239 [tr.]).

At the end of Iyasu's reign, W.G. appeared as a supporter of Iyasu's usurping son, *aṣe* ↗Täklä Haymanot I. Identified as "*däǧǧazmač* of Səmen and husband of *wäyzäro* Wälättä Rufaᵓel" (tr. by the author), he was one of a group of Gondär notables, most prominent among them *ras* ↗Fares, who proceeded to proclaim Täklä Haymanot as king in 1706 (BassÉt II, 56f.). Two years later, on the death of Täklä Haymanot, *ligaba* W.G., quite possibly the same man, and other notables "who were devoted to Täklä Haymanot", had him buried on the island of Kəbran (BassÉt II, 63).

We learn of W.G. in quite a different capacity, as the creator of the "*aläqənnät* of ↗Gälawdewos". This is first mentioned in an anonymous will, which, in retrospect, was clearly made by W.G.: "I have made Gälawdewos my first born", reads the will, "let him be the leader in the house of my mother and of my father" (tr. by the author; UNESCO, Dima 10:2.6, fol. 1). It mentions the town Agaṣ, which, apparently, is north-east of Səmada, in Bägemdər. It suggests that W.G. may have had two daughters, Marta and Ənqʷəlal, and a second son, Näč̣č̣o. Some of the relationships surrounding the founding of the *aläqənnät* are confusing. Several sources, including Basset's short chronicle referred to above, make Wälättä Rufaᵓel, daughter of Iyasu I, the wife of W.G. and mother of Gälawdewos (Kropp 1989: 169–77). However, several other sources claim that the wife of W.G. and mother of Gälawdewos was *əmmäbet* Bərute and that Wälättä Rufaᵓel was the mother of Gälawdewos's wife, *wayzäro* Wälättä Ṣəyon (Kropp 1989; BritLib, Orient. 778, fol. 1v).

Whatever the relationships, W.G. recognized Gälawdewos as his heir and endowed him with the family *aläqənnät*. This institution was to persist into the early decades of the 19th cent. (CrumLand 115–21, 126). We know neither the date of W.G.'s birth, nor of his death, although the latter may have occurred sometime before 1710.

Wäldä Giyorgis

Ǝç̣ç̣äge W.G. (**ወልደ፡ ጊዮርጊስ**; d. June 1918) was a prominent ecclesiastic of the ↗Mənilək II era.

From his early years, W.G. was a monk at the monastery of ↗Maḫbärä Śəllase. He was then called to the court of *nəguś* ↗Täklä Haymanot of Goğğam, and gradually accumulated considerable power. He participated in the battle of ↗Ǝmbabo between Täklä Haymanot and *nəguś* Mənilək of Šäwa on 6 June 1882, both inspiring Täklä Haymanot’s soldiers and fighting himself. Mənilək won the battle, and W.G. followed the victor to Šäwa.

W.G. gradually won Mənilək’s confidence, and in 1896, following the battle of ↗^{c}Adwa, he appointed W.G. ↗*nəburä əd* of Aksum. W.G. was thus entrusted with significant control over the border province of ↗Təgray; his contemporaries called him “Mənilək’s agent in Təgray”.

In 1906, W.G. succeeded *əç̣ç̣äge* ↗Gäbrä Śəllase as the head of the monastery of ↗Däbrä Libanos of Šäwa, thus finally becoming a part of the Šäwan court. In 1909, W.G. was granted landed property in Aksum by ↗Ṭaytu Bəṭul.

W.G. was also involved in royal politics. In 1910, under instigation of *ras* ↗Täsämma Nadäw, he annulled the marriage between the minor *ləğ* ↗Iyasu and Ṭaytu’s young niece Romanä Wärq, interrupting the progress of the tie between the two families. While during the ↗coup d’état 1916 (s. EAE vol. 2, 1081), the Metropolitan *abunä* Matewos hesitated in his loyalties, W.G. openly sided with Ṭaytu’s party and excommunicated *ləğ* Iyasu. During the battle of ↗Sägäle, he encouraged the soldiers of *ras* Täfäri (the future *aṣe* ↗Ḫaylä Śəllase I).

W.G. was buried at Däbrä Libanos.

Wäldä Giyorgis Abboyye

Nəguś W.G.A. (**ወልደ፡ ጊዮርጊስ፡ አቦዬ**, horse name Abba Sägäd; b. 1851, Mänz, d. 1918, Däbrä Tabor) was one of the most prominent Ethiopian generals who spearheaded ↗Mənilək (II)’s southward expansion at the close of the 19th cent. His mother, *wäyzäro* Ayahlušim was a granddaughter of *nəguś* ↗Śahlä Śəllase. His father, *afä nəguś* Abboyye (Abba Ǧawi), a nobleman from ↗Mänz, served briefly as governor of Šäwa under *aṣe* ↗Tewodros II in the late 1850s before he was removed to Bägemdər where he died ca. 1863. The young W.G.A. started service in *nəguś* Mənilək’s court as a page and rose through the ranks to become chief of the personal guard of the *nəguś* with the title of *grazmač* in 1883. The most important turn in his career came in 1885 when he became one of half a dozen officers selected by Mənilək to take responsibility for the recently annexed territories to the south-west under the supervision of *ras* ↗Gobäna Dač̣i. W.G.A. was named *däğğazmač* and appointed over ↗Limmu.

Using Limmu as his base, W.G.A. embarked on large-scale military expeditions that resulted in the incorporation of ↗Kullo, ↗Konta and other areas to the south as far as the Omo river. He also assisted ↗Abbaa Ǧifaar of Ǧimma in the incorporation of the kingdom of “Ǧanğäro” (↗Yäm); helped *däğğazmač* ↗Täsämma Nadäw in defeating the ↗Gomma resistance; and joined Mənilək in the conquest of ↗Wälaytta in 1894.

Already made a ↗*ras* in 1893, W.G.A. continued his pressure on the kingdom of ↗Käfa by annexing its subordinate territories. The total defeat of this last remaining independent principality was delayed by the mobilization for the ↗Italian war 1895–96. Due to the distance, the southern armies led by *ras* W.G.A. and *däğğazmač* Täsämma did not reach Addis Abäba until after Mənilək and the bulk of his army had started moving to the north. Instead of proceeding to the main war front in Təgray, W.G.A. and Täsämma were instructed to place themselves under the command of *azzaž* ↗Wäldä Ṣadəq and head east against *sulṭān* ↗Maḥámmad “Illálta” Hanfad̮é of Awsa who had just switched his loyalty from Mənilək to the Italians. *Sulṭān* Maḥámmad was defeated in January 1896 and news of the victory reached Mənilək on the eve of the battle of ↗^{c}Adwa.

W.G.A. resumed the offensive against Käfa soon after his return from the Awsa campaign. This time he was assisted by a much larger force led by Abbaa Ğifaar II, *däğğazmač* Täsämma and *däğğazmač* Däməssäw. Käfa was overrun after nine months of resistance and the king ↗Gaki Šeročo was captured in September 1897. W.G.A. set out for Addis Abäba to hand over the captured king to the Emperor, only to return back immediately to participate in an expanded expedition ordered by Mənilək along the southern and south-western border areas; an apparent move designed to preempt British and French ambition in that direction.

Ras W.G.A. was instructed to advance from Käfa into the south annexing all lands that lay along the way to the 2° north meridian and establish a foothold at Lake ↗Turkana. On 29 March 1898 he planted the Ethiopian flag on both of its shores. Report of this campaign is given by the Russian traveller Alexander ↗Bulatovich, who accompanied the troops of the *ras*.

Wäldä Giyorgis Abboyye (left) with two unidentified generals in the German newspaper "Deutsche Kolonialzeitung" from 1906; from the collection of Friedrich Julius Bieber, courtesy of the Hiob Ludolf Centre for Ethiopian Studies, University of Hamburg

Control over the rich province of Käfa allowed W.G.A. to maintain one of the largest and best equipped armies in the empire. The dazzling military display he presented with his 32,000 strong army in Addis Abäba for the seventh anniversary of the battle of ᶜAdwa was greatly admired. There was little doubt that W.G.A. had emerged as one of the most powerful military chiefs when Mənilək's health began to wane beginning in 1906. As a cousin of the Emperor and grandson of Śahlä Śəllase, there was suspicion among the nobility that W.G.A. might harbour ambition for the throne. This may have been one of the reasons why Mənilək bypassed W.G.A. in favour of *ras* Täsämma to serve as a regent for his designated successor *ləğ* ↗Iyasu.

Although W.G.A. appears to have chosen to stay out of the political fray in the capital, the power struggle between the new regime under *ras* Täsämma and *ətege* ↗Ṭaytu who still had control over the ailing Emperor, made neutrality untenable. Ṭaytu's strong following in the north could only be neutralized by someone who had the military muscle that W.G.A. had. The regency, therefore, invited W.G.A. in July 1910 to take the governorship of Bägemdər, Səmen and some districts in Wällo – the areas that were held by Ṭaytu's close relatives and supporters including *ras* ↗Wale Bəṭul of Yäğğu, *ras* ↗Gugsa Wale and *däğğazmač* Gässäsä of Səmen. With a prominent Šäwan in charge of Ṭaytu's power base, Täsämma's group was able to effectively quash any attempt to resurrect the power of the deposed Empress. W.G.A.'s authority extended into Təgray as well since he was charged by the central government to oversee the stability of the region. In 1914 he marched into ᶜAdwa with a force that numbered 50,000 to suppress a rebellion led by *däğğazmač* ↗Gäbrä Śəllase Barya Gabər who had killed *ras* ↗Səbḥat Arägawi and two of his sons.

W.G.A. was once again called to the national political stage when *ləğ* Iyasu was deposed in September 1916 (↗Coup d'état 1916, s. EAE vol. 2, 1081). The forces that plotted Iyasu's deposition were acutely aware of the challenges they faced from supporters of *nəguś* Mikaᵓel and *ləğ* Iyasu in Wällo and Təgray. W.G.A.'s support for the new regime was crucial. He was called upon to assist in the campaign against the supporters of *ləğ* Iyasu and promised a generous reward. W.G.A. marched to Däse, mopping up remnants of *nəguś* Mikaᵓel's followers along the way. From there he proceeded to Addis Abäba where he received the title of *nəguś* of ↗Gondär on 18 February 1917.

Shumet Sishagne

Wäldä Giyorgis Wäldä Yoḥannəs

Ṣäḥafe təʾəzaz W.G. (**ወልደ፡ ጊዮርጊስ፡ ወልደ፡ ዮሐንስ**; b. 4 August 1901, Bulga, d. 29 July 1976, London) was a powerful Minister of the government and close confidant of *aṣe* ↗Ḫaylä Śəllase I. He was born to a humble family of saddlers and cobblers in Šäwa.

W.G. received his early traditional education at the ↗Qəddəst Śəllase church in Addis Abäba. He later joined the ↗Mənilək II Secondary School where he was educated in French (Bahru Zewde 2003: 24). His formal education ended at the primary school level (HSLife II, 16).

In June 1920, W.G. was appointed customs inspector at the Customs Office in Addis Abäba. Thereafter, he joined Mənilək II Hospital as dispenser, interpreter, and clerk. Following a brief stint as interpreter for *däğğazmač* ↗Bərru Wäldä Gäbrəʾel while he was being treated for diabetes in France, he became interpreter for *ras* Täfäri (the future Ḫaylä Śəllase I).

In 1926 W.G., together with ↗Loränso Taʾəzaz, was sent to Geneva to assist the Ethiopian Mission to the ↗League of Nations. Shortly after his return, he was transferred to the Ministry of Foreign Affairs in charge for the Italian, Belgian and German sections. He rose to the position of Director General of the Ministry in 1931. He was one of the young, educated Ethiopians Ḫaylä Śəllase had recruited to promote his reform and centralization efforts. In 1934, he was promoted to the position of Director General of the Ministry of the Pen (HSLife II, 16).

During the Italian occupation W.G. planned the flight of Ḫaylä Śəllase and the royal family and accompanied them into exile (Greenfield 1965: 223; HSLife II, 47). While abroad, *ras* ↗Ḫaylu Täklä Haymanot, supported by the Italians, tried to plot against W.G. and Ḫaylä Śəllase, distributing leaflets with a fake seal of the Emperor and forged signature of W.G. However the plot had no success, the support of the local ↗Resistance by the British, under Colonel ↗Sandford, forced the Italians to withdraw from Goğğam (Greenfield 1965: 254). The weakened position of the Italians gave the Emperor the chance to re-enter Ethiopia via Sudan (HSLife II, 100).

After the liberation W.G. was appointed Minister of the Pen (↗*Ṣäḥafe təʾəzaz*). From 1941 on he was the most intimate confidant of Ḫaylä Śəllase and most powerful politician in the mission of centralizing Ethiopia. He accompanied Ḫaylä Śəllase on several state visits to Europe and the ↗United States. From 1943–49 W.G. also became Minister of the Interior, and later even Minister of Justice (ClapHS 112). W.G. reportedly used an efficient spying ring, and took advantage of his position in the most ruthless ways (Greenfield 1965: 293).

W.G.'s powerful position aroused envy among other politicians, such as *däğğazmač* ↗Takkälä Wäldä Ḥawaryat, who were in favour of forming a parliament and breaking up the old palace structures (Greenfield 1965: 291). Rumours spread by W.G.'s opponents reported that he might plan a military coup d'état. An allegation

Ṣäḥafe təʾəzaz Wäldä Giyorgis Wäldä Yoḥannəs; from ZRErtra 433 that later found some affirmation as a weapon depot was found under W.G.'s house on Ǝnṭoṭṭo (Greenfield 1965: 296). As W.G. had made many enemies, the pressure on Ḫaylä Śəllase to dismiss W.G. grew from all sides, especially from ↗Mäkʷännən Habtäwäld, formerly a good friend of W.G. (ClapHS 115). W.G. was finally dismissed and appointed governor of ↗Arsi province in 1955. As a sign for a general change in politics, which had also caused W.G.'s fall, the Revised Constitution was promulgated (↗Constitutions) that same year. From 1960–61 he was sent to ↗Gamo Gofa province.

In 1961 W.G. returned to Addis Abäba but lived retired in his house on Ǝnṭoṭṭo. In February 1974 he suffered a stroke and was transferred to London for treatment, where he died two years later.

Wäldä Giyorgis Wäldä Yoḥannəs

Blattengeta W.G. (**ወልደ፡ ጊዮርጊስ፡ ወልደ፡ ዮሐንስ**; b. 1894, Gubela, Šäwa, d. 19 December 1981, Addis Abäba) was a journalist, editor, and statesman and is considered to be a pioneer of Ethiopian journalism.

W.G. received a traditional education at ↗Wärra Illu and ↗Gondär, where he studied under *aläqa* Ḫəruy Fänta. In 1920/21, W.G. accompanied his former teacher to Addis Abäba, when Ḫəruy had been summoned by the then Crown Prince Täfäri Mäkʷännən (the future *aṣe* ↗Ḫaylä Śəllase I), to help translate a number of Gəᶜəz works into Amharic. W.G. worked for ↗Ḫəruy Wäldä Śəllase, who introduced him to Täfäri. W.G. himself was employed by Täfäri to translate, to teach, to act as secretary scribe in the government treasury and to compose and recite ↗*qəne*. Later W.G. startet to work in the ↗*Bərhanənna Sälam* printing press and became assistant editor (later editor) of the monthly magazine **ከሣቴ፡ ብርሃን፡ ለልበ፡ ጠቢባን** (*Käśate Bərhan Läləbbä Ṭäbiban*, 'The Revealer of Light to the Heart of Wise Men'; ↗Press).

During the Italian occupation W.G. fled the capital in order not to collaborate with the Italians, as many journalists were compelled to do. Yet in 1937 he was arrested and sentenced to death, which was later commuted to imprisonment. One year later, however, he was released and forced to write for the fascist newspaper *Corriere dell'Impero*. At the same time he secretly wrote pamphlets for the ↗Resistance movement, such as *Yäwänd ləǧ kurat səlähagär mämot*, in which he appeals the people to fight for Ethiopia's independence. He also wrote for the ↗*Hagär Fəqər Tiyatər*.

When the British forces entered Addis Abäba in 1941 they requested W.G. to set up a newspaper which he called ↗*Addis Zämän*. He himself was a frequent contributor to the paper as well as to *Sändäq ᶜalamaččən* (formerly ↗*Banderaččən*). He edited both papers from 1959 to 1962 and then became Assistant Minister responsible for all Amharic newspapers and magazines. In 1966 on the 25th anniversary of the founding of *Addis Zämän*, W.G. was appointed to rank ↗*blattengeta* and awarded the official title of "Father of Ethiopian Journalism". In 1967 he also became adviser to the Ministry of Information and served in this capacity until 1974 when he finally retired due to his deteriorating health. That was about three month before the downfall of Ḫaylä Śəllase, and W.G. could live relatively peaceful under rule of the *Därg* (↗Provisional Military Administrative Council).

W.G. wrote several works both in prose and poetry (cp. MolLit 37f.; cp. FanTarik 547; GerLit 439). After a visit to Europe he wrote *Bəlṣəgənna bägəbərənna*, a reflection on growth and development. Many of his works were in praise of the Emperor and his family. The most famous and most widely read of his books is the novel *Agʾazi*, which appeared in 17 instalments in *Addis Zämän* from 1946 onwards, and was published as a book in 1968/69. W.G.'s contribution to Ethiopian journalism and Amharic writing in their early, pioneering stages was remarkable. Ahead of his time, he was open to new, foreign, ways of thinking and was aware of what the modern, technological world could do to help Ethiopia.

W.G. must not be confused with his contemporary and close confidant of Ḫaylä Śəllase, *ṣäḥafe təʾəzaz* ↗Wäldä Giyorgis Wäldä Yoḥannəs, as has happened in some publications such as Gérard (GerLit 315ff.).

Jack Fellman – Maxim Zabolotskikh

Wäldä Ḥawaryat

W.Ḥ. (**ወልደ፡ ሐዋርያት**; d. 1 January 1733) was an official of the court of *aṣe* ↗Bäkaffa. He was appointed to the office of ↗*ᶜaqqabe säᶜat* on 5 October 1722 (BassÉt 81), which he held until his death. He may have been the same figure as a ↗*mäggabi* W.Ḥ., who is mentioned as an official with reference to an event in April 1721, during the reign of the preceding *aṣe* ↗Dawit (BégCron 102).

W.Ḥ. appears to have been the guardian of the ↗*Kʷərᶜatä rəʾəsu* icon, kept in the Church of Gəmǧa Bet Maryam, in the Gondär castle compound, which, from time to time, accompanied the Emperor on military expeditions.

W.Ḥ. is mentioned in the chronicle rarely and only in passing. Early in 1723, when Bäkaffa left Gondär for a major expedition, W.Ḥ. remained behind (GuiIohan 276). However, when, at the end of 1725, the Emperor left for an expedition against rebels in ↗Lasta, W.Ḥ. accompanied him along with the *Kʷərᶜatä rəʾəsu* (ibid. 297). On the same expedition he was present at a major review of the royal army near ↗Č̣äč̣äho. On 6 November W.Ḥ. and the icon were back in Gondär.

Following the death of Bäkaffa, in September 1730, W.Ḥ., along with the metropolitan, *abunä* ↗Krəstodolu, and the *əč̣č̣äge*, ↗Täklä Haymanot, presided over the funeral ceremony (GuiIyas 31). His final appearance was during the anti-*Qʷaräñña* rebellion of 1732, when, at the end of December, rebels, who had seized the royal compound, forced the leading ecclesiastical officials, W.Ḥ. among them, to pronounce anathema on the recently-crowned ↗Iyasu I and his mother Məntəwwab (↗Bərhan Mogäsa; GuiIyas 72). W.Ḥ. died, two days later, in the battle in which the royalists crushed the rebellion.

Wäldä Ḥəywät ↗Hatätä Zärᶜa Yaʾəqob

Wäldä Ləᶜul

Ras W.L. (**ወልደ፡ ልዑል**; d. 27 March 1767) was a major figure in the court politics of ↗Gondär from the 1730s to the 1760s, the brother of *ətege* Məntəwwab (↗Bərhan Mogäsa) and leading member of the *Qʷaräñña* faction (↗Qʷara), which dominated the palace and state during those decades.

The principal source of information about W.L. is the royal chronicle (GuiIyas). He was the son of *wayzäro* Ǝnkoyye and *däǧǧazmač* Mänbär. He had four half-brothers on his father's side and was the father of at least seven children. At different times he held the titles of *ṭäǧǧ asallafi*, ↗*bitwäddäd*, ↗*ras*, and *rəʾəsä mäkʷannənt*.

W.L. first achieved prominence during the reign of *aṣe* ↗Bäkaffa, of whom he was a favourite (BruNile II, 609). His first recorded appointment occurred in September 1730, following the ascent to the throne of his nephew, ↗Iyasu II, and his sister, Məntəwwab (GuiIyas 34 [text]). The following June, he was appointed as *ṭəqaqən* ↗*blattengeta*. In December 1732, a major revolt broke out. The rebels wanted to unseat the recently-crowned Iyasu and Məntəwwab and besieged the castle compound. W.L. was prominent among the successful loyalist defenders in recognition of which he received, on 8 January 1733, appointment as *bitwäddäd* (GuiIyas 65f., 75). The title of *ras* followed later that year. In January 1740, "chief of nobles …, chief general" and great councillor to the Emperor, he led an expedition to subjugate *däǧǧazmač* Ayo of Bägemdər (BruNile II, 629f.). In April 1744 he participated in a royal expedition to ↗Sinnār, which ended in defeat and the humiliating loss of the ↗*Kʷərᶜatä rəʾəsu*, an icon, which since the late 17th cent. had always accompanied the Ethiopian rulers into battle (GuiIyas 113ff.; BruceNile II, 636–41). In November 1746, he led first the vanguard, then the rearguard, in a successful royal expedition to ↗Lasta and ↗Təgray. The principal thrust of the expedition had been to gain the submission of *ras* ↗Mikaʾel Səḥul of Təgray, which, following a siege of Mikaʾel's stronghold of Samayata, was obtained on 7 January 1747 (BruNile II, 647–53). W.L. was confirmed in office as *ras bitwäddäd* on 3 September 1747, on 14 July 1748, in September 1751, July 1752, September 1753 and September 1754 (GuiIyas 141, 143, 154, 155, 157, 163).

The death of *aṣe* Iyasu II in June 1755 precipitated a major crisis. While events confirmed W.L.'s position as lead courtier, the existence of tension between him and Məntəwwab was indicated by the fact that the queen used her cousin, Ǝšäte, as a go-between with W.L., and it was she who nominated ↗Iyoᵓas as successor to his father, a decision in which W.L. acquiesced (GuiIyas 164f.). W.L. was again re-confirmed in his position on 22 September 1755, in October 1757, September 1758, October 1759, September 1760, October 1761, October 1762, September 1764, September 1765 and September 1766 (ibid. 174, 184, 187, 193, 194, 197, 198).

The last episode in W.L.'s career, his intervention in the Council of ↗Kayla Meda, occurred in October 1763. We have contradictory accounts of his role. Both accounts agree that he was then instrumental in having *däǧǧazmač* Yabo Barya expelled from Gondär. The first account gives no motive for this action and claims that he acted as a pacifier of the turbulent clergy, who pillaged and beat *əč̣č̣äge* Henok. The second explains it as part of W.L.'s intervention, which was far from peaceful. Motivated by jealousy of the "orthodox" Ǝšäte he had actively worked to support the insurrectionists and led the pillaging. Religious sectarianism was his primary motive for acting against Yabo Barya (GuiIyas 198–202).

W.L. was buried in the Yoḥannəs church, which he had built (ibid. 223). Only two years after his death, the rule of the *Qʷaräñña* faction came to an abrupt end (BruNile II, 669ff.).

W.L. was a prominent holder of ↗*rim* lands, especially those attached to the churches of Qaha Iyäsus, ↗Narga Śəllase and ↗Däbrä Ṣäḥay Qʷəsqʷam, Gondär (CrumLand 106f.).

Donald Crummey

Wäldä Maryam ↗Historiography; ↗Tewodros

Wäldä Maryam

According to the lists of the ↗*əč̣č̣äge* published by Cerulli (CerDLib III, 160ff.), W.M. (**ወልደ፡ ማርያም**; fl. mid-19th cent.) was the 49th holder of this office.

For all that he participated in epochal events, surprisingly little, starting with the dates of his birth and death, is known about him. Apparently he was originally from ↗Waldəbba and is first mentioned in a Catholic source with reference to the presence in ↗Gondär in 1852 of Catholic clergy, whose activities W.M. attempted to block in association with the ↗*käntiba* (CerDLib III, 161, citing Conti Rossini 1916: 503).

The following year, in May 1853, W.M. was present at the formal return of *abunä* ↗Sälama to Gondär, and, in 1855, accompanied *aṣe* ↗Tewodros II on his expedition to Šäwa. In the course of this expedition, W.M. and Sälama were accused of spreading sedition against the Emperor (ZanLitTheo 25; MorTeod 164f.). It was during W.M.'s tenure that Tewodros reversed the long-standing precedence of the *əč̣č̣äge*'s office *vis à vis* that of the Metropolitan (↗*Abun*). At the time of the Council of ↗Amba Č̣ara in 1854, Tewodros placed Sälama on his right and W.M. on his left, thereby recognizing the *abun* as superior in rank to the *əč̣č̣äge* (CerDLib III, 162; MonVidTeod 27; in this account the *əč̣č̣äge* is not named).

At an uncertain date, Tewodros appointed Wäldä Tənśaᵓe to replace W.M. as *əč̣č̣äge*, Wäldä Tənsaᵓe thereafter serving apparently for the bulk of Tewodros's reign (CerDLib III, 162).

Wäldä Mikaᵓel Sälomon

Ras W.M. (**ወልደ፡ ሚካኤል፡ ሰሎሞን**; b. ca. 1823, Hazzäga, d. 1906, Aksum; popularly known as Wäldänkel, Gomida, or *Ǝmbiyalä* Wäldu) was a nobleman of ↗Ḥamasen, who was renowned as an intrepid and tactful military leader as well as an astute judge, though at times rather impetuous. He is widely regarded in Eritrea as a national hero, and some writers view him as the pioneer of Eritrean nationalism. His father was *ayte* Sälomon, the eldest son of *käntiba* ↗Zärᵓay, a descendant of the 18th-cent. *baḥri nägaśi* Gäbrat, and his mother *əmbet* ↗Ǝllen, both of whom had played active political and military roles in the region in the 1830s and 40s.

A descendant of a line of rulers of Ḥamasen, W.M. was born and brought up in ↗Hazzäga. The exact date of his birth is unknown, and sources give different dates ranging from 1810 to 1827. Equally little is known about his early life and education apart from the fact that he grew up in an arena of conflict. At home, there was an incessant rivalry for power between his parents and a cousin, Gäbray Habtä Ṣəyon, who had inherited the greater part of their paternal grandfather's wealth. There was also a longstanding conflict on a larger scale between his extended family and the ruling dynasty of ↗Ṣäᶜazzäga, a neighbouring district inhabited by a people distantly related to that of Hazzäga. In addition to these conflicts, there were intermittent invasions from the lords of Təgray and Səmen (cp. ↗Wəbe Ḫaylä Maryam) who exacted tribute from Ḥamasen, ↗Akkälä Guzay and ↗Säraye during the ↗*Zämänä mäsafənt*.

According to the available records, W.M. began his administrative career in the 1850s under his brother, *ayte* (later *däggäzmati*) Märᵓəd, an ally of "Agäw" ↗Nəguśe Wäldä Mikaᵓel. After the death of Agäw Nəguśe in 1861, *aṣe* ↗Tewodros II arrested and imprisoned Märᵓəd on Mount ↗Mäqdäla where he eventually died. W.M. joined the new governor, *däggiyat* ↗Ḫaylu Täwäldä Mädḫən of Ṣäᵓazzäga, who was appointed by Tewodros to govern ↗Märäb Məllaš, and Ḫaylu gave W.M. a large part of Ḥamasen to govern.

Däggiyat Kaśa Mərč̣a (later *aṣe* ↗Yoḥannəs IV) imprisoned Ḫaylu in 1868 and appointed W.M. governor of the greater part of Märäb Məllaš. W.M. was accused sometime later of corresponding with the French government, allegedly seeking support in an effort to achieve independence for Märäb Məllaš, and he was consequently arrested in 1869 and imprisoned at ↗Ambalage, Təgray. Wäldä Iyyäsus, the governor of southern Təgray and brother-in-law of Yoḥannəs IV, rebelled in 1872–73 and released W.M. from prison.

W.M. went straight to ᶜAdwa and submitted to Yoḥannəs IV who kept him at his court until November 1875. That month, W.M. fought on the side of Yoḥannəs against an Egyptian army led by the Danish officer, Arendrup, at ↗Gundät. In fact, he intercepted an Egyptian military contingent which was transporting equipment and captured about 700 weapons. In return, the sovereign pardoned W.M. and appointed him governor of Ḥamasen under *däğğazmač* (later *wag šum*) Gäbru Wəbät, the very man who had had him imprisoned five years earlier. Dissatisfied with the offer, W.M. rebelled and went over to the Egyptians on whose side he fought in the battle of ↗Guraᶜ in March 1876 (↗Egyptian–Ethiopian war, 1875–76). When the Egyptians lost the battle, W.M. escaped to the western lowlands which were under the jurisdiction of the Egyptians, and gradually built up an army of those who, for one reason or other, had fled the highlands. Yoḥannəs IV released Ḫaylu from prison and appointed him governor of Märäb Məllaš after the victory of Guraᶜ. This imperial act revived the traditional feud between Ṣäᶜazzäga (represented by Ḫaylu) and Hazzäga represented by W.M. From this time onward, W.M. intermittently marched into the highlands to confront his rival.

The Egyptians and their European mercenaries who, when they invaded the Christian highlands of Eritrea, had lured W.M. to their cause with false promises, accused him of cruelty and treachery. General Charles ↗Gordon, who governed the Sudan on behalf of Egypt, and Augustus B. ↗Wylde, the British "Vice-Consul for the Red Sea", alleged that he had raided and devastated "the seat of his old Government, and turned the Ḥamasen plateau, formerly known by the name of the plain of the thousand villages, owing to its fertility and industrious population, into a howling wilderness of ruined houses, with a few half-starved peasantry" (Wylde 1901:27). His military campaign was actually an attempt to defeat his traditional rivals and regain his gubernatorial office in accordance with the convention of the region at large.

In the summer of 1876, W.M. marched his men to Ḥamasen and confronted Ḫaylu at Wäkkədəbba, near Asmära. Ḫaylu was killed in the heat of the battle and his army routed. Among the officers of W.M. killed in the battle was his firstborn son, Mäkʷännən, which grieved him greatly and provoked an outburst of rage against the people of Ṣäᶜazzäga.

Yoḥannəs IV immediately sent a huge army to Ḥamasen under the command of one of his leading generals, *ras* Baryaᵓu Gäbrä Ṣadəq. W.M. engaged him in a pitched battle in Asmära in 1878, defeated and killed him. But he had to retreat again to the western lowlands for fear of an attack by Yoḥannəs IV himself. Yoḥannəs appointed a junior officer, *šaläqa* ↗Alula Ǝngəda, over Märäb Məllaš and put him at the head of a large army. Alula preferred to use a strategem rather than confronting W.M. on the battlefield. He offered him peace and reconciliation guaranteeing him safety. Under pressure from Gordon *pasha*, the Egyptians had at this time refused to support W.M. This also coincided with famine and the outbreak of an epidemic in the region which seriously affected W.M.'s army. Hence, he accepted Alula's offer in 1879.

In September of the same year, Alula took W.M. with him to ᶜAdwa where Yoḥannəs was preparing the celebration of ↗*Mäsqäl* and suddenly brought charges against him. The sovereign sentenced him to imprisonment for life and sent him to ↗Ǝnda Abba Sälama together with some of his sons. A year and a half after the death of Yoḥannəs in 1889, one of the political pretenders released him from his mountain prison, free to go wherever he wanted. W.M. did not wish to surrender himself to the Italians who in the meantime had occupied his home region, and instead he retired to ↗Aksum where he died of illness 15 years later.

Wäldä Ṣadəq

Azzaž W.Ṣ. (**ወልደ፡ ጻድቅ**; d. February 1909, Ankobär) was an important official during the reign of *aṣe* ↗Mənilək II.

Of low (possibly Oromo) descent (cp. GueCopMen 606 n. 1), he is believed to have helped Mənilək in his escape from ↗Mäqdäla in 1865, in return for which he acquired the status of the future Emperor's protégée.

In 1877, having with W.Ṣ.'s help subdued a local revolt at ↗Ankobär, Mənilək appointed him *wähni* ↗*azzaž,* i.e. governor of the state prison (↗Wähni Amba) and of the district of Ankobär (CecZeila I, 165; MasMis^{2} vol. 5, 356f.). In this charge, which he held until his death, W.Ṣ. was responsible for guarding many prominent prisoners.

Thus, in 1889, the briefly arrested Abbaa Ǧifaar was placed in W.Ṣ.'s hands (GueCopMen 280). In the same year he is reported to have been instrumental in Mənilək's dropping charges against the scribe (probably ↗Aṣmä Giyorgis) who had tried to warn the Emperor against accepting Article 17 of the ↗Italo–Ethiopian Treaty (BTafA 845).

In 1892, *ras* ↗Mäkʷännən Wäldä Mikaᵓel of Harär sent the cattle looted during his successful campain in ↗Ogaden to Ankobär for Mənilək via ↗Erär. The ᶜAdalites wanted to appropriate the booty, but W.Ṣ., who was sent to receive the tribute, defeated them. However, an epidemic from an infection conveyed by the animals broke out among his soldiers, many of whom died (GueCopMen 322f.). W.Ṣ., who fell ill himself, left the cattle to the ᶜAdalites and ordered all roads be closed to keep the Emperor safe at Ankobär. He could not nevertheless prevent the epidemic of reaching the town, and Mənilək had to escape to ↗Ǝnṭoṭṭo (ibid.).

In October 1895, while Mənilək was preparing his campaign against the Italians, he left W.Ṣ. along with *ras* ↗Darge Śahlä Śəllase and *däǧǧazmač* Ḫaylä Maryam (a brother of *ras* Mäkʷännən) in full charge of the country (GueCopMen 375).

In 1895/96 W.Ṣ. participated alongside *ras* ↗Wäldä Giyorgis and *däǧǧazmač* ↗Täsämma Nadäw, in a successful military expedition against the *sulṭān* of the neighbouring sultanate of ↗Áwsa *amoyta* ↗Maḥámmad "Illálta" Ḥanfaḍé and fought in the battle of ↗Millee (GueCopMen 404f., 437). He also took part in the battle of ↗ᶜAdwa, commanding 3,000 infantry, a few months later.

In 1903 W.Ṣ. is reported to have become a guardian and tutor of the Emperor's grandson *ləǧ* ↗Iyasu, when the latter was brought from Wällo to Šäwa and accommodated at Tämqi near Ankobär (GueCopMen 540 n. 5; Märsəᵓe Hazän Wäldä Qirqos 2002/03: 44, 69).

Evgenia Sokolinskaia

Wäldä Ṣadəq Goššu

Bitwäddäd W.Ṣ.G. (**ወልደ፡ ጻድቅ፡ ጎሹ**, "horse name" Abba Gəšän; b. ca. 1870, Gola, d. 1 May 1937, Addis Abäba), was an important politician and personality during the time of *aṣe* ↗Mənilək II, *nəgəśtä nägäśtat* ↗Zäwditu and *aṣe* ↗Ḫaylä Śəllase I.

W.Ṣ.G. started his career as private secretary of *ras* ↗Darge Śahlä Śəllase, whose daughter, *wäyzäro* Təsäme, he married. He was known as a master of Amharic, both in speech and in writing. In the following years he moved to ↗Addis Abäba and was appointed by *aṣe* Mənilək ↗*käntiba* of Addis Abäba and separately of ↗Gondär.

In 1907 W.Ṣ.G. was appointed to the first Ethiopian Cabinet as Minister of Agriculture. In 1911, W.Ṣ.G. participated in the conflict between *ras* ↗Abatä Bʷayaläw and *ləǧ* ↗Iyasu, on the side of *ras* Abatä. After the ↗coup d'état 1916 (s. EAE vol. 2, 1081) W.Ṣ.G. participated in the battle of Maqdäla between the Šäwän troops and Iyasu in 1917.

He was dismissed together with other members of the Cabinet in 1918 and exiled. However, in the same year he returned to the capital to become Minister of Interior. At the end of his career, before the ↗Italian war of 1935/36 he became President of the ↗Senate.

In 1935 he was sent to ↗Gore as a representative of the Emperor. During the Italian war, the day before his departure from Ethiopia, *aṣe* Ḫaylä Śəllase appointed W.Ṣ.G. President of the Provisional Government at Gore. However, W.Ṣ.G. surrendered to the Italians at the end of November 1936. He was one of the victims of the ↗Graziani massacre (MahHorse 267). His wounds eventually led to his death.

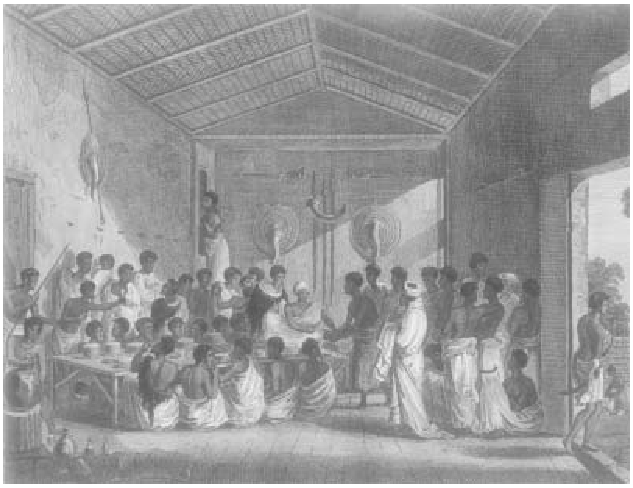
Wäldä Śəllase

Ras W.Ś. (**ወልደ፡ ሥላሴ**; b. ca. 1733, d. May 1815), dominated northern Ethiopia in the 1790s and the early years of the 19th cent. His base of operations was Ḥənṭalo (↗Anṭalo) in ↗Ǝndärta, from where he ruled Təgray with its dependencies. He was a proponent of the ↗*hulätt lədät* ('Two Births') theological doctrine, and his principal national rivals were the ↗Yäǧǧu rulers of ↗Bägemdər.

His father was Kəflä Iyäsus, a local noble of Ǝndärta. W.Ś. entered the national political arena in 1781 with the title of *šaläqa*. He was a supporter of *aṣe* ↗Täklä Giyorgis I as *nəguśä nägäśt*, a posture he maintained for much of the next twenty years (BlunChr 23 [text] = 235 [tr.], 39 [text] = 257 [tr.]). In May, 1783, *aṣe* Täklä Giyorgis appointed him as ↗*balgäda* (BlunChr 66 [text] = 297 [tr.]), i.e. governor of Ǝndärta. That same year W.Ś. went to war against his neighbour *ras* ↗Gäbre Täsfa of Səmen in support of Täklä Giyorgis. The appointment as *balgäda* was contested in Təgray, by *däǧǧazmač* Wäldä Gäbrəʾel, son of and successor to, ↗Mikaʾel *Səḥul*, the ruler of Təgray (i.e. ↗ᶜAdwa region, without W.Ś.'s governorate of Ǝndärta). Not until the death of Wäldä Gäbrəʾel in 1788, did W.Ś. achieve ascendancy in Təgray itself (AbPrince 31f.). Over the years relations between Wäldä Gäbrəʾel and W.Ś. were strained at best. In 1795, W.Ś. supported the claims to the throne of the ephemeral *aṣe* Bäʾədä Maryam, whose "reign" lasted a matter of months (Rüppell 1840: 383). However, at some other point during this same year, *aṣe* Täklä Giyorgis appointed W.Ś. as ruler of all of Ethiopia from the ↗ᶜAngäräb, just outside Gondär, to Massawa (BlunChr 163 [text] = 434 [tr.]; an area corresponding to the greater ↗Bambolo Məllaš, which had been given to predecessors of W.Ś.). In 1796 W.Ś. appears to have been reconciled with *ras* Gäbre, who visited him in Aksum.



Imaginative depiction of a feast at the court of the Təgrayan ruler in the early 19th cent.; from the collection of Wolbert Smidt

The following year, however, they again came into conflict when W.Ś. joined with *ras* ↗Märʾəd Ḫaylu and *däğğazmač* ↗Ḫaylu Yosedeq of Goğğam to promote the restoration of Täklä Giyorgis to the throne. In 1798 W.Ś. again formally submitted to Täklä Giyorgis, bestowing the ruler with lavish gifts, in appreciation of which Täklä Giyorgis appointed him as *ras* and *bəhtwäddäd*. Writing of this event, the chronicler praised W.Ś. as a great prince (*mäkʷännən*), who deposed no one, who made no one king, and who did not lift his hand against the Lord's anointed (BlunChr 173 [text] = 450 [tr.]; Rüppell 1840: 386). Despite this panegyric there continued to be tension between W.Ś. and Täklä Giyorgis. W.Ś. sent emissaries to the King of Kings asking him to bring reconciliation between himself and *ras* Gäbre, but, apparently, then went ahead and did this on his own, which displeased Täklä Giyorgis. Not for long. In February of that year Täklä Giyorgis confirmed W.Ś.'s appointment as *bəhtwäddäd*, and awarded him the revenue of Təgray for four years, "because he has helped me" (BlunChr 180 [text] = 459 [tr.]).

The end of 1799 found W.Ś. again at war with Gäbre in support of Täklä Giyorgis as king of kings. Täklä Giyorgis spent the period from March to June, 1800, his last as king of kings, in Təgray (Rüppell 1840: 388f.). He then withdrew to the monastery of Waldəbba, where he lived out his last years. This final eclipse coincided with the rise of a new star in the firmament of Ethiopian national politics. ↗Gugsa Märsa of Yäğğu had arrived in Təgray, where, in January, 1800, he received appointment from Täklä Giyorgis as *däğğazmač* of Bägemdər (BlunChr 180 [text] = 459 [tr.]; CRReal 2ff. [text] = 863f. [tr.]).

W.Ś.'s relations with Gugsa went through stages. His appointment, in 1800, as *däğğazmač* appears to have been with the blessing of W.Ś. However, in 1803, Gugsa joined with *əččäge* Wäldä Yona to expel Two Birth doctrinal adherents from central Ethiopia, and, following the death of *abunä* ↗Yosab II, plundered his property (CrumMis 25). These actions were opposed by the ruler of Goğğam, *däğğazmač* ↗Zäwde, and W.Ś.'s support for Zäwde's position brought about Gugsa's acquiescence and the subsequent reconciliation of the two princes (CRReal 15 [text] = 874f. [tr.]). Peace between W.Ś. and Gugsa rested uneasily on the principle enunciated by W.Ś.: "You stay in your country and I'll stay in mine" (BlunChr 190 [text] = 475 [tr.], 193 [text] = 479 [tr.]; CRReal 19 [text] = 878 [tr.]).

W.Ś. was the object of the first 19th cent. European diplomatic probe into Ethiopia. In 1805 he received Henry ↗Salt, secretary of Sir George ↗Annesley, Viscount Valentia, who commanded an exploratory trip into the Red Sea (RubInd 37–52; AbPrince 31f.). Salt returned five years later. Rubenson, in his account of these episodes, concludes that the initiative was entirely on the European side and that "it was mainly the internal, political struggles with their religious overtones that interested the feudal lords of Ethiopia" (RubInd 51). In an 1810 letter to George III, W.Ś. expressed this interest explicitly, complaining of Gugsa, "who is not identical with us in faith. He has proclaimed a king who is not Orthodox in faith. For this reason I have quarrelled [with him]" (RubActa I, 4f., no. 2). The king in question was Gʷalu (*aṣe* ↗Əgʷalä Ṣəyon), whom Gugsa had placed on the throne in 1801. In an attempt to resolve these issues, which remained quite unresolved up to W.Ś.'s death in 1815, W.Ś. arranged for the Coptic patriarch to appoint a new metropolitan for the Ethiopian church (Pearce 1831, vol. 2, 51). *Abunä* ↗Qerəllos arrived in Ethiopia in 1815, just a few months before W.Ś.'s demise, but quickly became embroiled in doctrinal controversies with the clergy of Təgray (CRReal 32f. [text] = 889f. [tr.]; CRNuov 362f.).

W.Ś. was active in support of the churches of Təgray, Aksum Ṣəyon not least among them. He founded a church dedicated to the Trinity in ↗Č̣äläqot, near Ḥənṭalo (CRAxum 80–83 [text] = 96–99 [tr.], 83 [text] = 100 [tr.], 49 [text] = 59 [tr.], 50 [text] = 60f. [tr.], 51 [text] = 62 [tr.], 54 [text] = 65 [tr.]).

He was married to *wäyzäro* Məntəwwab, daughter of *aṣe* ↗Həzqəyas, and, after her death, to Səhin, daughter of *aṣe* Täklä Giyorgis. Wäldä Rufaᵓel, a nephew, claimed his political legacy, but Təgray remained conflicted until the definitive emergence of ↗Säbägadis Wäldu, in 1822 (CRReal 37f., 893f.; Rüppell 1840: 394f.; AbPrince 34f.). W.Ś. died in 1815 (Annesley 1809, vol. 3, 41; CRReal 32f.; BlunChr 197 [text] = 484 [tr.]; Pearce 1831, vol. 2, 83f.).

Wäldä Śəllase Kənfu

Däbtära W.Ś.K. (**ወልደ፡ ሥላሴ፡ ክንፉ**, b. ca. 1841, Səmen, d. 17 July 1876, Ṣäᶜazzäga) was an Orthodox priest, who initiated the Bible readers' movement in ↗Ḥamasen and later entered into the services of the Protestant ↗St. Chrischona-Pilgermission.

After receiving his initial education at a ↗Wäldəbba monastery, W.Ś.K. visited the theological schools at Gondär (1855–60). Then he joined the court of *aṣe* ↗Tewodros II, where he carried the ↗*tabot* during military campaigns. Following theological doubts he planned a pilgrimage to ↗Jerusalem in 1861, but only got as far as ↗Ṣäᶜazzäga in Ḥamasen, where he was asked by the governor *däǧǧazmač* ↗Ḫaylu Täwäldä Mädḫən to take over the teaching of young deacons. In late 1867, after reading an Amharic Bible sent by the missionary Martin ↗Flad (which he himself had previously forbidden to his students), W.Ś.K. started to propose the reading of the Bible in Amharic instead of Gəᶜəz (cp. ↗Protestantism). This initiated a vivid movement of Bible readers which spread over much of Ḥamasen. In ca. 1869 W.Ś.K. managed to make contact with Protestant missionaries, who finally funded his pilgrimage to Jerusalem in 1871.

In 1872 W.Ś.K. joined the theological school of St. Chrischona near Basle, with the aim of being employed later as a "indigenous missionary", to initiate reforms of the Orthodox Church from within. He also went to Kornthal, to help the missionary Ludwig ↗Krapf in the revision of the Amharic Bible translation, and taught Gəᶜəz to the orientalist Ernst Trumpp in Tübingen. In addition, W.Ś.K. served as an informant for Leo ↗Reinisch (s. his book on the ↗Ḫamtaŋa language; Smidt 2005: 12).

In spring 1874 W.Ś.K. was sent back to Ṣäᶜazzäga, where he distributed Amharic religious tracts brought from Switzerland, funded by St. Chrischona and the ↗British and Foreign Bible Society. According to a report of the Catholic mission at ↗Kärän, this caused great unrest on the part of the official church hierarchy, who excommunicated him and his followers as "enemies of St. Mary" in May 1874. Persecuted by *aṣe* ↗Yoḥannəs IV, the "Bible readers" fled to the border region of ↗Gindaᶜ, but later, during the ↗Egyptian–Ethiopian War of 1875–76, returned. However, W.Ś.K. was killed after the Battle of Wäkki Dəbba in a local power struggle between *däǧǧazmač* Ḫaylu and the pro-Egyptian *raᵓsi* ↗Wäldä Mikaᵓel Sälomon, by soldiers of the latter (as were the Swedish missionary Lager and other Evangelical Christians outside the church of Qəddus Mikaᵓel near ᶜAddi Qonṣi).

Wolbert Smidt

Wäldä Yoḥannəs

Mälakä bərhan W.Y. (**ወልደ፡ ዮሐንስ**; d. 27 December 1913, Addis Abäba) is mostly known and referred to due to his role in the council of ↗Boru Meda. W.Y. was there an official representative of adherents of the 'two birth' (↗*Hulätt lədät*) doctrine. Being a true partisan of this creed, he succeeded in successfully winning the theological dispute against Habtä Wäld, who represented the 'three births' (*Śost lədät*, s. ↗*Sägga*) dogma (for details s., e.g., GueCopMen 153f.).

Later he became Mənilək's expert on the ↗*Fətḥa nägäśt* (Wolde Qirqos 2004: 150) with the title of *mälakä bərhan*. W.Y. is also said to have written traditional ↗*qəne* poetry (GueCopMen 153).

W.Y. is not to be confused with Wäldä Yoḥannəs Däbälqe, father of Wäldä Giyorgis Wäldä Yoḥannəs.

Src.: Luigi Fusella, "Le Biografie del blātengētā Ḫeruy Wålda Sellāsē (IIª parte)", *RSE* 31, 1987, 23–67, here 41; GueCopMen 153f.; Mersé Hazen Wolde Qirqos [Märsəʾe-Hazän Wäldä Qərqos], *Of What I Saw and Heard*: *the Last Years of Emperor Menelik II and the Brief Rule of Iyassu*, Addis Abeba 2004 (Études Éthiopiennes 1), 150.

Maxim Zabolotskikh

Wäldä Yoḥannəs Wäldä Ab

Grazmač W.Y. (**ወልደ፡ ዮሐንስ፡ ወልደ፡ አብ**; born in Yəfat [?]) was an expert in gold, silver, copper and iron working. He also seems to have been a court official who resided permanently in Addis Abäba.

During the reign of *aṣe* ↗Mənilək II, when the son of Täklä Haymanot *däǧǧazmač* Śəyyum was removed from the governorship of Goǧǧam (1902), and its next governor ↗Bäzzabbəh Täklä Haymanot died in prison (18 August 1905) after conspiring against Mənilək, the Emperor appointed W.Y. as his representative in the province. Soon after, however, *däǧǧazmač* Śəyyum was pardoned and restored to his position (30 May 1907). W.Y. returned to Addis Abäba (Mersʾé Hazen Wolde Qirqos 2004: 33). According to ↗Ḫəruy Wäldä Śəllase, he was then a follower of *ras* Täfäri Mäkʷännən (the future *aṣe* ↗Ḫaylä Śəllase I), who, "due to his special attitude towards educated people, made him his major favourite" (Fusella 1987: 41). Though this estimate seems to be exaggerated, his professional skills were apparently very much appreciated.

W.Y. is not to be confused with Wäldä Yoḥannəs Däbalqe, father of ↗Wäldä Giyorgis Wäldä Yoḥannəs.

Maxim Zabolotskikh

Wälde Aššagari

Ras W.A. (**ወልዴ፡ አሻጋሪ**, also Wälde Aššagre, "horse name": Abba Śəyyum; b. Efrata, d. November/December 1908) was an important administrator and general of *aṣe* ↗Mənilək II. He served as governor in a number of provinces and was instrumental in the expansion of the Christian Ethiopian empire into the south.

In the mid-1860s W.A. was a ↗*balabbat* and governor in north-eastern Šäwa (↗Gəšše, ↗Anṣokiya and Efrata). In 1865, after *nəguś* Mənilək had escaped from captivity in ↗Mäqdäla, W.A. immediately accepted him as *nəguś* of Šäwa and became a strong supporter throughout Mənilək's struggle for the imperial throne. In 1875 W.A. is reported to have taken part in an expedition to reconnoitre Mäqdäla together with the French traveller Pierre Arnoux. A year later he was appointed governor of ↗Yäǧǧu but also remained responsible for his home region. In January 1878 W.A., as a close ally of Mənilək, was attacked by *aṣe* ↗Yoḥannəs IV's troops in Gəšše.

In 1886 *däǧǧazmač* W.A. replaced ↗Mäšäša Säyfu as governor of ↗Soddo; the *kätäma* of Gəyon (↗Wäliso) serving as his administrative centre and military base for campaigns in the countries of the ↗Gurage, ↗Hadiyya and ↗Kambaata. In the same year the ↗Qabeena and ↗Wälane under ↗Hasän Ǝnǧamo formed an Islamic revitalist army who suspended their submission to Mənilək and waged a *ǧihād* against the Christian empire. They attacked the *näfṭäñña* of Gəyon and killed W.A.'s brother. During the next three years W.A. together with *däǧǧazmač* Gərmame and *balambaras* ↗Mäkʷännən Wäldä Mikaʾel led campaigns to re-establish Mənilək's supremacy in the region. They were supported by a pro-Šäwan alliance formed by the Soddo, ↗Gumär, ↗Dobbi, ↗Səlṭi, ↗Muḫər and Aymällälal. The Šäwans, however, were not successful and W.A. even "fell from grace at the Ǝnṭoṭṭo palace" (Borelli 1890: 300) for some time. Hasän Ǝnǧamo was defeated only in 1889 by *ras* ↗Gobäna Dač̣i, a competitor of W.A., in Ǧäbdu Meda (BTafA 755; BrHad 263, 275; Borelli 1890: 300, 403; Bustorf 2009: 228f.).

After the Battle of Ǧäbdu Meda *ras* Gobäna's troops entered into the countries of the ↗Səlṭi and ↗Libido while W.A. led the recapture of the Gurage highlands. He attacked the ↗Čaha, ↗Geto, ↗Gumär and Azärnät-Bärbäre. After short skirmishes, all submitted to Mənilək due to the superiority of Šäwan firearms. His troops became known in local tradition as *Wälde Amara* although they predominantly consisted of Oromo warriors. W.A.'s son Bərratu Wälde took part in the submission of the Mälga of ↗Wəlbaräg. In 1891 his troops conquered the Hadiyya of

Šaašoogo and Leemo as well as the Kambaata (BrHad 261, 276; Bustorf 2009: 233ff., 237, 264).

In 1889 W.A. was rewarded several possessions of the deceased *aṣe* Yoḥannəs IV and became governor of ↗Wadla, ↗Lasta and ↗Č̣äč̣äho in northern Bägemdər (Prouty Rosenfeld 1976: 137, 202). In 1900, W.A. is again mentioned to have been appointed as governor of Č̣äč̣äho "between the River Bambolo and Dəngel Bär" (↗Bambolo Məllaš). It is not clear from the sources, however, if this was a new appointment or an affirmation of the earlier one. It is similarly unknown when and to whom W.A. lost Wadla and Lasta. Anyhow, due to *ətege* ↗Ṭaytu's support for *ras* ↗Wäle Bəṭul and his family, W.A. could not hold his provinces for long. Tension with the party of the Empress may have been also the reason for his relatively late promotion to *ras* in 1900. In 1901 Č̣äč̣äho was given to ↗Gugsa Wäle and W.A. received the northern provinces of Šäwa instead. A year later he is mentioned as governor of Faği, while his son Mäšäša held the governorate of Efrata (GueCopMen 485, 487, 503f.; Prouty Rosenfeld 1976: 137, 202).

According to Ḫəruy Wäldä Śəllase, W.A. travelled to Moscow and France (HerTar 75). Probably he was part of *fitawrari* Damṭäw's official delegation to ↗Russia in 1895. This seems to be a bit doubtful, however, because he is not explicitly mentioned in the sources and the Ethiopian delegation was in Egypt still in August, while W.A. is reported to have taken position against the Italian troops under Pietro Toselli at Amba Alaği already in September the same year (Prouty Rosenfeld 1976: 172, 176). In May 1898 W.A. was part of a group of Ethiopians led by *däğğazmač* Bəru Ḫaylä Maryam that travelled to France with Comte ↗Lagarde (GueCopMen 466, n. 7; Prouty Rosenfeld 1976: 189).

In 1905 W.A. bought a house at Däbrä Gännät in Jerusalem following the examples of *aṣe* Mənilək II, *ətege* Ṭaytu and *afä nəguś* ↗Näsibu. In Addis Abäba his compound was situated at the edge of Ğan Meda (GueCopMen 456, 485, 518).

Waldəbba

W. (**ዋልድባ**) is a historical region in the north-west of Ethiopia (Sämen *awrağğa*, Ṣällämt *wäräda*), separated from ↗Šire by the River ↗Täkkäze in the north and bordered by the rivers Zärema and Tənsaʾe from the other sides. Lying in the lowlands, the area is characterized by an unhealthy, hot climate (cp. ↗*qʷälla*) and ↗malaria is widespread. However W. is most important due to its tradition of monasticism, and especially because of its ↗hermits.

Local tradition claims that upon its flight to Egypt the Holy Family went as far as Ethiopia and stayed in W.; therefore, the monastic life in W. took its origin from Christ himself. The name W. is traditionally explained as being derived from *wali*, the name of a plant "brought by Our Lord from Paradise" (Bärrihun Käbbädä 1990/91: 36).

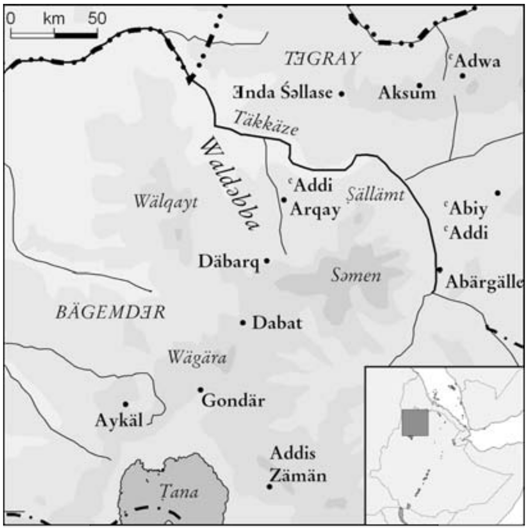
It seems that, historically, the spread of monastic life in W. was dependant on the influence of ↗Tämben, Šire and ↗Däbrä Abbay. The earliest historical reference to the area may be found in the hagiographic tradition of *abunä* Samuʾel of W., who is said to have been active in the region called **ገዳመ፡ ዋሊ** (*gädamä Wali*, 'the desert of Wali', rather than 'the monastery of Wali') in the published version of his Vita. Moreover, W. is mentioned as a place of great spirituality in the Acts of ↗ʿAbiyä Əgziʾ (Conti Rossini 1938: 414), ↗Yafqərännä Əgziʾ (Wajnberg 1936: 50f.), ↗Wälättä Ṗeṭros (Ricci 1970, s. index), ↗Täklä Haymanot (with reference to ↗*səwwuran*), ↗Filmona, and others. No Ethiopic non-hagiographic source refers to W. prior to the 17th cent.; however, European maps indicate the existence of W. as early as the 15th-cent. ↗*Egyptus Novelo* (cp. Almeida's map, BeckHuntAlm, after p. xcvi, "Oldeba", and cp. LudHist; as unnamed "hermitage", on 1564 Castaldi's map, s. BeckHuntAlvar).

In the 16th cent., the troops of ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") did not enter W.; however they attacked Däbrä Abbay on the other side of the Täkkäze (DombrChr 161). Later the region occasionally suffered attacks from the "*Šanqəlla*" (GuiIohan 165 [text]; BegCron 65 BruNile III, 178; RubActa II, no. 111). *Aṣe* ↗Susənyos is reported to have received a blessing from hermits (*baḥtawəyan*) of W., in ca. 1609 (PerChron I, 123; II, 95, 405). During the ↗Gondärine kingdom, W. was much revered by emperors and nobles who frequently passed by on their way to Šire and ↗Aksum, or during their hunting trips (like *aṣe* Iyasu I in 1697, s. DombrChr 225). W. was a favourite place of retreat and religious meditation, as well as for burial (for ↗Ḫaylä Maryam Gäbre, s. CRReal 839f.); it was sometimes used as a place of refuge (DombrChr 283). Among those seeking separation from the world in W., were *aṣe* ↗Täklä Haymanot II (who was forced to leave the throne in 1777 and probably died in W., BlunChr 88), *aṣe* ↗Täklä Giyorgis (cp. also CRReal 790f., 797, 803f., 816, 856) and *aṣe* ↗Iyasu IV.

The exact date when the coenobitic monasticism was established in W. is not known, though it might have been linked to the revival of the monastic movement after the re-establishment of the ↗Solomonic dynasty, and the activities of *abunä* Samuʾel of W.

Currently, there are several coenobitic communities in W.: ↗Däbrä Abräntant, Däbrä Säqʷar, Dəlšəha/Dalšəh. The first one is the first to be attested in published sources (Ḫabärtanti, for 1692, s. GuiIohan 152f., 165; Labärtanti/Abärtanti, for 1700, DombChr 230). Local traditions of the history of W. from the 14th-cent. *abunä* Samuʾel to the 20th cent. have been recorded (cp. Bärrihun Käbbäda 1990/91; Girma Elyas 1977; BerTarik; *Waldəbba bähagärä əgziʾabəḥer* … 2000/01), but they are in need of critical comparative analysis. Specifically, they stress the coming of five monks from Däbrä Libanos of Šäwa to Abräntant at the beginning of the 15th cent. (Bärrihun Käbbädä 1990/91: 72, 80); the changes made in rules of diet by the head *abba* Zäp̣äraqliṭos (d. 1644; Girma Elyas 1977: 103) and his restructuring of Abräntant's economy; the split of the community of Abräntant into two independent "houses" (Girma Elyas 1977: 106).

The participation of W.'s monks in the church councils is well attested (cp., e.g., DombrChr 236; CRNuov 364). The W. monks were persecuted for their adherence to the ↗*Ṣägga* doctrine by *aṣe* ↗Tewodros II (s. RubActa II, no. 249); at ↗Boru Meda, a certain *abba* Ǝngəda from W. was one of the leading members of the *Ṣägga* party, which was banned by the decision of the council (GueCopMen 149). From the early 20th cent., a controversy concerning the teaching on the ↗Trinity is reported to have emerged in W. (BerTarik 238–42).



From the earliest times, sources underline the strong asceticism of W.'s hermits and monks (cp., e.g., CrawItin 165), with special mention of the local ↗*qʷarf*-staple food. In 1881, Rohlfs, one of the few Europeans who ever visited W., reported the existence of 17 settlements with ca. 1000 monks, and one with nuns (Rohlfs 1883: 286ff.; cp. BruNile III, 177; cp. Chaillot 2002: 161).

W.'s monasteries have never possessed any ↗*gʷəlt*-lands, but developed monastic households, well-adapted to the local natural conditions, making the monastic communities self-sufficient (Girma Elyas 1977: 115ff.). The internal rules of monastic life are well-established (ibid. 113ff.). Today, a monk can enter hermitic life only after many years of service, and only with special permission (Girma Elyas 1977: 114). W. has long been considered as one of the leading monastic centres in Ethiopia, outstanding and exemplary in its asceticism (cp. GueCopMen 331; MahZekr 570f.).

The presence of substantial libraries, paraphernalia and church paintings have been reported (cp. Girma Elyas 1977: 118–21, pls. 1–21; Jäger 1960: 370, "Gondar XVI"), which remain unexplored. A closer study of the W. monastic complex would be most welcome.

Denis Nosnitsin

Waldmeier, Theophilus

W. (originally Blasius W., in Ethiopian sources **ወልደ፡ ማየር**, Wäldä Mayyär [and similar]; b. 3 February 1832, Möhlin, Aargau, d. 10 March 1915, Beirut) was a Swiss lay missionary of the Protestant ↗St. Chrischona-Pilgermission.

W. grew up in Lörrach in a Catholic family. He converted to Protestantism in Geneva and joined the St. Chrischona-Pilgermission in 1856. In 1858 he was recruited by bishop Samuel ↗Gobat for the Protestant mission in ↗Mäqdäla. In December 1859, W. married a great-grand-niece of *aṣe* ↗Tewodros II, Yäwəbdar (baptismal name Sara, also Susan Bell; b. ca. 1847, d. July 1893, Brummana), daughter of *liqä mäkʷas* John ↗Bell. This connection and his positive attitude towards Ethiopians helped him to maintain good relations with Tewodros II, even if starting from April 1866 W. was detained together with all the other missionaries.

In 1860, W. founded the craftsman's colony of ↗Gafat and, together with other missionaries, opened a school for poor (and often slave) children, teaching them reading and craftsmanship. One of his pupils was Gobbaw Dästa, who accompanied him everywhere and later became an important Ethiopian missionary himself (cp. ↗Gäbrä Əgziᵓabəḥer Dästa; Arén 1999:415). In around 1866, together with Moritz ↗Hall and his later brother-in-law Karl ↗Saalmüller, W. casted cannons for Tewodros, among them the famous "Sebastopol". As a teacher he prepared Amharic religious texts and he also collected linguistic material on ↗Agäw.

After the expulsion of Europeans from Ethiopia in 1868, W. went to Beirut and in May 1869 took the post as inspector of the British Syrian Schools. He continued to support the idea of a mission in Ethiopia; e.g. in 1872 he strongly supported Johannes ↗Mayer's demand in the name of king ↗Mənilək II of Šäwa to sent craftsmen to Ethiopia (ArEvang 171). He joined the Quakers in 1874 and founded several new mission schools at Brummana. Saalmüller joined him as a teacher, and W.'s daughter, Rosa (b. ca. 1863, Gafat), married the teacher Bessarah Manasseh. Another daughter Hannah styled herself as "Princess ↗Asfa Yilma" (after her ancestor *däǧǧazmač* Yəlma Asfaw, taking his name as a "noble name" for herself) and wrote a book on Ethiopia based on her father's memories.

W.'s report on his stay in Ethiopia, published in 1869, was translated into Swedish, French and Arabic. His autobiography is an important source on the missionaries' work in Ethiopia and later in the Lebanon.

Wolbert Smidt

Wäle Bəṭul

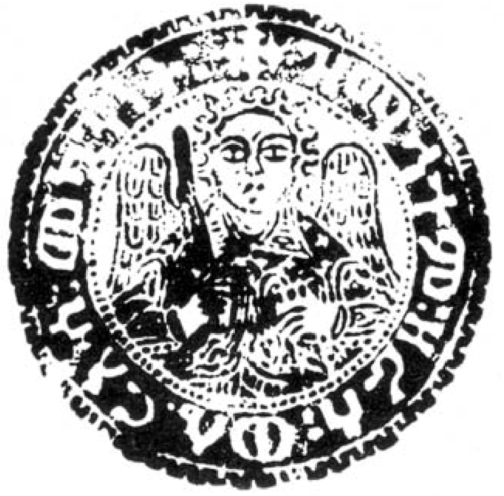
Ras W.B. (**ወሌ፡ ብጡል**, "horse name" Abba Ṭäṭṭaw; b. in Yäǧǧu, d. 16 June 1918, Yäǧǧu) was a ruler of ↗Yäǧǧu and ↗Təgray.

He was a son of *däǧǧazmač* ↗Bəṭul Ḫaylä Maryam and a brother of Alula Bəṭul, who, together with W.B., served *aṣe* ↗Mənilək II. W.B.'s younger sister was *ətege* ↗Ṭaytu Bəṭul. W.B. was the father of *däǧǧazmač* Amäde Wäle and of *ras* ↗Gugsa Wäle, the last husband of Empress ↗Zäwditu. W.B.'s daughter, *wäyzäro* Käfay, married *ras* ↗Mängäša Yoḥannəs; their daughter ↗Aster Mängäša was the only wife of *ləǧ* ↗Iyasu, who married her with proper ceremony.

W.B. spent his youth at the court of *aṣe* ↗Tewodros II until 1865, beginning a long-lasting friendship with Mənilək, who was also a guest/prisoner at the Emperor's court at this time. Probably in 1867 W.B. and his brother Alula went for two years to Šäwa. Mənilək's marriage with W.B.'s sister, Ṭaytu, in 1883, made the political bond between the two even stronger. Thanks to this relationship, W.B. played an important role in domestic politics during Mənilək's time.

W.B. was well known for his military skills, and on several occasions he fought on Mənilək's side in provincial wars. For example, in 1891 he helped Mənilək suppress a revolt of *ras* ↗Zäwde (GueCopMen 311ff.), and W.B.'s victory over Tädla Waḥəd in 1892 helped Mənilək strengthen his position in the country (GueCopMen 322f.). W.B. also took part in the battle of ↗ᶜAdwa, with 3,000 soldiers under his command (TSTarik IV, 77) as well as in the battle of ↗Ambalage (GueCopMen 416).

Mənilək appointed W.B. to rule over Yäǧǧu in 1868 (GueCopMen 121; Marcus 1975: 35). The province was once won over by *wag šum* ↗Zägäyye Bərru, but given back to W.B. by *aṣe* Yoḥannəs IV. After being crowned Emperor in 1889, Mənilək re-appointed him to this governorship together with the governorship of ↗Bägemdər and ↗Dämbəya province (GueCopMen 260, 262). At the same time W.B. received the title of *ras*. In 1900 he obtained the governorship of Təgray (ibid. 485). In the years of Mənilək's deteriorating health and the growth of *ras* ↗Mikaᵓel Ali's power following Iyasu's nomination as heir to the throne, W.B. and Ṭaytu struggled to keep power in the hands of the northern landlords. They both lost, when in 1910 Ṭaytu was removed from power and her protégés had to follow her.



Seal of *ras* Wäle Bəṭul; from Pankhurst 1972: 153 no. 62

On 5 May 1910 W.B. lost his province to *ras* ↗Wäldä Giyorgis. The latter's nomination was followed by a war between the Šäwan forces and W.B. and his son, Gugsa Wäle. The defeat of W.B. by *ras* Mikaᵓel's army in Wällo put an end to the fighting. W.B. accepted the hegemony of Šäwa and had to move to Addis Abäba; later he was imprisoned in ↗Ankobär (GueCopMen 624). He was released in 1916, after the successful ↗coup d'état (s. EAE vol. 2, 1081), and appointed to the governorship of Yäǧǧu again. He kept the governorship until his death in 1918.

Walī

W. (Arab. 'close friend, companion'; pl. *awliyāʾ*; related abstract form: *walāya* or *wilāya*, 'to be a W.') is the term commonly used in the Muslim world to indicate a ↗holy man (more precisely: *walī Allāh*, 'friend of God'). As a loanword from Arabic, W. has entered many Ethiopian languages: Amharic *wäləy* (KaneDic 1489 also with the meaning 'sorcerer, shaman'; in DTWDic 540 the verb *wälläyä* 'to choose, to select for a position, prophecy or any important thing' is attested), Tgn.: *awliya* (pl. form meaning 'spirit' or '*zar*', Leslau 1990: 311, *Mäzgäbä qalat* 1996: 556, '*zar*'), Harari *wäli* (Leslau 1963:159; Abdurahman Mähämmäd Qorram 1991: 159), in Tgr.: *wäləʾ* (Leslau 1990: 157), Somali: *weli* (*Dizionario Somalo–Italiano* 1985: 613).

The theological concepts underlying the idea of W. are very complex and heated debates took place among Muslim learned men about the definition of who and what a W. should be (s. for a general assessment Radtke in EI^2). The content of these discussions is not unknown in Ethiopia (s. for a contemporary example Muḥammad Walī 2005: 3, 17–25). In the ↗Qurʾān, W. is an epithet used for God himself who is the "close friend of the faithful" (Sura 2: 257, Sura 3: 68). God has in his turn friends "upon whom there is no fear, nor shall they grieve" (Sura 10: 62). W. is thus the word that directly (grammatically, so to speak) links the deity to his most beloved servants to whom protection and right guidance are surely guaranteed on this earth until they attain eternal bliss in paradise. The signs of God's predilection and affection for his friends are evident in their supernatural gifts and powers: *baraka* (lit. 'blessing', i.e. mystical power) and *karāmāt* (miracles). By his superhuman capability a W. alleviates suffering in the world and makes people meditate on divine mercy and omnipotence; at the same time, he can defend himself from the attacks of the enemies of God who are the friends of the devil (*awliyāʾ al-šayṭān*) and must be severely contested (Sura 4: 76). According to a well-known tradition, God himself protects *awliyāʾ* and He is at war with everyone who offends them. A love relationship connects God so closely to W. that no real distinction can be made between the two persons (Buḫārī, *Ṣaḥīḥ*, *Kitāb al-riqāq*, *Bāb al-tawāḍuʿ*, ḥadīṯ 6502).

However, the image of W. in Ethiopian Islam – as elsewhere in the Islamic world – is not univocal and monochrome and has undergone a long and manifold historical evolution: full respect for the principles of *šarīʿa* coexists with – at least apparently – unlawful behaviour (the so called *malamātiyya* stream: s. de Jong in EI^2); holy men known for their deep piety and high level of learning are revered side by side with holy fools (*maǧḏūb*) and illiterate mystics (s. Gramlich in EI^2).

Moreover, the sainthood of a W. is most commonly linked to his ancestry and lineage. Descendents of the Prophet Muḥammad (*šarīf*; *sayyid*) or of some of his companions (*ṣaḥāba*) are almost by default considered holy men. The *baraka* of a saint is also normally considered to be hereditary and thus clans and tribes of saintly origin are widespread.

On the other hand, the spread of the mystical brotherhoods favoured the diffusion of a more typified image of W. A peculiar phenomenon in the Horn is the sanctification of purely tribal eponymous founders. Among Somalis, for example, the forefathers of the main clans and tribes are depicted with the features of the classical sufi holy men (Lewis 1955, 1956 and 1998: 1–32).

As the domain of the typical Islamic W. many times has extended to comprehend a purely magical sphere, it is not surprising that in Ethiopia the word W. can be used to indicate spirits and *zar* (Rodinson 1967: 62 and n. 5).

Wäliso

The town of W. (ወሊሶ) known also as Gəyon (ግዮን) is situated 2,103 m A.S.L. and ca. 120 km from Addis Abäba on the road to Ǧimma. Like Ambo, ↗Fiçç̣e or Däbrä Bərhan W. lies within the two hour travelling time radius from the capital. Merely a large village in 1938, its population reached 16,871 inhabitants in 1984 and 34,227 inhabitants in 1999. The regime of Mängəśtu Ḫaylä Maryam tried in vain to impose the biblical name Gəyon instead of W. ,which is the ethnonym of a faction of the ↗Mäçç̣a. Until 1987 this town, which hosted the Cuban expeditionary Corps garrison, was the capital of the Č̣äbo-Gurage *awrağğa* (↗Č̣äbo), which later (1991) became the West-↗Šäwa (Məʿərab Šäwa) zone with Ambo as its capital, this zone being itself a district of the Oromiyaa *kəlləl* ('state-region').

W. is an important agricultural market located between a cereal growing plateau and the ↗*ənsät* producing regions of the Dändi ↗Wänç̣i volcano area and of the Gurage country. The town is still the seat of the West-Šäwa diocese presently occupied by Bishop Diyosqoros (*mämhər* Wäldä Tənśaʾe) who is said to have the ability to cure people with holy water (s. ↗*Ṣäbäl*), thus attracting, thousands of pilgrims. W. is also frequented by a great number of students and of tourists who use these waters. It is also a stop-over for the lorries which export the products of the south, particularly coffee.

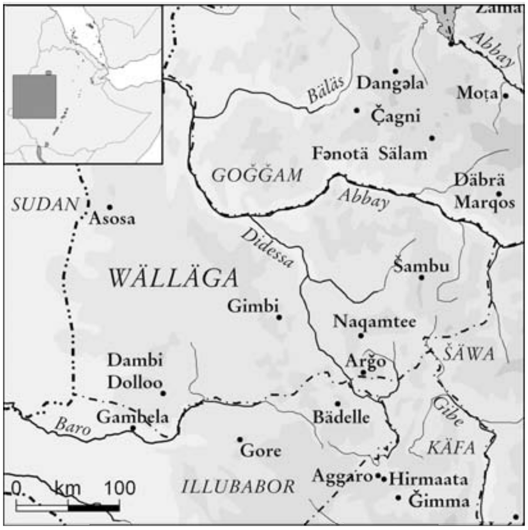
Wälläga

W. (ወለጋ, Orom. sp.: Wallaggaa) today is an administrative unit in the Oromiyyaa regional state, divided into East W. and West W. (↗Administrative division). Before 1991 it was a province on its own bordered to the north by ↗Goğğam, to the south by ↗Illubabor, to the east by ↗Šäwa and to the west by the ↗Sudan. In the past the name W. was applied only to the region situated to the west of the ↗Ḍiḍessa (Dhidheessa) River. This area is inhabited by the Sibuu ↗Oromo branch. All territories situated east of the river were called ↗Leeqaa (Abebe Ambachew 2002: 132; Triulzi 1986: 52). In the 19th cent. W. was known for its riches and important trade routes (CecZeila 485ff.). W. is also mentioned by ↗Baḥrəy (HuntGal 12). Nevertheless as a geographical concept it was uncertain. In the mid 19th cent. W. may have included an extensive territory including Illubabor to the west of the



Goğğäb River in addition to the ↗Gambella region, north of the River ↗Baro (Beke 1847: 49f.) and all territories roughly to the south of upper ↗Gibe (Gibee) River near Baakkoo town. The Gibe River forms the natural boundary between the provinces of Šäwa and W. (BTafA 921).

W., rich in streams and rivers, has abundant rainfall and vegetation. The Ḍiḍessa River flows through the province at an average height of 1,830 m A.S.L. In the higher part of the region, the climate is temperate. The heaviest rains fall from mid-May to mid-September. There is a short rainfall from March to April. The driest and coldest months of the year are October, November and December (Abebe Ambachew 2002: 132).

The etymology of the word W. is uncertain, but it seems connected to the westward migration of the ↗Mäč̣č̣a (Maccaa) Oromo (↗Oromo, history). W. may derive from the words *wol* – 'each other' and *lagač̣č̣u* – 'abstain from, avoid', according to oral evidence collected by Lambert Bartels (1983: 71). Oral tradition from the Amboo of Šäwa states that the "five Gibe", the Wallaga, the Iluu, the Guduru, the Liiban and the Walisoo in search of new land, were told to expand by their religious leader. The Wallaga and Illuu were told to move to the "region west of the Gibe" (Negaso Gidada 1984: 41).

↗Naqamtee, founded by the Oromo ruler ↗Bakaree Godaana (s. EAE vol. 5), is the provincial capital. Other important centres are Nağğoo, Gimbii, ↗Dambi Dolloo, Mandii, Šambuu, Giddaa, Arğoo, ↗Aʾira (s. EAE vol. 5), Gullisoo and Boğği.

Bakaree consolidated his power over the territories between the Waamaa and Ḍiḍessa Rivers. In the second half of the 19th cent. his son and successor, ↗Morodaa Bakaree, extended his family's influence and power over the Leeqaa groups and beyond, to the Sibuu groups by a blend of diplomacy and conquest. He gained supremacy over Gimbi, Haaruu, Arğoo, Nağğoo, Ğaarsoo, Baabboo, Mandii and other areas to the west of the Ḍiḍessa thereby unifying both sides of the river and the two Oromo groups (Sibuu and Leeqaa) of the Mäč̣č̣a branch. Morodaa peacefully accepted the overlordship of *nəguś* Mənilək [II] of Šäwa in the 1880s which helped him to secure a special autonomy over most of W. (Tesema Taʾa 1993: 63–66).

Western W. was ruled by the Leeqa ↗Qälləm *mooti* ↗Ğootee Tulluu who was based in ↗Gidaamii. His main opponent was *šayḫ* ↗Ḫʷağalī of Asosa, with whom he was in constant conflict for slaves and territory in the region around Begii. Both rulers were tributaries to the Ethiopian Emperor.

In 1889 Morodaa's son Kumsaa (baptismal name ↗Gäbrä Ǝgziʾabəḥer) succeeded his father as governor of W. He supported the conquest of ↗Beni Šangul by *ras* ↗Mäkʷännən and introduced the cultivation of ↗coffee in W. The coffee ↗trade which mainly ran through Gambella, led also to the economic growth of ↗Dambi Dolloo. In addition, W.'s importance was based on its great deposits of gold and marble.

The rise of Leeqaa Naqamtee and Leeqaa Qälləm led to the decline of the ↗*gadaa* system in W. The incorporation into *aṣe* Mənilək II's empire and the subsequent introduction of Orthodox Christianity further reduced the role of the *gadaa* rituals. The introduction of Orthodox Christianity did not, however, make further headway in superseding the traditional ↗religion. The Protestants founded village schools and clinics in order to establish themselves among the local people. Prior to 1935, the Swedish, the American and German missions were active in W. The missionaries were largely successful in education and in converting people. Local chiefs and rulers began to send students to the schools and were also encouraged them to go to Addis Abäba for further education. As a result of missionary activities in W. there were many local converts as well as local preachers, and theological seminaries were founded in the towns of Aʾira and Naqamtee. This contributed considerably to the development of literacy in W. In the late 1940s educated people from W. in Addis Abäba formed a W. self-help association which started to raise funds to establish new schools or support the existing ones. After 1970 there were earnest efforts to establish a university, known as “Oromo University”. *Aṣe* Ḫaylä Śəllase I, however, did not give his permission and the project was abandoned (Tsega Endalew 1992: 39).

During the Italian invasion of Ethiopia, the Oromo of W. together with those of ↗Ǧimma tried to assert their independence from *näfṭäñña* rule by establishing ↗Western Oromo [Galla] Confederation under British mandate. Thirty-three Oromo chiefs held meetings in 1936 and signed a document expressing their “desire of the people of western Oromia to become a League of Nations’ protectorate with the help of the British government until the Oromo could achieve self-government” (Assefa Jalata 2005: 177). The document was sent to the British Foreign Secretary, but they were not ready to endorse the proposal and subsequently the Italians occupied W.

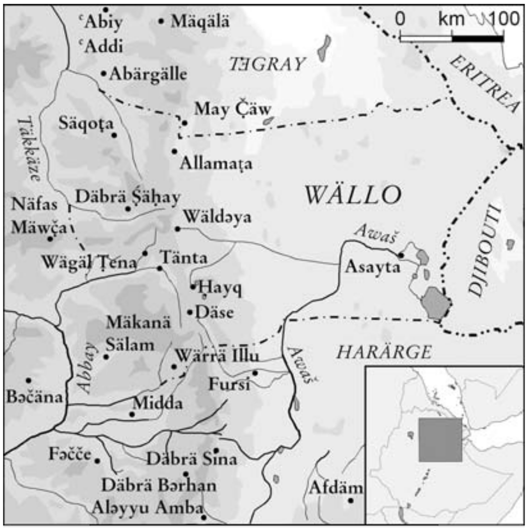
Wällo

W. (**ወሎ**, Orom. sp.: Walloo) is one of the major regions of central Ethiopia. Between the 17th cent. and the end of the 19th cent., the territory named W. corresponded to the boundaries of ancient Amhara (↗Amhara province, s. EAE vol. 5) before the 16th cent. It was approximately delimited by the course of the Bäšəlo to the north, the Abbay to the west, the Wänčit to the south, and the upper Borkänna to the east. During the 20th cent., the extension of W. as an administrative division of the Ethiopian state expanded considerably beyond the historical limits of this territory. It extended to the north to the fringes of ↗Təgray, to the south to Karakore, and in the east to the frontier of ↗Djibouti (i.e. large parts of the ᶜAfar province of ↗ᶜAwsa). Nowadays, W. includes two administrative zones: Sämen Wällo (cp. ↗Wäldiya) and Däbub Wällo (cp. ↗Däse). This article deals with the historical dynamics that took place within the perimeter of the contemporary administrative zone of South W., which is considered as “historical” W. (for North Wällo, s. also ↗Lasta, ↗Yäǧǧu, ↗Wag).

W. owes its name to one of the large clans of the ↗Oromo who settled in the region beginning from the late 16th cent. According to Baḥrəy’s account (BeckHuntAlm), the Oromo of W. belonged to the Bareytuma (↗Baarentuu), one of the two Oromo moieties. By the end of the 16th cent., the various Oromo clans had occupied the territory of Amhara, the core province of the mediaeval Christian kingdom of Ethiopia where they formed an enclave challenging the expansion and reconsolidation of the Christian kingdom in the late 16th cent. after the end of the military conflict with the forces of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī. Traditionally, the W. Oromo were divided into seven main sub-units which inhabited different parts of W. and which later came to designate the main territorial divisions of the region (Amh.: *Säbat bet Wällo*, ‘Seven Houses of Wällo’). Their exact listing varies according to traditions. According to Combes and Tamisier (1838) and Krapf (IsKrapf) who went across W. in the 1835 and 1842 respectively, these *Säbat bet Wällo* were: Läggambo, Läggahida, Lägä Gora, ↗Wärrä Himäno, Wärrä ↗Qallu, ↗Ambassäl and ↗Boräna. This framework has been used until today to name the major administrative divisions.

Whilst progressively influenced and overwhelmed by the Amhara language and culture of the land they had come to occupy, the W. Oromo



also assimilated military and political ethos to such an extent that they meddled in, and dominated, the politics of the Christian monarchy, especially during the 18th and 19th cent. This process culminated with the reign of ↗Iyoᵓas, whose mother (Wəbit, baptized as Bärsabeh) was from W., being the daughter of Amito, who had been an ally of ↗Bäkaffa. The Oromo W. family of the young Emperor, particularly his uncles, settled in Gondär and played a role in the political intrigues that led to the assassination of Iyoᵓas and the collapse of the Gondärine kingdom, opening the so-called ↗*Zämänä mäsafənt*. Despite this political participation of some Wälloyye in the sphere of influence of the Christian kingdom, other W. groups retained their separate identity through adherence to Islam, following the Šāfiᶜī and Hanafī schools of Islamic law and the orders of mystical ↗Islam, especially the Qādirī and Šāḏilī ↗Islamic brotherhoods. The islamization of W. took place at the end of the 18th cent., at a time when the pressure to subjugate the area had increased. This was particularly true of the ↗Mammädočč ↗*imāms*, the most powerful chiefs of W. and hereditary governors of Wärrä Himäno. For the W. chiefs, establishing an Islamic network was a means of resisting the encroachment of the neighbouring Christian provinces and securing commercial and political advantages.

This situation lasted until the middle of the 19th cent. when the Ethiopian Christian emperors undertook the re-conquest of the W. territory in the name of political reunification and to preserve the hegemony of the Christian state and faith. W. was also the target of several destructive and punitive campaigns led by *aṣe* ↗Tewodros and a bone of contention between *aṣe* ↗Yoḥannəs IV and *nəguś* ↗Mənilək [II] of ↗Šäwa. In order to put an end to this competition, and to turn W. into a buffer zone between Mənilək and himself, Yoḥannəs convened in 1878 a religious council at ↗Boru Meda, in the east of W., south of Lake Ḥayq. This aimed at restoring and enhancing the unity of the Ethiopian Orthodox Church by putting an end to the doctrinal dissension within the Church. Having resolved the problem, he issued an imperial edict ordering the forceful and mass conversion of the W. Muslims to Christianity. This policy was inaugurated by the baptism of the Muslim leader of W., Muḥammad ᶜAlī, who was renamed ↗Mikaᵓel and received the title of ↗*ras* and the governorship of the province as a reward for his conversion and submission. This event and the following years of persecution and conflict have been preserved in the memory of the W. Muslims as the *yäkəfäru zämän* ('era of forced conversion [to Christianity]'). A large number of W. Muslims became nominal Christians while some of the religious scholars like *šayḫ* ↗Ṭalḥa b. Ǧaᶜfar led a movement of armed resistance against the policy of religious coercion. Despite this, however, W. remained a model of mutual tolerance and coexistence between the Christian and Muslim communities while retaining their respective religious and cultural identities.

In W. there are renowned centres of advanced Islamic learning and shrines which attract Muslim students and pilgrims from all over the country and beyond. Its Muslim scholars and reformers played a key role in the propagation and revival of Islam, especially in southern, eastern and southwestern Ethiopia in the 19th cent. (cp. ↗Ḥasän Ǝnǧamo). They were also the authors of manuscripts and published works in Arabic (and in Amharic and other local languages using the Arabic script) dealing with grammar, theology, mysticism, history, literature and other disciplines.

After the death of *aṣe* Yoḥannəs IV in a battle against the army of the ↗Mahdists of the ↗Sudan, *aṣe* Mənilək II ruled the country in a relatively more consensual and tolerant way. With *ras* Mikaᵓel at its head, W. continued its administrative integration into the Christian polity. After his baptism, he became a sincerely devout Christian and built churches all over the province. He was both one of the most favourite vassals of Mənilək and his son-in-law since he married his daughter, ↗Šäwarägga (s. EAE vol. 5). The suspicion of secretly remaining faithful to ↗Islam later fell on his son, *ləǧ* ↗Iyasu. In 1909 Mənilək, having suffered several strokes, designated his grandson, Iyasu, as his successor. When Mənilək died in 1913, Iyasu was still too young to be crowned and the struggle for power among different factions of the nobility was intensified. Finally, Iyasu was deposed through a ↗coup d'état in September 1916 (s. EAE vol. 2, 1081) after being accused by the Christian oligarchy of having converted to Islam and of jeopardizing the integrity of the kingdom. The attempt of his father to reverse the situation ended in fiasco at the Battle of ↗Sägäle in 1917, with disastrous consequences for the people and hereditary rulers of W. which was reduced to the status of a buffer zone to be ruled and taxed only for the benefit of Šäwan officials appointed over it and the imperial regime that kept a watchful eye on events taking place in the region.

Under the government of *ras* Täfäri Mäkʷännən, initially regent to *ətege* ↗Zäwditu, and crowned as *aṣe* ↗Ḫaylä Śəllase I in 1930, W. was considered (not without reason), as a potentially insurrectionary territory and subjugated by a strong military force of Šäwan troops. Inspired by the Fascist Italian invasion in 1936, the Wälloyye (people of W.) took their revenge against the central government. They were not only reluctant to fight against the invaders, but they also attacked the retreating army of the Emperor that had been defeated in 1936 at the Battle of ↗May Č̣äw. Nevertheless, they supported and actively took part in the national patriotic resistance movement against Italian rule. After the restoration of Ḫaylä Śəllase to the throne in 1941, W. paid heavily for its "betrayal" by being neglected by the central government in the process of the modernization of the administrative and economic infrastructure of the country. It became the victim of the politics of underdevelopment and marginalization. The stigma of W.'s defiance, recalcitrance and potential disloyalty to the political centre – spanning the reigns of Tewodros, Yoḥannəs, Mənilək and Ḫaylä Śəllase (and the period of Mängəśtu Ḫaylä Maryam) – has remained embedded in the attitude and policy of the Ethiopian imperial and post-imperial regimes, and affected their relations with the region and its people. The central government appointed as governors of W. non-Wälloyyes which caused much resentment among the local people. Moreover, some districts and sub-provinces in the north, south and east were detached from W. and merged into ↗Təgray and Šäwa. However, in W., there was no popular sentiment or organized separatist movement calling for the creation of an independent political entity. Although Ḫaylä Śəllase was not popular in W., he relied on the support of a section of the W. nobility through his wife, *ətege* ↗Mänän Asfaw, granddaughter of Mikaʾel and niece of Iyasu. The incorporation of W. into the Ethiopian empire-state was symbolized by the nomination as titular governor of the province of *alga wäraš* ↗Asfa Wäsän, eldest son of Ḫaylä Śəllase, who, however, was more active in the palace affairs of Addis Abäba than in the development of his fief from Däse.

Events in W. finally dealt a deathblow to the long reign of Ḫaylä Śəllase I. In 1973 W. was hit hard by a devastating famine which was concealed by the bureaucracy but exposed by the international media and internal humanitarian campaign. This scandal sparked off a wave of protest which administered the *coup de grâce* to the Solomonid monarchy. As they had been exhausted by the trauma of the famine, and although there were peasant and student protests in W. against the oppressive rule of the feudo-bourgeois order, the Wälloyye played only a largely passive role in the popular upsurge that culminated in Ethiopian ↗Revolution of 1974, apart from the involvement of some *šayḫs* in the movement for the freedom of worship. But these efforts were swept aside by the brutality of the *Därg* military dictatorship.

In 1984 W. was once again the scene of a great ↗famine. It became the main target of a coercive policy of the forced resettlement of impoverished northern peasants in less populated and more fertile southern areas. One of the effects of this crisis in W. was the strengthening of the solidarity among different segments of the society and relegating to the background the former tensions between Christianity and Islam. The support of the Wälloyye for the anti-*Därg* insurgency movement operating in their territory was one of the decisive factors that contributed to the collapse of the military regime in 1991.

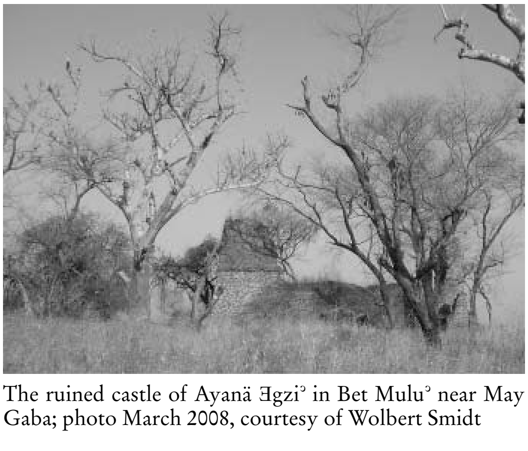
Wälqayt

W. (**ወልቃይት**) is a historical province in the north of Ethiopia (for location s. map for Wägära). It is located south of the ↗Täkkäze which separates it from ↗Adyabo; in the south, it neighbours Ṣägäde; in the north, it neighbours ↗Mäzäga (which is in fact considered “lowland W.”). Qafta and Bərtukan constituted the core highland part of W. (Ellero in EllLusAnt 110). In Ḫaylä Śəllase I’s imperial Ethiopia, W. was a *wäräda* (the capital Addi Rämäṣ) within ↗Wägära *awrağğa* of ↗Bägemdər; today it is in the West Təgray Zone.

Though W. is separated from ↗Təgray by the Täkkäze, today the bulk of its population is composed mostly of Təgrəñña-speakers, scores of Amhara, a few ↗Agäw-speakers and others. At least until the 1940s, there were smallest pockets of ↗Betä Ǝsraᵓel.

The toponym W. appears only in relatively recent sources. The archaeological evidence (presence of Muslim cemeteries), as well as local traditions (Ellero in EllLusAnt 111f.) suggest that W., thinly populated by non-Semitic speakers (Gumuz? Agäw?), was once under the Muslim domination of ↗Bäläw and ↗Funǧ. The penetration of Semitic-speakers from Təgray started relatively late; this process, as well as spread of Christianity, may be reflected in the legend of *abunä* ↗Gäbrä Nazrawi, a disciple of ↗Ewosṭatewos (ibid. 120). The royal power reached W. only with *aṣe* ↗Bäᵓədä Maryam, when the final submission of Ṣällämt, Səmen and Dämbəya was achieved. The tradition refers to *ras* Degäna (s. ↗Šire), accompanied by Bolay, Täsfay (Qästä Agam), Šäkkor and Zena Gäbrᵓəl and others (the chronology of the tradition is, however, confused), who divided W. among themselves and founded some lineages and a few settlements (ibid. 115). The Muslim influence weakened with the decline of the Muslim state in Mäzäga and after the death of Queen ↗Gaᶜəwa.

In the 17th cent., W. appears as a separate province (BeckHuntAlm 11, 13, 15f., said to have been previously in Bägemdər, but later separate from it). From 17th–18th cent., W.’s powerful governor (and a favourite of *aṣe* ↗Iyasu I) *däğğazmač* Ayanä Ǝgziᵓ (Nayəzgiᵓ) is known, allegedly a descendant of *ras* Degäna (s. genealogy in Ellero in EllLusAnt 130f., n. 8). *Aṣe* Yosṭos had allowed three ↗Capuchins to stay in W. under Ayanä Ǝgziᵓ’s auspices, but in 1716, under Dawit III they were brought to Gondär and stoned to death (DombrChr 264f. and no. 793; cp. BudHist 440f.; BruNile II, 568f., 579f.). They may be put in connection with the ruins of a large structure showing features of Gondärine architecture style in W., near today’s May Gaba. *Aṣe* Bäkaffa had good relationship to Ayanä Ǝgziᵓ, and used W. as a place of exile for his enemies. A break happened in 1725, when Mammo of ↗Ṣäᶜazägga was appointed over ↗Bambəlo Məllaš. He conflicted with Ayanä Ǝgziᵓ and defeated him (cp. KolTrad I, II, chs. 82–85; PankBord 407f.; the reason was probably struggle for power). Ayanä Ǝgziᵓ died in 1731 (GuiIyas 47 [text]). In



The ruined castle of Ayanä Ǝgziᵓ in Bet Muluᵓ near May Gaba; photo March 2008, courtesy of Wolbert Smidt

1749, the governor of W. was sent to support ↗Mikaʾel Səḥul during the latter's conflict with *däǧǧazmač* Wälde of Lasta. In the same year, one more rebel, Kəsade, was defeated in W.; in the next year, Č̣erqin Nač̣č̣o was appointed governor of W. and Ṣägäde, and in 1754 Surahe Kəsos (Krəstos). In 1781 *aṣe* ↗Täklä Giyorgis fought the rebellious local ruler *däǧǧazmač* Gädlu and forced him to submission.

At least from the 19th cent., different groups from ↗Sudan used to settle in W. It appeared as area of ↗trade activities, not only as wildness for ↗hunting. Qafta was a slave market frequented by the Arabs and the ↗Tukrīr from ↗Sinnār; from W., ↗cotton and ↗iron were imported into Ethiopia, and large quantities of cloths were locally produced. Insecurity of W. was a great impediment for trade.

By the time of ↗Parkyns passed through W., it was governed by *ləǧ* Ḫaylu, under ↗Wəbe Ḫaylä Maryam (who inherited it from his father ↗Ḫaylä Maryam Gäbre). By late 1850, W. was claimed by ↗Nəguśe Wäldä Mikaʾel. In the 1860s, W. was under the rule of the rebellious ↗Ṭəso Gobäze, until he was killed by *wag šum* Gobäze (↗Täklä Giyorgis II). *Aṣe* ↗Yoḥannes IV claimed the submission of W. in 1873 (RubActa II, 141, no. 102), but it was under a rebellious leader a couple of years later (ibid. 146, no. 104; 173, no. 123).

In the 20th cent. W. was incorporated into the empire; recently, its importance grew due to its position in the rear of ↗Ḥumära and its potential for commercial farming.

Wälqiṭe

W. (**ወልቂጤ**; 08° 17' N and 37° 46' E, 1892 m A.S.L.) is a fast-growing, multiethnic town on the all-weather road from Addis Abäba to Ǧimma with approximately 30.000 inhabitants (CSA 2007; for location s. map for Wäliso). The first village-like settlement of today's W. was the so-called Maryam Säfär on the southern tip of the town. W. probably got its name from ↗Ǧimma Abbaa Ǧifaar, who, on his way to the capital, used to rest at the place, which was situated at the half-way point between Ǧimma and Addis Abäba, thus Oromo *wal-qiṭe*, 'equal part, half' (FID 2006: 2).

In 1936, under Italian rule, W. became the *Residenza dei Guraghè Occidentali* and was recognized as a town (BrHad 360; FID 2006: 1). Consequently, it expanded toward the north along the road and became the most important market place in the region. Starting from the 1960s W. was the administrative centre for the Goro *wäräda* of Č̣äbo-Gurage *awraǧǧa*. In 1992 it became the administrative centre of the newly formed Gurage Zone in the Southern Nation, Nationalities and Peoples' Region (FID 2006: 2); since 2002 it is also the administrative centre of the ↗Qabeena *wäräda* (Crass 2005: 2). Until recently there were political tensions between the Gurage and Qabeena about the status of W.

In the 1970s W. was known for its large-scale mechanized farming (Ståhl 1974: 152f.) which probably attracted seasonal workers from other places. Today W. is known for its retail trade but also hosts a flour factory and a factory producing power poles. The population increase over the last decades has caused severe problems in the domestic fresh water supply established in 1976 (FID 2006: 26). Although the first primary school *Ras Zäśəllase* was founded in 1955 (FID 2006: 7), the highschool could only be established in 1979 with financial help of *šaläqa* Sulṭan (*Yäqatbäre šayḫ*, s. ↗Qatbäre). Education rapidly grew after the decline of the *Därg*. Until today six further private and government primary schools have been established (FID 2006: 7), a technical college was founded in 2005 and two further colleges are under construction.

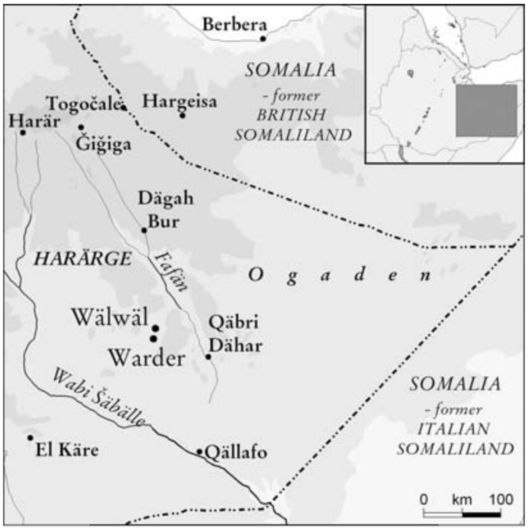
Wälwäl

W. is a locality in the ↗Ogaden, deep inside the Ethiopian territory, which was claimed by colonial administration of ↗Italian Somaliland in the 1930s (↗Boundaries). The area served as the side on 5 December 1934 of a skirmish that triggered the subsequent mass invasion of Ethiopia by the Italian army (↗Italian war 1935–36).

↗Mussolini was obsessed by the "[↗]ᶜAdwa complex", like all ultra-nationalists, and the minor event in W. gave him the long-awaited pretext to take the initiative. According to the agreement signed in 1908, W. belonged to Ethiopia but the fort had been held since 1930 by a small Italian garrison inspite of Ethiopian protests. W. and ↗Warder, precious for their wells traditionally used also by Somalis from Italian Somaliland, were regarded by the Italians as "our border posts" (Sabelli 1938: 204). The confines between Ethiopia and Somalia, and in general the confines of Ethiopia with the neighbouring European possessions, were ill- or un-demarcated and the terms of reference of the bilateral Conventions were sometimes represented by widely inaccurate maps (Ciasca 1940: 621ff.).

During the governorship of De Vecchi in Italian Somaliland (1923–28) and later on, the Italians pushed their presence further into the ↗Wabi Šäbälle region and into the Eastern Ogaden. Regulars and irregulars of the two sides frequently clashed. Rome worked to sow disaffection among the governors and inhabitants of the northern periphery of the Empire (BZHist 189). Italian military commands had prepared an Eastern Africa Plan. Pressures became more manifest after King ↗Vittorio Emanuele III's visit to Somalia; the King, contrary in principle to warfare in Africa, gave the impression of having changed his mind (Del Boca 1979: 229ff.). The incident of W. involved the Ethiopian escort of an Anglo-Ethiopian boundary commission (↗United Kingdom), that arrived in the area on 22 November 1934, on the one hand, and Somali troops (*dubat*) with some Italian officers led by Roberto Cimmaruta, on the other. The Ethiopian request was to evacuate the fort because it had been illegally set up on Ethiopian territory. The tension escalated day by day until 5 December when the Ethiopians, provoked or unprovoked, opened fire. Lacking neutral witnesses, circumstances and responsibilities remained controversial (Berhanou Abebe 1998: 175; Lessona 1939: 77). In the ensuing fight the superiority of the Italians, who employed three aircraft and two tanks, was overwhelming. Sources disagree on the number of casualties. Among the heavy Ethiopian losses (about 300 dead), one of the commanders, *fitawrari* ↗ᶜAlämayyähu Goššu, a cousin of the Emperor, was killed (Cimmaruta 1936: 185f.). Italy lost between 20 and 30 *dubat*.



Somali at one of the wells of Wälwäl; from Rikli 1935:80

Italy claimed to have been attacked and asked for official and formal apologies, reparations for the victims and punishment of the culprits. The Ethiopian government accused Italy of aggression and proposed to make use of the compulsory arbitrage provided for by clause 5 of the Treaty signed in 1928. A secret memorandum circulated by Mussolini on 30 December, however, proves that Italy wanted a total onslaught on Ethiopia and the conquest of the empire (Rochat

1971: 101–07, 376–79). Under these conditions, all the talks and initiatives of mediation were useless. As Italy refused to yield and insisted on "unreasonable demands", Ethiopia appealed to the ↗League of Nations which failed to resolve the dispute diplomatically. In the meantime, Italy proclaimed general mobilization. France appeased Italy's grievances whereas Britain – between Italy and the League – chose the latter. The crisis of W. developed into an all-out war which led to the Italian occupation of Ethiopia. W. had been forgotten and the whole attention of the Italian propaganda focused on the need to get land, space, and job opportunities in Africa.

Giampaolo Calchi Novati

Wämbär

W. (**ወምበር**) is the highest religious judicial figure among the ↗Kəmant. The term is also widely used in Amharic and means literally 'chair' or 'seat', but is also commonly used with the meaning of 'judge', particularly with reference to the higher level of judges in the traditional ↗*čəlot*. Such judges accompanied the emperor or regional governors in adjudicating cases, but sometimes also rendered verdicts on their own.

Among the Kəmant, the W. plays a most important socio-political role. Indeed, the Kəmant are unusual perhaps even unique among the peoples of northern and central Ethiopia in having leaders who combine these dual religious and secular roles. This institution appears to date to at least the Gondärine period, and prior to the 20th cent., there appear to have been as many as ten W. throughout the territory of the Kəmant, however more recently there were only two, one in ↗Čəlga and his superior in Kärkär. By 1955 only the former of these remained active.

In many ways the W. can be said to represent the Kəmant as a people, mediate between them and both supernatural and natural forces, and guarantee the smooth functioning of society. He insured the fertility of the land, flora, fauna and people. Women wishing to conceive brought gifts to the W., and he also oversaw the annual "spring" (*ṭəqəmt*) festival which began the ritual year. Perhaps most importantly, he led the Kəmant priests at the ↗*täzkar* ceremony which ensured that the deceased would pass to the next world.

Given the awesome power wielded by the W., it is interesting to note that although he, like most Kəmant religious leaders, must come from the *kəbər* moiety, he is chosen by the people when his predecessor was elderly or had died. In some cases mature adults are chosen for the role, in others a child, who is represented by an adult until he reaches maturity.

After his election or selection by consensus the candidate was blessed by the people and showered with green grass and leaves, which symbolize fertility. He was trained into the duties of his office by his predecessor – if he was still alive – or elderly priests. When he is sufficiently trained he is "ordained" through two ceremonies. One is the *yaqumtäzkar*, which, as the name suggests, is related to the commemoration of the dead and includes prayers said for oneself to pass into heaven. The other, *kasa*, is the same as the ordination of a priest. In the case of a W. who was subordinate to the highest W. of Kärkär (most recently only in Čəlga, but in the more distant past in several regions) he also brought gifts to the W. of Kärkär and received his blessings, which were followed by a two or three day feast.

The chief identifying feature of the W. was his white turban. Interestingly, although the W. officiated at several ceremonies at which ↗sacrifices were performed, he himself did not sacrifice. Indeed, even in daily life, he could not hold a knife or any other weapon.

In addition to these religious duties, the W. of the Kəmant had a vital judicial role reminiscent of the W. in broader Ethiopian society. He served as a court of final appeal when disputes could not be settled by councils of elders. This legal system operated in both a local and central fashion in the distant past when there were several W. Among the fines and punishments which could be levied were daily ablutions, drinking of ↗*koso*, sleeping on the ground and payments of bars of salt (↗*Amole*). Those who refused the judgment of the W. would be ostracized. In the case of homicide, when the family of the deceased could not come to an accord regarding the indemnity to be paid by the guilty party, the W. would determine this. This system functioned until the middle of the 20th cent., with Amhara administrators referring cases to the W.

The wealth of the W. derived from the fees and gifts he received in return for the performance of ceremonies. In some cases these were not limited to the Kəmant, but involved other communities as well.

Wämbärta

W. (ወምበርታ, in old sources also Mänbärta, Mämbärta) is a sizeable district in north-eastern Ethiopia, in the ↗Kələttä Awlaᶜəlo area, overlooking the ↗ᶜAfar lowlands (Tsegay Berhe 1996: 17). It constitutes today the Aṣbi Wämbärta *wäräda* of the Təgray regional state (↗Aṣbi). It is located east of the historical province of ↗Ṣəraᶜ. W. is situated partly on the edge of the plateau, and in the north-eastern escarpments, where it is forested. Agriculture and ↗salt trading constitute the basis of local peasant livelihood in W. A large seasonal labour force regularly leaves W. to work in the ancient Arho salt mines, in the northern ᶜAfar desert. Ethnically, the area forms a trans-frontier district between the ᶜAfar land and the Təgrayan highlands, as a centre of interaction, population movements and displacements (Munzinger 1869: 208, 223; Tsegay Berhe 1996: 18). W. is inhabited by ↗Təgrəñña-speakers who call themselves W.; smaller communities like Tälfän and possibly the historical ↗Dobaʾa also live there.

The region is mentioned in chronicles at least since the time of ↗Iyasu I who travelled to Təgray to establish custom posts; in 1698 he collected tolls from the posts of W. ("Mämbärta") and Ǝnnägale (GuiIohan 196 [text]). Salt tax from W. ("Momboerta") is also mentioned in the responses Murad had given to Ludolf's questionnaire in 1697 (DonMurad 93f.).

Munzinger (1869), when describing the area, speaks at length about the area of "Doga" inhabited by the omonymous people. Judging by the geographic description (Munzinger 1869: 208: "successive terraces" at the altitude of "3000 to 5000 feet high") he is probably referring to the geographical zone of ↗*däga* and the ᶜAfar and ↗Sāho-related peoples inhabiting this highland region. He assumed that the "Doga" region was initially inhabited by Ethiopian Christians (i.e. Təgrayans, ibid. 221) and its inhabitants were therefore a product of ᶜAfar-Sāho and Təgrayan socio-cultural assimilation and economic interaction. They constituted the principal inhabitants of the area, stretching from eastern ↗ᶜAgamä up to and including eastern ↗Rayya ᶜAzäbo. The "Doga" engaged in salt trade and were paying customs both to the ᶜAfar and Təgrayan chiefs. The Dahimela Sāho of the "Doga" area had in their hands two largest salt trade markets of the region (ibid. 210). The market in Efissa was owned by the chief of W., three markets to the south were under the chiefs of W. and ↗Ǝndärta and two more under the ↗*šum ᶜagame* (ibid. 223). This mode of livelihood changed through time into combining salt trading with farming (Munzinger 1869: 208, 211, 223).

Currently, W. is inhabited by ᶜAfar, Sāho and Təgrayan communities, with the latter dominating the area. ᶜAfar Muslims and Christian Təgrayans extensively assimilated in W. The neighbouring ᶜAfar regard the Christians in W. as their kinsmen and also in the past enjoyed peaceful relations with them, while they repeatedly came into conflict with the Ǝndärta Təgrayans over resources (salt, livestock raids and territorial hegemony, especially over Arho).

Regional administrative reshuffles coupled with growing ecological stress, however, left their mark and led to new territorial conflicts over woodland, pasture and farming plots between the long-interacting Təgrayans and the ^{c}Afar throughout W.

Wänč̣ət

The W. (**ወንጭት**) River is a ca. 160 km long subtributary of the ↗Abbay River. It springs up at more than 3,000 m A.S.L. on the northern slopes of Mount Abuyä Meda in the South-Wällo zone of Amhara *kəlləl*. It flows to the south-west first on cenozoic basalt plateaus (trapps) and has carved a deep gorge into the mesozoic sediment layers (cretaceous limestone and Mugär mudstone). In the North-West Šäwa zone of the Oromiyaa *kəlləl* the W. River flows into the Šämma River (ca. 1,050 m A.S.L.) which is a right bank tributary of the Abbay River. The W. and the Šämma gorges marked the southern border of the Zag^{w}e kingdom, Oromo groups used to fight there during their great migrations to the North (Arnesen in BHTOrom 222). Both valleys formed the southern boundary of the former ↗Märḥabete *awrağğa* (Šäwa region) until the 1991-administrative reform.

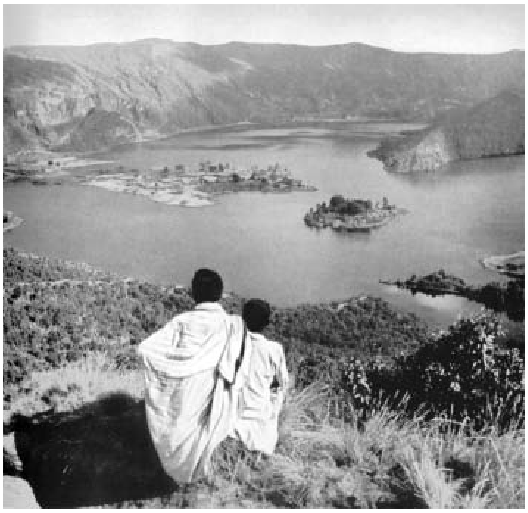
Wänči

Mount W. (**ወንጪ**) rises 35 km to the north of Ambo (Oromiyaa, West-Šäwa, Wänči *wäräda*). It is located in the middle of a range of recent volcanoes (Upper Cenozoic, Pleistocene) between Mount Badda Rogge to the west and Mount Dändi to the east (for location s. map for Wäliso). This volcanic massif lines the southern fault which delimits the Gudär graben. To the north it divides the Gudär basin (which runs to the Abbay River) from the Wäliso plateaus whence some rivers flow south-west to the Gibe/Omo River and others south-east from the Upper Awaš marsh. The W. slopes with plateaus formed from lava flows gently rise above Ambo and Wäliso. Recent volcanic domes and craters have erupted along the fault lines. Above 2,400 m A.S.L. huts are grouped on narrow plateaus where barley is grown and are surrounded by *ənsät* orchards. Above ca. 2,800 m eucalyptus and *ənsät* are replaced by *koso* which grows to a height of approximately 3,000 m A.S.L. where *asta*, giant heather (*Erica arborea*), is grown. This alpine stratum is often cleared in order to sow barley.

During the historic period Mount W. was volcanically active as witnessed by a recent rise in the level of the crater lake caused by a lava weir (Smeds). This 4 km by 3 km lake (*haaro*) at ca. 2,900 m A.S.L. lies at the bottom of an inner caldera encompassed by a huge outer caldera which is worn away by erosion. To the west, between the rims of the two calderas a marshy plateau is flooded during *kərämt* but some small volcanic ash cones are settled and cultivated (with *ənsät*). Some herds of cattle come from Ambo to spend the rainy season in the high mountain pasture. Around the Sunday daily market a large village has grown since the 1980s after the Ambo–Wäliso road through W. was completed. To the east a trail branches from the main road and leads through the inner caldera crossing down to the lake and up to the Giyorgis Church. It is located on a densely settled peninsula where



The Wänč̣i Lake near Ambo; from Ursin 1958: 73

ənsät is grown among orchards. One can reach Qirqos Church island in a *koso* dug-out where Betä Ləhem Church was recently built. South of the lake and between the walls of the two calderas hot mineral springs may be active. The waters coming from the lake and from the calderas are barred by the lava of "Fasiladäs bridge" and merge with the Wäga River which is breached by the deep Goro W. gorge, the outer caldera flowing into the Gibe River. Topped by a pyramid-shaped eroded dyke, the uninhabited cliff of the Galila peninsula plunges south into the lake. The high walls of the inner caldera (3,387 m A.S.L., EMA) tower above the lightly settled finger-shaped peninsula of the northern shore. On the outer part of the volcano, more and more barley fields have been cleared on the steepest slopes (GasEth; Gascon 2006). Both outside and inside the crater the population has increased along with their subsistence needs. Inhabitants may hope to earn some money in guiding tourists to the crater lake; a tourist hotel in traditional style of architecture is under construction.

Like their neighbours, the inhabitants of Dändi, the Galila of W. are related to the Gurage (Cohen 1931; Haberland 1960) this can be seen in their language and by the fact that they cultivate of *ənsät* (Getachew Asrat 1969). Along with the ↗Zay of ↗Zʷay Lake, they form Semitic speaking enclaves among the Oromo (Cohen 1931; Haberland 1960; Henze 1973).

Antoine d'Abbadie notes the meeting of two young priests, who had been ordained in Gondär, on their way back to W.; they met on 20 April 1844 in Dämbäč̣a, Goǧǧam (d'Abbadie 1890). They described their itinerary for him and the volcano, its crater lake, its island and its churches as a Christian Gurage speaking enclave under threat from the Oromo and close to the Muslim Hadiyya. Italians burned the Qərqos Church, where Mənilək had left King Ṭona of Wälayta's saddle after he had defeated him (Getachew Asrat 1969). As a consequence of this destruction the Galila were granted tax reduction after the war (Getachew Asrat 1969). In May 1991 a company of the regular army was retreating to Wäliso through W. after its defeat in Ambo and was assaulted and destroyed by the Wäyyane.

Wänd Bäwäsän

Däǧǧazmač W.B. (**ወንድ፡ በወሰን**; d. 10 December 1777), *balabbat* of ↗Bägemdər and *šum* of ↗Lasta, was a prominent warlord during the late Gondärine period and the early ↗*Zämänä mäsafənt*, during the puppet reigns of *aṣe* ↗Iyoʾas I and ↗Täklä Haymanot II and the actual rule of *ras* ↗Mikaʾel Səḥul of Təgray.

W.B. began his career as an officer of *däǧǧazmač* ↗Yämaryam Barya and was highly respected. Himself of noble descent, W.B. married Yäwəbdar, the daughter of *wäyzäro* ↗Alṭaš Iyasu and Mikaᵓel Səḥul's son *qäññazmač* Wäldä Ḥawaryat, and therefore the granddaughter of *ətege* Məntəwwab (↗Bərhan Mogäsa). Their marriage festivities were sumptuous, Iyoᵓas and Mikaᵓel Səḥul donated W.B. large areas of land, gold, muskets, cattle and horses to the couple on the occasion (BruNile III, 241). Mikaᵓel Səḥul invested W.B. with a ↗*lämd* and other precious items (ibid.; BlunChr 214).

Together with *ras* ↗Goššu Wädağe of Amhara, W.B. was sent to fight off the attacks of *däggazmač* Fasil "Wäräñña" of Damot.

When in 1768 Mikaᵓel Səḥul officially became ↗*ras bitwäddäd,* he began ruthless campaigns against the opposition, which included Yämaryam Barya, who had opposed Mikaᵓel's appointment. Soon, Mikaᵓel Səḥul had Iyoᵓas imprisoned and then executed; and installed Täklä Haymanot II on the throne (PankHist I, 167).

At the beginning, W.B. was loyal to Mikaᵓel Səḥul, but the relationship worsened with W.B.'s growing ambitions. W.B. was particularly offended when Mikaᵓel refused to give him his relative Wəšən Azal, a sister of ↗Ḫaylä Mikaᵓel Ǝšäte, as a wife, on the grounds that W.B. was already married, and, moreover, to a member of the same family (BlunChr 316). Later, however, Ḫaylä Mikaᵓel Ǝšäte let W.B. marry his sister (Guidi 1902: 34).

Eventually, Fasil, Goššu and W.B. formed an alliance against Mikaᵓel. They besieged Gondär (BruNile IV, 230f.), forcing Mikaᵓel to retreat to Təgray. The rebels entered Gondär and proclaimed Susənyos II as Emperor.

However, the alliances between the rebels and Mikaᵓel Səḥul changed constantly. Susənyos was deposed by Fasil who officially reinstalled Täklä Hamyanot. Thus, Fasil reunited with Täklä Hamyanot at Gondär. This newly strengthened army marched against W.B. and Goššu. They managed to defeat the enemy army at the battles of ↗Sarbakusa in Dämbəya in May 1771. W.B. even captured Mikaᵓel Səḥul and held him imprisoned for one year.

In 1777, W.B. made a short-lived peace with *aṣe* Täklä Haymanot II and was appointed governor of ↗Bägemdər, he is even said to have ruled the kingdom temporarily (BudHist 477). W.B. was among those who deposed Täklä Haymanot that same year and put ↗Sälomon I on the throne.

W.B. died in an accident in December. He can be considered as the founder of the Lasta dynasty, as the governorship of the province remained within his family for several generations, including his successor *däğğazmač* Bäqätu "Abba Ǧale", as well as another active king-maker of the time, *ras* ↗Wäldä Gäbrəᵓel and *ras* ↗Aśrat.

Wändəmmu Wänd

W.W. (**ወንድሙ ፡ ወንድ**; b. 1917, Bəčäna Giyorgis, Goğğam, d. 2002, Addis Abäba) was an Ethiopian painter. At the age of six he decided to become a priest like his father, and attended church school together with ↗ᶜAlämu Ḫaylä Maryam, also later an artist. Later on W.W. became a deacon at ↗Bəčäna Giyorgis Church, where he was deeply impressed by the mural paintings. He observed the traditional painters at work, started to practise their technique and became a self-taught artist who later painted the interior of the church of Läᵓatrəfo Giyorgis in the Gurage region.

He went to ↗Addis Abäba in 1934 and joined the brother of his friend ᶜAlämu, Yətbaräk Ḫaylä Maryam, who was already an established painter of secular themes, producing mainly for the expatriate community. W.W. realized that he would make more money if he also painted

Wändəmmu Wänd painting in his house; photo 1986, courtesy of Doro Röthlisberger secular themes for foreigners, and he started to imitate Yətbaräk's paintings, especially those of the legend of the Queen of Sheba (↗Makədda). Later on he found his own way of expression, also painting other subjects such as hunting and farming scenes. In Addis Abäba he lived in a little house near the University in the neighbourhood of ᶜAlämu Ḫaylä Maryam.

Five of W.W.'s paintings can be seen in the Museum of the ↗Institute of Ethiopian Studies in Addis Abäba, three in the Völkerkundemuseum of the University of Zurich, Switzerland, two are reproduced in Biasio (2006: 130–33) and two in Girma Kidane (1989, fig. 119, fig. 120).

Wändo Gännät

W.G. (**ወንዶ፡ ገነት**) is a spa ca. 20 km south-east of ↗Šašämänne, near the village of Woša and the marshy lake of Dabaši, located in the Sidaama zone of Ethiopia's Southern Region. W.G. had 5,530 inhabitants in 2004.

In the reign of Ḫaylä Śəllase I a hotel and swimming-pool were built near the hot springs in a dense forest of *ṭəd* and *Cordia.* An agricultural college and an arboretum have been opened near the spa where new hotels have been constructed. During the rule of the *Därg* it was a favourite place for officials to spent their holiday. In 2000 W.G. Agricultural College, Awasa University of Agriculture and Dilla Teachers Training Institute (TTI) merged into Awasa Regional University.

Wängelä Wärq

W.W. (Gəᶜəz **ወንጌለ፡ ወርቅ**, or **ወንጌል፡ ዘወርቅ**, *wängel zäwärq*, 'Golden Gospel', often also in Amharizing form, **ወርቅ፡ ወንጌል**, *wärq wängel*, Tgn. **ወንጌል፡ ወርቂ**, *wängel wärqi*) is a term used with a twofold meaning. In its more literal sense, W.W. indicates a ↗manuscript of the Four Gospels with a gold, but usually gold-like, silver or simply metal cover (cp. GuiVoc 565), a well-known practice in all medieval Christian civilizations (cp. Heldman – Devens in VarAeth 93, n. 54; for the Copto-Arabic and Christian Oriental domain, cp. Leroy 1974: 55f.). In a more specific sense, W.W. indicates a book of the Four Gospels in which notes regarding the institution (usually a monastery or a church), the place or the region where the codex is preserved, or where its owner dwells, are contained (cp. Conti Rossini 1916: 393; Kolmodin 1916: 246f., n. 10; P̣āwlos Ṣādwā 1953: 19f.; Doresse 1972: 150f.; BauEr II, 14, n. 2; Bausi in StudAeth 21). The notes may be either inserted in the empty spaces and leaves (blanks) of the manuscript, or/and be copied on separate leaves or fascicules rebound within the same codex.

The notes which characterize the W.W. are acts and grants declaring rights of exploitation, land prerogatives and benefits (cp. ↗*gʷəlt*, ↗*rəst*, ↗*rim*, etc.), usually in favour of the book's owner; the notes can also consist of inventories of goods and books. Such notes as well as others of different character added on the blank pages (historical records, genealogies, monastic rules, prayers, correspondence, etc.) are known as *additiones*, less properly also as *marginalia* (cp. Lusini 1999: 5ff.). With respect to their function, other questionable terms have also been proposed, such as '*condaghe*' (cp. Kropp in VarAeth 141ff.) and simply 'archive' (Wion 2006; further references in Bausi – Dore – Taddia 2000: 155–65; Bausi in StudAeth 19ff., nn. 50ff.; 2006: 102ff., nn. 1ff.; 2007: 81, n. 4).

The twofold meaning of W.W. probably represents the convergence (quite rare in codicological phenomenology, cp. Bausi 2008: 546, n. 133) of functional task and material appearance, i.e. between the special function of the Four Gospels book as a register of memories and records, and the visible preciousness it displays through its peculiar material structure (metal binding or decoration, cp. Balicka-Witakowska 1997: 8, n. 33). On the other hand, the same function can equally be borne by (non-Gospels) biblical and hagiographic manuscripts. In the *Mäṣḥafä ↗Aksum* however, there is only one document, dating to the time of *aṣe* Ləbnä Dəngəl, that attests the expression *wängel zäwärq*, with the technical meaning of "Gospel book as register of memories" (cp. CRAxum 46 [tr.], doc. no. II, 43; HuntLand 51, n. 1 wrongly supposes a reference to one specific manuscript, i.e. the W.W. of ↗Däbrä Libanos of Šəmäzana, Ham); three other occurrences in inventories of the same *Liber Aksumae* seem to refer to the material aspect of the codex instead (CRAxum 70.24-25, *wängel zäwärq*; 71.3, 71.12, *wärq wängel* [text], doc. no. III, 4). The general opinion that metal, esp. golden bindings, are reserved to books of the Four Gospels seems to be confirmed by the evidence (cp. Sergew Hable Selassie 1981: 26), even if some exceptions are attested, such as the manuscript of the Catholic ↗Epistles (i.e. Ḥawarya, 'Apostle', according to the traditional designation), with a richly decorated binding in gold and silver, donated by *aṣe* Naᶜod to the Church of Märṭulä Maryam (author's documentation), or ms. BritLib Orient. 728, *Gädlä Täklä Haymanot* (cp. Pankhurst 1983–84: 249, 256, fig. VI).

Even though not every important monastery or church has its own W.W. (cp. GuiVoc 565), "Golden Gospels" as a repository of records are widely attested all over Christian Ethiopia and Eritrea (for a general survey of Gospels manuscripts, cp. Zuurmond 1989, Part I, 240–55; for some W.W. cp. also Balicka-Witakowska 1997: 9ff.; BauEr I, 24–44 [no. 1], III, 13–23 [no. 11], 32–37 [no. 13]; Lusini 1999: 15f.; Heldman – Devens in VarAeth; Derat 2006). Far more rare are codices with metal bindings, which, however, seem to have existed from the most remote periods of manuscript documentation. In consistence with half-legendary traditions narrated by hagiographic sources for Aksumite times (the Acts of ↗Zämikaᵓel Arägawi report that books decorated with gold and silver were donated by king Gäbrä Mäsqäl to him, cp. Guidi 1896: 73*b*, 92), a certain number of ancient copies of the Four Gospels, which in the course of time have carried out the twofold function of W.W., are decorated with metal bindings. Two of the Abba Gärima Gospels are finely decorated with metal covers (Abba Gärima I and II–III, cp. Leroy 1960: 132, 134, fig. a; 1968: 75, 80, fig. 9; AfrZion 129, nos. 52f.), and the same is true of the 13th-cent. W.W. of Däbrä Libanos (cp. CRDLib; BauEr III, 13–23): at least for the latter, the metal cover seems to be contemporary with the time the manuscript was first copied and bound (cp. Schneider in PICES 8). According to a note on fol. 339v, dating to 1293/1294, in the Four Gospels ms. EMML no. 1832 from ↗Ḥayq Ǝsṭifanos, copied in 1280/81 (cp. Taddesse Tamrat 1972: 92), *aṣe* 'Yagba (!) Ṣəyon' decorated the codex, a few years after the copying, with gold and silver (cp. Sergew Hable Selassie in OrbAethChoj 252f., 255; Heldman – Devens in VarAeth 93, n. 54; BassHist II, 272, 337). The much more recent Four Gospels book of ↗Däbrä Dəmaḥ also has metal covers (cp. Bausi – Lusini 1994: 19f., n. 33), like two post-16th cent. mss. from ↗Aksum Ṣəyon (cp. *DAE* I, 17). Generic W.W. are, e.g., reported from ↗Ǝndärta and ↗Wälqayt (cp. EllLusAnt 75, 79, 82, 121), from ↗Hazzäga (cp. KolTrad III, A51–A61, with 16th cent. notes), from Betä ↗Ṗänṭälewon near Aksum (author's documentation; also mentioned in Zuurmond 1989, Part I, 254).

Alessandro Bausi

Wansleben, Johann Michael

W. (also Wansleb; French: Jean Michel Vansleb, Ital.: Giovanni Michele Wanslebio or Vanslebio, Lat.: Johannes Michael Vanslebius; b. 1 November 1635, Frankenhausen near Erfurt, d. 13 June 1679 Bourron, Fontainebleau) was a German Orientalist and traveller, who later became a Domenican father and a French citizen.

Born as a son of a Lutheran pastor, he started in Königsberg (1654) studies of theology and philosophy, as well as of Oriental languages (Hebrew, Samaritan, Persian, Greek, Syriac and Arabic) and mathematics, soon becoming a student of Hiob ↗Ludolf in Gəᶜəz (s. Quetif – Echard 1721: 793; W.'s diary for the period preceding his travels to Egypt is now kept in the "Nachlass Ludolf" in Weimar, Goethe- und Schiller-Archiv, ms. 105/103, s. Beltz 1995:86).

As a very promising scholar, W. was sent to London to take care of the first edition of Ludolf's *Lexicon* and *Grammatica* in 1661 (both emended and reedited by Ludolf respectively in 1699 and 1702), published in one volume together with the *Confessio fidei* of *aṣe* Gälawdewos, the "liturgy of Dioscorus" and other appendixes (s. Wansleben 1661). In London he also helped Edmund Castell (a collaborator of Brian Walton in the project of the polyglot Bible) in the realisation of the *Lexicon heptaglotton* (1669), one of the major achievements of Oriental scholarship of the 17th cent.

At his return to Germany, W. kept on cooperating with Ludolf, for whom he also realized from various libraries, since 1660 at the latest, copies of Gəᶜəz manuscripts which are now disseminated in Europe (s. Bausi 1991: 7ff.; 2009: 261ff.; SixTana III, 258–63; Six 2007: 113ff.).

Ten years after the visit of *abba* ↗Gorgoryos to Germany, under the auspices of the Thuringian Duke Ernst "the Pious" of Saxe-Gotha, Ludolf prepared an exploratory mission to be sent to Ethiopia. The aim was to overcome the lack of information after the expulsion of the Jesuits 30 years before, and even more that of highlighting the purported affinities between the Lutheran and the Ethiopian faith. W. started the journey alone in June 1663. He was supposed to spread interest for Luther's doctrine among Ethiopian clergy, to invite young "Abyssinian" pupils to study in Thuringia, and to collect as much information as possible on church history, government, peoples, history, geography and the nature of Ethiopia (s. his instructions, Flemming

1890: 549; Loth 1986: 72–78). Duke Ernst planned to support Ethiopians spreading Christianity in the countries surrounding them, in order to establish a route to Ethiopia.

W. arrived in Egypt in January 1664. He established lively contacts with the Copts. Their patriarch Matthew, however, warned him not to go to Ethiopia for security reasons. Therefore, W. resigned himself to collecting information on Ethiopia from Copts and from Indians, who had been at *aṣe* ↗Fasilädäs's court in ↗Gondär, as well as from Ethiopians in the Cairo churches and Egyptian monastic communities which W. visited, e.g., at ↗Dayr al-Muḥarraq, where he was also able to copy a few Ethiopic manuscripts and acquire Arabic ones (almost all of W.'s copies and Arabic manuscripts resulting from this first travel are presently kept in Florence, cp. Bausi 1991). He also collected the first reliable information on ↗Dongola and on Darfur (s. Adelberger 1991). W. returned to Italy in 1665 and sent a report to Duke Ernst from Florence concerning the political situation in Egypt and Ethiopia (*Relation von dem gegenwärtigen Zustande Ägyptenlandes*), only later published from Ludolf's own copy (s. Paulus 1794: 10–121, "Johann Michael Wansleb's bisher ungedruckte Beschreibung von Aegypten im Jahr 1664"). The report, however, did not contain any particular comments on religion.

In Italy W. acquired fame as a great Orientalist, first in Florence, where he examined at least one Gəʿəz manuscript preserved there in the library of Grand Duke Ferdinando II, and then in Rome, where he had occasion of visiting the Ethiopian community of ↗Santo Stefano dei Mori and annotating and copying Gəʿəz manuscripts. Probably in this period, not only for poverty (as Ludolf, styling W. a betrayer, assumed), but also for deeper reasons connected with a wider knowledge of Ethiopian canonical writings (as it appears from his personal notes, s. Bausi 1991: 12), he converted to Catholicism. W.'s conversion disconcerted and greatly disappointed Ludolf and shortly put an end to any cooperation among the two, even though W. kept on corresponding with Duke Ernst. In Rome he eventually became a Dominican priest at the Convento di Santa Maria sopra Minerva. In 1668 he asked the ↗Sacra Congregatio de Propaganda Fide to establish a school of Gəʿəz language and literature in Rome for a future Catholic mission, which was, however, not realized (Beccari 1903: 178). His travel report, dedicated to the Grand Duke of Tuscany Cosimo III, appeared later in Italian (a language W. mastered and in which he entertained extensive correspondence also in his French period) in 1671 in Paris, where W. moved the same year following the bishop of Montpellier, François Bosquet.

In 1671–76, under initiative of minister of finance Jean-Baptiste Colbert, W. undertook a new journey to the Orient, with the principal task of purchasing Oriental manuscripts and ancient medals, and of acquiring information on all sort of archaeological findings, inscriptions, etc. he would come across (s. Omont 1902, vol. 1, 54–174, vol. 2, 879–951). Via Eastern Mediterranean, W. reached Egypt in 1672, and extensively travelled there for two years visiting several places, for some of which he provided the earliest available information in Europe (e.g., the White Monastery founded by ↗Shenute of Atripe, the most important Coptic writer, on whom also he was the first to report). Yet, he never reached Ethiopia. In the monastic compound of St. Anthony near the Red Sea, in October 1672 he visited the ruins of a monastery, once inhabited by Ethiopians (Wansleben 1677a: 302). He returned to Paris via Asia Minor and Istanbul in 1677, having shipped in the course of time and from various places almost 600 manuscripts to France (Greek, Arabic, Syriac, Coptic, Persian, Turkish, Hebrew, but no Gəʿəz except one), now preserved in the Bibliothèque Nationale. All this notwithstanding, in consideration of the high costs undertaken and the disappointment for not reaching Ethiopia, Colbert considered W.'s expedition a failure. Fallen into disgrace, he lived poorly first taking residence at the Dominicans' house at rue Saint Jacques, in Paris, where he published his second travel account (ibid. 1677a) and his most important work, i.e. the *Histoire de l'Église d'Alexandrie* (ibid. 1677b), a milestone in the scientific investigation of Egyptian Church institutions, antiquities and writings, and eventually in Bourron in 1678, where he worked as parochial vicar and died. His planned extensive publications of Ethiopic works (where the identification of an ancient Gəʿəz version of a 3rd-cent. text of ↗Cyprian of Carthage, the *Epistle 70*, is also found, s. Wansleben 1671b) never took place.

After his death, a spurious anti-Catholic pamphlet circulating under his name (Wansleben 1679) was strongly criticized by Ludolf in the 2nd edition of the English translation of his *Historia* (s. Ludolf 1684: Preface, bifols. F–G).

Waq

W. (also *Awaqa*; adressed as *ğanḫʷe*, 'majesty' [Leslau 1979: 64, 453, cp. also ↗Žanhoy]) is one of three main ↗spirits or deities of the autochtonous ↗Gurage folk-↗religion. He is associated with the sky (as is his namesake ↗*Waaqa*) and his most important symbol is the shooting star. W. is believed to be the source of power and wealth. He is seen as protector of his people and their *gän* ('country' or 'district') in times of war and as guarantor of ↗'customary law' (*qič̣č̣a*) and 'justice' (*ang*). While the two other main spirits, ↗Dämʷamʷit and ↗Božžä, are venerated all over *Säbat bet* Gurage, W. has a local image, name and ritual tradition in each group. In fact, the term W. seems to cover a class of spirits rather than a single spiritual being. Such W. spirits are *Saᵓamär* in ↗Əndägañ, ↗Ənär and ↗Mäsmäs, *Gäbär* in ↗Ənnämor, *Awägʸä*(*t*) or *Ogʸät* in Čaha and Gumär, *Mando* or *Yənfaša* in ↗Geto, *Ənggʸäbär* in ↗Əža, and *Yämʷarär* in Aklil. In ↗Muḫər folk-religion, which has a high degree of Christian elements, *Iyäsus* (Jesus) was equated with W.

W. is venerated at various local sacred places situated on mountain tops and in groves. Every *gän* has its central shrine where chiefs are installed and assemblies are held under a holy ↗tree. The priests of his cult (*wäg* or *awaᵓə*), some of which are female, act as spirit mediums (↗Possession cults) and judges. They also function as convenors of the annual *č̣əst* feast in honour of W. Many of their ritual assistants are members of an endogamous social group, called ↗*fuga.*

Among all local W. cults of the western Gurage that of *Awägʸät*, the spiritual patron of the ↗*yäğoka* pan-Gurage assembly in the Yäbaze district of Čaha, achieved a central role by ritually and politically integrating the diverse subgroups. The highest representative of *Awägʸä*, is a female spirit medium with the title of *yogäp̣äča dämam* ('lady of Wägäp̣äča [the place of the shrine]'). She is chosen "by W." from the virgins of the Mäzäkʷər (Mazahur) clan. After a time of ritual seclusion she becomes the "ritual wife" of the *damo* of the Yənäqʷamt clan who inherits this office through his patrilineage. Her tenure ends after his death or in case she remains barren.

Today, the number of active followers of the Gurage religion is rather small. However, certain elements were integrated into Christian Orthodox and Islamic folk-religion (cp., e.g. ↗Abrät in EAE vol. 5). Attempts to maintain or revive the old cults remain on the local and clan level and are strongly discouraged by purist Orthodox Christian groups, such as, e.g., the *sänbät tämari* (lit. 'Sunday's students') in the case of Yawaqamʷeʸät of Gurša (Ǝža).

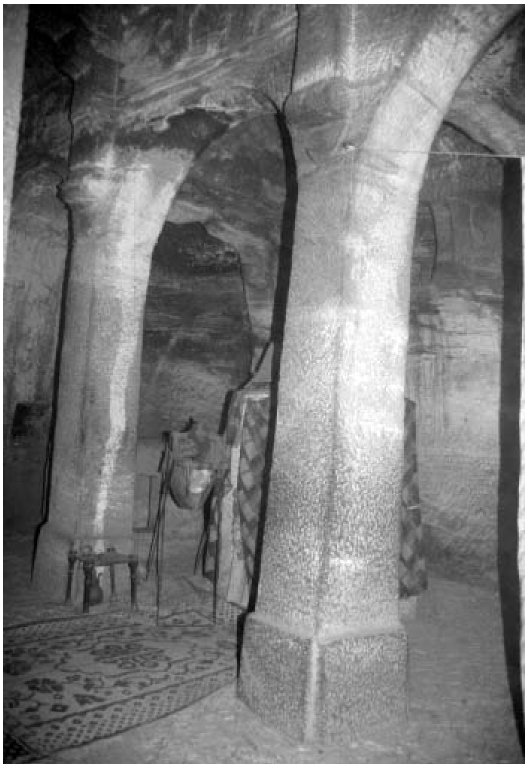
Wäqen Gabrəʾel

W.G. (**ወቄን፡ ገብርኤል**) is a ↗rock-hewn church in ↗Tämben, ca. 10 km east of ↗ᶜAbiy ᶜAddi. Its foundation and the establishment of a monastic community close by are attributed to a local saint Danəʾel of Tämben (15th cent.). The design of the church interior and the liturgical arrangement seem to confirm this attribution.

The limestone structure measures ca. 10 x 13 x 2.6 m. Its southern façade is exposed, while from the other three sides it is encircled by a fully excavated ambulatory, which at a later point was partially roofed over with huge flat stone slabs. In front of the western entrance, a pillared niche is excavated. The church is surrounded by a dozen cave-dwellings which were used by the hermits, and a large graveyard. Constructed walls with arched doors and windows around the western part were built by the Italians ca. 1935–41. Close to the church there is a rock pillar which, according to a local tradition, was the prayer site of *abba* Danəʾel.

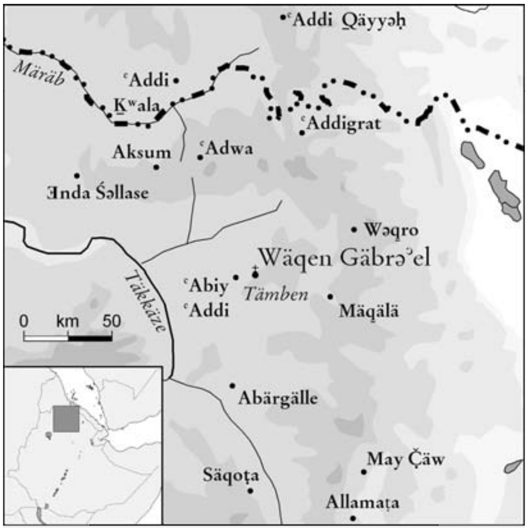
The interior of the church is divided by three pairs of pillars into three aisles of similar size and four bays. The division into sections is marked on the ceiling by flat lintels, with the exception of the intercolumnium in front of the sanctuary bay which is arched. The architrave of that part is decorated with a frieze of small arcades; the pilasters here do not descend all the way down to the ground but are interrupted at the level of the spandrels and are ended by the corbels. The western and northern walls are articulated by engaged pillars connected by large arches. Blind arcades are located below the three windows in the southern wall. The eastern wall behind the sanctuary is decorated with an imitation of windows, divided by small columns and supplied with traceries. The square compartments of the ceiling have either shallow domes or crosses in relief. In the central area of the sanctuary there is a high monolithic altar also functioning as the *mänbärä* ↗*tabot* and storage for liturgical paraphernalia (↗*Qəddase*: paraphernalia). Its top is decorated with a frieze composed of small arcades and crosses inscribed in the circles. A similar but smaller altar rises in the northern part, while the third, in the southern part, is constructed of stones.



Wäqen Gäbrəʾel, arches seen from the west entrance doorway, 15th cent.; photo 2000, courtesy of Michael Gervers

A large tablet-woven hanging (↗*Mägaräğa*), made of three cotton panels sewn together, stretches across the church from the north to the south, separating the first and second bays. Besides the intricate geometrical patterns, there are figural sections representing the church ceremonies and decoratively treated groups of animals.

There are carved crosses on both sides of the western door, and a twisted rope pattern above



the frieze of small arcades. A robed life-size figure is incised on the right-hand side. The door and its jambs are decorated with paintings in the Second Gondärine style: in the middle there is the Annunciation and Three Youths in the Furnace with a donor; on the right and left angels with raised swords and cherubs; above the Trinity, an anonymous saint and a donor couple. The southern exposed façade is decorated with blind arcades.

The most precious possession of the church is the 15th-cent. diamond-shaped shafted ↗cross of gilded bronze. An old wooden shafted cross is fastened at the top of a chest kept in the sanctuary.

Waqf

W. (pl., *awqāf*) is an 'endowment', usually, but not exclusively, in the form of landed property. It is established either for pious purposes (called *waqf ḫayrī*, 'public and charitable endowment'), or for the benefit of the members of the donor's family (called *waqf ahlī* or *waqf durrī* or *ᶜādī*). The genesis of the Islamic institution of W. can be traced back to the time of Caliph ᶜUmar (r. 634–644). There are traditions attributed to the Prophet about the merits of granting W. The regulations governing the granting, receiving and administration of W. property, and the conditions attached to it, were promulgated, defined and elaborated in the early ᶜAbbāsid period (8th cent. to mid-14th cent.).

The roots of W. include certain types of annuity that existed in pre-Islamic Arabia: contributions to the ↗*ǧihād*, the Byzantine practice of *piae causae* which was widespread especially in ↗Egypt, the desire of middle-class parents in 9th-cent. Iraq to exclude their daughters and their descendants from the benefits of the Islamic law of succession, and as a security against state confiscation of property.

Research on the origin, development and the extent of the practical application of W. in Ethiopia is still not well advanced. The existing literature is fragmentary and scattered. There are only cursory references to it in the secondary sources dealing with land tenure, Islam and Islamic institutions.

Trimingham's assertion that, in Ethiopia, "the institution of *waqf* (pious endowment) is weak compared to most Islamic countries" (TrIslam 233), is implausible in view of the long history of ↗Islam in the country. In the medieval Muslim states and those that flourished in subsequent centuries in other parts of the country (such as ↗Harär and ↗Wällo), the local rulers, pious and wealthy merchants, and cultivators set aside plots of land as W. which they granted to ↗mosques and teachers as sources of subsistence. In Harär, there were also W. farmlands bequeathed to members of families (Abbas Ahmed 1992: 52f.). In Wällo, the local rulers, prosperous merchants and cultivators granted plots of land to the mosque and prominent men of religion (Mengistu Abebe 1997: 45). In ↗Ǧimma, kings such as Abbaa Boqa (r. 1859–61) gave lands (*waqfi*) to merchants from northern Ethiopia (Taddese Semma 2007: 36). In the Muslim ↗Oromo kingdom of ↗Gommaa in south-western Ethiopia, kings provided land to the local scholars (Aman Seifedin 2006: 74). The last *sulṭān* of Ǧimma, ↗Abbaa Ǧifaar II (1861–1932), bought an apartment in ↗Mäčča which he turned into W. for accommodating Ethiopian pilgrims.

In Ethiopia the state forcibly took over W. and/or church lands (↗*Sämon*) at three different times. The first was the unsuccessful attempt of *aṣe* ↗Tewodros II to confiscate ecclesiastical lands. During the reign of *aṣe* ↗Yoḥannəs IV, lands that had been granted to mosques and prominent *šayḫs* by Muslim chiefs in Wällo were appropriated by the state and church, following the religious council of ↗Boru Meda in 1878 which imposed ↗Christianity on the Wällo Muslims. The third occasion was in 1975 when the military government issued a decree for the nationalization of the surplus lands and real-estate belonging to religious institutions. As a result, buildings owned by churches and mosques, especially those in Addis Abäba, were confiscated. For instance, the ↗Ǧāmiᶜ al-Anwar Mosque, which owned and collected monthly rents from shops that had been endowed to it by rich merchants, was deprived of its main income. The rent from the shops was to be shared with the other mosques of the city because, unlike the churches, the mosques never received any regular subsidy from the government. A few years after the overthrow of the regime in 1991, the current government discreetly but fully restored the confiscated properties to both the churches and the mosques.

In Eritrea, the institution of W. – both *ḫayrī* ('charitable') and *ahlī* ('family') – has been in practice for centuries, mostly in the coastal urban settings and later in towns of the interior. Up to late the mid-19th cent. legal records from the Islamic court of ↗Massawa include the foundation of endowments as well as other W.-related proceedings. Most endowed properties involved land, houses, rooms, stores, and water wells proceeds of which usually benefited Massawa's mosques (Miran 2009; Ibrāhīm al-Muḫtār 1958). In 1882 the Egyptian authorities established a *awqāf* committee in Massawa. In 1916 the Italian colonial administration promulgated a decree which legalized W. committees in Massawa, ↗Kärän and ↗Asmära, but it was implemented only in the 1930s. In 1936 a new decree stipulated the creation of a W. council in Asmära, but it was established only in 1943 (Yassin M. Aberra 1983–84). Under the ↗British Military Administration, the Grand Mufti of Eritrea granted *qāḍīs* in the principal towns the right to establish W. committees and appoint its members. In 1956 Ibrāhīm al-Muḫtār noted the existence of 288 endowed properties (esp. rooms, land) throughout Eritrea (Ibrāhīm al-Muḫtār 1956). Overall, the endowment of properties declined in the second half of the 20th cent. yet different *awqāf* councils still nowadays administer mosques and other religious institutions throughout the country.

Hussein Ahmed (W. in Ethiopia) –
Jonathan Miran (W. in Eritrea)

War(s)

Overview

W. can be defined as a large-scale armed combat between independent political units (or those striving to be so) in pursuit of power or dominance with regard to territory, people or to resources of a material or immaterial nature or because of competing value systems, ideologies, or notions of collective honour. W. can occur at the level of states, but also at that of political elites or of ethnic groups acting in a more or less organized way (s. Fukui – Turton 1979). In the history of the Ethio-Eritrean region and the Horn of Africa in general, W. have been a near-permanent feature of life, accountable for the formation as well as the destruction of states and non-state political entities, and cause for ↗migrations and perennial local-level conflicts over resources. In this the region has been no exception, but some specific patterns of conflict and warfare can be discerned, related to the types of state and communal relations that emerged and to the nature of its ethnic and religious formations.

Ethiopia, a political-geographical entity with shifting boundaries and historically the scene of a great diversity of peoples and local traditions, has been an arena of W. since living memory. The motives of W. throughout the centuries were fairly similar. Next to political dominance, conquest of resources, class struggle, control over people, territorial expansion in competition with other political units, or the quest by marginalized ethnic and regional communities for political inclusion, there were socio-cultural and religions motives which had a W.-propelling power of their own. Religious expansion was one of them (cf. Martin 1973). Some (pastoral) peoples had ritual requirements for warfare in connection with ↗initiation or bride-wealth systems (requiring males to gain livestock, show valour and achieve "killer status"), implying that in some cases W. was internally generated. In many Ethiopian cultural traditions (e.g., of the Amhara, Tǝgray, ↗Oromo, ↗Gurage, ↗Suri ↗ᶜAfar) participation in combat and success in W. came to be seen as positive (male) values. This is related to the "↗meritorious complex" (Braukämper 2002): the ideal of the self-made, assertive man (only occasionally, woman), becoming prominent through achievements in political manoeuvring and battle, which gained cultic aspects. Until this day, the public ritual enactment of ethnic identities in Ethiopia (e.g., on certain national holidays or commemorative days) is marked by the performance of stylized war dances and warrior ideals. Up to the late 20th cent., warfare was also the prime career choice to attain political prominence.

W. were also fuelled by political ideology, such as certain origin myths and ideas of religious identity and expansion also fuelled W.: ↗Aḥmad b. Ibrāhīm al-Ġāzī's ↗*ǧihād* against the Christian empire, and the armed struggle of *aṣe* ↗Yoḥannǝs IV against Ethiopian Muslims in the late 19th cent. W., being endemic to Ethiopia's political systems and a prime form of maintaining elite rule, defining relations and boundaries with other political units, profoundly shaped society and inter-group relations.

The impact of W. and warfare on history and society in the past two millennia has been pervasive, due to the traditionally contested hold of chiefs, provincial lords and emperors on their dominions, due to ceaseless disputes between emerging socio-political communities on borders and spheres of influence, and due to perennial local conflicts within competing smaller ethnic-based societies. W. thus played a role in the creation of states, chiefdoms and sultanates, but also caused lasting destruction and sapped the productive potential of the region. As Parkyns (1856: 55) wrote on northern Ethiopia, (civil) W. was "the perpetual scourge of Abyssinia", and the source of its poverty and other deficits due to the ongoing predations of the soldiery on ↗peasantry and ↗traders (cf. Caulk 1978). Warfare thus figured historically as a generative mechanism for the formation of authority, power structures, group boundaries and political units. W. had important economic and environmental ramifications, but also involved cultural values, group identities and social hierarchization, either as motivating factors or as reactive results of W. on collective identification.

Wars in non-state settings

While the traditional focus of Ethiopian historiography has always been of W. and its relation to the highland Christian state and the Muslim states, or – to a lesser extent, on indigenous kingdoms such as ↗Käfa, ↗Wälaytta, or the Oromo ↗Gibe states, there were at any point in time other processes of W. among decentralized societies in the Horn of Africa, such as the pastoral ↗Somali, the Gurage, or the ᶜAfar, or among small-scale chiefdom societies in the south-west. Examples are the ↗Konso, the ↗Dizi or the ↗Aari peoples, where the various sub-units frequently fought armed battles. Pastoralist groups such as the ↗Hamar, Suri, ↗Mursi, ↗Guǧǧi or ↗Boorana regularly clashed with sedentary farmers or other herding peoples. Knowledge about historical patterns and effects of W. among these groups is limited due to the absence of written records, but oral traditions contain numerous references to armed conflict. These societies in the south and west only engaged the Ethiopian highland state in the 1890s, when *aṣe* ↗Mǝnilǝk II's troops conquered and subdued them. In the non-state political formations W. were carried out for regional dominance or resources such as land, pasture and livestock in fragile ecological settings, although in many cases religious/cultural motives also played a role (e.g., Somali). Such societies usually had a strong in-group ethos and directed W. to territorially or ethnically different enemy groups, avoiding internal fighting (Taddesse Berisso in PICES 11, 312). As a rule, they knew warfare as a contained and ritualized activity whereby certain codes were respected and gross abuse was limited. In many of these loosely administered societies, local W. with neighbours continued up until recent years (Turton 1999). Still, these forms of W. were indirectly connected to those of the larger states, via relations of trade, resource extraction, political domination and forced conscription, notably since the late 19th cent. when imperial rule was extended over them.

History of wars

The emergence of the Aksumite empire (↗Aksum), a precursor of the medieval Ethiopian state, was a feat of W. (Marcus 1994: 5), in the course of which smaller polities were united in a new political formation under the influence of ideas of divine ↗kingship. For the Aksum state of the early 1st cent. A.D., W. was essential in its rise to regional power and to its subsequent economic and political expansion. The strong kingship that developed in Aksum was buttressed by an important military machine that reached in to ↗Sudan and ↗Yemen. The decline of Aksum in the 10th cent. eventually invited a violent take-over of power by the Agäw-based ↗Zagʷe state. This state showed much continuity with Aksum in political organization, religion and warfare practices, and was in its turn overthrown, probably by W., in 1268–70, when the ↗Solomonic dynasty took power and vested its rule in a neo-Aksumite royal ideology and a reconstituted Christian identity. In the Solomonic empire warrior-kings played an important role in both redefining, defending and expanding a renewed Ethiopian state. It emerged in parallel with a number of Muslim states in the east (e.g., ↗Ifat, ↗ᶜAdal, ↗Bale, ↗Däwaro) who competed with the Christian state for a variety of motives (territorial sovereignty, land, economic power over the coastal areas and trade routes, and religious identity). These Islamic states had emerged in the 9th cent. in the Red Sea coastal areas, territories never securely tributary to, let alone under the control of, Christian highland kings. Of the latter, ↗ᶜAmdä Ṣəyon was the most prominent figure, battling the Muslim warrior-kings such as ↗Ṣabraddīn who gradually tried to move westward into the highlands. Later episodes of W. followed under ↗Gälawdewos, ↗Minas, ↗Yəsḥaq, ↗Zärᵓa Yaᶜəqob, ↗Śärṣ́ä Dəngəl and ↗Iyasu I. The dynamics of W. between these two domains thus determined much of Ethiopia's history up to the late 19th cent., at least until ↗Tewodros II.

Soldiers were not salaried but were exempt from taxation, and had to rely on provisions and on quartering at the expense of the local population, which usually led to forced requisitioning and looting. They also received land as a recompense, worked by peasants (s., e.g., ↗*Madäriya*). *Aṣe* Tewodros was the first to start salaried remuneration (unsuccessfully), but it was *aṣe* ↗Ḫaylä Śəllase I who introduced the salaried standing ↗army after 1930. Even after this, soldiers regularly forced the local peasants in battle zones to give them provisions and property due to scarcity and low pay.

The organization of warfare showed remarkable continuity through the ages. The emperors had a core army around their camp (s. ↗*Kätäma*) or capital, but most of the country's defences was based on loyal ↗*č̣äwa* regiments as well as regiments that were formed on a territorial-ethnic basis (cf. TadTChurch 89ff.; Merid Wolde Aregay 1971: 282; 1997: 41) and were stationed in strategic border areas and regularly moved according to where major campaigns (s. also ↗*Zämäča*) were undertaken. Peasants could be called up for service by provincial lords at any time. Regimental organization was complex (cf. Merid Wolde Aregay 1971: 80–98). Personal ties of loyalty with the emperor (e.g., via kinship and affinal links) were important. Large numbers of soldiers were involved in the armies with tens of thousands of men and many more camp followers, although travel-writers had a strong tendency to overestimate the actual numbers. The size and the decentralized nature of the armies caused frequent lack of discipline and a lack of unity of purpose. Most of the army were ↗infantry armed with ↗lances, bow and arrows, ↗spears, clubs, ↗shields, sabres or ↗swords and knives. In the mid-16th cent. ↗fire-arms became important (Merid Wolde Aregay 1979), but were used only by a few strike units and lacked ammunition. Special units like the ↗Maya were known as skilled archers, with poisoned arrows. ↗Cavalry grew in importance in the late 16th cent. and became crucial in all subsequent W. until the early 20th cent. In the 17th–19th cent., notably, Oromo cavalry proved to be a formidable force in W. Actual warfare was bloody and ruthless, with no rights of prisoners respected and soldiers taking pride in their killing feats. Emasculation (s. also ↗Castration) of captured opponents occurred on all sides. Many of the vanquished were sold into ↗slavery.

A major period of W. that emerged from the age-old conflict between Muslim states and the Christian highland state occurred in the early 16th cent. with Aḥmad b. Ibrāhīm

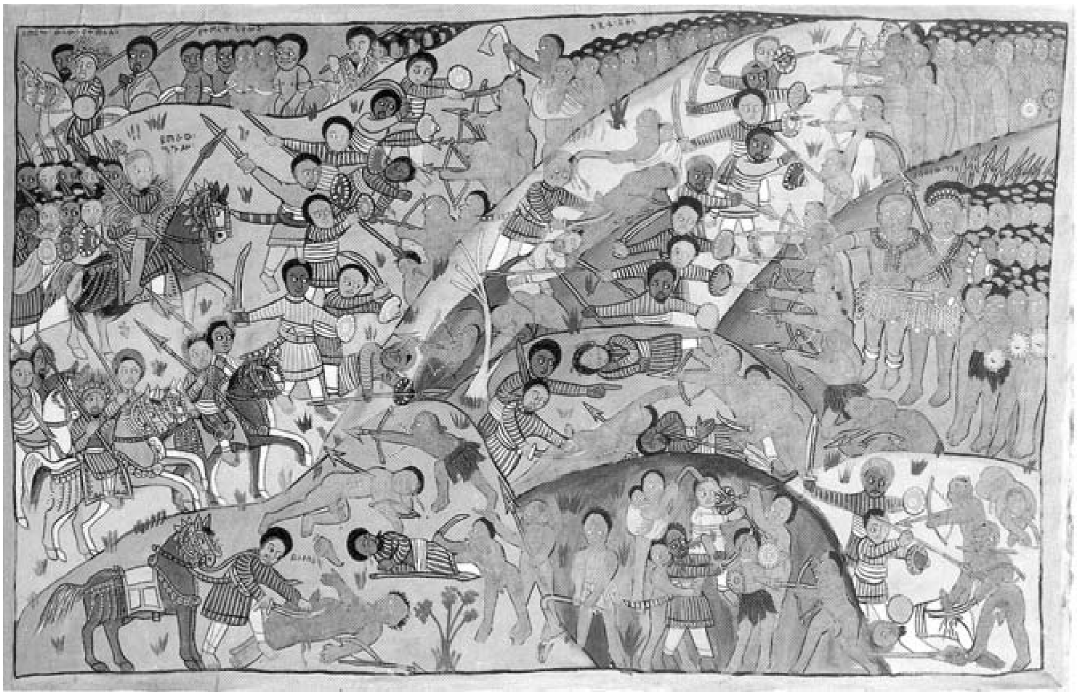

Fig. 1: Traditional depiction of a battle between the "Amhara king" and a southern people, by an unknown painter, ca. 1928, paint on cloth, 134 x 84 cm; from the Melchers collection, courtesy of the Übersee Museum Bremen

al-Ġāzī, the powerful leader of the ↗Harär sultanate, engaging the Solomonic state (1527–43). This became one of the most massive W. that Ethiopia experienced (BassHist). For the Muslim states it marked the transition from raiding and ambushing to organized W. in longer campaigns. New elite strike units like the ↗*mäläsay* were introduced by them. This well-described and highly influential period of W. had underlying demographic and politico-economic causes, but came to be marked by religious opposition. It led to major destruction of life and property and redefined Ethiopia and Christian–Muslim relations. It also meant a qualitative and quantitative transformation of W., in that for the first time fire-arms were used on a significant scale (first imported by the Turkish allies of Aḥmad b. Ibrāhīm and put at his disposal, and later by the Portuguese military contingent [↗Portugal, relations with]) that came to assist *aṣe* ↗Ləbnä Dəngəl in 1541) as well as the adoption of cavalry by both sides. Next to the huge number of casualties and the economic devastation, this W. (a self-proclaimed *ǧihād*) also saw the systematic destruction of cultural treasures and places of worship, notably churches, by Aḥmad's forces, and forced mass conversion of soldiers and peasantry as well as opportunistic defections to the opponent's side. The attempt to conquer and annihilate the Christian empire and religionwas also new; prior to this, W. was regulated by an idea of seeking dominance, trade route access and tribute, not wholesale conquest (cf. Merid Wolde Aregay 1971:75).

A second major period of W. was instigated in the wake of this W., when the northward migrations of the Oromo people into the highlands began, facilitated by the mutual exhaustion of the Muslim and Christian states. It led to long periods of major W. and territorial expansion that only ended in the 19th cent. This development not only evoked major political changes, but also showed innovations in the organization and scale of W. In their penetration of the highlands the Oromo, fuelled by population expansion, used mobile and highly organized units (*čəfra*) based on age grade organization (↗Age group systems; s. also ↗*Gadaa*), and, from the second half of the 16th cent., made effective use of cavalry, taken over from the highland state, which had long maintained royal mule and horse farms and stables. Contrary to some suggestions, neither the Oromo nor the Somali used ↗elephants or ↗camels in battle. While they were not united in a common political project, the Oromo came to be partly associated with and incorporated into the highland empire (cf. the Oromo regiments of *aṣe* ↗Susənyos), and had major influence at the royal court since the mid-18th cent. Other, southern Oromo sections formed new states in southwestern Ethiopia (↗Limmu Ǝnnarya, ↗Gomma, ↗Guumma; cf. MHasOr). The Oromo advance since the 1550s was not only directed to the areas of the Christian highland state but also deeply affected other kingdoms such as Käfa, Wälaytta and chiefdoms or segmentary societies such as the Gurage, ↗Sidaama, Somali, and numerous ethnic groups in the west, with whom W. were fought and many of whom were later incorporated. In the late 16th cent. the Oromo advance also led to the decline of eastern Muslim states, such as ᶜAdal and ↗Fäṭägar.

Apart from W. with neighbouring states, campaigns to subdue rebellious, semi-incorporated areas such as that of the ↗Betä Ǝsraᵓel (cf. CRHist 118–21) or defensive battles to ward off the Oromo, W. in the Christian highlands from the 16th cent. onwards had the character of internal W. Provincial warlords and the emperors were perpetually battling each other, vying for regional autonomy, power or economic resources. In addition, doctrinal divisions in the ↗Ethiopian Orthodox (Täwaḥədo) Church and constant conflict about royal succession also contributed to W. (s. also ↗*Zämänä mäsafənt*).

Since the 1550s the Ottomans sent their own well-armed military forces instead of proxies to discourage the Portuguese from becoming trade competitors in the Red Sea area. Previously some fire-arms from the Ottomans had reached the Ethiopian emperors, while larger numbers were provided to the forces of Aḥmad b. Ibrāhīm al-Ġāzī; the Ottomans had also sent reinforcements to the latter in the late 1530s–early 1540s (↗Ottoman empire). The Ottomans occupied ↗Massawa in 1557 and also ventured inland creating a precedent for later armed interventions by the Egyptians in 1875–76 and in 1885 (↗Egypt, relations with), and by the ↗Mahdists in the 1880s, leaving a massive trail of death and destruction.

In the 1880s a major period of W. was initiated in the context of European designs on Ethiopia, spurring Mənilək of Šäwa to embark on his violent conquest of the regions south and east of the Ethiopian heartland. Some of these regions (e.g., ↗Gamo, some Gurage areas) had nominally been part of the Ethiopian imperial state in medieval times, but consisted of autonomous states such as Käfa, Wälaytta and the Gibe kingdoms. These campaigns caused huge economic damage, great human suffering (cp. Vanderheym 1896) and redirected resources and migration flows to the imperial centre, buttressing its power. The use of fire-arms played a key role in securing the conquests (Merid Wolde Aregay 1979). Fire-arms had already been imported on a large scale by the highland warlords and emperors in the 19th cent.

In the Battle of ↗ᶜAdwa of 1896 the Italians had used qualitatively better fire-arms, but were outnumbered and outwitted by *aṣe* Mənilək II's forces. This historic battle had great symbolic value not only in Europe but also in Ethiopia itself, as some basic idea of national unity or national interest was forged. The actual battle was as devastating for local (Təgray) society as any previous imperial campaign (↗Italian war 1895–96). After 1896 *aṣe* Mənilək II could not prevent the advance of the Italians in Eritrea, who combinded to encroach and worked toward provoking a new W.

Mənilək's successor *ləǧ* ↗Iyasu tried to change the policies of the empire but operated unwisely in both foreign and internal affairs (in ↗World War I) and lapsed into a number of devastating slave raids, e.g., in the south. Forces loyal to him lost the Battle of ↗Sägäle in 1916 against *ras* Täfäri Mäkʷännən (later *aṣe* Ḫaylä Śəllase I). During the 20th cent., the technology of warfare rapidly changed, with the introduction of semi-automatic weapons, grenades, war planes, tanks, land-mines, etc. The Battle of Sägäle was the turning point proving the importance of machine-guns (used by Iyasu's opponents) over cavalry, which receded into history after 1930.

The ↗Italian war 1935–36 and the occupation of Ethiopia by Italy from 1936 to 1941 (↗Africa Orientale Italiana) introduced new forms of warfare and took a huge toll on Ethiopian society. Italy used aerial bombardment, tanks and poison gas (Pankhurst 1999; Sbacchi 2002), ruled by force and repression and massacred large numbers of (innocent) Ethiopians in reprisal killings (Addis Abäba 1937; Däbrä Libanos 1937). The Patriots' ↗resistance movement (Hilton 2007) turned to guerrilla warfare in the countryside, with support of the local population in many (but not all) areas.

After the end of the ↗War of Liberation and of ↗World War II, where the British forces, Pa-

Fig. 2: Ethiopian soldiers training the appropriate tactics during air raids; from Rikli 1935: 84

triots and troops of the Emperor defeated the Italians, and following the restoration of Ḫaylä Śəllase's reign after a period of British control (April 1941–January 1944), W. receded in Ethiopia, and, apart from the suppression of three major insurrections (the first ↗Wäyyane rebellion in 1943, the Goǧǧam revolt in 1968 and the Bale insurgency of 1963–70), W. was not seen again until the 1960s, with a low-key conflict against Eritrean separatists (↗Eritrean Liberation Front, ↗Eritrean People's Liberation Front [EPLF]). This developed into a full-scale W. under Mängəśtu Ḫaylä Maryam (↗Provisional Military Administrative Council; ↗Revolution) in 1977. The protracted conflict between the state army and the "liberation movements" fighting for independence caused tens of thousands of casualties and led to huge material damage and economic stagnation.

In 1975 a new phase of civil W. started when the ↗Tigray People's Liberation Front (TPLF), the ↗Oromo Liberation Front (OLF) and several other ethno-regional fronts emerged, fighting for people that felt excluded from power (cf. Gebru Tareke 2009). They embarked on sustained armed struggle. In response the Ethiopian regime, with its Marxist ideology and a strongly authoritarian military dictatorship, and following a rigid unitary state formula, built up one of the largest and best-equipped armies in Africa, with an ↗air force and modern arms of Soviet origin. However, it did not succeed in containing the insurgents. Other violent episodes in Ethiopia were the "Red Terror" campaigns of 1976–77 carried out by the *Därg* government against leftist parties and urban guerrilla movements that took the lives of some 30–40,000 mostly young people, and almost simultaneously the W. initiated by ↗Somalia against Ethiopia in 1977–78, which was only won by Ethiopia with the support of Cuban troops.

In the *Därg* era, W. had a deeply corrosive effect on the economy, the political system and on society, with people losing trust in government and their fellow citizens, and with the traditional moral, social and religious values under great duress. The *Därg* regime collapsed under the strain of W. and internal dissent in May 1991 (Gebru Tareke 2009; Fantahun Ayyele 2009), after which the insurgent movements TPLF and EPLF took over power respectively in Addis Abäba and Asmära, Eritrea.

W. did not end, however, with this new post-1991 political dispensation, because, apart from regular ethnic clashes and ongoing low-intensity struggles of various insurgent fronts (including the OLF), a large-scale "border W." between Eritrea and Ethiopia erupted in May 1998, leading to ca. 80–90,000 deaths, hundreds of thousands of displaced, massive destruction and an end to the political alliance between the two countries (Jacquin-Berdal – Plaut 2004). On the domestic front, while Ethiopia did not see a return to civil war, nevertheless regular violent "ethnic clashes" have caused the deaths of thousands of citizens over the past 18 years. This reveals the continuing deep divisions caused by centuries of conflict and the difficulty of overcoming the violent legacy of the past (cp. Triulzi 2006).

Societal effects of war

In the Ethiopian medieval era, the feudalist social organization (↗Feudalism), with its classes of royals, nobles, soldiers, peasants and craftsmen, led to a self-perpetuating predatory regime that lived off the produce and resources of peasants and traders. While the emperors did not officially permit the looting and robbing of local peasant populations (Merid Wolde Aregay 1971: 92; 1997) – indeed proclamations were later issued against it (by e.g. Tewodros and Mənilək) – the soldiery was more often than not undisciplined and engaged in the same, notably when their supplies ran out, or after a victory. Chronicles and eyewitness reports never fail to refer to the constant depredations of soldiers on the local population (PankBord 70, 159). Ironically, throughout Ethiopian history until today, foot soldiers were mostly recruited from the impoverished peasantry, the unemployed, the poor, underprivileged, and criminal elements (cf. PankBord 148), as well as from smaller and often marginal ethnic groups, who were put in special units (like the post-1991 *fäṭno däraš* units), thus perpetuating the problem.

While W. and warfare has certainly not determined all aspects of Ethio–Eritrean culture and society, its effects throughout history have been devastating, causing structural, long-term damage. Familiar effects of W., next to the high numbers of dead, maimed and traumatized, were impoverishment, crop destruction and ↗famine, war-induced diseases, recurring "ethnic" tension, a state of insecurity, sexual violence and spread of venereal disease (Pankhurst 1963: 143), lack of state investments and development, continued political authoritarianism, and distrust between local communities and social strata. Another effect was perpetual instability in the wider region of the Horn, notably in the late 20th cent. (Gebru Tareke 2009).

At the same time, warfare figured in the identity discourse of most political and ethnic groups (↗Ethnicity). The public self-presentation of ethnic or territorial communities in public ritual and on commemorative days often showed a notable emphasis on militarist symbols and identity markers. These values of (masculine) self-assertion then continued to shape warfare as a social practice. The role of women in W. was supportive of their warriors and their community; not only did they, as dependents, provide supplies and were camp followers, they also verbally and otherwise encouraged men to engage in battle.

Historically, W. could be said to have created a "culture of warfare" in the region, an institutionalized ethos of violent conflict resolution, and of militant responses to exploitation, insult and humiliation via recourse to violent action. This ethos often coexists with modes of accommodation and conflict resolution still present at the local level, but has prevented the emergence of a shared, institutionalized system of consensus politics at the national level.

Jon G. Abbink

War of Liberation

The W.L. refers to the final period of Italian occupation. During the five years of ↗Africa Orientale Italiana rule over Ethiopia and Somalia, ↗resistance against Italian occupation mounted steadily. The last phase, known also as the East Africa Campaign, saw the decisive intervention of allied powers and is the main focus of this entry. It was part of the allied offensive against the Axis during ↗World War II.

The W.L. campaign fell under the British Middle East Command. The vast majority of the British allied forces involved were from British Commonwealth nations, including troops from the Sudan, ↗British Somaliland, British East Africa, the Indian Empire, South Africa, Northern Rhodesia, Southern Rhodesia, Nyasaland and British West Africa (↗United Kingdom). In addition, there were Ethiopian irregular forces, Free French forces (cp. ↗Messmer) and Free Belgian forces. The Italian forces included Italian nationals, East African colonials (Eritreans, Ethiopians, and Somali *dubats*) and a small number of German volunteers (the "Compagnia Autocarrata Tedesca", i.e. German Motorized Company). The majority of the Italian forces were East African colonials led by Italian officers.

At the end of October 1940, because of the increasing Axis threat in the ↗Middle East, the British Foreign Secretary, Anthony ↗Eden convened a conference in ↗Khartoum. In attendance were Emperor ↗Ḫaylä Śəllase I, South African General Jan Smuts, the Commander-in-Chief of the Middle East Command, ↗Wavell, and senior military commanders in East Africa including Lieutenant-General Platt and Lieutenant-General ↗Cunningham. The general plan of attack was agreed upon at this conference (Wavell 1946). On 19 January 1941, British and Indian forces commanded by General Platt captured ↗Kassala and then advanced from Sudan into Italian-occupied Eritrea. The next day, Ḫaylä Śəllase, accompanied by Orde ↗Wingate, entered Goǧǧam, also from Sudan (↗Omedla). Four days later, and some 1,000–1,600 km to the south-east, British, East African and South African forces under General Cunningham launched a campaign from Kenya into ↗Italian Somaliland.

Italian forces had been demoralized by four years of Ethiopian Patriot military activity. Moreover, the Italian Central Command ("Comando Centrale") was planning for a war after 1942. In the summer of 1940, they were not prepared for a prolonged war or to occupy extensive areas of the African continent (however, they had occupied British Somaliland a short while earlier). As a result, the Italians were weaker than British estimates had predicted. On 2 February 1941, the Battle of ↗Kärän began. Italian troops managed to withstand repeated assaults by two British Indian Infantry Divisions. On 11 February 1941, General Cunningham's forces from Kenya invaded Italian Somaliland. On 24 February, his troops occupied Mogadishu and captured a sizeable quantity of military equipment and on 17 March they moved northward to ↗Ǧiǧiga. On 16 March, the Royal Navy recaptured British Somaliland. Meanwhile, allied forces from the west captured Kärän on 26 March and three days later allied troops entered ↗Harär.

On 1 April 1941, British forces occupied ↗Asmära and on the following day the British set up a provisory government structure in Asmära, the Occupied Enemy Territory Administration. Two days later, the ↗Gideon Force, commanded by Wingate, liberated ↗Däbrä Marqos. The next day, *ras* ↗Śəyyum Mängäša arrived in Asmära with 7,000 troops and offered them to the British. At the same time, Amedeo di ↗Savoia, Duke of Aosta, left Addis Abäba and headed into the mountain stronghold of ↗Ambalage. On 6 April, South African troops liberated Addis Abäba and four days later the Emperor's army, though poorly armed and often lacking adequate supplies or air support, captured Däbrä Marqos. The Patriots, under the command of *ras* ↗Abbäbä Arägay, consolidated themselves around Addis Abäba.

On 5 May 1941, the Emperor returned to Ethiopia. On 19 May, the Duke of Aosta and 5,000 Italian troops surrendered at Ambalage. Shortly thereafter, Italian General Guglielmo ↗Nasi surrendered his forces at Gondär. Over the next few months, Ethiopian and allied forces undertook several "mopping up" campaigns. On 27 November, the last significant campaign ended with the fall of Gondär to the British and the Patriots. Ethiopia thus became the first country to be freed from Axis conquest.

During the last phase (1940–42) of the W.L., the Italians had deployed some 325,000 soldiers and officers in Ethiopia and Somalia. The allies numbered between 30,000 and 50,000 soldiers plus several thousand patriot forces. During the fighting, 15,211 troops from both sides were killed, 38,152 were wounded and 100,000 were captured by the allied forces and the Ethiopian patriots. Emperor Ḫaylä Śəllase quickly reestablished his power and gradually distanced himself from his British allies, who had established a British Military Administration to administer Ethiopia (only in 1944 fully recognizing Ethiopia's sovereignty in an Ethiopian–British Treaty).

Warder

W. is the capital town of both the W. administrative zone and the W. *wäräda* of the Somali Regional State (for location s. map for Wälwäl). This zone (392,377 inhabitants, CSA 2004) forms a wedge between the former Somaliland, to the north, and the former Somalia Italiana territories to the south-east.

40 km to the north of W. lies the ↗Wälwäl post where on 6 December 1934 a column of Ethiopian troops faced Italian *dubat* (i.e. armed irregular bands employed by the Italian *Regio Corpo Truppe Coloniali*). ↗Mussolini used this confrontation as a pretext to start the conquest of Ethiopia.

The 70 wells of W. were guarded by a small fort which belonged to the sultans of ↗Hobyo. During the Italian occupation W. was the head of the *Commissariato dell'Ogaden* (Guida). In 1955 Great Britain ceded the northern part of the W. region to Ethiopia as a part of the Hawd (s. ↗Ogaden: Hawd and Reserved Areas).

W. again became a post of the Ethiopian army which combated the Western Somali Liberation Front guerrilla.

Until the 1987-administrative reform W. was the capital of the Wälwäl and W. *awraǧǧa* – larger than the present zone – which was a division of the ↗Harär region, and from 1987 to 1991 a part of the Ogaden autonomous region. W., which still retains its military function, today provides administrative services. Therefore, its population has increased (17,558 inhabitants in CSA 2004) at the expense of the population of the *wäräda* which has decreased from 21,892 inhabitants in 1994 to 20,516 inhabitants in 2004.

Wärǧih

W. (**ወርጂህ**, sp. variants: Warǧih, Wargeh, Wargar, Wegar) is an ethnic group first mentioned in the so-called Chronicle of ↗Šäwa (mostly dated to the 13th-cent.). The Chronicle states that the Amhara unsuccessfully attacked the W. in 1128 (Cerulli 1941: 18).

The W. herded cattle and camels in the lowlands east of the Awaš valley. They were already Muslims by that time. The Chronicle of *aṣe* ↗ᶜAmdä Ṣəyon I (MarAmdS 54ff., 184 and s. index) located both the W. and the Gabal nomads in this lowland region. ᶜAmdä Ṣəyon I fought against the W. in the early 14th cent. as part of his expansion of the boundaries of Šäwa.

The W. maintained themselves over the centuries, but surprisingly do not seem to appear in the 16th-cent. ↗*Futūḥ al-Ḥabaša*. By the 19th cent., the W. had become the dominant merchants throughout Šäwa, and traded into the southern regions such as the five Oromo ↗Gibe kingdoms of that period. These W. merchant activities were a key factor in the Islamization of these kingdoms between 1840 and 1870 (TrIslam 199).

In the late 19th cent., they were in the vicinity of Addis Abäba and said they had originated from Harär. They are described as "very fanatical Muslims" who worked as traders, traveling to Oromo areas. According to Mondon-Vidailhet, the W. distinguished themselves from another Muslim merchant group called the "Təgri" who lived more closely with the local sedentary population. The W. refused to interact with the "Təgri", including the refusal to eat meat killed by them (Mondon-Vidailhet 1900: 170). As late as the mid-20th cent., the W. who lived just south of Addis Abäba were still traders who were furthering the expansion of Islam among some of the ↗Gurage (Merid Wolde Aregay 1974: 270; TrIslam 186).

The relationship of the W. as traders with the ↗Ǧäbärti and the ↗Afkala is not clear, unless the W. were simply the earliest Muslim traders in the region, at least back to the 14th cent., and the Ǧäbärti came later. The Afkala were well known to have at least partially derived from the Ǧäbärti (MHasOr 138–42).

James Quirin

Wärqa

W. (**ወርቃ**; 5° 58' N–38° 17' 38° E) is a small market town located 23 km east of Yərga Çaffee in the Kočəre *wäräda*, a division of the ↗Gideᵓo zone of the Southern Nations, Nationalities and Peoples Regional State. Due to its low population it is not included in the Statistical Abstract list (2006). The other "towns" of the Kočəre *wäräda*, which is very rural and densely populated (469,6 inhabitants/km^2), are found along the main Dilla–Moyale road: Gädäb (9,023 inhabitants) not far from W. to the west, and further to the west Çäläqtu (7,944 inhabitants) and Fəśśəḥa Gännät (4,418 inhabitants).

W. is surrounded by a rich agricultural region where coffee and *ənsät* have been grown since peasants were forced by *däǧǧazmač* ↗Balča to do so (McClellan 1988). The place is situated on the highlands which separate the Lake ↗Çamo basin from the ↗Ganaalee river basin. Since the 1991-administrative reform W. borders on the Bore *wäräda* (inhabited by ↗Guǧǧi Oromo) of Oromiyaa.

Wärqənäh Ǝšäte

W.Ǝ. (**ወርቅነህ፡ እሸቴ**, also "*hakim* W.", "*azzaž* W.", "Dr. Charles Martin"; b. 1865, Gondär, d. 1952, Addis Abäba) was a statesman, diplomat, administrator and author. Ethiopia's first western trained physician, he significantly influenced modern ↗medicine, ↗education and economic development in the country.

He was found abandoned on the battlefield at ↗Mäqdäla in 1868 by a British officer who took him back to India, gave him his first name (Charles) and started his education. In 1882 he graduated from the Lahore Medical College and joined the Indian Medical Service in Burma where he served on and off from 1891 to 1919.

In 1899 W.Ǝ. returned to Ethiopia on the personal invitation of *aṣe* ↗Mənilək II. In 1902 and 1903 he served on two joint Ethio–British missions in the ↗Ogaden against ↗Muḥammad ᶜAbdallāh Ḥasan. From 1908 to 1913 he attended to Mənilək as a state-appointed doctor during the monarch's last medical crisis. His diary also keeps record of his medical service to *abunä* ↗Matewos, *ləǧ* ↗Iyasu and ↗Ḫaylä Śəllase I as well as many ordinary Ethiopians.

W.Ǝ.'s marriage to Qäṣälä Tullu, a member of ↗Gobäna Dači's family and a relative of ↗Zäwditu, Mänän and *ləǧ* Iyasu, significally increased W.Ǝ.'s influence at the court.

His service in Burma from 1913 to 1919 qualified him for an Indian Civil Service pension. Back in Ethiopia, he got closely associated with a group of progressive Ethiopians and put his hand to various projects in addition to his medical work: model farms, a flour mill, printing, road construction, liberation of slaves and a school for them once freed.

W.Ǝ. was appointed principal of the Täfäri Mäkʷännən School and wrote a textbook in world geography for its students. In the 1920s he was sent on numerous missions abroad to the U.S., Britain and to India. In 1930 he was named governor of ↗Çärçär, a model *awraǧǧa* where

Wärqənäh Ǝšäte (left), Princess Ṣäḥay Ḫaylä Śəllase I (middle) and the emperor Ḫaylä Śəllase on the day of their arrival in exile in Great Britain in May 1936; from *EthObs* 3, 2, 1959: 333

he had a reservoir built, piped water, built roads, bridges, a dispensary and founded a school.

In 1935 he became ambassador to the ↗United Kingdom. In London he played a key role in protesting the Italian invasion of Ethiopia and mobilizing British public opinion. His two eldest sons, Joseph and Benjamin, returned to Ethiopia to fight and were killed in the ↗Italian war of 1935–36.

On his return to Addis Abäba in 1942, W.Ǝ. retired from active political life.

Wärqənäh Gäbäyyähu

W.G. (**ወርቅነህ፡ ገበየሁ**; b. 1925, Gondär, d. 17 December 1960, Addis Abäba) was a military officer. Born to poor parents, he attended ↗Mənilək II Secondary School and later distinguished himself at an ↗Imperial Bodyguard training course. Between March 1952 and April 1953, captain W.G. served with distinction as the operations officer of the 2nd Qaññäw Battalion in Korea.

After returning to Ethiopia, W.G.'s career flourished. ↗Mängəśtu Nəway, his mentor and Commander at the Imperial Bodyguard, assigned him to security and intelligence work. His performance earned him a promotion to Major. In 1957, he visited ↗Japan on behalf of *aṣe* ↗Ḫaylä Śəllase I to assess trade prospects. In May 1959, W.G. became Assistant Minister for Security in the Ministry of the Interior and in December he was promoted to Lieutenant-Colonel and joined the Emperor's private cabinet as Deputy Chief of Staff.

Despite his rapid rise in the imperial government, W.G. grew critical of the government and considered his superiors to be corrupt, ignorant, incompetent and inefficient. Thus, in collaboration with other officers – including Generals Mängəśtu Nəway, Ṣəgge Dibu and ↗Gärmame Nəway – he conspired to overthrow Ḫaylä Śəllase (↗Coup d'etat 1960, s. EAE vol. 2, 1081–82). He convinced Crown Prince ↗Asfa Wäsän Ḫaylä Śəllase to support their cause and to assume leadership of the coup. The latter accepted and authorized the arrest of his father at the airport when he returned from his visit to Brazil. The Crown Prince would then depose the Emperor and declare the establishment of a popular government.

On 14 December 1960, W.G. and Mängəśtu Nəway ordered the arrest of nearly all Cabinet Ministers and other senior officials who were close to the Emperor. However, on 15 December 1960, the situation deteriorated for the Coup leaders as Mängəśtu Nəway failed to prepare his forces for battle and the loyal Ethiopian Army received reinforcements by air, rail and road. On 16 December, it had become evident that the coup had failed. W.G., however, refused to leave the capital.

Upon arriving in Addis Abäba, Ḫaylä Śəllase ordered an investigation and authorized the arrest of all those who directly or indirectly had participated in the Coup attempt with the exception of the Crown Prince. The following day, a despondent W.G., after shouting at his assailants that "Tewodros has taught me something", shot himself. The authorities hanged him and placed his body, together with those of other rebels, on display in Addis Abäba.

Wärqitu

Wäyzäro W. (**ወርቂቱ**, full name Wärqitu Wädaǧo; fl. mid-19th cent.) was a female leader and warrior in ↗Wällo.

W. was one of the wives of *imām* ᶜAli "Abba Bulla" of the ↗Mammädočč dynasty which was the most powerful ruling family in Wällo at the beginning of the 19th cent. After the death of her husband in 1852, W. controlled the strategic area around *amba* ↗Mäqdäla, acting as regent for her young son Amäde ᶜAli.

After his coronation in 1855, ↗Tewodros II conducted several devastating campaigns against Wällo, establishing his headquarters at Mäqdäla. He captured W.'s son Amäde ᶜAli and made him a prisoner. W. played an active part in the resistance of Wällo to Tewodros, but she was hampered by her son's captivity and ensuing negotiations. When Tewodros asked her to hand over deserters in exchange for her son's safety, she had to refuse because she did not have the consent of the other chiefs of Wällo on whom she depended (Stern 1868:218).

In 1865, W. helped the young Mənilək (future ↗Mənilək II) to escape from captivity at Mäqdäla, by sending soldiers to escort him to Šäwa. In retaliation, Tewodros executed Amäde ᶜAli. The death of her son robbed W. of her basis for claiming overlordship of Wällo.

W.'s main rival was another woman leader, *wäyzäro* ↗Mästawät, from another branch of the Mammädočč. She was a widow of W.'s husband's nephew and rival *imām* ↗Libän Amäde, and acted as regent for her son Amäde Libän "Abba Waṭäw". W. and Mästawät competed with each other in an intense rivalry, each of them striving to unify the armies of Wällo.

After having taken refuge at ↗Ləčče in Šäwa, W. was helped by Mənilək in reciprocation for her earlier assistance to him in his escape from Mäqdäla. In 1867 Mənilək led a campaign in Wällo in order to have W. recognized as the province's legitimate leader. She was followed by a boy which was presented as her grandson (according to Blanc 1868:298). In reality he probably was the future Wällo leader Mäḥammäd ᶜAli (s. ↗Mikaʾel ᶜAli), actually her stepson, the son of another wife of her husband.

The date and circumstances of W.'s death remain obscure. Since she is mentioned neither in written nor oral sources referring to the period after 1868, her death may have occurred not much later after the ↗Napier expedition. Moreover, since no dramatic tradition of her disappearance from the political scene has survived, she probably died a natural death.

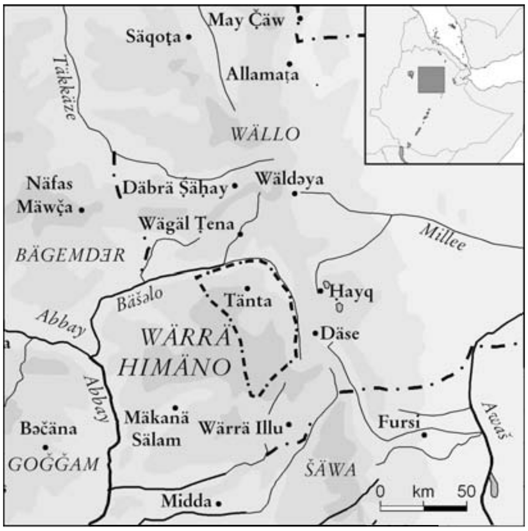
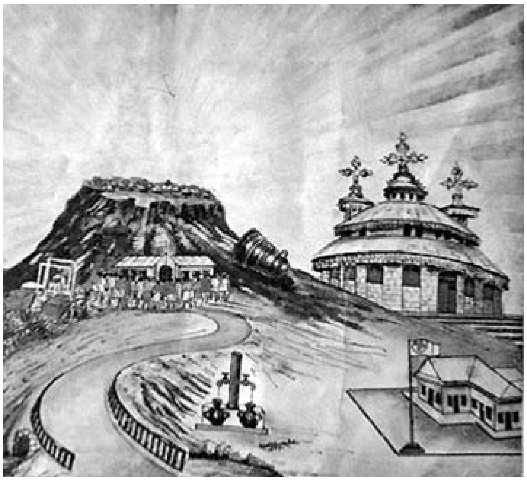
Wärr Day ↗Orma

Wärrä Himäno

W.H. (**ወረ፡ ሂመኖ**, Orom. sp.: Warra Himano) is a highland territory in southern ↗Wällo, which borders on Ṭala to the east, Gärado to the west and Bäšəlo to the north. W.H. appears in the first descriptions of Wällo in the middle of the 19th cent. It is mentioned as one of the *Säbat bet Wällo* ("Seven Houses of Wällo"), i.e. clans of ↗Oromo origin constituting the network of power relations in Wällo during the ↗*Zämänä mäsafənt*. While *wärrä* designates the 'household', there are two etymological assumptions explaining Himäno: it may either derive from the name of an Oromo ancestor called Hibano or from the Amharic word *haymanot* ('faith, religion') following a construction parallel to another toponym, ↗Wärrä Qallu ('house of the priest').

The concept of W.H. as a large territorial unit may be a late construction, probably after the territories of ↗Abbe Bet and Ali Bet had been unified under a new rule based on the expansion of Islam in the region. At the end of the 18th cent. W.H. was conquered by *šayḫ* Muḥammäd Abbaa Ǧibo, one of the prominent figures of the ↗Mammädočč ruling family who promoted Islam against divisions and warfare between local chiefdoms. In the first half of the 19th cent. W.H. remained the stronghold of the Mammädočč





Symbolic representation of the Wärrä Himäno landscape, with Mäqdäla in the centre (with the cannon "Sebastopol"), the church Tänta Mikaᵓel on the right, and a mosque on the left; from the cover of a publication of the *Association for the Restoration, Care and Improvement of the Ruins of the Holy and Historical Places of the Wärrä Himano Region*

imāms who dominated the political arena of Wällo. The town of ↗Tänta was their headquarters, as it was situated on the edge of a plateau which was at a strategic position overlooking Amba ↗Mäqdäla and the country beyond the Bäšəlo (Wadla, Dälanta, and Dawənt). In 1855 *aṣe* ↗Tewodros II conquered Wällo and settled his headquarters at Amba Mäqdäla. He waged several campaigns to reduce the resistance of the Wällo armies. These wars ravaged W.H. During the last decade of the 19th cent., under *ras* ↗Mikaᵓel Ali, the influence of this territory progressively declined with the growth of ↗Wärrä Illu in the south of the region and the development of trade routes in the east which was boosted by the foundation of ↗Däse as a regional capital. During the second half of the 20th cent. W.H. constituted an *awrağğa* of Wällo province. After 1991, it disappeared as a territorial unit, being divided between three *wärädas* of South Wällo zone, Tänta *wäräda* (administrative centre: Ağebar), Mäqdäla *wäräda* (administrative centre: Maša) and Läggambo *wäräda* (administrative centre: Aqästa).

Eloi Ficquet

Wärrä Illu

W.I. (**ወረ፡ ኢሉ**, Amh. also Wärrayəllu, Orom. sp.: Warra Illuu) is a town and a territory in southern ↗Wällo (for location s. map for Wəç̣ale). Etymologically, W.I. designated the area of settlement of the Illuu lineage (Orom.: *warra*) which was one of the groups composing the clan of the Walloo [Wällo] Oromo which occupied the region in the beginning of the 17th cent. The town of W.I. is located on a plateau at an altitude of 2,700 m A.S.L. Geographically, W.I. is a kind of natural checkpoint where the plateau is narrowing between two steep defiles, one of the upper ↗Wänč̣ət to the east, and the other of the upper Därame to the west. This configuration contributed to the development of an important regional marketplace, markets being held on Thursdays.

Due to its strategic position, the town of W.I. was founded as a royal camp and garrison (↗*Kätäma*) by *nəguś* ↗Mənilək [II] of Šäwa, around 1868. Immediately after his escape from custody in Mäqdäla, Mənilək fought to subjugate the insurrectionary territory of Wällo in order to protect the northern boundary of Šäwa against his Christian competitors. For this purpose, W.I. was strongly fortified. A description of the royal residence of W.I. in 1875 is given by the French traveller Lande (who accompanied Pierre Arnoux, Lande 1878): "The royal residence at Woreillou is located on a high plateau and is surrounded by large crenelated walls […]. These walls contain the palace of the king, the courthouse where he renders justice, vast stores and the housings necessary for the servants, always extremely numerous. At the highest point of the plateau, there is a gigantic olive-tree […].: it is an old idol of the Galla. Outside the enclosure, the army of more than forty thousand men, formed with her camping like a large city".

In the 1870s Mənilək frequently stayed at W.I., and this town played a great role in the system of power that he was building. *Wäyzäro* ↗Zäwditu, daughter of Mənilək, was born at W.I. in 1876. This birth was probably the reason of the rebellion of *wäyzäro* ↗Bafäna, Mənilək's first wife. As a consequence of this rebellion, W.I. was burnt in 1877 by Muḥammad ᶜAli (later *nəguś* ↗Mikaᵓel ᶜAli), and immediately rebuilt. After Mənilək became emperor and moved his capital south to Addis Abäba, W.I. declined somewhat in importance. In 1895 it became a supply dump, where large stocks of guns and cartridges were stored, serving as an organizing point for the Ethiopian army before the battle of ᶜAdwa.

Before its foundation as a town, the area of W.I. was part of the territory of ↗Läga Gora, under the rule of the Gatiročč family. Later, in the provincial administration of the modern Ethiopian state as the town of W.I. was essential in the power structure of Mənilək's state, it gave its name to a large group of territories, comprising the former independent chiefdoms of Läga Gora and ↗Lägä Hidda.

The size and the status of territory of W.I. were subject to many changes. In 1883, the territory around W.I. was given to Zäwditu by *aṣe* ↗Yoḥannəs IV as a gift of marriage with his son ↗Arᵓaya Śəllase. As Zäwditu's private property this territory had a special status. After the coronation of ↗Ḫaylä Śəllase I in 1930 it went under the authority of the governor of Wällo, Crown Prince ↗Asfa Wäsän, but its administration remained quite distinct from that of the rest of Wällo.

After the reorganization of regional administration in 1942, it became an *awrağğa* of Wällo, comprising the *wäräda* of W.I. proper, Ğama and Lägä Hidda. Since 1991, it is a *wäräda* of South Wällo zone. According to the 1994 census, the town of W.I. was populated with 5,809 inhabitants, while the *wäräda* of W.I. was populated with 120,193. According to the first draft of the 2007 census, the population of the *wäräda* seems to have declined with 109,200 inhabitants.

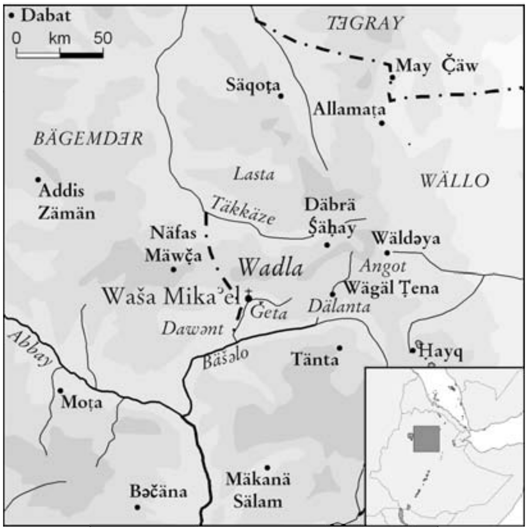
Wärrä Qallu ↗Qallu

Wärräsek ↗Yäğğu

Waša Mikaᵓel

W.M. (ዋሻ፡ ሚካኤል) is a rock-hewn church dedicated to the archangel Michael and located in the highlands of ↗Angot, ↗Wadla *wäräda* (Gašina), close to the gorge of the Ğeta River. According to a local tradition it was founded at the beginning of the 6th cent. by *abunä* ↗Muse. The place is not mentioned in any known historical source and remained unknown to the international scholarship until ten years ago.

The church is excavated into a hill situated in the centre of a valley. The ellipsoidal interior (ca. 10 m long, 10–12 m wide and 3–4.5 m high) is organized by four massive pillars (ca. 1.5 x 1.5 m) rising from the square base. The structure is prolonged to the east by a ca. 4 m deep apsidial sanctuary, hidden behind a monolithic wall, very thick but not reaching the ceiling. The wall has two openings: the central one covered by a massive arch reposing on the engaged capitals, and the southern one, square and very low. In the sanctuary, there is a modern *mänbärä* ↗*tabot* covered by a wooden baldachin. Three wooden poles at the front of the sanctuary are most probably the remains of an old wooden chancel. The west wall is divided in the middle by a large engaged pillar. The secondary arrangement of the interior added constructed walls (ca. 2 m high) between the first and the second pair of pillars (north-south axis), each supplied by a centrally placed door flanked by two windows, and each screened by hanging textiles (the wall between the first pair is partly destroyed). The church is accessible by three entries, two in the western façade and one close to



The rocky outcrop of Waša Mikaʾel, Wällo, church and compound; photo 2005, courtesy of Michael Gervers

the north-west corner. The light comes from three windows cut in the western wall, two of them just above the doors.

The concave southern and northern walls, as well as the western one, are covered with reliefs displaying hunters (some of them on a horseback) armed with bows and spears, along with rows of wild animals: ↗elephants, bears, antelopes, lions and ostriches. The sets on the southern and western walls bear traces of colour. Several carved and painted crosses are visible on the western wall above the doors and between the windows, as well as on the lower part of the first pair of pillars where they face the entry – obviously with an apotropaic function. A strange, quasi-human, sitting figure and a cross are carved on the southern face of the west-south pillar. The reliefs are difficult to date since no parallels for them have been found in Ethiopia but, taking into consideration the many carved crosses – which seem to be contemporary with the hunting scenes, – as well as the figure on the pillar, one may surmise that they do not predate the foundation of the church.

The interior is decorated with two sets of wall-↗paintings. The older, concentrated in the western part of the church, includes St. Mary with Child flanked by two angels and St. Michael saving souls from Hell on the western face of the first pair of the pillars (s. also Mercier 2002). On the southern side of the half pillar, St. Cyriacus (↗Qirqos) appears as an ↗equestrian saint. Between the windows of the western wall, a posthumous miracle of St. ↗George is shown (punishment of the general Euchios for putting the saint's shrine at Lydda on fire). The presence of this image may indicate that the church was once dedicated to this saint. Also on the western wall, between the half-pillar and the window, three historical figures are depicted: *ṣäware narge* Mäḥari Amlak (identified as a dignitary of *aṣe* ↗Yəkunno Amlak; for the title, cp. CRDLib 187, 190f.), *śəyyum* Nəwayä Krəstos and the scribe Ḫer Amlak – the former two also represented in the ↗Gännätä Maryam church. All paintings are accompanied by inscriptions identifying the represented figures; some saintly figures are accompanied by supplications in the name of Mäḥari Amlak. These historical figures, as well as stylistic similarities to the murals in the churches of Gännätä Maryam and ↗Ǝmmäkina Mädḫane ʿAläm, along with the archaic type of script in the accompanying texts allow us to date the paintings to the end of the 13th cent.

Several undated commemorative inscriptions accompanied by drawings of crosses appear on the walls around the old paintings representing St. Mary and Michael.

Another set of paintings, probably from the 19th cent., represents: St. Mary with Child on the north-east pillar (facing west); a group of dancing ecclesiastics (facing south); St. Mercurius killing Julian the Apostate on the half-pillar (facing east). The aniconic decoration of the arch above the entry to the sanctuary probably dates to the same period.

The church owns a small collection of ↗manuscripts and wooden hand ↗crosses, a wooden chalice and a couple of brass shafted crosses (one of them a gift of *ətege* ↗Ṭaytu).

Wäsän Ḫaylu

Wag šum W.Ḫ. (ወሰን፡ ኀይሉ; b. ca. 1915/16, Koram, Wag, d. November 1983) was a patriotic leader during the ↗War of Liberation. The son of *däǧǧazmač* ↗Ḫaylu Käbbädä, as a young man he submitted to the Italians and was appointed by them governor of Dähna *wäräda*. In 1938, he defected from the Italians and joined his mother, *wäyzäro* Šäwanäš Abrəha, who had led the surviving followers of Ḫaylu Käbbädä to Qaʿlisa in Bägemdər beyond the ↗Täkkäze River to resist the Italians.

W.Ḫ. assisted his mother together with other patriotic leaders in consolidating attacks against

Funeral monument in the form of the rock-hewn church St. George in Lalibäla on the grave of *wag šum* Wäsän Ḫaylu, graveyard of the Trinity Cathedral, Addis Abäba; photo August 2005, courtesy of Wolbert Smidt

Italian positions. With the return of Emperor ↗Ḫaylä Śəllase I to Goǧǧam in 1941, W.Ḫ. travelled to Goǧǧam to meet him while the patriots of ↗Wag went to liberate their region. In 1941 he was appointed Colonel and confirmed *wag šum* over his traditional area, Wag. However, when Wag was placed under the Crown Prince ↗Asfa Wäsän Ḫaylä Śəllase in Däse in 1949/50, *wag šum* W.Ḫ. vehemently opposed this administrative reform and went to the capital to appeal to the Emperor against the decision. Before this, the *wag šum* had paid their tribute directly to the central court, and with this decision became tributary to the governor of ↗Wällo in Däse. However, his appeal remained futile. A few years later he was removed and *wag šum* Admasu appointed in his place.

In 1951 W.Ḫ. was appointed ambassador to Greece, and to Jordan in 1967. In March 1957 he was appointed President of the Chamber of Deputies, and in December of the same year as an advisor in the Chamber of ↗Senate. In 1971 he became a member of the ↗Imperial Crown Council.

Wäsän Sägäd

Ras W.S. (**ወሰን፡ ሰገድ**, b. probably in the 1470s, d. 29 July 1531, B-w-sāt, ↗Fäṭägar; KrLebD 13 [text]; s.a. BassHist 170 [text]) was a powerful noble. We possess no data about his ancestors, but his family clearly had its roots in Ethiopia's south-east, bordering on Muslim ↗ᶜAdal. While the sources associate W.S. overwhelmingly with ↗Däwaro, where he is also reported to have commissioned the building of two splendid churches (BassHist 118, 131, 271 [text]), his brother Wänag Žan under *aṣe* ↗Naᶜod and the early part of the reign of *aṣe* ↗Ləbnä Dəngəl was influential in neighbouring ↗Bale and for some time even held the governorship. Moreover, the rise of both brothers to high office in the Christian empire suggests that they were born into an already prominent family.

Both W.S. and Wänag Žan made very different use of their power and position. W.S. was staunchly loyal to the Christian empire whilst Wänag Žan twice betrayed the trust put in him, defected to ᶜAdal, converted to Islam and tried to facilitate a Muslim conquest of Bale. Yet both attempts backfired, and after his first act of treason (which probably took place in the early 1500s), he was captured and brought before ↗Naᶜod. Thanks to W.S.'s intercession Wänag was pardoned and soon, fully rehabilitated, was (again?) made governor of Bale.

Highly esteemed by the Emperor, W.S. was Naᶜod's ↗*wazīr* (BassHist 92 [text]). When the latter died in 1508 and his young son Ləbnä Dəngəl followed him on the throne, W.S. became a leading member of the court council which governed the empire during Ləbnä Dəngəl's minority, up to around 1516 (the so-called "History of Ləbnä Dəngəl" calls W.S. the second in rank in the empire; KrLebD 3 [text]).

W.S. remained highly influential after Ləbnä Dəngəl's coming of age, when he held the title of *gra bitwäddäd* ('*bitwäddäd* of the Left') and was thus one of the empire's highest dignitaries (CRAxum 29f., charters nos. 26 and 27 [text]). Though formally only his equal, it appears that in practice he even ranked higher than his right-hand counterpart ↗Ǝslam Sägäd since Francisco ↗Alvares terms him "the great Betudete" (BeckHuntAlvar 377; Alvares never mentions W.S. by name though contextually the term can be assumed to refer to W.S.).

W.S., however, lost the dignity of *ras bitwäddäd* in late 1524 when Ləbnä Dəngəl in a surprise reshuffle of several leading state offices (cp. ↗Robel,

↗Ros Näbiyat) not only stripped W.S. of his rank, but banished him to a remote *amba*. Ləbnä Dəngəl's demotions and new appointments were motivated by his desire, following the deaths of the two matriarchs ↗Naᶜod Mogäsa and ↗Ǝleni shortly before, to rid himself of an "old guard" closely associated with them. His additional severe punishment of W.S. however had personal reasons: over many years W.S. had entertained an amorous affair with Ləbnä Dəngəl's mother Naᶜod Mogäsa, a fact which the young monarch apparently strongly resented and on which he now, after his mother's death, felt free to act.

Yet after a period of three years at most, Ləbnä Dəngəl was compelled to reinstate W.S. on the the grounds of the latter's popularity at court as well as among the people (BeckHuntAlvar 430–34). W.S. was not fully rehabilitated though. He never again became *ras bitwäddäd*, but had to content himself with the title of *ras* only.

W.S.'s loyalty to the Christian empire remained, however, unaffected by this experience and during the *ǧihād* which ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") launched in 1529 he devotedly fought for the Christian cause (BassHist 142f., 154f. [text]). Moreover, he was particularly concerned with Ləbnä Dəngəl's personal safety and well-being in the unfolding war (ibid. 134–37, 142f., 153ff. [text]). It was this very concern which motivated him to go on the campaign that turned out to be his last (ibid. 143, 155, 159f., 167 [text]).

W.S.'s death in the battle of B-w-sāt in ↗Fäṭägar on 29 July 1531 (ibid. 165–70 [text]; KrLebD 13 [text]) marked a turning point in the *ǧihād*. Thereafter Christian morale in central Ethiopia largely collapsed, with several leaders defecting to the Muslim side (↗ᶜUṯmān b. Sulaymān), large territories surrendering to the Muslim armies, and their populations converting to Islam (BassHist 175f. [text]). Ləbnä Dəngəl himself was so panicked by the news of W.S.'s death that he immediatly left his *məkram* in southern ↗Wäǧ and hurriedly marched to the supposedly safe province of Amhara (ibid. 188f. [text]).

W.S. had an unnamed son by Naᶜod Mogäsa and his other documented relatives are: a brother Gərma (BassHist 169f. [text]); two sons called Baḥər Sägäd and Saf Sägäd (hypochoristically: Safo; ibid. 100f., 243, 270–74 [text]; BeckHuntAlvar 538ff.;HuntLand 43[ch. 29],);up to five more unnamed sons (BeckHuntAlvar 431); a paternal cousin Z-m-n-ǧān (BassHist 63 [text]; an Arabic reflex of an original Zämän Žan?). Wänag Žan had a documented son, S-y-mū, who in terms of treachery followed in his father's footsteps (ibid., e.g., 92ff. [text]).

Wäsän Sägäd

Märəd azmač W.S. (**ወሰን፡ ሰገድ**; baptismal name: Wäldä Giyorgis; horse name: "Abba Dama"; r. 1808–12/13, d. 1812/13) was a ruler of ↗Šäwa. W.S. was the son and successor of *märəd azmač* (later *ras*) ↗Asfa Wäsän of Šäwa and his first wife *wäyzäro* Atmočuno (BTafA 525). Asfä Wäsän also married a woman from ↗Mänz and had a son Iyoᵓas. Fearing the rivalry of Iyoᵓas for the throne, W.S. rebelled against his father. However, his rebellion lacked support; W.S was defeated and taken prisoner (GueCopMen 65). Later, Asfa Wäsän reconciled with his son, released him from captivity and declared him his official heir. He also made W.S. *abagäz* of Ǝfrata, ↗Gədəm, Qäwät and ↗Märḫabete, areas which Asfa Wäsän had previously conquered from the Oromo (GueCopMen 66). After the death of his father in 1808, W.S. chose ↗Qʷəndi, instead of the seats of his father, Däbrä Bərhan and ↗Ankobär, as his capital (BTafA 527; PankHist I, 189).

W.S. himself led several victorious military campaigns against the neighbouring territories and extended his realm far beyond the limits of his father's territory. Adhering to a policy of co-existence with Muslims and Oromo the motivation for his campaigns was not particularly religious (PankHist I, 189). Nevertheless, he is said to have captured ↗Angoläla from "the heathen" (HarAeth II, 128). Thus, he was able to strengthen Šäwan rule. Due to his tributary territories W.S. was able to acquire greater wealth than his predecessors and held many extravagant banquets. His wealth was also visible in his extensive capital Qʷəndi (CecZeila I, 243).

Already as *abägaz*, W.S. founded many churches. As *märəd azmač* he continued to found churches, such as ↗Däbrä Bərhan Śəllase. W.S. also used his wealth to rebuild old churches, such as the church of ↗Täklä Haymanot at ↗Däbrä Libanos (BTafA 527; GueCopMen 67; AWTarik 99).

W.S. felt himself superior to the other nobles, therefore he had the people of Šäwa summoned at Angoläla and declared himself *ras.* He felt so powerful that he planned to march against ↗Gondär and *ras* ↗Gugsa Märsa (BTafA 531). Together with *ras* Wäldä Śəllase of Təgray he fought against the ↗Wällo and ↗Yäǧǧu Oromo and prepared to head for Gondär (GueCopMen 68). Whether it was this over-estimation of his abilities or his tolerance towards Islam which aroused opposition against him cannot be said. Finally, W.S. was murdered at Qʷəndi by one on his slaves. He ruled only four years and he was buried in his mausoleum at Ankobär.

With his wife Zännäbä Wärq, a noblewoman from Mänz, he had two sons, Bäkʷəru (variant: Bäkəruye) *abägaz* in ↗Märḫabete and ↗Śahlä Śəlase, and four daughters (AWTarik 102; HarAeth II, 348). Though Śahlä Śəllase was the second born and only in his teens when his father died, he was proclaimed *ras* by his mother's powerful kinsmen (HarAeth III, 11).

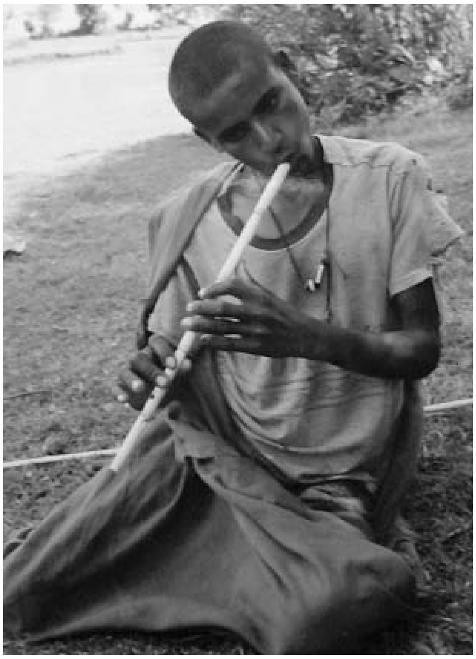
Wašənt

W. (**ዋሽንት**) is the most common wind ↗instrument found in Ethiopia. It is a bamboo flute, typically associated with shepherds and night watchmen. Like other Ethiopian musical instruments, it is known by different names throughout the country. The physical characteristics of the instrument vary as well, and it is rare to find two W. looking exactly the same. Although there are some inconsistencies in the literature about the W., it generally has the form of an oblique end-blown flute made of a three to five-node of length bamboo, with four finger-holes which are played by the second and fourth fingers of both hands, while the thumbs and third fingers are used to hold the instrument. The length of the hollowed bamboo varies between 35 and 70 cm. determining different ranges of the pitches produced. There is no specifically defined standard arrangement of distances between finger-holes, and therefore the notes produced may vary, but it is generally accepted that the W. produces a pentatonic scale.



Amhara shepherd playing *wašənt*, Andassa, Goǧǧam; photo 2003, courtesy of Katell Morand

Researchers have only recently approached systematic studies of the W. and of its secular repertoire, which may be performed in solo or accompanying voice and ↗*kərar*.

Wäṭ ↗Food

Waṭāwīṭ

The term W. is loosely used to denote 19th-cent. ↗Beni Šangul aristocracy, W. refers to mixed descendants of Arab settlers and ↗Berta inhabitants of the trans-border region south of the ↗Abbay in north-western ↗Wälläga. The term is closely connected to the wider group of "freemen" locally called *Mayu*, possibly a contraction from the Arabic Banī Ummaya, which includes any foreigner of Arab origin who settled in the wider Berta-inhabited border region and intermarried with local women.

The term W. is to be distinguished from the term *ǧabalawīn* (Arab. for 'mountain dwellers', or 'people of the hills') which refers to descendants of earlier waves of Sudanese-Arab migrant communities from ↗Sinnār who came to settle in the region towards the end of ↗Funǧ rule mainly for trade and sporadic missionary activities. The Berta include both terms to denote the wider category of *Mayu* or 'freemen', the upper Arab-influenced stratum of traditional Berta society.

Like the Funǧ before them, the new migrants settled among the Berta, intermarried with the region's ruling families, and by the mid-19th cent. had taken power in their hands. The mixed descendants of these Arab settlers and Berta inhabitants, who came to speak the region's language as their own, and ruled over it, were termed by subsequent Sudanese Arabs as W. (Sg. *waṭwaṭi*, from Ar. *waṭwaṭ*, 'bat') because their language (Berta) sounded to them 'like a bat in flight'.

The term has a pejorative connotation in the region and is rarely used by the Berta-speaking Arab descendants who prefer to call themselves 'Arab' to emphasize their 'pure' origin and who adamantly claim the word W. comes from the Arab *waṭan* ('homeland') to mean 'true people of the land' where they had settled.

Water

Hydrography

Ethiopia is the W. tower of north-eastern Africa. The general direction of flow of the rivers, as dictated by topography, is away from the Rift System Escarpment, towards the Indian Ocean in the south-east and towards the ↗Nile in the west. Only short and intermittent streams flow into the Red Sea. Rivers flowing through the ↗Rift Valley form closed endoreic basins (table 2). Most of them are occupied by lakes (↗Čamo, ↗Abbayya, ↗Awasa, ↗Abiyata, ↗Šala, ↗Langano, ↗Zʷay, Beseka). Crater lakes (Bišoftu [↗Däbra Zäyt; ↗*Hoora*], Dändi, ↗Wänči, ↗Ḥayq) and lakes made by lava flows (↗Ṭana, Ašänge) are common on the highlands (table 3). Ethiopia, through the ↗Abbay and the ↗Aṭbara basins (only 20 % of Ethiopian territory), contributes 86 % of the W. of the Nile at Aswan (more if the ↗Baro and its tributaries which flow into the White Nile are added). The ↗Wabi Šäbälle and its tributaries (the Fäfän) flow through the dry plateaux of Ogaden and enter Somalia where its course, being obstructed by dunes, runs for another 400 km parallel to the coast of the Indian Ocean up to the mouth of the Juba (↗Wäyb). The ↗Gänale River, receiving considerable W. from its major tributaries, the Dawa and the Wäyb, flows through the arid regions of Ethiopia and Somalia to spill into the Indian Ocean. The Awaš River course follows the Rift Valley toward the Gulf of Taǧūra but divides into an inland delta branches of which spill into salt lakes such as lake Abhé. The ↗Bilate rises from the Gurage mountains and runs into Lake Abbayya. The ↗Omo-↗Gibe and its affluents which originate in the highlands to the north of Ǧimma flow southward to fill Lake ↗Turkana.

Table 1: Length (in km) of major rivers in Ethiopia (CSA 2004: 5)

Rivers	Total	Inside Ethiopia	Outside Ethiopia
Abbay	1,450	800	650
Wabi Šäbälle	1,130	1,000	130
Gänale	858	480	378
Awaš	1,200	1,200	0
Omo	760	760	0
Täkkäze	608	608	0
Märäb	440	440	0
Baro	277	277	0
Angäräb	220	220	0

Table 2: Approximate size and depth of major lakes in Ethiopia (CSA 2004: 5)

Lakes	**altitude (m)**	**max. depth (m)**	**area (km²)**	**width (km)**	**length (km)**
Abbayya	1,268	13	1,160	20	60
Abiyata	1,573	14	205	15	17
Ašänge	2,409	25	20	4	5
Awasa	1,708	10	129	9	16
Bišoftu	–	85	–	–	–
Camo	1,235	10	551	22	26
Ḥayq	2,030	23	35	5	7
Qoqa	–	9	250	15	20
Langano	1,585	46	230	16	18
Šala	1,567	250	409	12	28
Ṭana	1,840	9	3600	60	70
Zʷay	1,846	4	434	20	25

The highlands, from which the streams flow, are humid and rugged; the surrounding lowlands, into which the rivers flow, are arid and relatively flat. Theses conditions encourage rapid run-off, low retention in soil layers, and soil erosion on the highlands; and the flood plains of the streams are flooded every rainy season. Flood and flood damage in the lowlands are common annual phenomena. Considerable risk to loose property and crops exists on the flood plains in the highlands during the rainy season. Seasonal variation of stream flow in the basins reflects the seasonality of rainfall (↗Climate). The shape of the stream hydrographs resembles the pattern of rainfall distribution at the representative climatic stations, the month of peak stream-flow coming just after the rainiest month. Most of the rivers which are flow in deep valleys and canyons are interrupted by falls and rapids. One can notice caverns, underground rivers, dry valleys and resurgences in the Bale karst region (↗Soof Omar). Only the Baro is navigable up to Gambela during the rainy season. There is considerable potential for the development of ↗irrigation facilities in the lower valleys and in the flood plains as was expected in the middle and lower Awaš valley when the Imperial Government established the Awash Valley Authority (AVA). For the time being, rivers seem to be becoming increasingly important for the production of hydro-electricity (Awaš [↗Qoqa], Finčaa, Täkkäze, Bäläs, Gəlgəl Gibe).

Rainfall flows through the soils and percolates through permeable rocks of either volcanic (basalt) or sedimentary (limestone) layers and also down through alluvial deposits. Superficial or deep piedmont aquifers supply W. to numerous springs (**ምንጭ**, *mənč̣*). Deep mineralized hot W. comes back up to the surface along tectonic fault-lines. One can observe a great number of thermal springs which Ethiopians regard traditionally as holy places (↗*Ṣäbäl*). Cattle are driven to take mineralized W. (**አምቦ**, *ambo*). Since the Italian occupation the Ambo-Sänqalle (West-Šäwa) mineral W., at first carbonated, has been bottled and sold all over Ethiopia with the exception of Harär where Baabbillee W. has replaced it. In Eritrea *Ailet* mineral W. is drunk. In Ethiopia since 1991 new mineral springs have come into operation around of the capital and the main regional towns. Inspite of abundant W. resources only 18 % of the rural population and 70 % of the urban population in Ethiopia had access to drinking W. in 1998 according to the World Bank (Frérot 1999). The rapid advance of industrialization and ↗urbanization has brought about severe W. pollution in the rivers mainly downstream of Addis Abäba.

Table 3: Streamflow in selected drainage basin (Daniel 1977: 32)

Basin	area (km²)	discharge (m³/sec)	runoff (mm)	rainfall (mm)	runoff (% of rainfall)
Awaš	7,723	40.33	164.63	900	18.29
Mille	4,350	6.91	50.1	500	10.02
Angär	4,349	64.78	469.74	1,500	31.32
Bäläs	3,520	35.98	322.32	1,200	26.86
Mäqi	2,433	9.8	126.98	900	14.11
Gəlgəl Gibe	1,600	53.32	1,051	1,500	70.07

Cultural significance

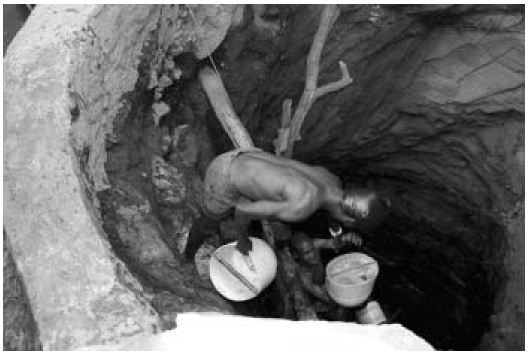
The symbolic significance of W. (Amh.: **ውኃ**, *wəha*; Tgr.: **ማይ**, *may*; Orom.: *bišaan*) is commonly associated with death and rebirth, purification and healing. This universal symbolism, which certainly existed in Ethiopia prior to the advent of the monotheistic religions, is given another layer of meanings in the specific teachings of each faith through association with, e.g., the creation, the Noah's Flood, the crossing of the ↗Red Sea, the stream of Zämzäm in ↗Mecca and the ↗baptism of Christ, etc. (Eliade 1952: 151–60).

An important component of the cultural symbolism of W. is the association of wells and springs with ↗spirits. In ↗Käfa a belief in W. spirits called ↗*eqo* exists, the Amhara folk-religion knows the *aganənt* ↗spirits (s. also ↗Demons) of the ↗Awaš River (Levine 1974: 48), and the ↗Kəmant worshipped *qole* spirits associated with ↗trees and springs (Gamst 1969: 30).

Although it is difficult to prove that the importance of a certain well or spring was retained when people converted, a number of early churches of northern Ethiopia can be considered as being located at the sites of pre-Christian sacred springs. At ↗Däbrä Damo, for example, it is alleged that the cisterns were at one time sites of a pre-Christian cult. There is, moreover, another wide-spread symbolism present here: dew which drips from the rock of the cave of the founder of the monastery is held to have healing powers, a common theme in Ethiopia (Hein – Kleidt 1998: 95; Matthews – Mordini 1959; cp., e.g., ↗Libanos). Other churches associated with holy springs (↗*Ṣäbäl*) include, e.g., Maryam Həbəᵓto, Tämben (Buxton 1971), Däbrä Saläm Aṣbidära, where the W. source has been dammed to form a rudimentary baptismal pool, Maryam Abaᵓo, Dära and May Bäläs (Plant 1985:109f., 193). In time such springs became attached to the name of the patron saint or founder of the church (↗Healers; ↗Medicine, traditional).

Legend has it that the church of ↗Aksum Ṣəyon was founded in an area, formerly a lake bed, that was miraculously drained by God in the era of kings ↗Abrəha and Aṣbəḥa (MHAksum 209). There are at least 72 good quality springs in the area, some of which have curative properties. At a small rock-shelter site some five kilometres to the north-west of Aksum (Bäᶜatti Nəbayti), two small fissures in the rock surface seep with water even in the dry season. Folk belief holds that these W. may cure eye infections (Finneran 2000).

↗Lalibäla is said to be modelled on the sacred geography of ↗Jerusalem, even down to a Golgotha and a River Jordan (Gəᶜəz: *Yordanos*; Heldman 1992). W. symbolism in this region is also present in the form of a large number of *ṣäbäl* in the surrounding countryside. Holy W. is often the focus of ↗pilgrimage. ↗Zəkʷala, one of the best known pilgrimage sites, consists of a volcanic crater lake, and a church dedicated to its founding saint *abba* ↗Gäbrä Mänfäs Qəddus.



Boorana "singing well" near Dublok, with water being brought up by a chain of men; photo 2005, courtesy of Chikage Oba-Smidt

Apart from the Christian associations, W. is known to adherents of ↗Islam and of traditional ↗religions as having powers to aid fertility (Pankhurst 1991). At ↗Faraqasa (s. also ↗Momina [in EAE vol. 5]), Islamic pilgrims gather at a spot where there are eight holy springs, although seven of them are actually dedicated to Christian saints (Pankhurst 1994). According to some traditions these W. are associated with the W. of Zämzäm in Mecca. Similar traditions that connect ↗Oromo traditions of sacred pools and springs with Meccan traditions are found in association with the shrine of ↗Šayḫ Ḥusayn.

Apart from taking W., venerating the saint and (even for some Christians) placating the ↗*zar* and tree spirits, there is also the *fačasa* ritual, a fertility rite which consists of gathering marsh grass *qeṭema*, washing it in the W. of the lake, and then brushing its foliage over women to aid conception.

The use of W. for healing is not limited to its presence at a fixed geographic location. Pilgrims may also take holy W. with them to bring it to others. Nor was this strictly speaking limited to baptismal W. As several hagiographic texts indicate the recitation of a prayer, the washing of a cross could all render the W. efficacious (KapMon 84f.). Immersion in W. (*ṭəmqät*) and sprinkling (*aṭämmäqä*) of a possessed person with holy W. are considered efficacious means of exorcism. A baptistery has been attached to churches from the Aksumite period onward. New born boys (40th day) and girls (80th day) are baptized by having holy W. poured upon

(↗Baptism). The pouring with W. also plays a central role as part of the ritual of ↗Ṭəmqät.

One of the most interesting elements of W. symbolism in the Ethiopian Orthodox Church context is found in the celebration of Ṭəmqät. The ↗*tabot* is taken to a body of W. where it remains overnight. The following morning the congregation receives a blessing and are doused with holy W. If the W. source is large enough, a mass immersion takes place (Rey 1927:155; Walker 1933:82; SerHist 271; BeckHuntAlvar 345f.).

Among the ↗Betä Ǝsraʾel the child is immersed and the mother purified on the 40th or 80th day after birth. This is accompanied by the reading of the ↗*Ardəʾət* with passages relating the story of the Red Sea and is thus associated with ancient Biblical narrative. In addition Betä Ǝsraʾel villages must be situated near running W. to permit purification particularly of menstruating women (↗Menstruation). Indeed so common are their immersions that they are said to "smell of W.".

Niall Finneran – Steven Kaplan

Waugh, Evelyn

W. (b. 28 October 1903, Hampstead, London, d. 10 April 1966, Combe Florey, Somerset) was a British writer and journalist. After studying history at Hertford College in Oxford he was employed briefly as a teacher in Wales. Working as a journalist he wrote his first novel *Decline and Fall* in 1928 followed, in 1930, by *Vile Bodies*.

In the 1930s, W. traveled extensively around the world: in Europe, the Near East, Africa, North and South America. He went to Ethiopia as a correspondent of *The Times* for the coronation of *ras* Täfäri Mäkʷännən in 1930 (↗Ḫaylä Śəllase I). This first visit, apart from the travelogue *Remote People*, yielded his third novel, *Black Mischief* (1932), which helped to establish W.'s reputation as a master satirist. Although it is set in a fictional African state it clearly refers to Ethiopia and is a satire on Ḫaylä Śəllase I's efforts to modernize the country.

In 1935 W. was again sent to Ethiopia as a war reporter of the *Daily Mail* to cover the Italian invasion (↗Italian war 1935–36). As a result of it he wrote *Waugh in Abyssinia* (1936) where he documents Ethiopia's fall and also hints at Britain's apparent idleness in averting it. A thinly veiled Ethiopia also features in his novel *Scoop* (1938), a satire of sensational journalism and foreign correspondence, which was based on his own experience in Ethiopia. A compilation of the passages W. wished to preserve from his travel books was published in 1946 under the title *When the Going was Good*, which contains two chapters on Ethiopia: "A Coronation in 1930" and "A War in 1935".

In his early 30s., W. converted to Catholicism and became a vivid opponent of liberal trends within the Church. He was also a friend of the Jesuit Philip Caraman, whom he had been introduced to by Martin D'Arcy, Caraman's fellow in religion and philosopher (Rockett 2004:54, 107, 137, 175).

Ewa Wolk

Wavell, Archibald Percival

W. (1st Earl Wavell, 1st Viscount Keren of Eritrea and of Winchester; b. 5 May 1883, Colchester, d. 24 May 1950, London) was a British general. The son of Archibald Graham Wavell, a major-general in the British Army, he studied at Winchester College and Sandhurst. He served in the Boer war and in World War I.

In July 1939, W. was named as General Officer Commanding-in-Chief of Middle East Command, being also responsible for the war in Somalia. In November 1940 he went to ↗Khartoum, accompanying Anthony ↗Eden, where the two forced the Sudanese governor-general Huddleston and Major-General William Platt of the Sudan Defence Force to concede a decisive role in the war against the Italians to *aṣe* ↗Ḫaylä Śəllase I, who was then residing in Khartoum. W. then also arranged the appointment of Colonel Orde ↗Wingate as Ḫaylä Śəllase's staff officer.

By February 1941, W.'s Western Desert Force had destroyed the Italian Tenth Army at Cyrenaica and from January to May 1941 W. led a victorious offensive against ↗Africa Orientale Italiana, mainly relying on his 4th Indian Division. After the decisive Battle of ↗Kärän in February/March, W. was created "Viscount Keren of Eritrea and of Winchester" (later also "Viscount of Cyrenaica and of Winchester"). As commander-in-chief, he was also responsible for the Occupied Enemy's Territories Administration (OETA), active in the colonies of Eritrea and Italian Somaliland; in this function he supported the idea that the OETA should be extended over all of Ethiopia. Eden, however, stated that Ḫaylä Śəllase should be immediately placed back on the throne, following the Italians' surrender in April. Ethiopia then went under a de facto military protectorate of the British War Office, with W.'s deputy political officer for Ethiopia Brigadier Maurice S. Lush and W.'s chief political officer Sir Philip Mitchell exercising control over all administrative and political acts of the Emperor. Later, this status was defined, after discussions involving W. and Sir Philip, through the Anglo-Ethiopian Agreement and Military Convention of 31 January 1942 (cp. Spencer 1984: 97ff.; ↗United Kingdom, relations with).

W.'s later operations against the Germans in North Africa and the Japanese in Southeast Asia were largely unsuccessful. In 1943, he was promoted field marshall and then appointed viceroy of India (1943–47). W. was made an Earl in 1947. Later, a street was named after him in ↗Addis Abäba.

The W. (**ወይብ**, or Wabi Gestro) River, which is more than 500 km long, originates on the northern flank of the ↗Bale Mountains at ca. 3,800 m A.S.L. (for location s. map for Soof Omar). It runs northward on cenozoic basalt plateaux and then, north of Dinšo, it bends south-eastward, following a mountainous ridge which separates it from the ↗Wabi Šäbälle basin. The river flows further down in a deep gorge carved into lower mesozoic karstic calcareous sediments. It disappears into the ↗Soof Omar caves (1,300 m A.S.L.) for more than 10 km. East of Magalo, where the W. enters the cenozoic Ogaden soft sedimentary series (gypsum), its valley becomes wider. It is flooded during summer rains. Many small left bank tributaries flow into the W. It starts at a height of 650 m A.S.L. in Mälka Gurra to 221 m A.S.L. in Dolo.

The upper W. valley is covered with forests. It forms part of the Bale ↗National Park which is surrounded by ↗Arsi Oromo agriculturists and cattle-keepers. Between Mälka Gurra and El Mädo (Ceel Medo), it is the realm of Somali cattle-breeders. The lower valley belongs to the Afder zone, a division of the Somali Region. The W. River flows into the ↗Ganaalee River ca. 20 km north of Dolo on the Ethio-Somali border. With the Dawa River joining the W. from the west, the Ganaalee River, now called Juba, runs trough southern Somalia to flow into the Indian Ocean near Kismaayo (Guida 585).

Alain Gascon

Wäyna Däga

The W.D. (**ወይና ፡ ደጋ**) is the moderate, semi-arid to humid agro-↗ecological zone, lying between the warm, predominantly semi-arid ↗*q*^{w}*älla* and the cool and mostly sub-humid *däga*. The surface, its agro-ecological potential, as well as the number of inhabitants and economic activity of W.D. make it the most important zone of the Ethiopian highlands. However, the following scientific description of the W.D. does not coincide with the subjective definition of the many peasants who live there (Mesfin Wolde Mariam 1991:33f.).

The upper limit of the W.D. lies between about 2,400 to 2,600 m A.S.L. Depending on temperature and rainfall patterns the lower limit lies between 1,600 and 1,800 m A.S.L. from the north-eastern to the south-eastern highlands and reaches 1,200 m A.S.L. in north-western and south-western Ethiopia; west of Addis Abäba even 800 m A.S.L. is possible (Hurni 1995a).

Mean annual temperatures typically range from 18 to 20 degrees, in the western and, in the south-western highlands from 20 to 25 degrees. Mean annual rainfall varies widely from about 300 to 2,200 mm. Therefore the zone can be divided into three different sub-zones: (1) Dry W.D., with an annual rainfall of 300 to 900 mm, a short rainy season and low but intensive rainfall, typical of the northern and Eritrean highlands and in lower parts of the southern and eastern highlands. (2) Moist W.D., with an annual rainfall of 900 to 1,400 mm, a fair rainy season and intensive rainfall being typical of the north-western, central and south-western to eastern highlands. (3) Wet W.D., with an annual rainfall of 1,400 to 2,200 mm, an extended rainy season, relatively high temperatures mainly in the western and south-western highlands.

The natural vegetation has a very great diversity, depending on ↗climate and soil characteristics. Due to human activity the natural vegetation and particularly the forests are very discontinuous; in many cases they have been modified by human activity for hundreds and even thousands of years. Friis (1992:27) presumed that "even before historical time […] complex mosaics with patches of forests, bushland and woodland" were intermingled. The following floristic forest types and developments can be said to typify the three sub-zones: (1) Dry W.D.: dry single-dominant Afro-montane forest with *Juniperus procera* in the canopy and *Olea europaea* subspecies *cuspidata* in the understorey, and the transition between this and East African evergreen and semi-evergreen bushland and thicket. Historical travel reports and photographs show that ↗forests have been almost inexistent in this sub-zone since at least the mid-19th cent. Today, a few trees (including ↗Eucalyptus) and plantations can be found here and there; (2) moist W.D.: undifferentiated Afro-montane forest, including various types of upland forest with *Podocarpus*. Since at least the 19th cent. forests have been heavily reduced and are found in only a few areas; trees are common but not numerous. Since the beginning of the 20th cent. Eucalyptus plantations have spread, particularly in and around urban areas; (3) wet W.D.: broad-leaved Afro-montane rain forest, still exists in many regions, but deforestation has been a serious problem for decades (Friis 1992; Hurni 1995b; Ritler 2003).

Soils vary from sandy to silty in the dry sub-zone, to loams, black clay and red clay in the wet W.D. Their fertility generally ranges from fair to excellent. Soil erosion is very common, but has diverse forms, depending on the amount and intensity of the rain, soil type, topography, land-cover and land-use. In many parts of the land effective methods of soil conservation including water management have been developed or re-established, particularly since the 1970s.

Traditionally population density of the W.D. was (and still is) relatively high due to good to excellent climatic conditions for intensive agriculture. On the other hand, throughout history, this zone was particularly exposed to devastation by military campaigns and marauding troops, but also to natural catastrophes such as ↗locust invasions etc.

The most important crops are ↗*ṭef* (grown in all sub-zones), ↗maize, barley, ↗coffee (moist and wet sub-zones) and ↗*ənsät* (wet sub-zone). A broad variety of cereals and vegetables are grown especially in the moist and wet sub-zones. Traditionally two different agricultural systems have established themselves (Westphal 1975): (1) The seed-farming complex: Characteristic of this system is the reproduction of nearly all crops by seed (mainly cereals, pulses, oil crops). Today the most important type here is the grain-↗plough (alias ox-plough) complex. It fully dominates the agriculture of the central and northern highlands (mostly dry to moist W.D.), a situation which has strong connections with the historical Amhara expansion from north to south and the shift in many Oromo regions from ↗pastoralism to this system. The similar ↗sorghum-plough complex of the eastern highlands was established only by the end of the 19th cent. In several southern regions the hoe is the predominant tool in seed farming. (2) The *ənsät*-planting complex: being a perennial tuber, *ənsät* is the characteristic plant of a horticultural complex with various crops. However, it requires relatively high temperatures and humidity and is thus restricted to south-western Ethiopia (wet W.D.).

In the last decades, particularly near towns and along important roads in the W.D., demand for agricultural products on the part of the fast growing urban population and the world market led to intensified and market-oriented agriculture and livestock production.

Wäyna Däga

As a place name, W.D. (ወይና፡ ደጋ; or Wäyna Dägᶜa) is used to designate a district in ↗Ǝnfraz, Bägemdər, north-east of Lake Ṭana (cp. ↗Libo).

A fertile region inhabited by the ↗Betä Ǝsraᵓel, W.D. was chosen by Gäbrä Iyäsus for his monastery of ↗Däbrä San in the mid-14th cent.

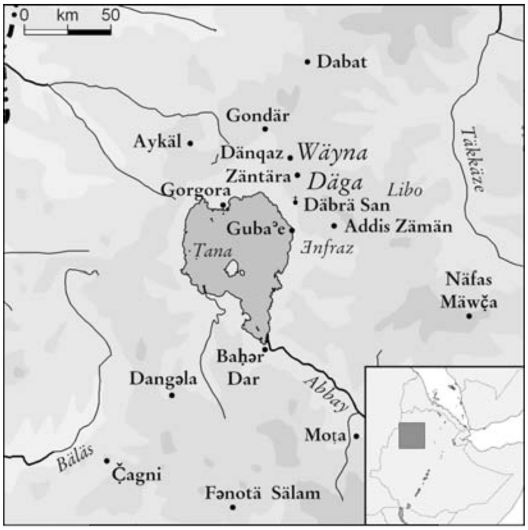
It was also in W.D. or, more precisely, at Zäntära (variants Zantära, Zäntera, Zäntəra), at the place today called Grañ Bär (12° 26' N, 37° 37' E), that the troops of *aṣe* ↗Gälawdewos ultimately defeated the army of ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ"), killing the latter on 21 February 1543.

In 1577, ↗Śärṣa Dəngəl defeated the Oromo in W.D. Later he had several clashes with the local Betä Ǝsraᵓel population there. He took residence at ↗Gubaᵓe, somewhat south of W.D.

In the 1620s, Däbsan (i.e. Däbrä San) in W.D. became the residence of the Portuguese Patriarch ↗Mendes, chosen for reasons of its good climate and its proximity to the royal establishments at Gubaᵓe and ↗Dänqäz and to the Portuguese settlements of ↗Gorgora.

In 1632 W.D. witnessed a decisive battle between *aṣe* ↗Susənyos and ↗Mälkəᵓa Krəstos, the pretender to the throne from Ǝmäkina. The rebel army was defeated, *wag šum* ↗Rətuᶜa Amlak and Bəḫano Ḫayal were killed and Mälkəᵓa Krəstos himself had to flee.

In 1771, one of the important fights of the *Zämänä mäsafənt* took place in W.D. when the united forces of Šäwan nobility defeated the army of *ras* ↗Mikaᵓel Səḥul in the battle of ↗Sarbakusa, just a couple kilometres away from Grañ Bär.



With the centre of power moving away from the Ṭana shores, the importance of W.D. declined, and sources only sporadically mention the location when listing the taxes collected or giving details on travel routes of the monarchs, such as the remark on the area being plundered *en passant* by *aṣe* ↗Tewodros in 1867. Traditions collected by Antoine d'Abbadie in the 19th cent. still speak of W.D. as one of the camps of the semi-legendary 7th-cent. king Dəgnağan (s. Conti Rossini 1917: 706, cp. TadTChurch 35).

Evgenia Sokolinskaia

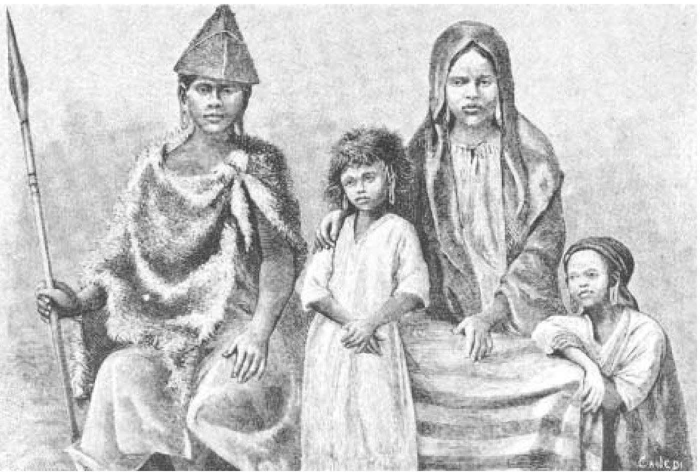
Wäyṭo

The W. (**ወይጦ**) are a small indigenous group of people in north-western Ethiopia living among the ↗Amhara. According to the 1984 census they number 3,816 while the 1994 census indicates only 1,515, probably due to a redefinition of their ethnicity. Zerihun Abebe's research in 2001 shows that in ↗Baḥər Dar alone there are 1,500 W. The W. used to live in scattered settlements along the shores of Lake ↗Ṭana (for a list of W. villages s. Grottanelli 1939: 180) and further inland in Aläfa, ↗Dämbəya, ↗Fogära and Baḥər Dar. Since the 1970s a greater number of W. migrated to Baḥər Dar due to the increasing insecurity of settlement and livelihood on their traditional land. They occupy the outskirts of the town and are continually displaced whenever the land is needed for construction work or business purposes. The W. mostly dwell in fringe settlements on lands which are considered useless or uninhabitable by the majority population.

The ethnic status of the W. has been debated in the literature; while some understood them as a originally distinct ethnic group others viewed them as a primarily social group (cp. Simoons 1960: 49). According to Grottanelli (1939: 170), who also speculates about a possible "Nilotic" origin, the W. were formed by originally unrelated clans that were segregated from society to form a distinct social group. The W. are mostly discussed with reference to other ↗"marginalized groups", such as the ↗Manǧo in Käfa, the ↗"Fuga" in southern Central Ethiopia and the ↗ *Waata* among the Oromo. Together with them they were often understood as people who "survive[d] as endogamous pariah castes of hunters living in a partly dependent and partly symbiotic relationship with their dominant neighbours, whose language they speak" (Murdock 1959: 59; cp. also Grottanelli 1939: 170). Cerulli (CerFolk) identified the W. as an element of "a low-caste of hunters" often called *Waata* (cp. also CRStor I, 73, 199). Their occupation as hunters according to Cerulli "signifies a cultural stage characteristic of primitive people". However, such hypotheses have been largely criticized by latter studies which show that the various marginalized minority groups including the W. are not generally distinct in their origin nor can they appropriately be defined as caste groups (Teshale Tibebu 1995; Pankhurst 1999; for a recent more general debate cp. also Amborn 1990).

There are no records of a distinct W. language, apart from an observation reported by Bruce (BruNile, vol. 3, 403); however, linguists and ethno-historians agree that the W. once spoke a language different from Amharic. Most oral traditions of both the W. and Amhara depict the former as a "first people" who migrated into the Lake Ṭana region. The W. myth represents them as migrants from ancient Israel and the first inhabitants of the Lake. Like many other marginalized groups in Ethiopia the W. also have a myth relating that they were formerly more powerful but loose their status due to a curse (CerFolk; for a variant of the legend cp. Grottanelli 1939: 177). Ethno-historical and linguistic studies suggest that the W. originally belonged to the indigenous ↗ Agäw people and spoke an Agäw language before they adopted Amharic and became amharized, without being accepted as Amhara.

The traditional W. practised a foraging economy and subsisted, until the 1950s, from ↗hippopotamus ↗hunting, ↗fishing, some agriculture and the collection of roots and reed pith found along the shores of Lake Ṭana. Their knowledge of boat building and navigation made them useful to the Amhara for whom they provide with ferry services. They gather papyrus reed, form bundles and tie them to make ↗ *tank*^{w}*a*-boats. W. *tank*^{w}*a* were the main means of transportation in



A Wäyṭo family in a 19th-cent. depiction; from MasMis 9

the Lake region (cp. Grottanelli 1939: 190f., 197f., 204–19). However, the appropriation of ferrying by the non-W., the introduction of motor boats and increasing urbanization have made the W. traditional livelihood difficult to maintain. European traders acquiring hippopotamus tusks since the early 1900s decreased the number of hippopotamus. By the late 1960s the W. changed to a non-foraging economy and adopted diversified means of livelihood. The women produce ↗basketry (*mäsob, agälgəl*) from a variety of Ṭana swamp grass for sale, while the men weave papyrus reed into fences, mats and thatch for temporary shelters. They also mine and hammer flat lava stones into grindstones (*wäfčo*) for the local market. Some W. are in paid employment while others are peasants and casual labourers.

The W. are no more eating hippopotamus. However, past food habit marks the boundary between W. and non-W. They are stigmatized as "impure" by those who culturally consider hippopotamus as not edible. They are also perceived as a "pleasure seeking and drink enjoying" people having "less attention" to property and wealth. Until the 1960s W. rarely practised agriculture.

The W. had long been islamized by a Sufi *šayḫ* from Wällo and identify themselves as Muslims. They belong to Mālikite *maḏhab* (↗Mālikism). However, the Muslim identity of most W. is not fully accepted by other Muslims. During the socialist regime the status of the W. appears to have improved. A few were employed in the Baḥər Dar textile factory. Membership of non-W. formal and informal associations became relatively open to them. They joined burial associations (↗*Ǝddər*) and were also "allowed" to bury their dead in the same graveyard as other Muslims.

However, even in the early 2000s they remained a "marginalized group" in social and political terms. Other Muslims do not usually consider them as proper marriage partners. The W. therefore remained a largely endogamous group. Likewise, the W. village-Mosque in Baḥər Dar is not considered as a proper place for prayer by non-W. co-religionists. W. local religious practice of venerating *šayḫ* ↗Ḥusayn (*Nurhussen*) and their "patron saint", known as *šayḫ* Abnaz, is not recognized by other Muslims. In particular, *Abnaz* is an annual feast comprising a conscious involvement of almost every W. household head and practised at the mouth of the Nile River. It involves worshipping the guardian spirit called *Gəyon* to promote W. well-being.

In political terms the status of the W. has remained weak. Even though, since 1991, group right-based political recognition has been introduced into Ethiopia, this applies only to the larger groups, while the W. and similar former hunter-gatherers lack any meaningful political representation.

Wäyyanä

The term W. (**ወያነ**) means ‘revolt’ or ‘rebellion’ in Təgrəñña. W. originally means the 1943 revolt against the central government in southern and eastern ↗Təgray, and refers to the participants in this revolt. In order to distinguish it from the revolt led by the ↗Tigray People’s Liberation Front, who are also popularly known as “W.”, the 1943 revolt is today also known as “*qädamay* W.” (‘first W.’).

The 1943 W. represents one of the largest revolts against the imperial government. It spread throughout large parts of southern and eastern Təgray, such as ↗Mäq̱älä, ↗Kələttä Awləᶜalo, ↗Tämben, ↗Ǝndärta, Samre, Ḥənṭalo (↗Anṭalo) and Alağe. More than 20,000 participants attacked military camps and then occupied the provincial capital of Mäq̱älä. Following this, the military, with the help from the British (cp. EAE, vol. 5 ↗British Military Administration of Ethiopia), ended the revolt and recaptured the territory which had been under W. control after a period of two months.

The W. occurred soon after the Italian withdrawal (↗War of Liberation, 1941) and the return of Emperor ↗Ḫaylä Śəllase I, which was accomplished with British assistance. During the decolonizing process, Təgray went through various transformations. Although *ras* ↗Śəyyum Mängäša was appointed governor of Təgray by the central government, which was suspicious of the close relationship *ras* Śəyyum maintained with a British officer in Təgray and ordered him to report to Addis Abäba. This opened the way for internal changes within Təgray, organized by the central government. While sub-provincial and other local governors were Təgrayans, Mäq̱älä itself was controlled by Amhara officers, and a fundamental administrative reform of Təgray was effected by these officers during *ras* Śəyyum’s absence. The local administration, often based on strong local traditions of (self-)administration, was also changed under the new regime. Although the new local administrators appointed by the central government in 1941–42 were usually *mäsafənt* and *mäkʷannənt* (↗Aristocracy) from Təgray, some were sent to remote places, while others who returned to their former administrative positions encountered chaotic conditions, which were characteristic of the time following the Italian occupation. Often, they were not able to establish any order; the people suffered under social disorder, administrative incompetence, and the fear of a new repressive administration often led by Amhara administrators.

Before the W., two remarkable incidents occurred in southern Təgray: First, residents of ↗Waǧǧärat (Waǧǧərat) and ↗Rayya ᶜAzäbo raided (↗*Gaz*) the ᶜAfar soon after the Italian withdrawal causing social disorder in eastern Ethiopia from 1941 to 1942. Second was the ensuing conflict between the Təgrayan administration and the Waǧǧärat people, who were trying to keep their autonomy against the new provincial administration. The intention of the Təgray sub-provincial administrator of southern Təgray to govern and punish the Waǧǧärat for the *gaz* was foiled by a surprise attack by the Waǧǧärat in May 1943. The Waǧǧärat fought against the sub-provincial administration, led by *däǧǧazmač* ᶜAbbay Kaḥsay; they captured him and his subordinate local administrators, and killed some of his followers. Both incidents, especially the latter, highlight the social disorder and the lack of effective administration.

It was in this context that the seeds of the W. revolt were planted. The peasants gathered and discussed the problems affecting their daily lives, including bandit activity (↗*Šəfta*), administrative incompetence, and fear of the Amhara administration and military. Their mobilization expanded from the village level to the regional level when representatives of each village gathered at May Därhu, near Ḥənṭalo, to discuss their common problems.

This peasant mobilization was said to have been organized by *blatta* Ḫaylä Maryam, the son of a local administrator and rich farmer in Ǝndärta, and by other local leaders from the lower *mäkʷannənt* class and elders such as *baššay* Gugsa from Ḥənṭalo. Although *blatta* Ḫaylä Maryam is popularly believed to have been the leader of the W., modern historiography (Gebru Tareke 1996) mentions other leaders who were captured after the W. Some of these were from the same *mäkʷannənt* class as *blatta* Ḫaylä Maryam, and others were from the Təgrayan *mäsafənt* class. The participation of the latter is less recognized, even in Təgray. Some informants report a secret relationship between *blatta* Ḫaylä Maryam and those in the *mäsafənt* class (Maki, in preparation).

The W. revolt started in August 1943. Although the immediate cause of the revolt remains unknown, the indirect cause was the Waǧǧärat victory over the sub-provincial administration in May 1943. It is said that, before the outbreak of the revolt, the Təgrayan self-administration and the return of *ras* Śəyyum represented the goals of the populace. The W. participants attacked the imperial military camps in Kʷiḥa and Ǝndayäsus, located in Ǝndärta, and after overrunning both camps, captured the provincial capital, Mäq̱älä. The W. targets were, primarily, military camps and administrative offices used by officers of the central government, i.e. mainly Amhara. Most administrative personnel and military officers escaped to northern Tigray.

The W. kept Mäq̱älä for a period of time but were soon confronted by the imperial military sent by the central government to suppress the revolt. The most serious battle occurred around Amba Alagi (↗Ambalage), near the mountain, in late September 1943; this battle pitted the W. against the imperial military, supported by the British Military Mission in Ethiopia. The army was led by *ras* ↗Abbäbä Arägay and ↗Abbäbä Damṭaw. Finally, the Emperor asked the British military to use aircraft to bomb the W. rebels, leading to the final defeat of the W. The area targeted for bombing ranged from Amba Alagi to Mäq̱älä. Although neither death toll nore numbers of injured exist, it is known that the final bombing of Mäq̱älä hit the market and caused many civilian deaths, including women and children. The W. were broken by the bombing, and the imperial military proceeded to Mäq̱älä and reoccupied it in October. This operation led to the death of 1 and the injury of 2 British officers, and to 200 dead, 375 injured and 33 missing from the imperial military.

After the W. had been suppressed, *ras* Abbäbä Arägay, who had been directing the operation, was appointed provincial governor of Təgray and served until 1947. Under his administration, a centralized administration was established and led by an Amhara officer. The imperial army searched for the leaders of the W., and 18 members were captured, including the daughter of *ras* Śəyyum and other *mäsafənt*, and sent to Addis Abäba. *Däǧǧazmač* Mängäša Śəyyum, the son of *ras* Śəyyum, who remained in Mäq̱älä during the W. and whose participation in the revolt was never substantiated, was sentenced to death by the Emperor, although he was later pardoned. The peasants were disarmed and some were forced to pay compensations. Even more effective than such punishments, however, was the influx of soldiers into the villages. The military took control in the villages and subjected the peasant class into serfdom. *Blatta* Ḫaylä Maryam escaped to the ᶜAfar soon after the W. failed and was captured only in 1947. He was sent to Ǧinka with his family and was not allowed to return to Təgray until the 1970s. Most of the other *mäkʷannənt* leaders were detained in Addis Abäba for several years and later permitted to return to Təgray. *Baššay* Gugsa, like *blatta* Ḫaylä Maryam, was not allowed to return to Təgray and was later appointed to serve as the local administrator in the Oromo region.

A monument commemorating the 'first Wäyyanä' and the ᶜ*aräna* assembly held at May Därhu; ᶜAddigədom market, Təgray; photo 2003, courtesy of the author

Although the W. is generally seen in modern historiography as a peasant revolt against a central government, the participation of the *mäsafənt* Təgrayans, the local ruling class, should be examined. However, even with *mäsafənt* participation, the determination of the peasants to change their lives through the assembly held in May Därhu and the revolt against the central government was of crucial importance for the W.

A number of complex factors contributed to the dissatisfaction, distrust and anxiety with which the new administration and the central government were viewed. *Mäsafənt* participation stands for the general reaction of the Təgrayans against the radical political reforms instigated by the central government.

Wäyzäro

W. (**ወይዘሮ**) in modern Amharic and Təgrəñña is a form of address for married women equal to the English "Mrs.". The term **ወይዘሪት** (*wäyzärit*), used in both languages for unmarried women, is less widespread.

The term seems to have been originally applied to both female and male members of the royal family. It appears in the Chronicle of *aṣe* ↗Zärʾa Yaʿəqob referring to the daughters of the Emperor as well as to men of royal blood (PerrZarY 94, 98). In the Chronicle of *aṣe* ↗Śärṣa Dəngəl (1563–97) the term is used to indicate women of Solomonic descent (CRHist 191). However, according to Manoel de ↗Almeida, the term was used for men and women of royal descent alike (BeckHuntAlm 57). The same missionary observed that although the real kinship between a W. and the Emperor may be quite distant, still the female W. were considered sisters and daughters of the Emperor, and they therefore never married a male W. (ibid. 71).

The chronicler ↗Aṣmä Giyorgis (ca. 1850–1915) used the term with two meanings: as a designation for women of royal descent (BTafA 721) and as an equivalent to *ras* ↗*bitwäddäd* (ibid. 697); for instance, *ras bitwäddäd* ↗Yämanä Krəstos is mentioned as W. of Ṭäqʷan (ibid. 213). The emergence of the latter meaning is most probably due to contamination with the term *wäzir* (**ወዚር**), an obvious borrowing from the Arabic ↗*wazīr* (ibid. 988). Both words had the same plural form – **ወይዛዝር**, *wäyzazər*, **ወይዛዝሮች**, *wäyzazəročč* (ibid. 378). The abstract noun, **ወይዘሮነት** (*wäyzäronnät*), used by Aṣmä Giyorgis to mean the 'state of being *wäzir*' (ibid. 526f., 988), nowadays means the 'state of being married' (cp. KaneDic 1561).

As a term to describe the nobility or a military rank W. has not survived. It is not clear when the "devaluation" of the term (similar to that of ↗*Ato* for "Mr." in Amharic and Təgrəñña) took place, and when W. became limited to married women. In the Chronicle of ↗Mənilək II it is still applied to women of noble descent only (cp. GueCopMen vol. 1, 73, n. 7) and to ladies of the court (Smidt 2005: 35). Its use in a modern sense is noted already in ↗Isenberg (1841: 150). The term, however, preserved its association with an elevated social status even into the 20th cent. (s. BaetDic 778f.). It is unclear when *wäyzärit* came into use (registered in DTWDic 430; on its particular plural form s. Vycichl 1957).

Maria Bulakh – Alexander Meckelburg

Wazema

W. (**ዋዜማ**) is a type of "full-verse" (*mulu bet*) ↗*qəne* always sung in ↗*araray* mode of chanting.

Three sub-types of W. are distinguished: long (*räğğəm*), with five verses (*bet*), middle (*mähakkäläña*) with three *bet*, and short (*aç̣č̣ər*) with two *bet*.

W. is also the name of the Office of Solemn Vespers, during which four *qəne* hymns are executed. Three of long W. are to be chanted after (or in-between, s. VelMe II, 65 and below) each Vesperal Ps: 23/24, 92/93 (except for Betä Ləḥem school), and 140/141. The fourth hymn, performed after *Yətbaräk* (the ↗*Dəggʷa* element that accompanies Dan 3: 52–56), can be either another long W. or ↗*śəllase* (six *bet*), or ↗*zäyəʾəze* (five *bet*), depending on the chanting mode of *Yətbaräk*: long W. if it is ↗*araray*, *zäyəʾəze* if it is ↗*Gəʿəz*, and *śəllase* if the mode was ↗*əzəl*. If *Yətbaräk* (*Dəggʷa*) has a *məlṭan*, no *qəne* is needed (Yəḫeyyəs Wärqe 1967/68: 17f.; VelMe II, 299; Elyas Abrəha 1996/97: 12f.).

According to Admasu Ğämbäre (1970/71: 19), long W. has five *bet* because it is sung interpolating immediately after five lines of the abovementioned psalms. According to other traditional scholars (Ḫəruy Wäldä Śəllase 1926/27: 6; Yəḫeyyəs Wärqe 1967/68: 17; HabTent 177), the long W. is performed after the complete psalms (cp. also VelMe II, 299). In fact, these three psalms are first executed with their respective *Dəggʷa* antiphon (HabUff 217f.).

The W. is used also in the ↗*Mäwäddəs* Sunday office. The long W. is employed in the *Mäwäddəs* with Ps 92/93, the short W. with Ps 44/45, but only during ↗Lent; middle W. with Ps 49/50. The W. is never composed when a psalm finishes with a *məlṭan.*

The traditional scholars ascribe symbolical meaning to W.: the five lines of the long W. are seen as the symbol of the five "pillars of mysteries" (↗*Amməstu aᶜəmadä məśṭir*), the two lines of the short W. are seen as the symbol of the two natures of Christ.

Habtemichael Kidane

Wazena s. vol. 5

Wazīr

W. (Arab. وزير, pl. *wuzarāʾ*) is a high-level minister of a ruler with whom he collaborates in governing the subjects in a theoretically subordinate rank but very often in a *de facto* leading position (for a general history and assessment of the title and corresponding functions and institutions s. Zaman et al. in *EI*^{2}).

In Islamic Ethiopia one may surmise that W. were in charge of various offices of the Islamic states since their first appearance. It is clear from the local written sources that at least since the 16th cent., the role of W. was administrative and political. E.g., W. was the title of Ḥāmid b. *sulṭān* Nāṣir who ruled ↗Harär on behalf of his brother *sulṭān* ↗Muḥammad b. Naṣīr when the latter went to fight ↗Śärṣ́ä Dəngəl in 1572–73 (s. Cerulli 1931: 54, 60). The title also normally had a strong military dimension. It was thus borne by officers of the Muslim troops who were at the head of the main sections of the army and were directly involved in battles and fights. During the tumultuous period of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī W. were among the leaders of the Muslim army, e.g., the famous W. ᶜAddole [ᶜAdlī] (BassHist I, 17 and *passim*; II, 38 and n. 4 and *passim*; cf. also Cuoq 1981: 230f.) and W. (formerly *Kušəm garäd*) ↗Nūr b. Ibrāhīm (BassHist I, 23, II, 49f. and n. 2 and *passim*).

Moreover, Ethiopian W. were apparently able to use their influential political and military position not only to climb the hierarchical structure of the state but also to rebel and usurp the supreme leadership.

In 1577, when ↗Muḥammad Gāsā I b. Ibrāhīm moved his capital to Awsa, he appointed his brother ↗Muḥammad Gāsā II b. Ibrāhīm W. to govern Harär in his name; in 1584 Muḥammad Gāsā II became *imām* of Awsa himself (Cerulli 1931: 70, 74). In 1585, W. ᶜAbbās b. *kabīr* Muḥammad of Bale, whom Muḥammad Gāsā II had appointed commander in chief of the army, rebelled and managed to rule alone for almost six months before being defeated and killed (Cerulli 1931: 71, 75f.). In 1589 W. ᶜAbbās b. Abūn, nephew of *imām* Aḥmad b. Ibrāhīm and father of Ṭalḥa who had ruled Harär in 1569–71, was chosen to rule Awsa but was deposed only after two months (Cerulli 1931: 54, 64, 68, 77, 80). Finally, ᶜAlī b. Dāʾūd, the founder of the dynasty of *amīrs* who ruled Harär since 1647, was previously W. of *amīr* Ṣadīq and successfully exploited his rank to seize power himself (Cerulli 1942: 6).

Weavers and weaving

The cultivation of ↗cotton in Nubia can be attested from 2500 B.C. on (Radiocarbon dating, Gosh 1964:66). From an ↗inscription of king

↗ᶜEzana, dating to the mid-4th cent., it is known that he seized cotton from the ↗Noba (RIÉ I, 189.28). The exact date of the domestication of cotton in Ethiopia, as well as its further processing into textiles, however cannot be given. Previous to this date the demand for textiles by members of the church (e.g. ↗Mägarăǧa) and the wealthier classes was met through the importation of various qualities of cloth from points between Arabia and India (s. ↗Trade). There is no evidence of the weaving of garments made of linen, or of other vegetable fibres such as ↗*ənsät*, although either of these may have been employed. No textile remains, such as ↗wool or ↗silk, or signs of weaving are known from the excavations at ↗Aksum. In fact, the only possible indication of apparel was a small piece of ↗leather.

The pit-treadle double-shafted loom

Weaving in Ethiopia today is carried out almost entirely on a mechanism known as the pit-treadle double-shafted loom, specialized for weaving cotton. Characteristically, the treadles are suspended in a hole in the ground. The W. sits on the edge of the pit with his legs inside so that his feet can operate the treadles.

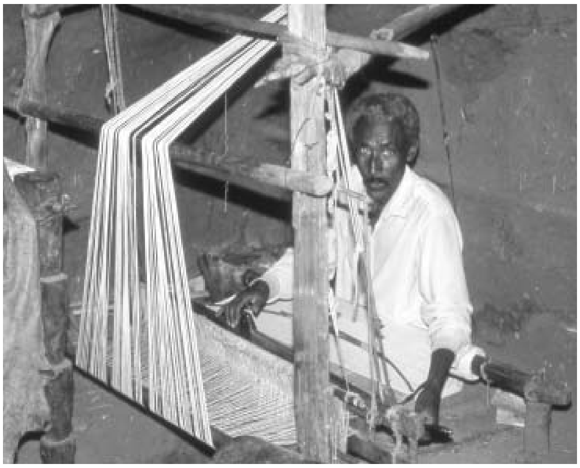
The origin of this loom in Ethiopia is uncertain, although numerous writers have noted how closely it parallels the Hindu loom, and some suggest that the technology is the result of direct importation from the Indian subcontinent. Possibly as early as the first centuries of the Christian era, this loom spread westward via Afghanistan and Persia to Arabia and the Near East. In addition, the nomenclature attached to cloth and the most widely used forms of woven highland ↗clothing can be traced to Arabic.

The specific characteristics of the Ethiopian loom are its sturdy frame, the width of the comb and consequently of the cloth produced, and the depth of the pit. In addition to the exceptional width of the material produced, up to 90 cm, the ornamental woven designs are unique to the continent. Again, the technical association of the loom with cotton would also argue in favour of a simultaneous development with the introduction of the loom and cotton growing and weaving to the Ethiopian highlands. There is reason to believe that the diffusion of weaving outside the highland market towns and areas of cotton procution is a relatively recent development.

Weavers and weaving

Traditionally weaving was men's work. Until the time of *aṣe* ↗Mənilək II the ↗Amhara left weaving to the Muslims and the ↗Betä Ǝsraʾel. Mənilək, for the first time, encouraged Christians to weave. His efforts were largely unsuccessful, in part because of the availability of cheap imported *šamma* and in part undoubtedly because of the contempt in which the W.'s craft, among others, has traditionally been held in Ethiopia. The reason for this contempt is not clear, but it is of long standing and common to many cultures. There is a recognized prejudice in Ethiopia which favours above all the ownership and cultivation of land; accordingly W. are valued less but not to the extent that they can be regarded as ↗marginalized people (s. EAE vol. 5; s. also ↗Handicrafts). In the lowlands there are many who own land and who weave on a part time basis, thus avoiding the opprobrium generally associated with the craft. For these people, weaving is a secondary source of income and if the demand changes so might their supplementary occupation. Weaving used to be an important source of income for the ↗Gideʾo, but many have given it up and gone into the more lucrative business of coffee growing. In ↗Konso W. are organized together with other craftsmen and traders in the economial powerful guild-like ↗*fulḍo* association.

Another reason may derive from the religious discrimination which serves to separate Orthodox Christian society from that of Muslims and the Betä Ǝsraʾel. Unsubstantiated as it may be, the hypothesis is that weaving, on the pit-treadle loom at least, may



Betä Ǝsraʾel weaver, Getanäh Čekol, in Wäläqa, Gondar; photo 1982, courtesy of the author well have been introduced by Muslims, who, as traders and husbandmen, may also have been responsible for providing the Horn of Africa with cotton cloth, the loom, and the knowledge of cotton cultivation; and therefore occupying the whole industry.

Nowadays, Ethiopia endeavours to attract foreign companies to invest in its national textile industry. This counteracts external competitors in business such as China, who endanger modern as well as traditional textile production in Ethiopia.

Wəbe Aṭnaf Sägäd

Däǧǧazmač W. (**ውቤ፡ አጥናፍ፡ ሰገድ**, "horse name" Abba Tadäg; d. 1912/13) was a respected warrior of the time of *aṣe* ↗Mənilək II, best known as the third husband of the Emperor's daughter ↗Zäwditu. He was the brother of *däǧǧazmač* (later *ləᶜul ras*) ↗Ləᶜul Sägäd and *liqä mäkʷas* Abbäbä Aṭnaf Sägäd.

W. already had the rank of *qäññazmač* in 1877 when he fought on the side of Mənilək against the Təgrayan troops of ↗Yoḥannəs IV (GueCopMen 143).

Zäwditu, widowed from ↗Arᵓaya Śəllase in 1888, was first given to Gʷangul Zägʷe. They were divorced in 1891, and Zäwditu married W.

W.'s home base was in ↗Mäč̣č̣a (GueCopMen 349). With Zäwditu, he moved to Addis Abäba, where they lived in the district now called Wəbe Bäräha.

Zäwditu divorced W. to marry her last husband, *ətege* ↗Ṭaytu's nephew and protegée, *däǧǧazmač* (later *ras*) ↗Gugsa Wäle, in 1900/01.

W. kept his title upon the divorce and was given governorship of Gola, around ↗Ankobär. His privileged position is indicated by the fact that in 1903, during the festive procession organized by Mənilək to celebrate the seventh anniversary of the battle of ↗ᶜAdwa, W. was invited to participate in the parade. He led a force of nine thousand rifles.

W. was the father of *liqä mäkʷas* (later *bitwäddäd*) ↗Mängäša Wəbe, who was active during *aṣe* ↗Ḫaylä Śəllase I's reign.

Hanna Rubinkowska

Wəbe Ḫaylä Maryam

Däǧǧazmač W. (**ውቤ፡ ኀይለ፡ ማርያም**, baptismal name: Kidanä Maryam, "horse name" Abba Mare; b. ca. 1799, d. 1867, Mäqdäla) was one of the major Ethiopian lords of the second half of the ↗*Zämänä mäsafənt*. He was the son of *däǧǧazmač* ↗Ḫaylä Maryam Gäbre of ↗Səmen and *wäyzäro* Məntaye of ↗Ǧan Amora. Ḫaylä Maryam had built up a strong political centre in Səmen. In 1826, shortly before his death, he sent the young W. to conquer ↗Ṣägäde and ↗Wälqayt (CRNuov 369f.), a task which W. apparently completed successfully. As his successor, Ḫaylä Maryam appointed his son ↗Märso, a half-brother of W., born from Ḫaylä Maryam's legal wife, *wäyzäro* Ḫirut, daughter of

↗Gugsa Märsa. W. challenged his brother's succession, and before the year was out he prevailed, concentrating power over Ḫaylä Maryam's realm in his own hands.

W. was to spend much of his career warding off domination by the Wärräsek rulers of ↗Däbrä Tabor. In 1827, the year after his succession, *ras* ↗Yəmam separated Wägära from W.'s realm and gave it to *däǧǧazmač* ↗Maru of Dämbəya. W. resisted this action but lost. Nevertheless, he was pardoned and preserved his governorship. In that same year, W. joined Yəmam in fighting against Maru and ↗Goššu Zäwde of Goǧǧam (CRNuov 370ff.).

To strengthen his hand against the Wärräsek, and perhaps favouring the idea of a coalition of Christian rulers against these "pagans", W. entered into an alliance with *däǧǧazmač* ↗Säbagadis Wäldu of Təgray, and married his daughter Dənqe (Dənqitu). This step was, however, punished by ↗Marəyye Gugsa, the successor of Yəmam, who ravaged Səmen and defeated W. in June 1830 (CRReal §§54–55; CRNuov 375). Angered that Säbagadis had not come to support him, W. switched alliances, joining Marəyye in 1831. Säbagadis invaded Səmen and appointed Märso Ḫaylä Maryam in W.'s place, but was himself defeated in 1831 in the battle of ↗May Ǝslamay, and killed. W. profited from the situation: having crushed Säbagadis's sons, by 1835 he consolidated control over the entire Təgray (cp. RubInd 94), and could keep it despite rebellions and the fact that he himself was not from Təgray (cp. ↗Arʾaya Śəllase Dəmṣu) and that he was hated for his cruel and cunning character.

In 1835, in a move designed to serve his own political ambitions in addition to the spiritual needs of Ethiopia's Christians, W. made his first attempt to bring a new metropolitan from ↗Egypt (RubInd 68; AbPrince 101), the office being vacant following the death of *abunä* ↗Qerəllos ca. 1828. Internationally, Ethiopia's position appeared to be deteriorating, because of the threat of Egyptian expansion, which brought tension to the Sudanese borderlands. In 1835 W. rebuffed an Egyptian raid into the lowlands of Wälqayt (AbPrince 101). The Egyptians began to scale down their activities in 1836 (RubInd 69f.), and, in 1837, following a defeat at the hands of *däǧǧazmač* ↗Kənfu Ḫaylu they scaled them down still further.

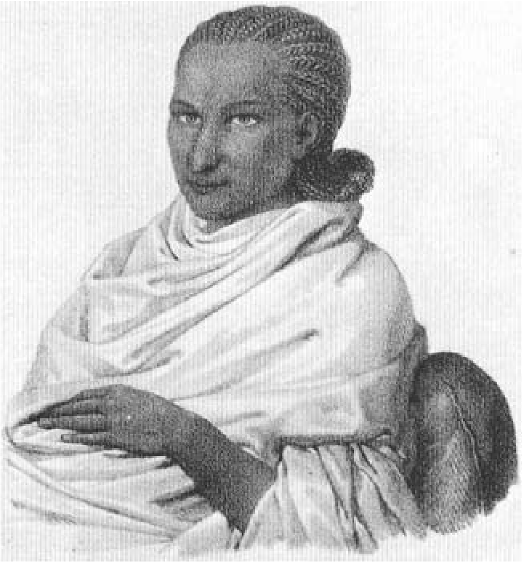
In 1830 Protestant missionaries belonging to the Anglican ↗Church Missionary Society (CMS) started what proved to be a continuous presence of Europeans in Ethiopia. W. tried to use the CMS missionaries to make contact with European powers. He expressed a particular interest in obtaining craftsmen and military technology and sought assistance in resisting the extension of Turko-Egyptian power into ↗Red Sea coastal lands over which he claimed suverainty. He wrote to Louis Philippe of ↗France (cp. ↗Lefebvre) and to Queen Victoria and, later, to Louis-Napoléon Bonaparte (RubActa I, nos. 32, 88, 132, 143; cp. 39; Appleyard et al. 1985, no. 25). Following an abortive attempt, in 1841, to send a letter to Queen Victoria (Appleyard et al. 1985, no. 11 = RubActa I, no. 38), W. wrote again in 1849, helped by the British consul, Walter ↗Plowden (s. Appleyard et al. 1985, no. 12 = RubActa I, 121), and again in 1852, together with *ras* Ali (Appleyard et al. 1985, no. 25).

The CMS representatives roused strong opposition from the Ethiopian Orthodox clergy and W. expelled them in 1838 (RubInd 75f.; cp. ↗Isenberg; ↗Krapf). Their place was quickly filled by Catholic missionaries, notably De ↗Jacobis, whom W. cultivated. The Catholics promoted the influence of France, despite the persistent coolness of the French government towards contact with Ethiopia. By chance, W. received a small number of French fire-arms in 1843 (RubInd 104).

In the early 1840s, W. made a second, this time successful, attempt to acquire a new metropolitan, *abunä* ↗Sälama III, from Alexandria. At about this time he apparently also explored the possibility of manufacturing cannons in Ethiopia (RubActa I, no. 37), and may also have created the paraphernalia with which he would declare himself *nəguś* (CrumLand 160). Sälama's presence strengthened W. in his looming conflict with the new Wärräsek Yäǧǧu ruler, *ras* ↗Ali Alula. The metropolitan arrived towards the end of 1840 and in February 1841, W., now allied with Bərru Goššu of Goggam and *aṣe* ↗Yoḥannəs III marched on Däbrä Tabor (CRNuov 380, 381; RubInd 94). Despite Sälama's excommunication of Ali, the latter overcame an initial setback to emerge victorious (RubInd 94). Sälama was transferred to Gondär and W., retaining his control over northern Ethiopia, slowly re-built his relations with Ali.

In the meantime, tension mounted in the coastal region and, in 1844, the Egyptians replaced the Ottomans. The Egyptians wanted control of ↗Sawākin and Massawa, which was formally granted by the Ottoman *sulṭān* in 1846 (RubInd 116). Egyptian penetration into W.'s territory was answered by W. raiding ↗Bogos and the lowland towards ↗Kassala. In 1847 Ḥərgigo came under the control of the Egyptians, who installed their own governor (RubInd 117; cp. RubActa I, no. 98). W. had looked to the European powers for help in dealing with the Ottomans and the Egyptians, but was deeply disappointed by the French, who, represented by their consul, Alexandre Degoutin, provided no help in solving the problem. This feeling was aggravated two years later by the failure of a treaty prepared by Degoutin's successor Eugène Rolland (RubActa I, no. 131). The treaty would have granted the French a vague "protectorate" over Ethiopia's coastal lands in return for one thousand muskets and two cannons, but became a dead letter when the French failed to ratify it (RubInd 109–14, 125ff.). Accompanying these diplomatic frustrations were the expulsions from W.'s territory of the two Catholic missionaries, Guglielmo ↗Massaja and Giustino De ↗Jacobis. Massaja was a bishop, who ordained some of De Jacobis's disciples to the priesthood. Learning this, *abunä* Sälama, again in Təgray, having been expelled from Gondär in 1846, issued an anathema, which led to Massaja's expulsion in 1847. The expulsion of De Jacobis followed in 1848 (CrumMis 69f.). In 1849, W. troops attacked Ḥərgigo and looted Catholic settlements, esp. ↗Əmkullu, where the French consul had his house. W. had equal grounds for dissatisfaction with the British, who, in 1849 responded unfavourably to W.'s letter of that year (s. Appleyard et al. 1985: 73f. no. 15; RubInd 128).

Meanwhile, the domestic political scene was being transformed by the challenge to *ras* Ali from *däǧǧazmač* Kaśa Ḫaylu (the future *aṣe* ↗Tewodros II). Throughout the wars, which accompanied the rise of Kaśa, W. remained loyal to Ali. After Ali's defeat by Kaśa in 1854, W. agreed to pay tribute to the latter, but Kaśa demanded surrender. W.'s refusal led, in February 1855, to the battle of ↗Däräsge, W.'s residence in Səmen. W. lost this battle, and his son Əšäte was killed (CrNuov 409f.). Kaśa immediately had himself crowned as *nəguśä nägäśt* in the church of ↗Däräsge Maryam. This church was W.'s principal foundation and had been built for him some years before by his European followers, ↗Schimper and ↗Zander.



The only known portrait of Wəbe Ḫaylä Maryam of Səmen and Təgray, from LefAbyss I, 228, plates, *Portraits* no. 2 (right)

W.'s life was spared, but he spent the rest of it as a prisoner at ↗Mäqdäla, where he died in 1867. After this defeat, his nephew ↗Nəguśe claimed to be his political heir and established himself for some time as a "counter-king", again cultivating French support (CrumMis 101–10). Tewodros II married W.'s daughter ↗Ṭəru Wärq, born to him by *wäyzäro* Laqiye (cp. Appleyard et al. 1985, nos. 28–29) and his lineage retained its political importance. He had three wives: Yäwärqwəha, Yäwärqmaru and Dənqənäš Säbagadis. One of his brothers was ↗Bəṭul Ḫaylä Maryam, whose lineage played a central role in early 20th cent. Ethiopian politics.

Denis Nosnitsin

Wəč̣ale

W. (**ውጫሌ**, 1,800 m A.S.L.) is the capital of the ↗Ambassäl *wäräda* of South-Wällo zone, Amara *kəlləl*. It is located on the Däse-Wäldəya road in the upper valley of the ↗Millee, a tributary of the Awaš River, and is overlooked in the west by the mountainous edge (3,200 m A.S.L.) of the highlands which separate the plateau from the ↗Abbay River basin.

The W. area became known internationally when on 2 May 1889 the ↗Italo–Ethiopian Treaty of Friendship and Commerce, the “W. Treaty”, was signed here (↗Treaties and conventions, s. EAE vol. 5). The foundation and the expansion of W. town are relatively recent; in 1938 the Italian *Guida* and maps only mention an inhabited area called Ambassäl and W. as the name of an Oromo group.

The Wällo famines of the 1970s and 1980s impeded the growth of the town: in the 1984 census there were 703 inhabitants but 3,934 inhabitants by the time of the 1994 census. According to recent estimations its population is 6,505 inhabitants (CSA 2004) or 7,134 inhabitants, probably due to the increase of traffic on the Addis Abäba–Mäqälä highway. Today’s W. has a few shops and public services (mainly schools).

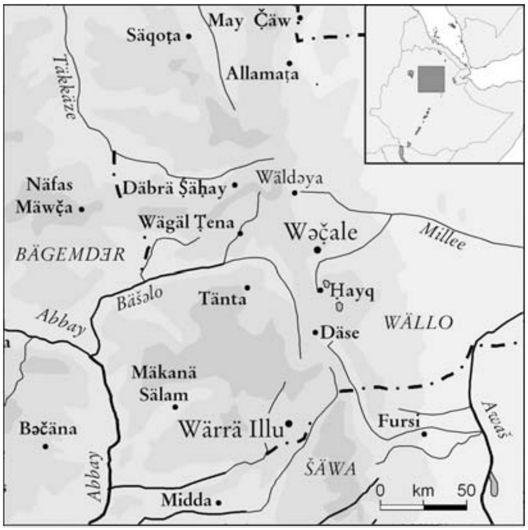
Alain Gascon



Wəddase amlak

The W.a. (**ውዳሴ፡ አምላክ**, ‘Praise of God’) is a collection of ↗prayers meant exclusively for personal devotion.

The W.a. is divided into seven sections, one for each day of the week. Each section starts with a reference to a Church father and ends with a doxology. Monday’s prayer is ascribed to ↗Basil of Caesarea. Tuesday’s and Wednesday’s prayers are said to be taken from homilies of ↗Efrem the Syrian. Thursday starts with the words of John Saba (s. ↗*Arägawi Mänfäsawi*), and ↗Pachomius is mentioned later on in the text. Friday’s prayer is attributed to ↗Shenute. Saturday’s prayer comes from Coptic hymns ascribed to ↗Athanasius of Alexandria. Sunday’s prayer is linked to writings of ↗Cyril of Alexandria. The names of the Church Fathers are most probably pseudonymous, and should be regarded as such unless further studies prove the contrary.

The W.a. abounds in parallel, repetitive, or rhythmic prayers like **ስብሐት፡ ለከ** …፤ **ስብሐት፡ ለከ** … (*Səbḥat läkä* …; *Səbḥat läkä* …, ‘Praise be to You …; Praise be to You …;’) or **መሐረኒ፡ ኦእግዚእየ** …፤ **መሐረኒ፡ ኦእግዚእየ** … (*Mäḥaränni oʾəgziʾəyä* …; *Mäḥaränni oʾəgziʾəyä* …, ‘Have mercy upon me, Oh my Lord …; Have mercy upon me, Oh my Lord …’). Unlike such compositions as, e.g., ↗*Arganonä Maryam*, the W.a. has very few metaphors and symbols, whereas comparisons with Biblical events and figures are plentiful.

God is portrayed as merciful Creator; his wrath is far away and forgiveness abundant. This is accompanied by Biblical references. Many prayers are also addressed to Jesus, with the use of many epithets, such as the “tree of life”, “sweet fruit”, “comforter of monks”, etc.

The prayers contain praises, but also petitions and implorations (cp. ↗Litanies; ↗*Məḥəlla*). The petitions refer to different N.T. figures mainly in conjunction with requesting the mercy of Jesus.

Monks and ecclesiastics may replace the W.a. with more fitting prayers, e.g. ↗*Askema*, W.a. being the choice of the laymen.

The dating of the W.a. is difficult. Some abrupt changes such as the sudden shift from "I" to "we", or from "God" to "Mary" in Friday's prayer could support the hypothesis of a compilation.

The W.a. has not been studied thoroughly by scholars. Zanetti (1995: 92 n. 95) identified the Arabic and the Syriac versions of the W.a. and hypothesizes that the Arabic text, entitled *Al-kitāb al-muḫtar min ṭalabāt al-abrār* ('The Chosen Book [made] from the Biddings of the Just') and possibly composed in Egypt, is the *Vorlage*. A comparison of the Ethiopic text with the Arabic and the Syriac ones remains a desideratum. One should speak of a compilation rather than of a composition. The earliest manuscripts date to 16th–17th cent.: EMML no. 8153, BN éth. 89, Princeton Garrett Ethiopic 40.

Wəddase Maryam

W.M. (**ውዳሴ፡ ማርያም**, 'Praise of Mary') is the short title of a famous office of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC), the complete title of which is **ውዳሴ፡ እግዝእትነ፡ ማርያም፡ ድንግል፡ ወላዲተ፡ አምላክ** (*Wəddase əgzəᵓtənä Maryam dəngəl wäladitä amlak*, 'Praise of our Lady Mary, the virgin genitrix of God'), one of the three offices for St. ↗Mary, the other being the ↗*Anqäṣä bərhan* and ↗*Argänonä Maryam*.

W.M. consists of blessings and praise of the Mother of God and intercessions to her. It is divided into seven parts for each weekday. In some manuscripts, the lection for Sunday is the first, in others the lection for Monday, but this difference does not constitute two textual traditions.

Ethiopian tradition attributes the W.M. to ↗Ephrem the Syrian (d. 373) or to a Simeon the Potter (Syr. *qūqāyā*, Gəᶜəz *läbḥawi*), a Syrian poet of the 5th/6th cent., and claims that it was introduced into Ethiopia already in Aksumite times (Cowley 1980: 43). In the Acts of St. ↗Yared, the two persons are confused as Ephrem the Potter (*Efrem läbḥawi*, cf. CerMaria 296). These ascriptions are hardly tenable. Although the style resembles hymns of Ephrem to a certain degree, and also the "Potter-Songs", no possible *Vorlage* in Ephrem's extant works has been identified, and also in the Syriac songs attributed to Simeon (*qūqāyāṯā*, 'Potter-Songs') only some similarities can be found. Sources of the W.M. can be found in a famous Coptic *Theotokion*, extant in a Bohairic version (O'Leary 1950). In the *Theotokia* influence of Ephrem's hymns as well as Greek and Byzantine models can be traced. From the Coptic *Theotokion*, an Arabic translation must have been made. The Arabic version became the source of the Ethiopic W.M. It was probably translated in the second half of the 14th cent. by *abba* ↗Sälama the Translator, or on his behalf. That a non-extant Arabic intermediary must have existed is proved by several inconsistencies in the Ethiopic text that can only be explained by translation mistakes from an Arabic text (GrohHymn 10).

The W.M. became very popular. Manuscripts of the W.M. abound and can be found in all libraries. In many manuscripts and prints (e.g., Aśmära 1956), it is included in the appendices of the ↗Psalter, together with the Biblical canticles, the *Anqäṣä bərhan*, etc. The W.M. was also included in the second part of the ↗*Məᶜəraf* (VelMe I, 76–91 = II, 286–96). There is an ↗*andəmta* commentary on the W.M., because it is an obligatory part of the teaching in the ↗*mäṣḥaf bet*.

The importance of the W.M. for the EOTC can hardly be exaggerated. It became influential also for other liturgies such as the ↗Anaphora of Ps.-Cyriacus of Behnesa (Böll 1998: 19–24), the *Wəddase wägənay läᵓəmmä Adonay* ('Praise and Thank for the Mother of the Lord'), which is based on it and the *Arganonä Maryam*.

Wəddase mäsqäl

The W.m. (**ውዳሴ፡ መስቀል**, 'Praise of the Cross') is a hymnological composition (↗Hymns), attributed, according to well-established tradition, to the 15th-cent. *abba* ↗Giyorgis of Sägla. The tradition is supported by the fact that the list of Giyorgis's works included in his Acts does mention the W.m. (Colin 1987: 22 [text]), as well as by the author's interest in the subject of the Cross, as illustrated by some passages in his *Mäṣḥafä* ↗*məśtir* (YaqMist I, 8 [text]).

The only extant witness of the W.m. known so far is the 16th-cent. ms. EMML 5041. The style of the text is similar to that of other works by Giyorgis of Sägla, esp. such as the ↗*Arganonä Maryam*, ↗*Ḫoḫətä bərhan* and ↗*Ǝnzirä səbḥat*. Interestingly, on fol. 32v the author uses the word **መጻዕርት** (*mäṣa^{c}ərt*, 'tortures'), otherwise only registered in the *Mäṣḥafä məśtir* (YaqMist I, 46 [text], cp. DillmLex 1304).

The W.m. begins with the usual opening prayer to the Cross composed as a rhyming hymn (fol. 5r), which is followed by a composition that alternates between simple prose and litany (fol. 5r–v).

Giyorgis's understanding of what the Cross and Christ's death on it mean to the Church and his symbolic interpretations of the event are presented in his usual eloquent language. E.g., he compares the Cross with "a dowry for the bride (i.e. the Christian Church) and a certificate of divorce for the one you left in the synagogue (i.e. ↗Judaism)" (fol. 53v).

The frequently employed word **ዕፅ** (^{c}*əṣ́*, lit. 'wood', 'tree', 'plant', 'herb') is a challenge to translate. Using only one of the English equivalents, e.g., 'wood', since it is often used in the phrase **ዕፀ፡ መስቀል** (^{c}*əṣ́ä mäsqäl*, 'wood of the Cross'), would cause the author's message to be lost because the word ^{c}*əṣ́* in different contexts signifies all four meanings. The option of alternating the English equivalents would be truer to the author's message, but results in inconsistency and in the loss of some of the beauty of the author's language.

The W.m. does not contain a discussion of Christological controversies as many other works by Giyorgis. It only presents a succinct and precise description of the ↗*Täwaḥədo* doctrine; opposing it to the teachings of ↗Nestorius and Eutyches. The formula of the W.m. (fol. 25r: "You [Christ] are our high priest anointed by the Father with the Holy Spirit") may have been used by the later followers of the ↗*Qəbat* (cp. Getatchew Haile 1990: vii–xiv).

The fact that the author used the phrase **ዕፀ፡ ኢሎቄ** (^{c}*əṣ́ä iloqe*, fol. 66v) for what in the Bible of today is rendered as **ሐረገ፡ ወይን** (*ḥarägä wäyn*, Gen 14:3) might suggest that the author's version of the Bible differs from the textus receptus. There are other such examples where the words in his biblical quotations differ from those in the Bible we use.

As a prayer book intended for daily prayer like the ↗*Wəddase Maryam* and his *Arganonä Maryam*, the W.m. is divided into the days of the week, and concludes, interestingly, just as his *Arganonä Maryam* does, with a solicitation of the blessings of the saints, from Adam to the present Christian community and a greeting (*sälam*) of 15 lines (fol. 75v).

Wedding(s)

Throughout Ethiopia ↗marriages are made official and valid in the eyes of the surrounding society through a series of W. rituals. While the specifics of these acts vary widely from culture to culture, there are also certain widespread common features. As the rules of endogamy/exogamy and betrothal as well as types of marriages and W. in the Ethiopian Orthodox Church are treated in the articles "Marriage" and ↗Matrimony of this Encyclopaedia, this article focuses upon "traditional" forms of the W. ceremony itself which often no longer hold. In practice many elements of betrothal, particularly the giving and receiving of either bridewealth or dowry continue into the ceremony. (For "modern" W. popular in urban Ethiopia and the Diaspora s. Otnes – Pleck 2003.)

Although all arrangements between the families have usually been concluded before the W. ceremony begins, there are often rituals in which the handover of the bride is acted out either as a negotiation, ruse or capture. (The latter, in which the bride may be physically carried to her new home, is to be distinguished from actual cases of bride capture.) In a fashion reminiscent of the Biblical story of Rachel and Leah, the bride may at times be hidden among other girls of her age, secluded or kept behind a curtain. The groom or his representative must determine who is the true bride. Among ↗Amhara and ↗Betä Ǝsraʾel the **ሚዜ** (*mize*, 'best man') requests the bride from her father and only after some play-acting of refusal is allowed to take her to her groom (Shack 1974:33). Among the ↗Gurage the groom can only take his bride to his village, after his friends have bested hers in a ↗song duel (s. below).

Bride and groom are usually accompanied not only by family members, but also by friends and age-mates, who play a prominent part in the proceedings. Often these can be seen as the dramatization of a "battle" over the bride with sides being taken based on locality and/or gender. Among the Amhara and ↗Tǝgrǝññā-speakers, the groom spends the night before the W. with his best men, and does not participate in the pre-W. feast. These best men are sworn to protect the bride in her new home. A **ደንገጡር** (*dängäṭur*, 'bridesmaid') accompanies her to the groom's house. Among the ↗Kǝmant, the groom travels to the bride's homestead accompanied by his kin and eight fictive siblings. The oldest of these acts as his advisor, the youngest serves food and drink to the bride at the W. Here as well, the *mize* pledge to treat her (and the groom) as kin.

In southern Tǝgray the groom's age-mates bearing ↗shields and ↗spears used to accompany him to his bride's village where they broke into song. At the entrance to the village, they were met by young girls who confronted them and a "song duel" ensued. In some cases, young men from the village also appeared and staged a mock battle. Here too, the groom's mates took an oath to protect the bride. Young women from the groom's village greet the bride when she comes to her new home and the groom's companions remain for as long as a month. In ↗Ǝndärta, the groom is met along the way as he returns to his village with his bride and is obliged to perform a dance for women from his bride's village. In ↗Harär, it is the obligation of the groom's friends to symbolically guard the bride after she is brought to his homestead. His 'best man' *(mǝhis mäläq)* accompanies him when he goes to his parents' blessing.

Singing plays a major role in Ethiopian W. rituals. Among the Amhara the *mize* spend much of the morning after the W., singing ↗songs on the groom's behalf and acquiring ↗gifts of money, clothing and livestock for the couple. As was already noted, in some parts of southern Tǝgre the groom's age-mates and young girls from the bride's village engage is a song duel and when the bride reaches the groom's village girls from there "greet" her with vituperative songs. Such song duels are also common among the Gurage where close friends of the bride and of the groom compete in singing the praises of their clan through both traditional and impromptu verses. Among the Kǝmant, the groom sings war songs in return for payments, which appear to be vestiges of bridewealth. Songs of war and bravery are also sung as the *mize* bring the bride to the groom's homestead.

Among some Oromo groups, the bride's departure from her home is accompanied by songs which mourn her departure and instruct her regarding the duties of a wife including cleaning her husband's clothes, preparing and serving food, personal hygiene and refraining from gossip. Among the eastern Oromo songs celebrating the bride's purity are sung on the night of her arrival in her husband's village. In Harär, her friends follow behind the marriage procession, singing praise songs.

In cases in which particular importance is attached to the pre-marital virginity of the bride, the consummation of the marriage and her "deflowering" is an integral part of the W. ritual. Thus many Christian groups, including the Amhara prefer Sunday after nightfall for a W. To marry on Saturday would mean that the couple could not consummate their marriage that night, but only on Sunday evening since a husband cannot sleep with his virgin bride on Sunday. W. are also not scheduled for the period of fast days, particularly ↗Lent, and in the rainy season although in the latter case this is more a matter of logistics than piety connected to consummation. The blood-stained sheet displayed on her W. night, which proves both her virginity and

Wedding of Princess Ǝǧǧəgayyähu Asfa Wäsän with *däǧǧazmač* Fəqre Śəllase Habtä Maryam; photo from the collection of the IES

her husband's virility assume considerable importance. Reminick (1976:754) notes no less than 25 Amharic terms for defloration of a bride. If the groom is unable to overcome his bride alone one of his *mize* may assist in restraining her or even perform the act himself. According to some reports from Ǝndärta, the groom's chief friend (Tgn.: ዐርኪ፡ ርእሲ, *ʿarki rəʾəsi)* may remain in the hut "so the bride will not be afraid". In Harär, his role is to guard against the intrusion of outsiders. In many such regions a woman who is diagnosed not to be a virgin is returned to her parents. Among the eastern Oromo, the bride's purity is publicly announced on the day of her W. Today, the premium placed on bridal virginity has largely declined, especially in urban areas among the educated youth and many others.

↗Blood either symbolic or real often plays an important role in W. rituals. In some cases it is clearly an allusion to the issue of virginity. Thus the Betä Ǝsraʾel groom wears red and white coloured thread around his forehead during the W. ceremony. If it is discovered that his bride is not a virgin, he removes it and the marriage is annulled. The display of the 'blood cloth' (*nay däm čärqi*) or even its presentation to the bride's parents clearly has a similar import. However, the *rako* ('sacrifice') performed by the Šäwan Oromo, in which the groom slaughters an ox and her brother smears its blood on her belly and pudenda appears to be concerned not only with her virginity but with the newly formed ↗kinship links. Similarly among some eastern Oromo, the groom would pour blood from a sacrifice over the bride's breast and right foot, his own forehead and the centre post of the house. Here, and in the ↗Beni ʿAmər custom of marking the marriage house with blood (today red dye), the custom seems to be connected to "blood-ties" of kinship.

Feasting and other forms of commensality are yet another widespread feature of W. In this context it is useful to take note of situations in which the bride and groom do not eat together until after the W. ceremony is completed (Shack 1974:33, 85). This act is deeply ritualized in the bride and groom's participation in the ↗Eucharist while being wrapped into a single large garment. Among the ↗Konso (Hallpike 1972: 113), the feast is, in fact the only W. ritual, and the bride's family does not participate. Among most groups W. are a time for exorbitant feasting often far beyond the means of the families involved, in which each attempts to exceed its neighbours in generosity and the display of wealth. In addition and sometimes in lieu of gifts for the couple, guests may bring food and drink, including alcohol to be drunk and animals to be slaughtered.

As with other rites of passage (↗Birth, ↗Burial), Ethiopian W. have not been the subject of sufficient detailed ethnographic analysis (as opposed to description) or comparative study.

Steven Kaplan

Wədəm Räᶜad

Aṣe W.R. (**ውድም፡ ረዐድ**, also Wəd[d]əm Arᶜad; r. 1299–1314) was a son of *aṣe* ↗Yəkunno Amlak and thus a brother of his predecessor on the throne *aṣe* ↗Yagbəᵓa Ṣəyon. He was succeeded by ↗ᶜAmdä Ṣəyon.

W.R.'s period of reign was relatively long, but there is little information on these years. However, they must have been far from peaceful. Taddesse Tamrat suggested that W.R. encountered some difficulties in Təgray, because in a land grant the *śəyyum* of ↗Ǝndärta referred to this province as his own kingdom (*mängəśtəyä*, CRDLib 199, l. 3; TadTChurch 73). Yet, in that document there is no indication as to the *śəyyum*'s failing to recognize the king's authority: on the contrary, W.R. is mentioned explicitly.

The attribution to the first year of W.R.'s reign of an agreement between the Christian king and *šayḫ* Muḥammad Abū ᶜAbdallāh (cp. TadTChurch 130) seems to be more convincing. According to the Coptic historiographer al-Mufaḍḍal b. al-Fadāᵓil, W.R. succeeded, through a political intervention, in preventing a war with the *šayḫ*, who finally acknowledged the sovereignty of the Emperor, and received in exchange a region where he was authorized to settle with his followers (ed. Blochet 1929: 56ff.).

An indication concerning the problems W.R. had to face is related to ↗Däbrä Ḥayq Ǝsṭifanos. From the documents preserved in the Gospel of ↗Iyäsus Moᵓa (EMML no. 1832, fol. 25), it is clear that W.R. withdrew royal support from this monastic community, for he confiscated its land. The reasons for that are not given, but Däbrä Ḥayq's close relationship with both W.R.'s predecessor (Yagbəᵓa Ṣəyon) and successor (ᶜAmdä Ṣəyon), may point here to a power struggle.

The Chronicle of ᶜAmdä Ṣəyon mentions his opposition to queen Žan Mängäśa, W.R.'s wife (MarAmdS 54f. and n. 1). The Acts of ↗Bäṣälotä Mikaᵓel also allude to a conflict between this saint and ᶜAmdä Ṣəyon concerning W.R.'s marriage. According to this source, ᶜAmdä Ṣəyon claimed to be not a son but a nephew of W.R., his real father being Qədmä Sägädä, another son of Yəkunno Amlak (Conti Rossini 1905: 20). In the Acts of ↗Filəp̣p̣os of Däbrä Libanos, however, ᶜAmdä Ṣəyon only insists that W.R.'s wife was not his mother (Turaiev 1908: 209). This controversy may be another indication of the acute succession struggle after W.R.'s death.

Western sources mention W.R. in connection with the famous *Letter* of ↗Prester John; and record an embassy he sent to the "king of Spain" in 1310 ca., which passed through Genoa (↗Italy), and was thereby instrumental to fostering the actual knowledge of Ethiopia in contemporary Europe (s. Fiaccadori 2009: 29).

Marie-Laure Derat

Weedduu

W. (lit.: 'praise') is a panegyric genre of the ↗Oromo oral arts (↗Oromo [oral] literature). It is the generic name for folksongs (↗Songs) that are used to praise Man and objects. An Oromo mother praises her god for giving her a baby with the *weedduu/sossoba daaᵓimmanii* (i.e. lullaby), the cattle keeper praises his cattle and the God that made him the possessor of cattle through *weedduu loowwanii* (i.e. cattle praising songs). The adherents of the Oromo traditional ↗religion praise ↗Waaqa with W. Likewise, the followers of Islamic ↗holy men use the genre to express their feelings and beliefs; thus among the ↗Arsi of ↗Bale there are a wide variety of W. said in praise of ↗Soof Omar and *šayḫ* Ibrāhīm. Similarly, a lover expresses his/her admiration and glorification of the beauty and character of his/her beloved through *weedduu ǧaalala* ('love songs').

W. also function to account for the social and historical realities of the world. Like modern songs, the W. carry various messages. The multiplicity and dynamism of the messages embedded in a W. can be accounted for through critical discourse analysis. For instance, the Oromo women say W. when they are engaged in time-consuming chores such as grinding cereals, churning milk and cementing floors. In such a situation, the primary role of the W. is to ease the pain caused by the drudgery. However, practical usage shows that Oromo women use the same oral art to offer social and political comment. They use it, for instance, to express their acceptance or repudiation of their social role and position in the family and society. A good example of the use of W. as a means to comment on the sociopolitical and cultural lives of a society is found in ↗Boorana. The Boorana women used a W. version called *karrile* to disapprove of or to reject the injustices men impose on them individually or in groups (AsmGada). *Karrile* is also used to admire the political and military achievements of members of the society.

A lullaby can carry multiple meanings (for an Arsi lullaby s. Jeylan Woliye Hussein 2004); one is that Oromo parents, particularly mothers, find social, economic and psychological empowerment in their children. The other meaning of the lullaby is the different values the Oromo society sees in male and female children, particularly the belief that males are superior. The lullaby can be used under different social and psychological circumstances. It may be used by a mother who is proud of bearing sons in order to irritate those whom she thinks are conniving against her. Again, one can use the same lullaby as an advice for parents/mothers who do not have male children so that they may think of having some either through natural birth or through ↗*guddifačaa*. The lullaby also potentially expresses regret for a woman who wants to lament her "failure" to give birth to a son.

Jeylan Woliye Hussein

Weinzinger, Erich Karl Wilhelm

W. (b. 31 July 1888, Vienna, d. 17 August 1960, Vienna) was an Austrian consular official, publisher and businessman. He was a son of Carl Hallasch and Berta Weinzinger. He attended school in Krems, Austria, and Zurich. W. studied at the École des Langues Orientales in Paris in 1908/1909 and at the École des Sciences Politiques. Spending 1909/1910 in Harär he became a friend and teacher of *ras* Täfäri Mäkʷännən (later *aṣe* ↗Ḫaylä Śəllase I), who later was to promote his career.

In 1911/12 W. was employed at the Austro-Hungarian consulate in Constantinople; and then moved to Zurich in 1912, where he published a journal for the consular service, and worked at the Turkish Consulate in Zurich. In the same year he married his first wife Margit Comentinger from whom he was divorced in 1952.

In 1917, he offered his services as expert on Ethiopia to the Imperial German Foreign Office. After ↗World War I W. returned to Ethiopia as director of the Trieste-based company "Agrumaria". He was honorary consul of Austria in Addis Abäba from 1 July 1924 to 20 October 1927. In 1926, W. started to publish the only international newspaper on Ethiopia, *Correspondence d'Ethiopie*, published in Vienna, Hannover and Paris, carrying articles on Ethiopia in English, German and French. In 1927 W. resigned his post as Austrian honorary consul and became press advisor to the Ethiopian Government, a post he held until the end of 1930; at the same time he was also writing "anti-British" articles for French newspapers like *Éclaireur du Soir*. After 1930 he lived in Zurich, Vienna and Addis Abäba. In 1932 he returned to Vienna as journalist and in 1935 moved to Athens. In ↗World War II W. apparently worked for the German intelligence service in Jerusalem, until he was deported to Kenya by British authorities after the Nazi-inspired failed coup d'état by Rashid al-Gailani in Baghdad; in Kenya he had to work on a plantation. He reentered Ethiopia in 1946 and lived as businessman in Addis Abäba where he also married his second wife Maria in 1956. He stayed in Ethiopia until 1960.

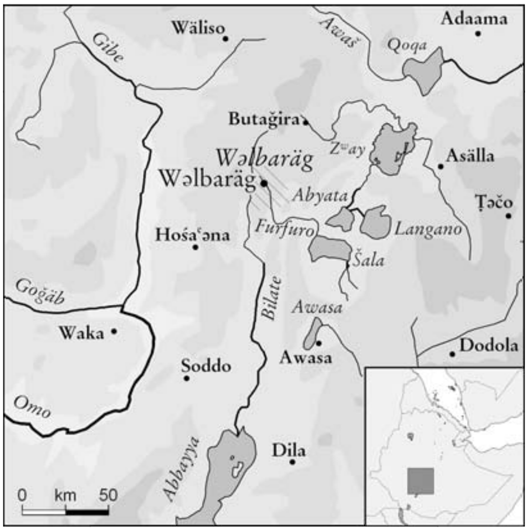
Wəlbaräg

The name W. (**ውልባረግ**, Wulbaräg, Hulbaräg, Ulbaräg; in the literature also Urbarag, Ulbaraga, Urbaragh, Urbarak, Oulbaragué) designates an



area and a little town situated in today's Daloča *wäräda* of Səlṭe *zone*. W. is also an alternative name of the Mälga sub-group of Səlṭe (↗Səlṭi). Linguists named the southernmost variant of the Səlṭi language, which is very similar to the ↗Ǝnnäqor variant, "Ulbarag".

In the genealogies of most subunits the W. or Mälga are traced back to Mälgageᵓlo and his alleged forefather *šayḫ* ↗Abādir ʿUmar ar-Riḍā. It is also claimed that Mälgageᵓlo was a father-in-law of the Səlṭi ancestor *ḥağği* Aliye. Another important ancestor is *imām* Side (↗Śidi) who links the Mälga with their traditional allies, the ↗Allaaba. Oral tradition claims that Mälgageᵓlo was a smith (*qurqura*). However, the Mälga traditionally were agriculturists, and to some extend pastoralists, while iron work was done by non-Mälga.

After their 16th-cent. migration from ↗Čärčär into former ↗Wäğ, the W. reached the Gurage highlands. They settled there, until at the end of the 18th cent. population pressure forced them to leave. Constantly in conflict with the pastoralist groups of ↗Libido, ↗Arsi and Šaašoogo ↗Hadiyya, they established, during the 19th cent., their territory in today's W. After the Ethiopian conquest they, together with other Səlṭi-speakers, expanded further into the historical districts of Sankura and southern Ṭora.

W. town is situated at the crossroads of important trade routes from Šäwa and Arsi to ↗Kambaata and ↗Wälaytta as well as, along the River Bilate, to the former Sidamo province. Merchants from W. were known for the trade in slaves and in coffee. The *kätäma* of W. was established in 1896 by *däǧǧazmač* (later *ras*) ↗Abatä Bʷayaläw at a ford of the Furfuro River where *balabbat* Šafi Awwäl already had founded the market of Kerate.

Wəllağ

The term W. (ውላጅ) refers to the half-caste offspring of a highland Ethiopian and one of the black-skinned peoples of the western lowlands known to the highlanders as ↗*šanqəlla*. During the 17th and 18th cent., W. designated regiments of half-caste soldiers armed with bows and arrows, lances, and firearms who served as personal guards of the emperors in ↗Gondär. Units of W. soldiers are first mentioned in 1689 when they accompanied *aṣe* ↗Iyasu I on a military campaign, but they probably existed well before then as the number of half-castes grew when slaving (↗Slavery) increased along the western borderland beginning in the early 17th cent.

The chronicles have little to say about them until the early 18th cent., by which time the W. had become a veritable praetorian guard deeply involved in royal successions. In 1716 and again in 1721, they thwarted the plans of high-ranking nobles to select the next candidate for the throne. In control of the castle grounds, they proclaimed their own candidates and won over the populace of Gondär to their nominations (↗Dawit in 1716 and ↗Bäkaffa in 1721).

By the early 1720s, however, the W. had become insolent and were notorious for murder, rape and rapine in Gondär. When in May 1723 they were allegedly involved in a plot to murder Bäkaffa (BruNile II, 600), the Emperor banished them from Gondär. When the W. decided to return in defiance of his orders, Bäkaffa sent loyal ↗Oromo regiments who massacred almost all of them, much to the relief of the people of Gondär. According to James ↗Bruce, this was the end of the W. guard units, and, indeed, they are not mentioned hereafter in the chronicles. But as Bruce makes clear, black soldiers still served as royal guards in the later 18th cent., e.g., a 300-strong "black horse" regiment. Many probably were half-caste W., but by then royal guard units were no longer known by that name.

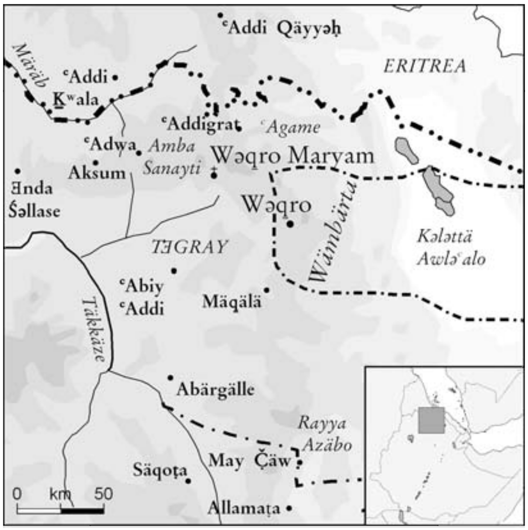
Wəq̱ro

W. (**ውቕሮ**, also **ውቅሮ** Wəqro, related to the Ethio-Semitic root *wäqärä* [Təgr. *wäq̱ärä*] 'to carve, to hew', i.e. 'rock-hewn [church]') is a roadside town (13° 48' N, 39° 36' E; 26,131 inhabitants in 2004, s. CSA 2004) and administrative centre in the Eastern Təgray Zone, on the route connecting ↗Mäq̱älä with ↗^{c}Addigrat. Historically it belonged to ↗Ṣ́əraʾ province. W. lies on the ancient eastern Təgrayan trade route linking the ↗Red Sea via Akkälä Guzay, ^{c}Agamä with inner Ethiopia (Lasta). Approximately half of the inhabitants are Orthodox Christians, with a small Catholic minority, and half are Muslims.

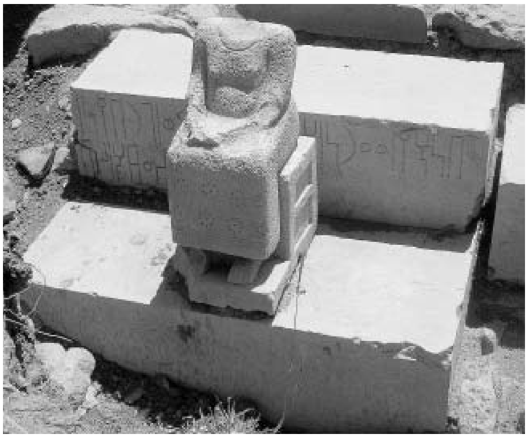
Historically, W. belonged to the originally larger ↗Dängolo village; W. was only the toponym used for the rural area surrounding the medieval rock-hewn church of Č̣ärqos Wəq̱ro, which is situated above the River Gudbaḥri. The church is also called Ǝnda Č̣ərqos [locally, Č̣ärqos] or, seldom, Č̣ərqos [Č̣ärqos] Maryam, referring to both of its most important *tabots* (Amh. Wəqro Qirqos; on this church, cf. Dängolo).



After an asphalt street was built in the 1930s, passing nearby the church, this area quickly developed into a town, which took the name of W. It was administratively separated from Dängolo village, with the *qalay* Ṭäli (or *gäräb* W.), which irrigates the surrounding fields, serving as the boundary. In the period of ↗Africa Orientale Italiana W. became the administrative centre of the Italian Residenza; later in Ḫaylä Śəllase's time it served as the administrative centre of ↗Kələttä Awla^{c}əlo *awraǧǧa* and today of Wəq̱ro *wäräda*. In the 1990s, industrial enterprises, including a tannery, were established there. It is also the seat of a Catholic mission that manages a school.

In older sources, the toponym W. appears repeatedly; in some cases it may refer to Č̣ärqos Wəq̱ro with its *g^{w}əlt* lands, in others it may mean other areas such as Wəq̱ro Märay near Aksum, ↗Wəq̱ro Maryam or others. The Mäṣḥafä ↗Aksum, for example, testifies to the pur-ported donation of W. "in ↗Säḥart" (i.e., rather in Ǝndärta) by the Aksumite ruler ↗Gäbrä Mäsqäl in favour of ↗Ǝnda Abba Gärima (CRAxum 21 [tr.], no. 3), the donation of "Däbr Ǝnda W." by *aṣe* ↗Zärʾa Ya^{c}əqob in favour of *abba* Iyosyas (ibid. 29, no. 18), and the endowment to the church of "W. Kidanä məḥrät" by *däǧǧazmač* ↗Säbagadis for his own commemoration (ibid. 71, no. 83). The Chronicle of *aṣe* ↗Susənyos reports that he was defeated by the Oromo at the battle of W. in December 1607 (PerChron, ch. 117, 119).

According to Eritrean oral traditions collected by Kolmodin (KolTrad I, 20, II, 16, 251), W. "in Ḥaḥaylä" is the ancient place of origin of several Təgrəñña subgroups who migrated to Eritrea (Kälkälti, Wäq̱ärti and Šəlälä; cp. also Conti Rossini 1942: 162, 189, nn. 12–13). Nowadays' local oral tradition reports that the church had been burnt either by the 16th cent. ruler ↗Ga^{c}əwa (popularly, but erroneously identified with the 10th cent. queen "Gudit" or ↗Esato) or by ↗Aḥmad b. Ibrāhīm al-Ġāzī (Lepage – Mercier 2005: 87; Smidt 2009: 135). Ga^{c}əwa is said to have been killed "by God" in punishment for her deeds near W. Local tradition locates her grave, called Ga^{c}əwa Mäq̱abər ('grave of Ga^{c}əwa'), on a



Ethio-Sabaic figurine as discovered in December 2007 in the site Mäq̱abər Ga^{c}əwa, Wəq̱ro district; photo 2008, courtesy of Wolbert Smidt

ruin hill in the area of the village ^{c}Addi Akawəḥ in the south-western outskirts of W. (also ^{c}Addi Kawəḥ, s. Godet 1977:35).

An excavation of Ga^{c}əwa Mäq̱abər, initiated by the Tigray Tourism and Culture Commission (TCC) in 2007, unearthed not the grave of this ruler, but several much more ancient, partially inscribed, objects; this was followed by excavations directed by the German Archaeological Institute (DAI) and the University of Jena in collaboration with the TCC starting from October 2008, revealing an Ethio-Sabaic temple. In 2009 more ancient structures of another building under that temple were found. The findings of 2007 included five, partially fragmentary, Ethio-Sabaic inscriptions of about the 6th to 8th cent. B.C., which makes W. one of the most important Ethio-Sabaic sites in north-eastern Africa. In the centre of the temple there is a libation altar, still in situ, with a fine inscription mentioning the name of a king, and linked to the cult of ↗Almaqah. In addition, a female statue (of the same type as the one of ↗^{c}Addi Gälämo, and also resembling the one of ↗Ḥawəlti), fragments of copper alloy work, votive figurines, incense burners, miniature vessels, and potsherds were found. The excavations showed that in a later period, a part of the then already half-buried temple was used for another local pre-Christian cult.

In addition, the church of Abba Gärima ^{c}Addi Akawəḥ, situated on the site of an alleged former palace of *aṣe* ↗^{c}Amdä Ṣəyon on the adjacent hill, keeps three Ethio-Sabaic altars with inscriptions linked with the kingdom of ↗D^{c}MT (in the 1970s only two were known, s. Godet 1977:35). The area south and south-west of W. hosts a number of ruin hills, which have yet not been excavated.

The existence of a high-quality fragmentary Cufic Arabic inscription of around the 10th cent., which seems to have belonged to a representative Muslim building, possibly a mosque or a minaret, is seemingly the earliest material witness to Islamic presence along the trade route of W. after the end of the Aksumite kingdom (Smidt 2009). The inscription is kept at Č̣ärqos Wəq̱ro (↗Inscriptions, Arabic).

Wolbert Smidt

Wəq̱ro Maryam

W.M. (**ውቅሮ፡ ማርያም**, also Wəqro Maryam Näbälät) is a monastic church at the foot of ↗Amba Sänayti (↗Təgray), on the western bank of the River Wär^{c}i (for location s. map for Wəq̱ro).

The main part of the church is square (9.5 x 9.5 m), extended by a roomy narthex in the front and prolonged eastwards by a sanctuary making the whole structure ca. 21 m long. The church is excavated along the face of the rock which serves as its southern façade. The façade, with two windows and three pairs of doors, is not decorated.

The interior, divided into three aisles (the central nave being 8.5 m high, the aisles ca. 5.5 m) and three unequally large bays is hewn with great precision and displays several elaborate architectonic details. The space is organized by two pairs of square pillars and corresponding pilasters which mark the division into bays on the walls. All supporting elements have bracket capitals topped by flat projections and are connected by arches, with the exception of the first and the second bay of the central nave. That section, with a very high wall which rises above the pillars, is unified by an "Aksumite" frieze running around its four sides. A cruciform window is cut in the eastern wall between the second and third bay. In the north-east corner of the northern aisle, there is a stone platform (ca. 0.8 m high) with a square opening above, leading to a large chamber, presently used for storage. In the front of the platform there seems to be a crypt, its entry covered by a piece of wood.

The central part of the church has a carved ceiling of two types, both imitating wooden roofing: with cross-patterns, and with a cupola. Bosses of different forms are carved in the centre of the crosses and at the apex of many arches. Spandrels are decorated with carved rosettes.

The sanctuary rises by three steps above the level of the nave and consists of two square rooms communicating by a doorway. The larger, on the axis of the central nave, opens to the latter though a decorated arch and houses a large *mänbärä* ↗*tabot* covered by a canopy. On the ceiling, a cupola in the centre is encircled by four squares with crosses and by four small cupolas. The second room is placed on the axis of the northern aisle from which it is screened by a wall; it is connected to the aisle by an arched opening. Inside, there is a monolithic cubic *mänbärä tabot*.

The narthex is divided by two cruciform pillars, joined by a double arch with an unsupported median. In the middle of the western wall there is an elevated niche, possibly a place for an honourable seat, from which – through the door and the central nave – it is possible to see the opening to the sanctuary and, if it is not screened, the main *mänbärä tabot*. There is also an opening in the northern wall which leads to a short ambulatory and through it to the first bay of the northern aisle. The ceiling is decorated with cupolas and crosses. A finely carved frieze of Aksumite type runs round the southern, western and northern walls.

Wall-↗paintings on canvas, dating to the 20th cent. but painted in the tradition of the second Gondärine style, are glued to the walls in the narthex and in the central part of the church. They show the Passion, some Marian scenes and figures of popular Ethiopian saints.

To the left of the church, there is a chapel dedicated to St. George. It is hewn on the level of the roof of the northern aisle and is accessible by a ladder. The interior with a low flat ceiling is divided into two unequal parts by a short pillar supporting a double arch. Two windows at floor level open to the main church, one to the northern aisle and the other to the central nave.

The whole complex seems to have been excavated over a longer period of time. Scholars have suggested dating ranging from the late 12th cent. (Buxton 1947) to mid-15th cent. (Lepage – Mercier 2005).

Two iron shaft crosses from the 15th or 16th cent. are kept in the ↗*ᶜəqa bet*, along with two 19th-cent. illuminated manuscripts: the Four Gospels and a copy of the ↗*Dərsanä Mikaʾel.*

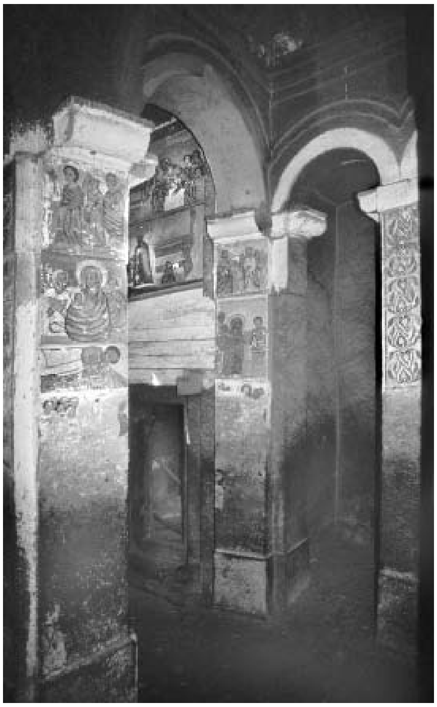
Wəqro Mäsqäl

The monolithic church of W.M. (**ውቅሮ፡ መስቀል**, also called Ǝnda Mäsqäl), dedicated to the Holy Cross, is situated in ↗Wag, south-east of ↗Säqoṭa (for location s. map for Wag). It bears a similarity to such rock-hewn churches as Betä Maryam, Amanuʾel and Libanos in ↗Lalibäla and Giyorgis in ↗Zoz Amba. Until the late 19th cent., the church served as a burial place for the rulers of the historical province (↗*Wag šum*).

Excavated in reddish volcanic tuff, W.M. is accessible through a constructed gatehouse which closes a narrow passage leading to the south-west corner of the church.

The structure (ca. 8.5 x 11.5 m) is encircled by a court. The hillside joining the building in the west at roof level provides a covered vestibule in the front of the western façade. Four stepped platforms lead to the main western door, flanked by two blind windows decorated with the motif of a double key-hole. There are two other entrances, from the south and from the north, the latter with a monolithic, poorly preserved porch.



Wəqro Mäsqäl, interior: view towards south-west corner; on the pillars the 18th-cent. murals depicting "the Story of Mary"; photo 2002, courtesy of Michael Gervers

The façades are divided vertically by broad pilasters (west and east into three sections, south and north into five). Horizontal string courses on the south-east and north sides imitate the Aksumite alternating timber-stone wall construction. Windows are placed within the sections marked by the pilasters. On the south façade, the upper windows are open and rounded at the top, the lower ones are blind and imitate Aksumite ↗architecture. The open central window on the east façade is a secondary addition; the original arrangement was limited to the "Aksumite" open windows in the lower row. The north façade has only the "Aksumite" blind windows in the lower level. The flat thick rock of the roof is covered by layers of stone tiles – an attempt to stop the deterioration of the ceilings.

The interior arrangement is of the cross-in-square type (↗Church buildings). Three square rooms form the eastern part, each with one window: the sanctuary, which opens to the nave, and the two *pastophoria,* screened from the aisles by walls but communicating with the sanctuary by door openings. The ceiling over the sanctuary imitates a ribbed dome. The walls above the doors to the *pastophoria* are decorated with large carved crosses of *lignum vitae* type. Such arrangement of the sanctuary and the absence of monolithic altars may suggest that the church was excavated at the end of the 13th cent. or in the early 14th cent.

The central part is divided by four cruciform pillars, the first pair rising from a large plinth. The pillars and slightly projecting pilasters, which articulate the division of the bays and correspond in their placement to their exterior counterparts, have bracket capitals and are connected by arches. The horizontal division, marked by tripartite courses, equally corresponds to the exterior decoration. A similar but five-partite course runs at the level of the capitals on the north and north-east walls. The ceiling compartments of the nave are decorated with differently designed crosses in bold relief which recall the vaulting beams of constructed buildings. The ceiling of the south aisle is flat and covered with simple relief crosses; in the north, the ceiling is flat and not decorated.

The western part is composed of a vestibule which opens through a double arch to the nave and two side-rooms, one with the door to the south aisle and another with the door to the vestibule. Until recently, coffins of some Wag nobles were kept there (they have been now moved to a hewn chamber off the church compound). The funeral character of the church is also witnessed by the two-chamber crypt with the opening at the front of sanctuary.

The western façade is decorated with three sets of ↗paintings from different periods, all executed on primed canvas glued to the wall. They are damaged (especially their southern part) despite a protecting wall constructed in the south-west corner of the church. The oldest set is from the 17th cent. and represents the early phase of the First Gondärine school. Above the door, St. ↗Mary with Child flanked by four archangels is depicted. On the right-hand pilaster, the Annunciation based on an apocryphon is placed, with Gabriel represented as an old man. On the wall further to the right there is an unidentifiable, probably eschatological scene at the top, and St. George slaying the dragon below. In the upper left corner, four ↗Zagʷe kings on horseback are depicted, ↗Yəmrəhannä Krəstos, ↗Ḥarbay, ↗Lalibäla and ↗Näʾakkʷəto Läʾab. The remaining representations are gathered around the false window which itself is adorned with painted ornament: inside, there are the Sun and the Moon, with the monk Śärṣ́ä Ləʿul, the superior of Däbrä Sərem, and *abba* Ṣəge Dəngəl underneath; on the right, the Sacrifice of Abraham; on the left, Julitta and Cyriacus (↗Qirqos) and an anonymous ecclesiastic.

The second set was executed in the 18th cent. in the Second Gondärine style. The images, placed in the central part of the façade, include the representations of the ↗*Maiestas Domini* and the ↗*Kidanä Məḥrät*, encircled by the 24 Heavenly Priests, and a half-figure Archangel Raphael glued to the door.

The third set, from the second half of the 19th cent., is placed below the Zagʷe kings and represents two scenes of the Passion, with *ras* ↗Bərru Gäbrä Mädḫən as supplicant.

The church interior is also decorated with wall-paintings on cloth. The set from the 18th cent., executed by the same painter as the *Maiestas* on the façade, represents the martyrdom of St. ↗George (15 scenes displayed on the northwest pillar and the north engaged pillar) and the story of St. Mary and the Holy Family's flight from Herod, based on the ↗*Nägärä Maryam* (ca. 30 scenes on the western wall above the southern chapel, on the wall between the south and central nave, on the south-west pillar and on the south engaged pillar). The floral decoration which covers the eastern sides of both painted pillars and the east side of the pillar dividing the porch and the naves belongs to the same set. The dedicatory inscription placed on the western wall below the first scenes of the Marian cycle indicates that the ↗donors of this set of paintings were *wag šum* ↗Näʾakkʷəto Läʾab (r. 1746–47) and his father Arʾaya Krəstos (↗Arʾayo).

From the second set, which once decorated the first pair of pillars, only the upper part has remained: on the south-east pillar, two cherubs and St. Mary talking to ↗Ephrem the Syrian; on the north-east pillar, a figure holding a book, probably a prophet.

The church claims to possess a large number of manuscripts, including documents related to the history of Wag and the Zagʷe dynasty.

Western Galla Confederation

The W.G.C. (or "Western Galla Province") was a short-lived political entity founded in May 1936 by ↗Oromo leaders in western Ethiopia. They asked the British to accept a ↗League of Nations mandate over the western Oromo, based on respect of their autonomy and providing military protection. It encompassed territories from the Blue Nile in the north, the River Gudi in the east to Maği in the south (Hasselblatt 1982: 96). The term "↗Galla" was used in this case by the Oromo leaders themselves as it was perceived as the (in this case neutral) English translation of "Oromo"; modern historiography rather speaks of the Western Oromo Confederacy (Ezekiel Gebissa 2007).

After Italy had won the Battle of ↗May Č̣äw (↗Italian war 1935–36), remnants of the Ethiopian government retreated to ↗Gore in western Ethiopia and immediately tried to organize a functional administration of the last un-occupied territories. The local Oromo leaders, however, were looking for alternatives, wishing to preserve the traditional political autonomy of their territories. On

23 May 1936 the Oromo governor *däǧǧazmač* ↗Habtä Maryam of Wälläga sent messengers from ↗Naqamtee to British-administrated ↗Gambella, in order to negotiate a treaty on the "future relations" between the "Western Galla Province" (as the messengers called it) and the British Government. The delegation was led by *ləǧ* ↗Yəlma Däressa, acting as Habtä Maryam's and the other western Oromo leaders' plenipotentiary envoy.

The delegation started the negotiations in Gambella in June 1936, and several memorandums were sent to the British Government, with the suggestion that the western Oromo territories should be taken over by the British, or at least administered by them with a mandate of the League of Nations. These negotiations were kept secret from "the Amhara" (documents s. Hasselblatt 1982: 95ff.). The delegation informed Foreign Minister Anthony ↗Eden, that due to the breakdown of the Ethiopian government the western Oromo had formed a "Confederation" to govern themselves, and that a "provisional government" of "Western Galla" would be formed in Gore by Habtä Maryam. They underlined that the western Oromo had always preserved their autonomy within the Empire, were governed by their own dynasty and never militarily subdued "by ↗Šäwa", and that they had accepted Ethiopian domination only in order to enjoy military protection, which had disappeared now. British officials declared that their government would only become active in the region following an official request by the League, following which Yəlma urged for a British mandate by the League.

Simultaneously, Ethiopian government officials managed to establish a provisional government of Ethiopia in Gore, with the support of the British consul Erskine, with *bitwäddäd* ↗Wäldä Ṣadəq Goššu as its President, and *ras* ↗Ǝmməru Ḫaylä Śəllase as his assistant and foreign minister (↗Resistance). According to a British report to the League of Nations Union in London (Hasselblatt 1982: 98f.) they managed to come to an agreement with the western Oromo leaders; this agreement stipulated that they would support the provisional administration, against the recognition of their autonomy, the possibility of an international mandate over their territories, and the abolition of discriminatory laws. In fact, taxes were then already only paid to the local Oromo leaders and not to the government officials any more.

However, in August "George" Ḫəruy, secretary of his father *blattengeta* ↗Ḫəruy Wäldä Śəllase, was sent as an Ethiopian envoy to the British Sudan to convince British officials not to recognize the W.G.C., "encompassing only small parts of western Ethiopia", and instead exclusively support the provisional government. Eden then still considered submitting the W.G.C. mandate question to the League (ibid. 104), but the provisional government in Gore continued to underline the futility of the W.G.C. initiative. When in September "Abyssinian" attacks against Oromo were discussed in the League, the Ethiopian delegation described the western Oromo initiative as a result of foreign interference and underlined the unity between the Ethiopian government and the Oromo (Hasselblatt 1992: 105).

The further development of the war finally made the W.G.C. obsolete, and its territory was included in the newly proclaimed ↗Africa Orientale Italiana.

Wine

W. (Amh.: **ወይን፡ ጠጅ**, *wäyn ṭäǧǧ*, 'wine'; **ሀረግ**, *harägg*, 'grape, vine leaf'; Tgn.: **ወይኒ**, *wäyni*, 'vine', **ቪኖ**, *wino* [Ital.: *vino*], 'wine', **ነቢት**, *näbit*; Orom.: *wayinii*, 'vine') was known in Ethiopia already in Aksumite times (↗Aksum). The ↗*Periplus of the Erythraean Sea* records the limited import of grapes at ↗Adulis, and grape seeds have been identified at ancient Aksumite sites (Schoff 1912: 24; Phillipson 1998: 59). The existence of local viniculture may likewise be reflected in several Aksumite carvings (MHAksum 78; s. ill.), as well as in the tradition that the Aksumite king ↗Dəgnaǧan established his capital at a place called ↗Wäyna Däga (lit.: 'grape highlands'; SerHist 203; cp. Conti Rossini 1938: 444).

Awareness of grapes, and hence W., was later apparent in the ↗*Fətḥa nägäśt*, which commanded faithful Christians, after gathering their grapes, to leave some for the poor (Paulos Tzadua 1968: 85, 279). Specific reference to viniculture in Ethiopia comes in the 14th cent., when the Egyptian author Ibn Faḍlallāh al-ʿUmarī reports that black grapes were grown in ↗Ifat and nearby Abyssinian sultanates (UmMasGaud 10, 18). *Abba* ↗Gäbrä Iyäsus at around the same time reportedly estab-

Aksumite ivory plate with a carving showing a wine branch; Museum of Aksum; photo 2008, courtesy of Pawel Wolf

lished a vineyard at Däbsan, or ↗Ǝnfraz, east of Lake Ṭana (Conti Rossini 1938: 409–52). Later again *aṣe* ↗Bäʾədä Maryam founded a church, apparently in ↗Gurage, which he provided with vines (HuntGeogr 148, 160). Grapes likewise find their place in Gəʿəz literature, for example in the Romance of ↗Alexander the Great, which tells of a bird carrying a magic branch of such fruit in its beak (Budge 1896: 269f.). Grape cultivation, by the early 16th cent., was fairly widely practiced. Alvares states that the principal vineyards, in the heart of the country, belonged to Ləbnä Dəngəl and to the Patriarch, *abunä* Marqos. Many monasteries, particularly in the north, however, also produced grapes, albeit in smaller quantities (BeckHuntAlvar 166f., 390).

Viniculture was, however, somewhat alien to the country's subsistence economy. Most of the population, farmers and pastoralists, did not grew vines, and were thus largely without access to W. Another problem was that vines needed constant care and protection – from robbers during periods of disorder, and at other times from birds and bees (MasMis, vol. 3, 39). A further difficulty was that the country lacked a bottling industry or other effective means of storing W. – which was in consequence available only seasonally, in January or February (BeckHuntAlvar 166f., 390; Pearce 1831: 236f.; Combes – Tamisier 1838, vol. 4, 84f.). Grape W. was therefore outclassed by ↗*ṭäǧǧ* made from ↗honey. This latter could be obtained at any season, with the result that *täǧǧ* could be produced, and drunk, throughout the year. The need of grape W. for the communion service was at the same time obviated by the widespread use of ↗Eucharist W. made from raisins, either local or imported.

Despite such limitations, grapes continued to be cultivated throughout the next few centuries, notably during the heyday of Gondär, at nearby Ǝnfraz, Därita and Qäroda (BruNile III, 335); and at several later towns, among them Č̣äläq̱ot in Təgray (Ferret – Galinier 1848: 134). New vines were also introduced at ʿAdwa by the German botanist Wilhelm ↗Schimper (1872: 485f.). Most of the country's vines were, however, ravaged around 1855 by a serious epidemic of the vine-louse Phylloxera (Heuglin 1874: 300f.; de Coursac 1926: 23).

Interest in W. nevertheless later revived. The founding of Addis Abäba in 1887 was followed by the establishment of French, Greek and other foreign shops selling imported wine. Mənilək and Ṭaytu were photographed drinking Bordeaux W. The first three modern vineyards were set up in the capital's vicinity in the early 20th cent. (ZerÉth 131).

Viniculture was further expanded during the Italian occupation and post-war period, when vines were planted in the Awaš area and at Gudär, near ↗Ambo. Ethiopian W. is currently produced for both the Ethiopian market and export. Today, the Ethiopian State Winery produces two red W., *Gouder* and *Dukam,* as well as a white W. by the name of *Crystal. Dukam*, another red W. is produced by the Awash Winery. Both wineries also make industrial honey W. (different from *ṭäǧǧ*).

Richard Pankhurst

Wingate, Orde Charles

W. (b. 26 February 1903, Naini Tal, India, d. 20 March 1944, in a plane crash near Bishenpur, India) was a British officer. Born to a military family, he attended Britain's Royal Military Academy from 1921 to 1923. At graduation, he received a gunnery officer's commission, and joined the Royal Garrison Artillery. In January 1926, W. received a place at the Army School of Equitation and subsequently enrolled in the London School of Oriental Studies (↗School of Oriental and African Studies) to study Arabic. From 1928 to 1933, he served in the Sudan Defence Force, where his primary duty was to patrol the Sudanese-Ethiopian border in search of slave traders and ivory poachers. Between 1936 and mid-1940 W. served in British intelligence in Palestine, where the Palestinian Arabs initiated their 1936–39 revolt against the British and the Jews. Wingate identified with the Zionist cause, and in 1938, with the blessing of his superiors, began training Jewish commandoes. By many he is still considered the first architect of the modern Israeli Defense Forces.

At a conference convened in Khartoum at the end of October 1940 British military commanders agreed with *aṣe* ↗Ḫaylä Śəllase I on a plan of attack for Italian-occupied Ethiopia. Major W., who by then had the sympathy of Winston Churchill himself, was then called to Sudan by Archibald ↗Wavell, Commander-in-Chief of Middle East Command; he was to serve as a staff officer with the brief of liaising between William Platt's "Mission 101" and the Emperor. He arrived in Khartoum on 6 November 1940 with £1 million to spend.

Orde Wingate; photo courtesy of the IES (W-803)

In early December, W. formulated a plan for action in Ethiopia. He rejected the so-called Plan X, which had been drawn up by Daniel Arthur ↗Sandford, commander of "Mission 101", whereby the Emperor would return to Ethiopia at the head of a large Anglo-Ethiopian army. Instead, he devised a strategy whereby small groups of Ethiopian fighters would deploy throughout parts of the empire to conduct guerrilla operations against Italian forces (cf. MockWar 284f.).

The plan was approved by Wavell and at a base near Khartoum, W. received weapons, some 18,000 camels and several thousand camel drivers. The main force included a Sudanese battalion, commanded by Lieutenant Colonel Hugh Boustead, and an Ethiopian battalion commanded by Captain E.M. Boyle, who was soon sacked by W. on grounds of his poor performance. W. then organized ten guerrilla groups known as Operational Centres. Each force included a British officer, five British Non-Commissioned Officers, and 200 Ethiopian fighters who were divided into ten squads. W. named these soldiers the ↗Gideon Force, after the Biblical figure of Gideon. During the early stages of the campaign there was considerable tension between W., already perceived in the army as eccentric and ill tempered, and Sandford, his nominal commander.

In February 1941, W. commenced operations against Italian forces. Over the coming months, irregular Ethiopian forces known as Patriots (↗Resistance) also played an important role in the campaign by attacking Italian bases and their supply lines. Near the end of the allied campaign, the Gideon Force took the surrender of some 20,000 Italian soldiers under Colonel Maraventano. On 21 January 1941, Ḫaylä Śəllase accompanied by *ras* ↗Kaśa Ḫaylu and the Gideon Force crossed the frontier and raised the Ethiopian flag on Ethiopian soil.

With the end of the East African Campaign, on 4 June 1941, W. was removed from his command and his rank was reduced to that of major. He left for Cairo and wrote an official report extremely critical of his commanders, fellow officers, government officials and many others. W. was irritated that British authorities ignored his request for decorations for his men and obstructed his efforts to obtain back pay and other compensation for them.

During ↗World War II W. became famous as commander of the long-range jungle penetration Chindits Unit in Japanese-occupied Burma.

Thomas P. Ofcansky

Winqvist, Karl

Reverend W., (b. 14 Oktober 1847 Smedstorp, Sweden, d. 6 December 1909, Bäläsa, Eritrea; previous surname Karlsson) was an important missionary, medical doctor and translator of Bible texts into Ethiopian Languages.

W. was ordained in Skara diocese in ↗Sweden and became a seamen's pastor in Grimsby, UK, from 1878 to 1879. After his medical studies in Edinburgh 1880–83, W. married the German Elsie Winqvist (née Hefter, 1863–1957), who was later to write their biography (1945). Together they started their service with the Swedish Evangelical Mission (↗Evangeliska Fosterlands Stiftelsen) in that part of Ethiopia which later became Eritrea. They worked from 1883–95 at ↗Ǝmkullu, in the Mission's centre, and from 1897–1909 in Bäläsa (10 km north of Asmära).

Besides his missionary work W. also worked as a medical doctor. His initial plan was to build a hospital in Ǝmkullu, but only a small clinic could be set up. Through his medical work he established not only friendly relations with the Muslim ↗Təgre lowlanders but in 1892 *ras* ↗Alula Ǝngəda entrusted to W. the treatment of wounded soldiers (ArEvang 292).

W. is famous for his efforts concerning the development of the ↗Təgre and ↗Təgrəñña languages. Together with local converts and missionaries he translated and edited several books of the ↗Bible and religious scripts. With ↗Dawit Amanuʾel and ↗Täwäldä Mädḫən Gäbrä Mädḫən he translated the Gospel of St. Mark into Təgre in 1889; however, the latter claimed, that W. only "supervised" this work (ArEvang 337). The translation of the New Testament which W. achieved with the help of Täwäldä Mädḫən Gäbrä Mädḫən and Täwäldä Mädḫən Gäbru in 1909 had the greatest impact on the development of the literary language. Most of W.'s linguistic activities were in Təgrəñña, several of his works were published post-mortem supervised by his wife.

Elsie W. deserves closer examination, as she equalled, if not outshined, her husband's reputation. Before she got married, at the age of 19, she mastered the highest (medical) education, women could attain in the Germany of that time (cp. ArEvang 289). She grew up trilingual (German, French, English) and, while in Eritrea, she gained a profound knowledge of Təgre and Təgrəñña. After the death of her husband she stayed in Eritrea until 15 December 1935 when numerous Swedish missionaries were expelled from the then Italian colony (Arén 1999: 456f.). But she managed to travel to Eritrea several times in later years. The work of translating the whole Bible was continued by Elsie culminating in the publication of the complete Bible in 1956/57 which "several experts hailed for idiomatic accuracy and poetic beauty" (ArEvang 337; for another early translation of the Four Gospels carried out by W., Marqos Gərmay and Gäbrä Ewosṭatewos Zämikaʾel in 1910, cp. Agosṭinos Tädla 1994: 335).

Wisdom Books, biblical

The W.B. follow upon the ↗Historical Books in the ↗Old Testament; they share the particularities of text development with the O.T. The W.B. included in the Gəᶜəz ↗Bible are: Job, Psalms, Canticles, Proverbs, Ecclesiastes, Song of Songs, Wisdom of Solomon and Sirach. All of them are transmitted in the Hebrew Bible, in the sequence: Ps, Job, Prov, (Ruth), Song, Ecc., Wis and the Canticles are transmitted only by the Greek Septuagint (LXX), in the sequence (cp. Rahlfs 1935: II, 1–489): Ps, Canticles, Ecc, Song, Job, Wis, Sir. Moreover, the LXX have also the Psalms of Solomon, which are not in the Gəᶜəz Bible (cp. *CAVT* no. 212). The Canticles of the LXX are 14: *First Song of Moses* (Ex 15,1–19); *Second Song of Moses* (Deut 32,1–43); *Prayer of Hannah* (1 Sam 2,1–10); *Prayer of Habakkuk* (Hab 3,2–19); *Prayer of Isaiah* (Is 26,9–20); *Prayer of Jonah* (Jon 2,3–10); *Prayer of the Three Holy Children* (Dan 3,26–45); *Song of the Three Holy Children* (Dan 3,52–88); *Magnificat* (Lk 1,46–55) and *Benedictus* (Lk 1,68–79); *Song of the vineyard* (Is 5,1–9); *Song of Ezechias* (Is 38,10–20); *Prayer of Manasse* (cp. *CAVT* no. 178); *Nunc dimittis* (Lk 2,29–32); *Gloria in excelsis Deo* (neither in the O.T. nor in the N.T., but cp. Lk 2,14). Ps and Canticles are found altogether in the Gəᶜəz *Mäzmurä Dawit*, in the sequence: *First Song of Moses* (Ex 15,1–19); *Second Song of Moses* (Deut 32,1–21); *Third Song of Moses* (Deut 32,22–43); *Prayer of Hannah* (1 Sam 2,1–10); *Song of Ezechias* (Is 38,10–20); *Prayer of Manasse* (also in Gəᶜəz, inserted at 2 Chr 33,13); *Prayer of Jonah* (Jon 2,3–10); *Prayer of Azariah* (Dan 3,26–45); *Song of the Three Holy Children* (Dan 3,52–88); *Prayer of Habakkuk* (Hab 3,2–19); *Prayer of Isaiah* (Is 26,9–20); *Magnificat* (Lk 1,46–55); *Benedictus* (Lk 1,68–79); *Nunc dimittis* (Lk 2,29–32).

Dillmann (1894: 114, followed by many others, cp., e.g., CRStor 223) supposed that the *subscriptio* dating to 678 A.D. in ms. BN Éth. 6 (ZotBNat 9f.) and others referred to the translation of Sir, where, moreover, God's name is rendered twice (Sir 31,8 and 37,21) with *Astar*, to be compared with the name of god ↗ᶜ*Astär* (cp. CRStor 141). Yet, the *subscriptio* to the purportedly last OT books translated into Gəᶜəz is highly problematic, and might either be wrong, or point to the copying of a manuscript in much later times (cp. Rahlfs 1965: 679ff.; CerLett 20).

The concept of W.B. is neither of the Hebrew Bible, where Ps, Prov, Job, Song and Ecc are part of the "Writings", nor of the ↗Ethiopian Orthodox (Täwaḥədo) Church, in the printed editions of which (cp. *Bəluy Kidan* 1981/82) the W.B. do not form a conceptual unity of their own, and – apart from Ps and Canticles – are included in the "Books of the Kings". In turn, Ps, Canticles and Song (plus such praises of Mary as *Wəddase Maryam* and similar) form altogether and by their own the *Mäzmurä Dawit* (↗Psalter), i.e. the most popular writing (usually, bound in one codex) of the whole ↗Gəᶜəz literature.

Moreover, Prov are traditionally subdivided in Prov 1–24 (*Məssale* or *Məssaləyatä Sälomon*, lit. 'Proverb' or 'Proverbs of Solomon'), and Prov 25–29 (*Tägśaṣä Sälomon*, 'Admonition of Solomon', cp. DillmLex 1152; Cowley 1988: 458f.); in some Ethio–Eritrean editions the two sections are printed separately with their traditional titles, in the sequence Job, Prov 1–24, Ecc, Song, Prov 25–29, Wis (cp., e.g., *Bəluy Kidan* 1981/82: 429–81 [*Mäṣḥafä Iyob*, 'Book of Job'], 483–520 [*Mäṣḥafä Məssale*, 'Book of Proverbs', i.e. Prov 1–24], 521–35 [*Mäṣḥafä Mäkbəb*, 'Book of the Ecclesiastes'], 536–44 [*Mäḫaləyä Sälomon*, 'Song of Solomon', i.e. Song], 545–53 [*Tägśaṣä Sälomon*, 'Admonition of Solomon', i.e. Prov 25–29], 554–82 [*Ṭəbäbä Sälomon*, 'Wisdom of Solomon']). The subdivision of Prov could account for the reckoning of five books "of Solomon the wise" (i.e. Prov 1–24, Prov 25–29, Ecc, Song, Wis) in one of the several Ethiopian ↗Bible canons of the ↗*Senodos* (cp. BauSen 280 [text]), that includes Ps, five books of Solomon, Sir, Job. Other Bible canons in the *Senodos* reckon quite differently: Job, Ecc, Ps, Prov, Sir, Song, Wis (each in one book, cp. *ibid.* 144f. [text]); Ps, Prov, Ecc, Song, Job (cp. *ibid.* 178 [text], the same in the Bible canon of the *Canons of the council of Laodikeia* in the archaic *Senodos*); Job, Ps, Prov, Ecc, Song, Wis, Sir (cp. *ibid.* 230 [text]).

W.B. make no exception to the urgent need of a critical edition of the Gəᶜəz Bible. Besides da Bassano's (1925) comprehensive edition, Sir (cp. also Ahlmark 1932–33) and Wis have been edited by Dillmann (1894), Job by Pereira (1905), Ecc by Mercer (1931, on which cp. Conti Rossini 1936: 515ff.), whereas Prov have been only examined in an unpublished dissertation (cp. Pilkington 1978). Ps, Canticles and Song (ed. by Gleave 1951, but cp. also Euringer 1900ff.) were usually published altogether in the *Mäzmurä Dawit* (for details on various editions, cp. Gleave 1951: xiii–xvii). Among the most important not yet used mss. cp., e.g., EMML no. 2080 (Prophetic Books, also including Prov [*Məssalyatä Sälomon* and *Tägśaṣä Sälomon*], Wis and Ecc, on which cp. Knibb 1995: 10), and Oslo – London, Schøyen M. 2073 (Psalms, Canticles, Song and *Mäzmurä Sälomon*), both of the 15th cent.

The fortune of the biblical W.B. in the Ethiopian Orthodox Church can be also appreciated from the number of Gəᶜəz commentaries (cp. Cowley 1988: 436f.), and Amharic ↗*andəmta*, both mss. and printed editions (cp. *ibid.* 458f.) on all the W.B. Of exceptional importance is the still unpublished Gəᶜəz version of Philo of Carpasia's commentary on Song 1.2–14a, preserved in the 14th/15th cent. ms. (*codex unicus*) Jerusalem JE 300 (Ethiopian Archbishop's private residence no. 119, cp. Isaac 1987: 67, no. JE300E; Cowley 1988: 437): in fact, besides the original Greek, the commentary was only known in a Latin version (on Philo of Carpasia in the Ethiopian tradition, cp. also Raineri – Tedros Abraha 2003; Voicu 2004). On Song cp. also Euringer (1936ff.).

Alessandro Bausi

Wohlenberg, Hellmut

W. (b. 16 October 1892, Hannover, d. 3 May 1939, Frankfurt am Main) studied education and humanities at Göttingen, Germany. He worked as a teacher at a grammar school, and, after World War I, was fascinated by the cultural philosophy and ethnography of Leo ↗Frobenius. He wrote articles about cultural morphology which conceives of culture as living organism and about "Paideuma", a kind of cultural soul which was considered to act more or less independently of humans. In 1933 W. left Hannover and joined Frobenius' "Institute of Cultural Morphology" at Frankfurt am Main. From October 1934 to May 1935 he participated in a research expedition to Ethiopia together with the ethnologist Adolf E. ↗Jensen and the painter Alf Bayrle. A fourth member, Helmut von den Steinen, made a separate journey via Goǧǧam to Gondär and Beni Šangul.

For the voluminous publication *Im Lande des Gada* (ed. Jensen 1936) W. contributed a descriptive account of more than 300 pages about the journey. It is a very detailed narrative and untypical of scholarly enterprises predating the postmodern postulate of reflexively revealing the personal conditions of field research. The itinerary led from Addis Abäba via the Rift Valley and Sidaamaland to Gideʾo and Konso where the researchers stayed for longer periods of fieldwork. They returned via the Gamu highlands to the capital whence they travelled on to Gurageland. Due to rumours of the impending Italo–Ethiopian war, the sojourn of the expedition in Ethiopia was shortened.

As W. (1936: 448) indicated, the research expedition was stimulated by by ↗Azaïs and ↗Chambard's (1931) book on archaeological findings in southern Ethiopia. A major interest of the ↗Frobenius-Institut at that time was the focus on culture history in general and on megalithic monuments and their ethnographic implications in particular. The monuments and the spectacular grave cult of the Konso, Gato and other groups as well as the widespread ↗stelae and the ornamented effigies of ↗Ṭəya therefore attracted the special attention of researchers with such a scholarly orientation. While Bayrle painted the monuments and objects of material culture, W. made a photographic documentation and also contributed to Jensen's analytical interpretations on the ↗*gadaa* systems and collections of folktales in southern Ethiopia.

Woma

W. was a title of high dignitaries among Highland East Cushitic-speakers such as the ↗Sidaama, ↗Kambaata, ↗Ṭimbaaro, ↗Dubamo, ↗Donga, ↗Allaaba and ↗Qabeena as well as some Omotic speakers. According to historical data of the 19th and 20th cent., the position of the W. was the highest in a monarchical system, i.e. that of the "king". Among the Sidaama, however, it referred to a leading representative in the age class system; most probably the original function of the W. (Jensen n.d.: 92f.).

In most cases the W. was considered the highest priest. the features associated with W. are typical of a divine king. As a male member of a "noble" clan he had to be physically and mentally fully intact. He was associated with the supra-natural world and was believed to act as a mediator between that sphere and his subjects. Major public performances such as religious feasts, ↗rainmaking, blessing of warriors, rewarding honourable titles and grants were carried out by the W. He also acted as the highest judge while other secular duties were limited. He did not participate in military activities, and political negotiations were usually conducted by the war-leaders or special representatives of his court.

The W. had to maintain a status of symbolic purity, particularly by observing sophisticated prescriptions concerning manners of behaviour and food avoidance. Ordinary people were usually not allowed to approach him directly, and to look at his face was considered harmful to them. The W. was therefore hidden behind a curtain and communicated with his subjects by an interpreter. "Royal" species such as ↗lions, ↗elephants and ↗bees were believed to be associated with him. The W. was entitled to claim considerable parts of the booty, land, livestock and slaves, obtained in war, and of precious items such as ivory, leopard skins and honey. However, it was expected that he generously redistributed most of these goods.

In the course of the 19th cent., the features of the divine ↗kingship associated with the W. were increasingly abandoned in favour of a more secular type of ↗monarchy. This can be stated, e.g., for the Kambaata, the Dubamo and the Qabeena (BrKam 123–31, BrHad 171, 175). The succession of the eldest son to the office of W. became a preferential practice. Among the Ṭimbaaro, however, the electoral system prevailed (BrKam 127f.) and among the Sidaama, where the institution of monarchy never fully evolved, the W. remained part of the age class system.

Woodland

The most common definition of W. in an East African context is "land with an open cover of trees, the crowns of which do not form a thickly interlaced canopy, and which as a rule is leafless for some period during the year" (Greenway 1973, cit. in Friis 1986: 32). In a widely used and rather generalized classification system (often used by the FAO) the formation "W. savannah region" is characterized by an average rainfall of between 200 mm and 1,400 mm and at an altitude of between 250 m and 2,300 m A.S.L. This definition roughly includes all areas with a natural ↗tree vegetation, from closed ↗forests to treeless savannah or bushland.

Critical of these definitions the UNESCO Vegetation Map (White 1983: 47, 52) uses a more differentiated classification: based exclusively on the vegetation itself, without reference to the physical environment, it defines W. as "land occupied with an open stand of trees the crowns of which form a canopy from 8 to 20 or more in height and cover at least 40 % of the surface". And in this context: "Wooded grassland is land covered with grasses and other herbs, with scattered or, more rarely, grouped woody plants which are often, but not necessarily, trees. The woody plants cover between 10 % and 40 % of the surface. These figures are somewhat arbitrary, since wooded grassland grades into woodland on the one hand and pure grassland on the other" (ibid. 52). By this the differences to ↗grassland and ↗bushland become clear.

A small area of W. is to be found around Lake ↗Ṭana, but mainly along the semi-arid escarpment and valleys north-west and west of the Ethiopian highlands typically lying below 1,600 m A.S.L. in the north-west and 1,000 m A.S.L. in the south-west (usually ↗*qʷälla* and *bäräha*). In the lowlands (*bäräha*) near the Sudan border W. changes into wooded grassland and bushland. Although classified as "[↗]Acacia-Commiphora deciduous bushland and thicket" by White (1983, map), parts of the ↗Rift Valley look more like W. and wooded grassland, caused eventually by human impact.

W. has a low to medium bio mass production. Therefore, the predominant land use system was traditionally and, in many parts, still is ↗pastoralism. Nomadic or semi-nomadic pastoralists live(d) there, mostly ↗Oromo, with large herds of cattle, sheep, goats and sometimes camels (in drier W.). Since the 20th cent. W. areas, particularly those with higher bio mass production, have been invaded by arable farmers. Along rivers, especially along the ↗Awaš, potential irrigation areas have also been prepared for intensive farming. Intensification of land use, reduction of grazing areas and population growth may provoke deforestation, overgrazing, soil erosion and water scarcity if social, agro-economic and technological changes are not coordinated or if they are inadequate.

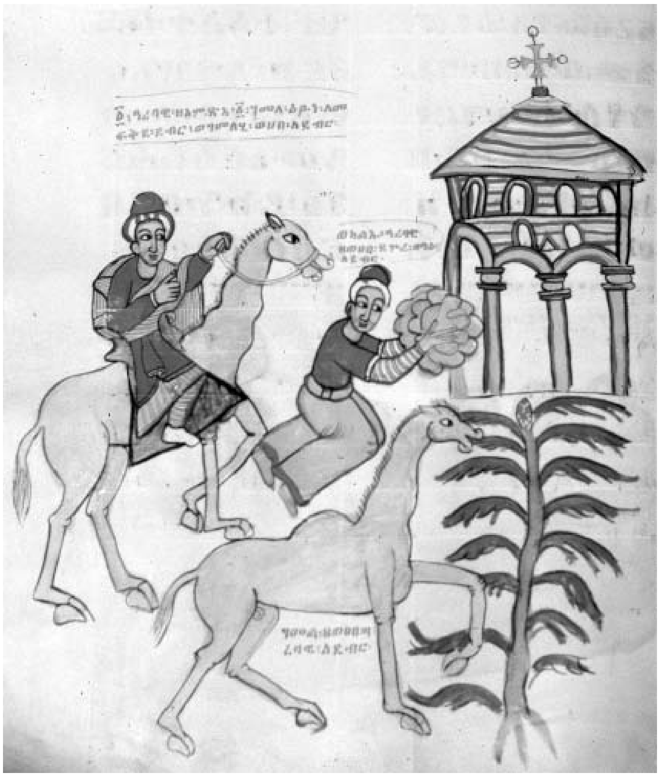
Alfons Ritler

Wool

Reference to W. (Amh. **ሪዝ**, *riz* [‘W. of sheep’]) in Ethiopia’s historical record is rare, for cotton is the primary material for weaving. According to Strabo, Ethiopians wore skins, adding that sheep have no W. in Ethiopia, but hair like goats (Strabo 1830–33:565; Wilkinson 1878:261, n. 5). Francesco Suriano in 1482 reported that people wore linen but not woollen cloth (CrawItin 45; s. also ↗Clothing), in contrast to Brother Raphael’s statement in 1522 that “they make clothes (*panni*) of [↗]silk, W. and [↗]cotton, very fair and abundant, which they wear” (CrawItin 143). Manoel de Almeida’s statement (ca. 1645) that women in Təgre “wear something like shawls of sheep’s W. or goat’s hair, but so badly tanned and cured that it is more like hair than W. and is a rough hair shirt” (BeckHuntAlm 60f.), confirms the passage in Strabo and refers rather to fleece than to garments woven of W. More certainly woven is the clothing worn by married women of the ↗*baḥər nägaš*, referred to by Alvares according to whom they wrapped around themselves black (or coloured) woollen stuffs, with wide fringes of the same stuff (BeckHuntAlvar 171).



Rescued Muslims bring loads of wool and dates as gifts to the church of St. Mary, 17th cent. *Täʾammərä Maryam* manuscript, old Aksum Ṣəyon; photo 2000, courtesy of the author

Black highland W. continues to be produced locally in particularly cold regions of Təgre and Šäwa for blankets, tents and some articles of clothing such as hats and the burnous (Gervers in OrbAethChoj 25). Hats made of brown and white spun, course woollen thread are also popular in regions susceptible to cold weather. Parkyns (1853:174f.) describes tents in the camp of *däǧǧazmač* ↗Wəbe Ḫaylä Maryam made of black W. from the southern provinces of Təgray (cit. in PankSoc 155f.).

The manufacture of small woollen carpets (↗*Mənṭaf*), which continues today, was noted before 1814 by Salt (SalTrav 426), who was shown “superior” examples from the Səmen region in the market at ^{c}Adwa. Numerous carpet- and tentmakers worked in Mänz (Šäwa), the latter at least with thick, black woollen cloth (PankSoc 230). Other Šäwan centres of black cloth production included Däbrä Bərhan (PankSoc 238).

Woollen garments were also imported at Massawa in the 17th cent. (PankSoc 55). Woollen carpets for churches and the homes of the wealthy have been a regular import item for centuries.

Indigenous Ethiopian sheep are raised primarily for their meat. The ^{c}Afar type produces no W., while the Ethiopian Highland sheep produces some. Subtypes of the latter which are known for their clip include the Mänz, which gives from 400–1,000 gram of W. usually twice per annum, sheep from Däbrä Bərhan (Šäwa) giving a single 600 gram clip annually, and those from Däbrä Marqos (Goǧǧam). In 1980 the country is recorded as having exported 33 tons of W., while importing 55 tons of greasy W. and 396 tons of W. waste, most of which was re-exported as 9,650 knotted and woven carpets (Wilson 1991:136).

In 1965, the government established the Däbrä Bərhan Wool Factory, the first of its kind in the country, with 120 spindles and six looms, employing 200 people and capable of processing a metric ton of W. a day. Belgium provided the equipment and the technicians. In a single-shift operation, it produced 7,065 blankets in the first six months (*Ethiopian Herald*), and cloth for the burnous. The factory is also known for its black, white and brown carpets, which often depict birds, lions and houses.

Using local production and W. acquired from eastern Gondär and northern Šäwa, western Wällo is known for its runner carpets (Cossins – Yemerou Bekele 1974). Small farmers from the same regions, and the Däbrä Bərhan Wool Factory, supply Addis Abäba's carpet makers, but there has often been a shortage of supply, especially of white W. from imported sheep (Gatenby – Trail 1982).

Michael Gervers

World War I

Ethiopian troops played no significant role in combat operations during W.W. I (28 July 1914 to 11 November 1918). However, after the outbreak of the war, *ləǧ* ↗Iyasu sought to influence the course of events in Ethiopia and the Horn of Africa. He supported the Central Powers (Austria, Germany, Hungary and Turkey) much to the dismay of the allies, Britain, France and Italy.

In the early days of W.W. I, the central powers launched a disinformation campaign that accused the allies of plotting to colonize Ethiopia. They also promised that Ethiopia's support would be rewarded with the cession of Eritrea and parts of Kenya, Sudan and ↗British and ↗Italian Somaliland. More importantly, the central powers maintained that accomplishing these goals would facilitate the spread of ↗Islam throughout Ethiopia and the Horn of Africa. The allied powers, in turn, banned arms sales to Ethiopia for fear of a wider conflict.

One of Iyasu's earliest undertakings involved sending arms and ammunition to the Somali rebel ↗Muḥammad ᶜAbdallāh Ḥasan, the "Mad Mullah". Such behavior alarmed the allies, who encouraged Šäwan leaders to marginalize Iyasu. Other influential foreigners in Ethiopia failed to convince Iyasu to provide provisions to the allied forces. Instead, he started a secret correspondence with the ᶜAdalites and Somalis in the hope of convincing them to resist allied overtures.

In April 1915, Britain, France and Russia signed the secret Treaty of London. Italy promised to join the allies within a month in return for territorial concessions at the end of the war. On 23 May, Italy entered the war on the allied side. In June, Wilfred Gilbert Thesiger, British envoy in Ethiopia, warned that Iyasu aimed to facilitate the establishment of "a Moslem Kingdom that will stretch far beyond the frontiers of his present Empire".

On 27 September 1916, a group of Šäwan aristocrats finally deposed Iyasu and declared *ras* Täfäri Mäkʷännən (later ↗Ḫaylä Śəllase I) heir to the throne, Crown Prince and Regent Plenipotentiary (↗Coup d'état 1916, s. EAE vol. 2, 1081). Three days later, Mənilək II's daughter, ↗Zäwditu, became Empress of Ethiopia. Täfäri then considered entering the war on the allied side. However, the allies maintained their arms embargo against Ethiopia as they feared a proliferation of weapons would destabilize the country.

In January 1916, the British legation in Addis Abäba sought to prevent Germany from persuading the "Abyssinians to attack Eritrea" and to undermine Iyasu's attempts "to rouse the Moslem tribes in the Ogaden".

Thomas P. Ofcansky

World War II

The Horn of Africa was much more actively involved in W.W. II (1 September 1939 to 2 September 1945) than in ↗World War I. During the ↗War of Liberation the Horn was to be one of W.W. II's most active battlefields outside Europe.

Moreover, the ↗Italian war 1935–36 is often presented as one of the events that helped pave the way for W.W. II.

By early 1939, France had increased its garrison to some 10,000 troops, which included several Senegalese Tiralleurs battalions, and had also strengthened its defenses around ↗Djibouti. In December 1939, France devised a common defense plan with the British that supposedly would facilitate the adoption of a "more enterprising policy". French General Paul Legentilhomme, who had just arrived in Djibouti, accepted the plan that involved French protection over Djibouti and ↗Zayla^c while British forces defended ↗Berbera, the capital of ↗British Somaliland. Legentilhomme also became commander of all allied military forces along the Somali coast, responsible to Lieutenant General Sir Archibald ↗Wavell. Squabbling between Britain's Colonial Office and the War Office over the plan remained unresolved until June 1940, when the War Office assumed responsibility for the administrative control of military forces in British Somaliland.

With the collapse of the French government in June 1940, Legentilhomme announced his intention of continuing the war on the allied side. The colony's administrative council turned against Legentilhomme, who fled to British territory and was replaced by General Aymé.

The collapse of ↗Africa Orientale Italiana in 1941 did not end hostilities in the Horn of Africa. Italy, which had declared war on Britain and France on 10 June 1940, had deployed some 300,000 Italian soldiers to Eritrea, Ethiopia, and Somalia. British and allied forces were scattered along the frontiers of Egypt, Kenya and British Somaliland. On 4 July 1940, Italian forces deployed from Eritrea, attacked Sudan, and occupied ↗Qallabat and Kassala. Four days later, Kurmuk fell to Italian forces. On 4 August, three Italian columns crossed into British Somaliland and assumed control of the Protectorate while an Italian brigade captured Moyale on the Ethiopian-Kenyan border and advanced toward Buna and Lake Rudolf. Despite these reverses, Wavell, then based in Cairo, continued building up the Army of the Nile; he established military bases in Cairo, Khartoum, and Nairobi.

On 4 August 1940, Italian troops from Ethiopia attacked British Somaliland along the Harär-Ǧiǧiga axis. On 17 August, the civilian government evacuated Berbera. On 16 March 1941, a British expeditionary force arrived in Berbera from Aden and reoccupied the capital without incident.

On 16 February 1941, detachments of the King's African Rifles (KAR) arrived in Kismaayo and were warmly greeted by the Somali and Arab populations. The KAR reported that the European population had been evacuated from the town. The KAR managed to expropriate three 4.9 defense guns and ten reparable anti-aircraft guns. An unidentified Italian officer reported that the town's command element was the "first to leave the sinking ship". Military conditions at Jumbo and Jelib were chaotic. Additionally, ammunition and guns were left behind in Mogadishu.

Initially, the British made "immense advances with little opposition". However, they encountered more serious opposition as they approached the Juba River. At Bulo Erillo, for example, the Gold Coast Regiment contended with Italian armored cars, land mines, machine gun emplacements, and tank traps. Near Jelib, South African forces also faced fierce fighting and had to contend with enemy fire while on a pontoon bridge. Italian forces had become little more than a rabble as panic and deteriorating morale affected both Italian and Somali troops. On 24 February 1941, allied forces captured Mogadishu without any resistance and declared it an open town. In Somaliland, the British reported they had captured 250,000 square miles of territory, 20,000 prisoners of war, 350,000 gallons of petrol, rations for 10,000 prisoners for six months, and a variety of serviceable weapons.

In April 1941, Legentilhomme resurfaced in British Somaliland with a few small detachments of Gaullist troops. He launched a propaganda campaign against the Vichy government but it failed to have any significant impact on the course of events. On 1 January 1943, Legentilhomme became High Commissioner for French possessions in the Indian Ocean. After the cessation of hostilities, Ethiopia was totally under British Military Administration (↗British Military Administration of Ethiopia, s. EAE vol. 5).

Thomas P. Ofcansky

Wright, William

W. (b. 17 January 1830, Mallai /Mully, Nepal, d. 1889, Cambridge) was a British Orientalist. The son of a Scottish officer in the service of the East India Company, he was first educated at Madras College and continued his studies at St. Andrews University, Scotland. Later he studied Syriac and other Semitic languages in Halle and Arabic in Leiden. At the latter university he received his PhD in 1852.

In 1855–56 W. was professor of Arabic at University College, London, and in 1856–61 at Trinity College, Dublin. From 1861 to 1870 he was conservator of Oriental ↗manuscripts at the ↗British Museum with the purpose of cataloguing the vast collection of Syriac manuscripts. From 22 May 1889 to his death he was professor of Arabic at Cambridge University.

W. published several books in Arabic studies, mainly an authoritative, frequently reprinted, revised edition of Carl Paul Caspari's grammar (Wright 1859–62) and became widely respected for his works in Syriac studies. In ↗Ethiopian studies he published *The Book of Jonah in Four Oriental versions* (1857) and, most importantly, the excellent catalogue of the Ethiopic manuscripts from the British Museum (1877; WrBriMus) acquired since Dillmann's previous catalogue of 1848 (DillmLond), consisting chiefly in the collection from ↗Mäqdäla that the ↗Napier expedition had taken to London.

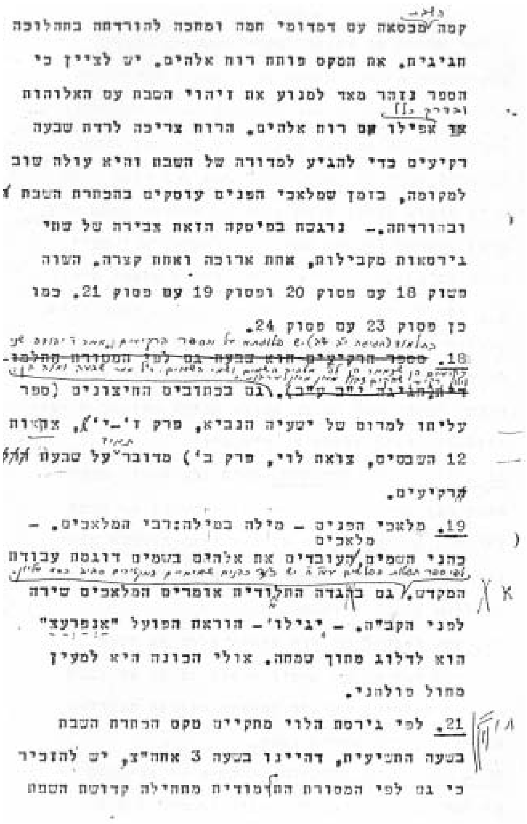
Witold Witakowski

Wurmbrand, Max (Mordechai)

W. (b. ca. 1900, Rumania, d. ca. 1996) was an Israeli Semiticist and translator of several ↗Betä Ǝsraʾel texts.



קמה מכסאה עם דמדומי חמה ומחכה להורדתה בתהלוכה
חגיגית. את הקטע פותח רוח אלהים. יש לציין כי
הספר נזהר מאד למנוע את זיהוי השבת עם האלוהות
~~אף~~ אפילו עם רוח אלהים. הרוח צריכה לרדת שבעה
רקיעים כדי להגיע למדורה של השבת והיא עולה שוב
למקומה, בזמן שמלאכי הפנים עוסקים בהכתרת השבת
ובהורדתה.- נרגשת בפיסקה הזאת צבירה של שתי
גירסאות מקבילות, אחת ארוכה ואחת קצרה. השוה
פסוק 18 עם פסוק 20 ופסוק 19 עם פסוק 21. כמו
כן פסוק 23 עם פסוק 24.
18. ~~מספר הרקיעים הוא שבעה גם לפי המסורת התלמו-~~
~~דית (חגיגה י"ב ע"ב)~~. גם בכתובים החיצוניים (ספר
עליתו למרום של ישעיה הנביא, פרק ז'-י'), צוואות
12 השבטים, צואה לוי, פרק ב') מדובר על שבעה
רקיעים.
19. מלאכי הפנים - מילה במילה: רבי המלאכים. -
מלאכים
כהני השמים, העובדים את אלהים בשמים דוגמת עבודת
המקדש. גם בהגדה התלמודית אומרים המלאכים שירה
לפני הקב"ה. - "יבילו" - הוראת הפועל "אנפרעצ"
הוא לדלוג מתוך שמחה. אולי הכוונה היא למעין
מחול פולחני.
21. לפי גירסת הלוי מתקיים טקס הכתרת השבת
בשעה התשיעית, דהיינו בשעה 3 אחה"צ, יש להזכיר
כי גם לפי המסורת התלמודית מתחילה קדושת השבת

W. moved to Palestine in the 1940s. He held no university post but informally taught Gəʿəz courses and Ethiopic texts at "Beit Faitlovich", the house of ↗Faitlovich in Tel Aviv. W. remained active in the Jewish folklore organisation *Yeda V'Am* ('Knowledge and People') whose headquarters were located there, even after Faitlovitch's death. He translated Faitlovich's *Quer durch Abyssinien* from German to Hebrew in 1959, thereby acquainting an Israeli public with Faitlovitch's second expedition to Ethiopia, and the origins and plight of the Betä Ǝsraʾel.

W. produced several important editions and translations (1961, 1964) and wrote encyclopaedia entries, translated texts from German, French and other languages to Hebrew, and published important articles on Betä Ǝsraʾel literature (1954, 1962, 1963, 1991–92, 1993).

Shalva Weil

Wylde, Augustus Blandy

W. (b. 1849, d. 1909) was a British traveller. The son of William Henry Wylde, a minor Foreign Office functionary, he came from a military family. Having been rejected by the army on grounds of unfitness he travelled to the East on his own account and established the trading concern of Wylde, Beyts & Company in the Sudan. He was successively appointed British consul in Jeddah and vice-consul in ↗Sawākin.

In the Sudan W. was initially highly regarded by the British Government. In 1877 he advised Colonel Charles ↗Gordon on its policy towards Ethiopia and befriended *ras* ↗Alula Ǝngəda. Later, at the height of the ↗Mahdist rebellion, W. was chosen to accompany Rear-Admiral Sir William Hewett's diplomatic mission to Emperor ↗Yoḥannəs IV in 1884 (Wylde 1888, vol. 1, 189ff.). Often outspoken W. became persona non grata to the British Government (ErlAlula 32), particularly when he described its abandonment of the Tripartite Treaty of 1884 signed with Yoḥannəs (↗Hewett Treaty) and British connivance at the Italian occupation of ↗Massawa in 1885, as "one of the worst bits of business" carried out by Britain in Africa (Wylde 1900: 39).

Later, after the battle of ↗ᶜAdwa, W. travelled to the battlefield for the British *Manchester Guardian* and interviewed his old friend *ras* Alula, *ras* ↗Mäkʷännən Wäldä Mikaᵓel and several other Ethiopian chiefs, as well as the Italian General ↗Albertone. W. devoted 17 long articles to the episode and also wrote two important, partly autobiographical, books, which contained accounts of the Hewett mission and the ᶜAdwa campaign, as well as of Ethiopian history, geography and political, economic and social life.

Richard Pankhurst

WᶜZB

W. was a Christian king of ↗Aksum probably reigning within the first half of the 6th cent. (and however distinguished from the earlier, possibly homonymous, ↗Ouazebas, cp. Hahn 1984: 133, on which Munro-Hay 1984: 110f., 119, and Godet 1986: 191). A son and successor of *nəguś* ↗Kaleb, he is only known from his monumental ↗inscription in pseudo-Sabaic (RIÉ no. 192), which was found at the site of ↗Aksum Ṣəyon cathedral: swarming with biblical quotations, it records a successful campaign against a people called WYTL, not attested elsewhere.

In his inscriptional titulary, rather close to ᶜEzana's older form, W. abandons his father's reference to the ↗Ḥaḍramawt and the highland and the coastal area of the Yemen, which are instead mentioned in the titulary of the contemporary king in South Arabia, ↗Abraha. The latter agreed to pay tribute to Kaleb's successor, and was thus recognized as a tributary ruler (Procopius, *Hist.* I, 20, 3–8, ed. Haury 1905: 106ff.): some adjustment of the Aksumite protocol might well have been effected at the same time (MHAksum 160).

W.'s own titulary also includes his "gentilicium" or "clan-name" (s. ↗Name(s): Pre-Aksumite and Aksumite names), read either as *Bᵓ S ḤDFN*, 'man of ḤDFN', which recalls the name of ᶜEzana's brother *Ḥadefa(n) (s. ↗ŚᶜZN), or as *Bᵓ S ḤDQN*, 'man of ḤDQN', a toponym with a "pendant" in South Arabia (not far from Ṣanᶜāᵓ), according to a proposal aimed at recognizing South Arabian place names after the "man (of)" element (Manzo 1976: 74ff. and n. 41; but see Fiaccadori 2004: 110, 134). The sequence in question is followed by "son of Ǝllä Aṣbəḥa, servant of Christ [*gäbrä Krəstos*]", a humbling formula already used by ᶜEzana in its Greek original (RIÉ no. 271.10: *doûlos Christoû*), and revived then in Gəᶜəz by Kaleb himself (RIÉ no. 191.11; s. MHAksum 208).

As to W.'s relation with the two other sons of Kaleb hitherto known, ↗Ǝsraᵓel and ↗Gäbrä Mäsqäl, it seems reasonable to suppose that the latter is the "Christian name" of W., who would have reigned, therefore, from 534 to 548 ca. (*pace* MHAksum 93, on whose historical reconstruction, and its alleged Chinese source, s. Fiaccadori 2006: 130–38).
